As a party that has grown expert in explaining away defeat, the English Liberals will not find it very difficult to explain away the outcome of the bye-election in Glasgow last week. From 1886 to 1906, the seat was held by the same Unionist incumbent. In the tidal wave of the latter year, he was beaten by only 431 votes. Obviously, the recapture of so ancient a stronghold by the Unionists cannot be described as a crushing Liberal defeat. Moreover, the Liberal candidate was badly handicapped. He was the renowned T. Gibson Bowles, who, up to 1906, was a Unionist member of independent proclivities, but who was defeated in the last general election, or, as he maintains, assassinated by the Unionist tariff reformers, because of his decided "free-food" views. Mr. Bowles thus had to contend against the particular resentment of the Unionists and the distrust that is always the portion of a "renegade." The influential Glasgow *Herald* is against tariff reform, but it supported the Unionist candidate, because it believed that "free trade is in no danger from anything Mr. Scott Dickson can say." Hence a Unionist victory, by 7,298 votes against 5,185 in an old Conservative constituency, is not so overwhelming as it seems at first.

When the British Old Age pensions bill was before Parliament, Mr. Balfour opposed it on the ground that many persons would not be able to prove their age, particularly in Ireland. How could an Irish dock-laborer working in Liverpool convince any one that he was born in Belfast, seventy years ago, he asked, when it was notorious that the Irish statistics of 1840 were wholly untrustworthy, where any existed? In fact, it is the Irish septuagenarians who are swamping the Chancellor of the Exchequer. The statistics show there should be only 184,000 persons over seventy years of age in Ireland, of whom 32,000 now receiving poor-relief are disqualified for pensions. Of the remaining 152,000, it would seem as if there ought to be at least a few thousand well enough off to do without pensions, but no less than 177,000 Irish pensions have already been granted. It looks as if many men and women in Ireland had reached the age of seventy in a great hurry. If there is a comic side to this, there is also a tragic one for the Chancellor of the Exchequer and the government. They now confess that their estimates of the cost of old age pensions were 80 per cent. out of the way. But the Chancellor of the Exchequer is reported as saying: "I cannot tell you now, but you will find I shall get the money for this alleviation of the misery of the poor from people who are well able to pay." In other words, property is to be taxed so as to break down the incentive to saving for old age.

The Parliamentary elections in Italy last Sunday insure a new lease of power for the Giolitti Ministry. Detailed figures are not yet at hand, but if we accept the government's estimate of 350 Ministerialists, against 158 of the Opposition, the Giolitti majority is almost exactly what it was upon the assembling of the preceding Parliament, late in 1904. Since the legislative term for the Italian Chamber is five years, the recent dissolution only hastened a general election by a few months. The Premier chose to go to the country rather than risk further debate on his foreign policy. Public opinion in Italy is at a high tension with regard to Austrian aggression in the Balkans, but while an excited Chamber might conceivably have voted down the Giolitti Ministry, a Ministerial victory at the polls was inevitable. Giolitti's position in Italy is a good deal like that of Clemenceau and his predecessors in France. Like them, his power rests on a Radical *bloc*, diverse enough in interests, but united against reaction on the one hand, and revolutionary Socialism on the other. In France a long series of tumultuous and short-lived ministries preceded the victory of Radical concentration under Waldeck-Rousseau. In Italy, there was the same chaos of ministries and combinations until the Radical *bloc* was formed, under the Zanardelli Ministry in 1901.

An interesting feature of the Italian elections is that the Pope's supporters are said to have taken a more active part than they have done since the beginning of United Italy. The Papal inhibition against going to the polls was removed in seventy-two constituencies, or one-seventh of the whole number voting. The result has been no gain in Rome, where the Anti-Clerical *bloc* repeated its victories of the preceding year, and a slight gain in the rural districts. In general, it may be questioned whether the Papal *non expedit* has really kept Catholics out of politics to a very considerable extent. The enrolled electors in Germany constitute 20 per cent. of the entire population; in France the ratio is nearly 24; in Italy it is less than 8. At first sight that would indicate that an enormous number of Italians boycott the polls. We find, however, that the Italian franchise demands not only the ability to read and write, but a certain degree of additional elementary education; and that in 1901 nearly 44 per cent. of all males over twenty years of age were illiterate. Add the fact that there are considerable property qualifications for the franchise, and it would follow that the number of Italians who refrain from availing themselves of their electoral rights is not very large.

THE INAUGURAL.

President Taft could not write in the 'Ercles vein if he would, and he has chosen to give his inaugural address an agreeably quiet tone. He summons his fellow-countrymen, not to a deadly combat with Apollyon, but to the long work of constructive legislation, steady administration, and industrial recovery. There is no boasting, either for himself or his party, in putting on the armor, but the new President's words breathe of matured convictions and strong common sense, and will fall gratefully upon the ears of a people wearied of vehemence.

What Mr. Taft has to say about his hopes of tariff revision will be read with the more interest in that Congress is so soon to attack that question. Doubtless, the President will more fully express his views when he sends a message to the special session on March 15. The mere outline to which he limits himself is along familiar lines. Mr. Taft does not go the whole length of the tariff-reform argument. There is no moral indignation in his reference to the Dingley schedules which he would like to see modified. He appears to be still caught in the bog of "cost of production at home and abroad." Still, he has the root of the matter in him. He declares that, in the making of a tariff, the "prime motive" must be "taxation and the securing thereby of a revenue." And he makes it clear that, in his opinion, the existing duties ought to be reduced all along the line. This being so, we think we can speak for tariff-reformers, who have borne the heat and burden of the day, when we say that they will wait patiently for a protectionist Congress and a protectionist President to confess the follies and wrongs of protection, and to set about cutting them away.

In what the inaugural has to suggest about enforcement and revision of laws relating to railways and other interstate corporations, the chief thing is the announced aim—to give to American business "that measure of stability and certainty . . . which is essential to the life and growth of all business." These are the words which will first catch the eye of the thousands all over the country who are striving to restore the former level of industrial activity. Mr. Taft speaks of changes he desires in the anti-Trust law. In view of the recent report of the Senate Judiciary Committee against any modification of that statute, it is hard to see how the new President can hope to bring about an important amendment. But the distinction which he seeks to have made is, not between "good" Trusts and "bad" ones, but between those combinations which are based upon "legitimate economic reasons" and those "formed with the intent of creating monopolies and artificially controlling prices."

Of high significance is President Taft's language about the South, and the status and progress of the negro. One sentence of his, intimating that he will not appoint negroes to a "local office" in any community in which "the race feeling is so widespread" as to interfere with the transaction of the public business by such appointee, will undoubtedly be hailed by negro-haters in the South. They will read into it a promise to remove all colored Federal officials and to name no more. But they must not too hastily overlook the other things that Mr. Taft says on this subject. He warns against "the pretence of race feeling manufactured in the interest of individual political ambition." By that he will not be deceived. Consequently, any Southerner who itches to obtain an office now held by a negro, and who thinks he can get it by showing how the race prejudice in his locality is suddenly terrible, will be likely to have his labor for his pains. And the sober second thought of the South cannot fail to fasten upon the President's emphatic words of sympathy with the negro, and desire to advance his industrial, educational, and political status in every way possible. Mr. Taft proposes to go on in the encouragement of the negroes by "recognizing their distinguished men," in "appointment to office" and otherwise. Moreover, the President stands up stoutly for the war amendments to the Constitution, including the Fifteenth, and notifies the South that its suffrage laws "must" conform to that national charter of political rights for the negro. Hence, we may well believe that, with all his good will and his obvious desire to win the South, President Taft will certainly do as much for the negro as his predecessor did.

The only passage in the inaugural that glows with inward heat is the one refusing even to consider the legal sanction of boycotting, or the withdrawal from the courts of the power of issuing injunctions against labor unions. "As to that," says the President, "my convictions are fixed." Messrs. Gompers and Mitchell will take notice. So will other people. With nothing sensational in his inaugural address, the new President comes before the country with an appeal for reason in all things and justice to all classes of citizens and all parts of the land. We shall, of course, judge him by his acts in the future, not by his words to-day; but that he now stands in a high degree of favor with his fellow-countrymen is plain to everybody. That he may continue to do so to the end of his term is our sincere wish.

A PARTING GLANCE AT ROOSEVELT

We distrust attempts to sum up Mr. Roosevelt's administration. Several of his subordinates in office have tried to do it, but not even their high impartiality is equal to the task. We are too near the events; we are yet too much under the spell of a salient personality, a man of contradictions, in whom good and bad are curiously and inextricably mingled. The most that can be done to-day is to note his chief qualities, and ask what has been their effect upon public affairs.

When Col. Roosevelt ceased to be Governor of New York, the *Nation* said that his two years in office had shown his master-passion to be love of excitement. "It is the clamorous life," we remarked, "which most appeals to him." That opinion is confirmed by the eight years which has followed. Now, Walter Bagehot has a warning passage on the perils of excitable statesmanship. He pointed out in Bolingbroke, what he might have pointed out in Roosevelt, that it is "incompatible with the calm circumspection and the sound estimate of probability essential to great affairs." Certainly, President Roosevelt has taken no thought for careful adjustment of outlay to income and has consequently been wildly extravagant. He has been an unreflecting and noisy advocate of a big army and navy. Yet as an offset to his blustering talk about preparation for war and his constant encouragement of the military spirit must be set his brilliantly successful efforts to conclude a peace between Russia and Japan—efforts that were most appropriately rec-

ognized in the bestowal of the Nobel Peace Prize.

His passion for the sensational has not been confined to his own sensations. He would have everybody set tingling along with him. With an energy that nothing can sap, and an almost fatal eye for what will prove startling, he has given the country a long succession of shocks. And here comes in his wonderful talent for advertising. As Tacitus said of Mucianus: "Omnium quæ dixerat, feceratque, arte quadam ostentator"—he has the showman's knack of drawing public attention to everything he says or does. This is Roosevelt the politician, and no more consummate politician ever lived. For knowing when to seize the occasion; for understanding perfectly how to hit popular feeling between wind and water; above all, for ability to impress and handle men, not singly, but by the million, we have not looked upon his like.

Mr. Roosevelt's uncommon powers of moving the masses have had their chief display in the field of social agitation. A great upheaval of moral sentiment took place during his administration. He was not the sole cause of it, but he utilized it and furthered it mightily. An account of stewardship of the rich was vigorously demanded. Business dishonesty was held up to abhorrence. Corporation rottenness was probed. All this, in spite of excesses of denunciation and legislation, was highly salutary. It was full time that people who had been mismanaging corporations and exploiting the public were called sharply to book. Yet such acts as Mr. Roosevelt's wresting of Panama from Colombia and his appeal to E. H. Harriman for campaign funds have raised grave doubts whether this eager moral crusader is himself always possessed of clear moral perceptions. The fact remains, however, that the quickening of the national conscience, the rousing of a people long dead in trespasses and sins, with such concrete results as the reform of the insurance companies and the restrictions upon predatory public service corporations, is a service the value of which can scarcely be overestimated.

One defect of Mr. Roosevelt as President—on which we have dwelt more than once—was his indifference to constitutional and legal methods. He has but a feeble grasp of general principles; he sees only isolated instances. This explains his failure to perceive that ours is a government of divided and limited powers. His tendency was always to ride rough-shod over Congress, to curse the courts when they failed to sustain his policies, and to do what seemed to him best at the moment, regardless of strict legality. It was not merely that he cut red tape. More than once, as in the case of the colored soldiers involved in the affair at Brownsville, he coolly ignored the express provisions of our statutes. This same trait was also exhibited in his offhand license for the steel merger, in his frequent transgressions of the rules and usages of civil intercourse, his numerous brawls in and with the public press, his fondness for calling men liars. He was impatient of all the restraints which his position should have laid upon him.

But as the years pass and enmities are forgotten and wounds heal, it is inevitable that his eccentricies and acerbities of manner, his recklessness in statement, his violence in vituperation, and even his trampling upon legal and administrative precedents shall fall more and more into the background, while the solid achievements of his seven years in the Presidency shall bulk ever larger. It is on having "done things" that he most prides himself and most confidently challenges the verdict of history. Certainly, the prosecution of the Northern Securities suit has put a definite limit to a consolidation of railways in a few hands through a series of mergers. The value of the railway rate legislation which he secured, after convulsing the country and making himself the idol of the West, cannot yet be reckoned, though the moral effect of the law has doubtless been considerable. No one, however, can gainsay or lessen the credit which Mr. Roosevelt deserves for his pursuit of the postal thieves and the land thieves, for his vigorous prosecution of the railways which gave rebates and the companies which received them, for extending the forest reserves, and for pushing the passage of the Pure Food Law and the Meat Inspection Law. But, above all, the beginning of the irrigation project is likely to rank as the legislative landmark of his administration. That was true initiative, the effects of which will bless millions yet unborn. Conceivably this vast undertaking will be his abiding monument when all his other labors are sunk in oblivion. We cannot tell. Said Bismarck at Friedrichsruhe, after his retirement: "The banker, when he has closed out a speculation, can instantly estimate his gains. But the public man is never in that happy position. He is constantly tormented by the doubt lest, in the end, what he has done have harmful consequences." So we must wait years before knowing how to strike the balance of the Roosevelt administration.

EXIT PLATT.

Of the retiring members of the United States Senate, none presents so melancholy a spectacle as Thomas C. Platt. He returns now to private life, broken in body and mind, almost friendless. No civic organizations are passing resolutions commending the intelligence and zeal with which he has served his State. He has earned no gratitude—only contempt. The people of New York give a sigh of relief that Platt has gone out of politics forever. We should not dwell on so unhappy a figure, but for the fact that Mr. Platt's fate is the direct logical outcome of the policy which for many years he pursued with singular skill and tenacity. Here is a man whose sins have found him out.

Platt is an example of the scholar in politics. He was a member of the class of 1853 at Yale, and though he was compelled to give up the course because of ill health, his attainments were recognized in 1876 by the honorary degree of master of arts; but his case only serves to prove afresh that what is wanted in politics is not so much scholarship as character. Platt began his career as officeholder—clerk of Tioga County—in 1859, at the age of twenty-six; he entered Congress in 1873; and he rose to be United States Senator in 1881, when not yet forty-eight. Such rapid advancement was not the result of accident. He had devoted himself to mastery of the game of politics as it was then played in New York. He was hampered by no scruples; he never allowed himself to be diverted from his ends by any qualms as to the necessary means. It was a day when politicians confessed their cynicism rather more frankly than is now thought to be discreet; and Platt made no pretence to

a high-mindedness which he neither possessed nor understood. The value of noisy professions of all the virtues, domestic and public, had not then been so convincingly demonstrated as it has since; and Platt, with commendable freedom from hypocrisy, set himself quite openly to the task of debauching voters and manipulating legislators.

But mere indifference to principle would never have carried him into the United States Senate. His ambitions were backed by an uncommonly keen intellect. Persons who have seen Platt only in his declining years, since he has been shorn of his power, can hardly imagine what a force he was in his prime. In political astuteness his only rival was the Democratic leader—sometimes, it is suspected, Platt's co-worker—David Bennett Hill. Platt held the Republican party of this State in the hollow of his hand. It was an adage of his that in quiet times the machine rules; and he built up a machine of extraordinary efficiency. He had plenty of money; for at the insurance investigation he told how he used to bleed the big corporations, with the understanding that he would grant suitable favors in return. This money was most judiciously expended throughout the State. He knew the exact capacities of all his minor leaders, the size of the vote which each could deliver, the relative purchasing power of a dollar in city districts and in rural, the various factional quarrels, the possibilities of dicker and intrigue, both within the Republican ranks and with venal or discontented Democrats. New York is a vast chess-board on which to marshal an army of pawns, but Platt deployed his with consummate tact. He was called the "Easy Boss," because he could drive with a free rein (within the prescribed limits) as well as apply the spur. He could take a high-spirited, conscientious, and capable young man, give him his head when he became restless under the discipline of the depraved party organization, tempt his ambition, promise him a career of great usefulness and honor, entangle him in one compromise after another, threaten to bury him in that famous Platt graveyard, and finally bind him to the machine, helpless and hopeless. As a corrupter of youth, we grant the palm to Platt, with his amazing smoothness and cleverness.

His shrewdness was never more strikingly shown than after his disgraceful fall in 1881. With Conkling, he had resigned from the Senate in a quarrel with President Garfield over the patronage. The two men came back to Albany to plot for a reëlection; and the hotel corridors were filled with rumors of bribery and scandal. Then Platt, caught in a nasty scrape, was forced to withdraw, and as one of the newspapers then put it, he "stole into the darkness." That a man thus thrust out of public life should ever rehabilitate himself seemed incredible. But he was indefatigable, and before long he appeared at Albany in control of half-a-dozen votes in the Legislature. With this small capital he began trafficking in legislation. He managed his resources dexterously, steadily enlarged his stock of Senators and Assemblymen, added an attractive line of delegates to city, county, State, and national conventions, ornamented his show-window with Congressmen, Federal officeholders, and even Governors, and then in 1897 returned in triumph to the Senate. But in his twelve years there he has not brought forward any large piece of constructive legislation. His activities have been confined to the field in which he has won all his successes—if we may use that term—office-broking. With his mental equipment, he might have made a record to be proud of; but he deliberately narrowed his interests and centred his attention on petty jobs.

We need not press the lesson. It is easy to sneer at ideas and the idealists; but in the long run it is the idealist who wins and the gross materialist who goes down in shameful defeat. Platt and Platt's influence have wrought nothing but harm in State and nation. A life so sordid, unilluminated by lofty impulse, unredeemed by anything resembling devotion to duty, can secure but one verdict from history; and in this instance Platt's contemporaries anticipate the condemnation of posterity.

FRENCH ANTI-CLERICALISM.

Last week M. Clemenceau's Minister of Public Instruction appointed the Abbé Loisy professor of the history of religions at the Collège de France. The choice was significant, both because of the character of the man on whom it fell and the manner in which it was brought about. The authorities of the Collège de France had recommended M. Loisy; but the Academy of Moral Sciences, which had a voice in the mattor, declared in favor of another candidate by a vote of 19 to 17. Later the Academy reconsidered its action and came to the support of M. Loisy, who was promptly confirmed by the authorities. There can be little doubt that government pressure had been brought to bear on the Academy. The candidacy of M. Loisy had taken on a political aspect. Rejecting him would be a triumph for the Catholic cause; appointing him would be a striking demonstration of the government's unflagging zeal against Rome. For it must be remembered that M. Loisy is the most redoubtable champion of that dangerous heresy of Modernism which the Church has so recently spewed out of its mouth. As far back as 1893 the Abbé Loisy became suspect, and was removed from his professorship at the Institut Catholique. In 1903, five of his books were placed on the Index. In 1907, the Papal decree *Lamentabili sane exitu* stamped as heresy sixty-five propositions drawn largely from the writings of Loisy. The abbé replied. He was excommunicated, and Rome proclaimed a general war on Modernism in the encyclical *Pascendi*.

Neither the Church nor its enemies, in France, hold the opinion that everything was lost and won when Separation was effected some two years ago. The bishops and the faithful, under the lead of Rome, are taking up new positions and are reforming their ranks with an eye to continued resistance. The passionate anti-clericals are pressing on towards victories new. While the necessary after-effects of Separation move on apace, while Church property is being laicised and liquidated, and, on the other hand, the Church finances are being reorganized on the basis of voluntary contributions, the firing line has shifted from Parliament and the courts into the schools. The schoolmasters as a class have a strong liking for the revolutionary ideals so plentiful in France of the present day. Trade-unionism, as applied to their own profession, is defended. Teachers have been known to lecture their pupils on the folly of patriotism quite in accordance with the principles of Gustave Hervé. Naturally, the anti-religious spirit is strong in the average French schoolroom. Text-

books on the history of France, in which the rôle played by religion and the Church is neglected or slurred, are popular. In other words, the radical secularists have borrowed a page from the book of their opponents. They know what an advantage it is to carry your beliefs into the elementary schools. And the Church is fully conscious of the danger. Helpless, under the present régime, it sees its hopes of the rising generation being swamped by the teachers of irreligion, of spiritual and moral, as well as social, anarchy.

With the government definitely arrayed against them, the bishops must fight their battles by extra-political means. They must utilize public opinion. Since it would be less than useless for them to work on the schoolmaster or his superior, they are trying to work through the parents of the school children, whose future welfare they regard as threatened. The great majority of Frenchmen are, formally at least, still in communion with the old faith. The women are still largely susceptible to priestly influence. If the mothers and fathers of France could be brought to protest against the growing godlessness of the schools, there can be little doubt that they would have to be listened to. But for the success of such a policy, or of any policy that the Church in France may bring forward, it is essential that the Church should show a spirit of partial compromise, a certain readiness to recognize the logic of accomplished facts. And especially is it important that its members should act as Frenchmen and not as privates at the absolute behest of Rome. Unfortunately, Rome has shown no desire for compromise, and the Church in France displays no desire or ability to question the orders from Rome. The tendency is the other way. Because the French bishops in their plenary assemblies favored a policy of moderation in the Separation crisis, the plenary assemblies are now abolished and provincial assemblies are substituted. So strong a Catholic organ as *Figaro* has characterized this change as a scheme for splitting up the French Episcopate in order to prevent the formation of a united opinion, within the French Church, in possible opposition to Rome. At the beginning of January, M. Andrieu, the archbishop of Marseilles, probably the most steadfast opponent of compromise with the state, was raised to the dignity of cardinal. It was unmistakably a reward.

Under such circumstances, the anti-clerical swing is gaining force. It is war to the hilt, even if it is sometimes war to the point of the ridiculous. The author of a depreciatory life of Joan of Arc is made professor at the Sorbonne and riots follow. The Socialist Mayor of Ivry celebrates "civic baptisms." The new-born are brought in to the strains of the "Marseillaise," listen to a discourse on liberty and democracy, and depart to the strains of the "Internationale," taking with them a box of candy and a penny savings bank as the gift of the state. The situation is not pleasing to good Catholics.

WILLIAM MORRIS.

I.

Mr. Noyes, himself one of the most serious of the younger English poets, has written a life of William Morris in a tone of almost lyrical enthusiasm*; affording further evidence that the maker of "The Earthly Paradise," as the representative of one of the diverging lines from Tennyson's early Victorian compromise, is receiving more serious critical attention. When Morris went up to Oxford in 1853, bearing with him the humors of a strange romantic boyhood in Epping Forest, he was already steeped in Tennyson, and it was natural that he should have joined himself to a set of men who were under the same spell. "We all had the feeling," says Canon Dixon, one of that university group, "that after Tennyson no farther development was possible: that we were at the end of all things in poetry." As a matter of fact, though Tennyson no doubt exercised a strong influence on these ardent seekers after beauty, their course was to be by no means a continuation of the great Cambridge poet's.

Morris, too, like Tennyson, made a friendship at the university, which colored all the rest of his life. When he took his examination at Oxford, there sat beside him in the Hall of Exeter, a boy from Birmingham, Edward Burne-Jones, the future artist, with whom and three or four others was to be formed the Brotherhood (not to be confused with the Pre-Raphaelite Brotherhood), whose eccentric doings are chronicled so entertainingly in Lady Burne-Jones's memoirs of her husband. Both Morris and Burne-Jones were deeply imbued with the enthusiasm left over from the Oxford Movement, and their first aim was to form a conventual society with some vague notion of preserving and disseminating the religious ideas of the past. Meanwhile, their activity took the usual form of publishing a periodical, the *Oxford and Cambridge Magazine*. It succumbed after a few months, like other such ventures; and if a neglectful world was bettered thereby it was not immediately, but through the lasting influence of those warm aspirations on the men themselves. And I often think that nothing is more striking, nothing, indeed, more lamentable, than the absence of these little societies from our American universities. How utterly lonely and unhelped is the path of many college men who cherish the long hopes of youth. We have so little sense of the power and comfort of these frank conspiracies for fame; we seem to be born with a shame of great ambitions, and tremble lest any one should suppose we nourish a plot to conquer the world. And so we go out into life with no recollection of that first buoyant sympathy to hearten us against life's subduing indifference. We lack the reserve force and the retiring place of such a memory. Well, that is for America, and, perhaps, for England of to-day; not for the Oxford of the Brotherhood.

**William Morris.* By Alfred Noyes. (English Men of Letters.) New York: The Macmillan Co. 75 cents.

II.

Their religious zeal soon waned, if it was not rather factitious from the beginning. Morris might be described as a High Churchman and Neo-Catholic when he entered the university, but his religion even then was more a matter of the senses than of morals and creeds. There is a significant note in one of his earliest poems preserved in a letter to a friend:

> 'Twas in Church on Palm Sunday,
> Listening what the priest did say
> Of the kiss that did betray,
>
> That the thought did come to me
> How the olives used to be
> Growing in Gethsemane;
>
> That the thoughts upon me came
> Of the lantern's steady flame,
> Of the softly whispered name;
>
> Of how kiss and words did sound
> While the olives stood around,
> While the robe lay on the ground.

One can imagine the scorn with which Newman would have regarded this use of the Passion of Christ for æsthetic titillation—he who recoiled with suspicion even from the allurement of natural scenery. And there was little of the earlier zeal then at Oxford to correct or change this tendency. "The place was languid and indifferent," wrote Burne-Jones; "scarcely anything was left to show that it had passed through such an excited time as ended with the secession of Newman." In the hollow ritualism that was beginning to crystallize from the Oxford Movement our band of enthusiasts could find satisfaction neither for conscience nor for imagination, and they gradually turned from

this mixture to a pure art of the senses.

New influences, not of the university, began to take hold upon them. They grew deep in mediæval things; Poe's poems came across the water to open a realm of shadowy dreams; Ruskin's "religion of beauty" created in them the solemn conscience of art, and through Ruskin's "Edinburgh Lectures" they were drawn to the strongest force that operated upon them—Dante Gabriel Rossetti. It is not easy to account for the extraordinary domination of Rossetti over almost every one with whom he came into contact. We may call it the mystery of his personality; and this, if analyzed, will probably reduce in large part to the effect of invincible self-knowledge, to his sure instinct of knowing what he admired and what he wanted, while others were waiting for the guidance of some external impulse. And so, as he became better known to these Oxford searchers, he grew to be for a time a kind of high-priest of artistic taste. Their first serious incursion into art under the new leadership was that hilarious fiasco, when Morris, who had no training as a painter, and others who, if they could draw, knew nothing of frescoing, covered the walls of the Oxford Union with pictures which faded almost immediately into the plaster. But there were great days of talk and wild merriment when these friends, now settled in London, came back to Oxford as knights errant of the brush.

III.

The various interests of the world soon invaded that little *cénacle*, drawing its members into different paths of success, but the mark of those Oxford days and of their comradeship in the long hopes was never worn away. The precise work of each depended on his peculiar talents. For Morris, the future was determined by an æsthetic irritability that was not so much the all-eliminating impulse of the great artist as an indiscriminate hankering after beauty, and by a certain fluidity of temperament. You may sink your plummet into his mind, but you will touch no bottom; there is no solid core; all there is movement and flux, save this sense of beauty, which was itself largely a matter of flowing rhythm. The vision of life passed before his eyes in sequence, but without consequence; more than almost any other man of his age he had the romantic indifference to the law of cause and effect which locks events together into a kind of static system, and the bondage of logic he never suffered. The moral compromise of the age, also, which, as "In Memoriam" shows it, tried to combine the old notion of an eternal *fiat* with the new theory of evolution, was no problem to him. If Tennyson sometimes escaped from that constraint into the higher logic of the spirit, Morris moved for the most part as if unconscious of its existence. There is nothing immoral in his work; but of morality there we do not think at all, save as another term to distinguish the beautiful from the ugly.

This lack of a fixed centre is a part of the man's character, showing itself in little traits as in his large. There is no repose in his body. He had, says a friend, the "incessant restlessness of a wild creature." He was "fond of talking, which he did in a husky shout," and for emphasis had the "habit of beating his own head." If anything happened to check his impulse, he would fly into a gusty rage, and there are stories abroad of insane exhibitions of temper, such as striking his head against the wall, rolling in paroxysms on the floor, biting through window-frames, lifting coal-scuttles with his teeth, and the like Herculean feats—half inventions of Rossetti's humor, it may be, but characteristic of the man. His impatience of hindrance was like the boiling of a mountain torrent over a boulder. Of death he was notoriously afraid, not from any deficiency of physical courage, but in recoil from its final stay and pause.

The same restlessness runs through his artistic life. I am not sure that I can enumerate all the crafts he took up at one time or another, either in rapid succession or together, but weaving, dyeing, furniture making, paper designing, and printing were among them. So feverish was his method, that his great physical strength was worn out at the age of sixty-two (in 1896; it seems already long ago), and he succumbed to the disease, as his family doctor reported, of "being William Morris, and having done more work than most ten men." Excellent results were obtained in all these arts, even if sometimes, as in much of his printing, the delight in antique forms and the sheer lust of the eye overrode the craftsman's right feeling for utility. To these tasks of the hand he brought a magnificent scorn of "vagueness, hypocrisy, and cowardice," and his hatred of these sins against joyous and beautiful production was the real substitute in him for the moralist's dictates of conscience. One thing is specially noticeable: his successful work was almost purely decorative, depending on fluent line and skilful repetition. He never learned to manage figures, and when animal or bird was necessary to a design, he generally had it drawn in by another hand. A picture, properly speaking, he could never make, chiefly, I believe, because the concentration of sight and the static power of composition were so weak in him.

IV.

Poetry was but one craft among many for Morris, and he turned off his lines with incredible ease. "That talk of inspiration is sheer nonsense," he once exclaimed; "I may tell you that flat: there is no such thing: it is a mere matter of craftsmanship. . . . If a chap can't compose an epic poem while he's weaving tapestry, he had better shut up, he'll never do any good at all." And so he composed epics and lyrics and again epics amidst his other occupations, accomplishing once, it is said, as many as seven hundred lines in a single day. Mr. Noyes, who himself knows something of the poetic pains, stops to calculate this at about one line a minute for twelve hours on end, and is aghast and incredulous at such an *enfantement*. As a matter of fact, Morris's writing approaches more nearly than that of perhaps any other Englishman to the style of the *improvisatore;* it bears the same relation to the verse of other equally famous poets as the work of the arabesque decorator bears to that of the figure painter. "The poetic upholsterer," Sir Edmund Beckett called him, and Morris was astonished that this "harmless statement of fact" should have been meant for an insult.

Well, let us admit all this, and then add that Morris's verse is superb decoration. With all their shortcomings and their omission of the qualities that mark the great style, it is possible that a time may come when "The Earthly Paradise" and "Sigurd the Volsung" will be read more than many a poem that fails in a grander manner. Every one knows the simple and happily conceived plot of Morris's longest poem. It is told in the Prologue how certain gentlemen and mariners of Norway once, in the Middle Ages, set sail to find the Earthly Paradise, and after long wandering came at last to an island in the western sea, where dwelt a Greek people who still preserved the life and traditions of the ancient world. So throughout a year the elders of the two peoples entertain one another with stories of mediæval and classical origin, one of each source every month. There is no attempt on the part of the poet to differentiate his style for the two periods; his aim is to waft the reader to "a shadowy isle of bliss" which is neither pagan nor Christian, but the world's refuge of romance. From Chaucer he drew the plan of his poem, and with Chaucer in his Envoi he ranges himself as pupil with master. As a matter of fact, except for their common skill in weaving a story, there are few poets in English from whom Morris differed more than from his avowed model. Chaucer did not hate death as Morris hated it; nor did Morris have any understanding of that broad love of actual life that makes the savor of the "Canterbury Tales." His aim was rather to escape from the realities of living, while still shrinking from the contemplation of death or of the eternal things. To me the only really pathetic lines he ever wrote are the

prologue to "November," wherein he expresses this revulsion from the two realities:

Look out upon the real world, where the moon,
Half-way 'twixt root and crown of these high trees,
Turns the dead midnight into dreamy noon
Silent and full of wonders, for the breeze
Died at the sunset, and no images,
No hopes of day, are left in sky or earth—
Is it not fair, and of most wondrous worth?

Yea, I have looked and seen November there;
The changeless seal of change it seemed to be,
Fair death of things that, living once, were fair;
Bright sign of loneliness too great for me,
Strange image of the dread eternity,
In whose void patience how can these have part,
These outstretched feverish hands, this restless heart?

In those lines is something of the grand manner, as you will find it rarely, if anywhere else, in Morris—not the weight of Milton, but let us say the elfin gravity of Spenser in the later stanzas of "The Faerie Queene."

V.

Void patience was not in the heart or the hands of our craftsman, and for his refuge from life he turned to the "pageant-maker's imagery." You remember the story of "The Ring Given to Venus" and the young man, who, to recover the ring and therewith gain his human bride, was forced to stand in a place of wizardry by the sea while a procession of phantoms passed before him:

In after times would Laurence say,
That though the moonshine, cold and gray,
Flooded the lonely earth that night,
These creatures in the moon's despite
Were colored clear, as though the sun
Shone through the earth to light each one.
. . . . . .
And then his dazzled eyes could see
Once more a noiseless company;
And his heart failed him at the sight,
And he forgot both wrong and right,
And nothing thought of his intent;
For close before him now there went
Fair women clad in ancient guise
That hid but little from his eyes
More loveliness than earth doth hold
Now, when her bones are growing old;
But all too swift they went by him,
And fluttering gown and ivory limb
Went twinkling up the bare hill-side,
And lonely there must he abide.

Such a scene is a parable of Morris's own life save that, unlike Laurence, he never recovered his ring, and it affords the best criticism of the whole poem of "The Earthly Paradise." Like the distracted youth, the reader seems to be standing by enchanted waters drenched in a magic light, while dream-shadows flit before him, some terrible and some lovely; but the former pass with open mouths that emit no sound and raised hands that never strike, and the latter gleam only for a moment on the hillside and are gone. The best of the tales, to my taste, are those that use this pageant-like material most frankly—such as "Atalanta's Race," with its dazzling picture of the maiden running before her suitor to the goal:

Then flew her white feet, knowing not a doubt,
Though slackening once, she turned her head about;

or the "Cupid and Psyche," in which the solid gold of Apuleius seems to have dissolved into a golden haze, "the wavering memory of a lovely dream." One seems to take part in the process of transmutation by reading together passages of the Latin and of Morris's paraphrase. Thus, Psyche has been carried to the palace of her unseen lover, and the English poem continues:

Now went she through the chambers tremblingly,
And oft in going would she pause and stand,
And drop the gathered raiment from her hand,
Stilling the beating of her heart for fear
As voices whispering low she seemed to hear,
But then again the wind it seemed to be
Moving the golden hangings doubtfully,
Or some bewildered swallow passing close
Unto the pane, or some wind-beaten rose.

That is all evoked from a single phrase of the Latin: *vox quædam corporis sui nuda.* There is an element of magic in these simple words, no doubt, but nothing that corresponds to the tremulous uncertainty of the paraphrase, as if an enchanted mist had arisen between the palace and the beholder's eyes.

The great fault of "The Earthly Paradise" is its monotony. Very soon we begin to be aware that with all its seeming diversity, it is really extraordinarily poor in ideas. If we say that beauty and death, death and beauty, form almost the whole substance of the poem, it might seem that enough had been granted to furnish forth a library of verse; but Morris uses these topics with the least variety of effect. Death is only the cessation of beauty, and beauty is only the indistinguished blaze of gold and silver, lilies and roses, slender hands and white limbs. Nowhere is there any relief or emphasis, but an even, swift flow, which never invites the mind to pause, or reflect, or go back. In all the diffuse imagery of "Cupid and Psyche," for instance, you will not find anything like Apuleius's description of the chariot of Venus: *limæ tenuantis detrimento conspicuum et ipsius auri damno pretiosum.* Those words, which fascinated Pater by the cunning of their paradox, are altogether omitted by Morris. He was not one of those poets "who hoard their moments of felicity," but sowed from the whole sack. And too soon, this entire lack of concentration or hesitation in the mind of the poet results in something perilously like indifference in the mind of the reader.

VI.

If my own taste can be trusted there is less of this cloying monotony in Morris's other great poem, "Sigurd the Volsung." Already, while composing "The Earthly Paradise," he had become absorbed in Icelandic studies, and one of the later tales, "The Lovers of Gudrun," the finest of all his poems, if we may believe Swinburne, was taken directly from this source. In 1870 Morris, in collaboration with Magnusson, made a translation of the prose Volsunga Saga. Six years later he developed this into the magnificent epic of "Sigurd the Volsung," surely one of the high metrical triumphs of the nineteenth century. It is, of course, idle chauvinism to call these legends, as Morris does, "the Great Story of the North, which should be to all our race what the Tale of Troy was to the Greeks." Our literature and our ways of thinking do not come to us from the sagas, but from the classics and the renaissance. And it is mere wantonness, as some hot brains have done, to place Morris's work above, or even beside, that of Homer. Apart from the question of artistic form and beauty of expression, it lacks the full humanity of the Iliad, and its romance, beside that of the Odyssey, is as stammering to perfect speech.

In one respect "Sigurd" is like Morris's earlier work. If you read the poem pencil in hand you will find that you have no impulse to mark the lines for future reference, that you are never tempted to linger and reflect, but are jostled on from page to page. This is partly due to the metrical rhythm, which deserves a word to itself. In the tales of "The Earthly Paradise" Morris used the ordinary iambic pentameters and tetrameters, but he gave them a new character by lightening the accents, so that in place of the grave marching measure of Milton or the regular rattle of Scott, there is an even, almost unstressed flow. To such an extent does he carry this that many of the octo-syllabic lines have only three accents, with a huddling together of two or three unaccented syllables, while the pentameters have a trick of loosening into series of four or even three accents with still longer groups of unaccented syllables. Now write two of these three-stressed verses together, and you have the verse of "Sigurd":

Then he rose at once to his feet, and smote the harp with his hand,
And it rang as if with a cry in the dream of a lonely land;

or even more characteristic, as showing the tendency to bunch three light syllables at the cæsura:

But the thought of my heart is unstable, and my hope as the winter drift.

Morris himself no doubt believed that

he was using a metre equivalent in effect to the Greek hexameter; as a matter of fact, his rhythm, as Mr. Mackail observes, is probably closer to the original tumbling ballad sing-song out of which the classical dactyls and spondees were developed. Only there is still this difference, which Mr. Mackail does not observe: that the absence of a fixed syllabic quantity, such as we may assume to have been even more pronounced in Homeric than in later Greek, gives to Morris's measure an unpausing haste and, so to speak, a vague and fitful restlessness.

VII.

But this metrical effect, better than in "The Earthly Paradise," harmonizes with the emotional quality of the poem. As you read on and the magic of the imagery lays hold of the mind, you seem indeed to have been rapt away into the dream of a lonely land. Nothing is quite familiar, nothing quite stable. Before you drives a broken mist, through the rifts of which you catch glimpses of a changing and disconnected panorama—gold-gleaming palaces and gray weather-beaten castles, groups of huntsmen driving the deer in the deep glades, terrible kings frowning forward from their thrones, warriors battling within rings of fire, women wonderfully fair calling men to blind dooms. The effect comes, in part, no doubt, from the story itself as Morris found it in the Icelandic saga, but he has shown extraordinary skill in adaptation. Some of the cruder, more savage details he has omitted, and about the others he has thrown an emotional atmosphere almost entirely his own. Sigurd's fateful arrival at the castle of the Niblungs, for example, is told in the saga with the utmost simplicity: "Thus he rides until he comes to the hall of King Giuki; there he rides into the burg." That is all; whereas in the poem all the mystery of the future seems to meet the hero at the gate;

Upriseth the heart of Sigurd, but ever he rideth forth
Till he comes to the garth and the gateway built up in the face of the north:
Then e'en as a wind from the mountains he heareth the warders' speech,
As aloft in the mighty towers they clamor each to each;
Then horn to horn blew token, and far and shrill they cried,
And he heard, as the fishers hearken the cliff-fowl over the tide:
But he rode in under the gate, that was long and dark as a cave
Bored out in the isles of the northland by the beat of the restless wave;
And the noise of the winds was within it, and the sound of swords unseen,
As the night when the host is stirring and the hearts of kings are keen.
But no man stayed or hindered, and the dusk place knew his smile,
And into the court of the warriors he came forth after a while,
And looked aloft to the hall-roof, high up and gray as the cloud,
For the sun was wholly perished; and there he crieth aloud. . . .

There is, in fact, little feeling of any kind evident in the saga, but a mere recital of stark deeds. When Gudrun kills her two children, the brief scene is snapped off with a "yet for all that, she cuts the throats of them"—it is all in the day's work. Now there is, properly speaking, little more of real humanity in Morris than in the Icelandic story. His sense for moral values is of the most rudimentary sort, and the law of cause and effect, which we associate with the moral law, scarcely exists for him. As a consequence, we have small human sympathy with his characters. Yet an emotional quality he does have, and that in a high degree, latent no doubt in the original but developed into something quite his own. From first to last one feels a kind of dim fatality brooding over the poem, a strange troubled necessity, such as cannot be found in any other of the great epics. It is not the mystical fate of Virgil, the unknown law that governs men and gods for its own far ends; nor the apportioned lot of Homer; nor the blind chance of Lucretius; nor the divine will of Milton. It is the fatality of magic, a web of mist and cloud spun by the Norns; a something inhuman and elfin that sends through the reader a boding thrill as from the night-terrors of his childhood. "The Earthly Paradise" was a lovely and rather cloying fairy tale; "Sigurd" is the menacing fable of a witch.

P. E. M.

THE NEW COPYRIGHT LAW.

To the general surprise, the new copyright bill passed both houses of Congress last week. It consists of one complete and consistent copyright statute, in sixty-four sections. The term of copyright is lengthened. The bill leaves the present first term of twenty-eight years unchanged, but provides for a renewal term of twenty-eight years instead of fourteen, thus making possible a period of protection of fifty-six years from the publication of the work. The bill also provides for the extension of subsisting copyrights.

Copyright may now be secured for all the "writings" of an author, using the Constitutional expression. In enumerating and classifying works protected by copyright, the bill is more explicit than the present statutes, and adds the following new designations: "Lectures, sermons, and addresses, prepared for oral delivery"; "dramatico-musical compositions"; "plastic works of a scientific or technical character"; "reproductions of a work of art," and "prints and pictorial illustrations," in lieu of "engravings," "cuts," and "chromos"; and "works of art" instead of the present specific designations, "painting," "drawings," "statue," and "statuary." Express provision is made that compilations, abridgments, adaptations, arrangements, dramatizations, or translations and works republished with new matter shall be classed as new works subject to copyright. As regards a musical work, the bill provides, as does the present law, that the author shall have the sole right to perform the work publicly for profit, but adds the sole right "to make any arrangement or setting of it or of the melody of it in any system of notation or any form of record from which it may be read or reproduced." The composer's control of the reproduction of his music by mechanical instruments is qualified as follows: (a) to cover only music published and copyrighted after the act goes into effect; (b) not to include music by a foreign author or composer unless the foreign state or nation of which he is a subject grants to citizens of the United States similar rights; (c) whenever the owner of a musical copyright has used or permitted or acquiesced in the use of his work upon parts of instruments serving to reproduce mechanically the musical work, any other person may make similar use of the work upon the payment of a royalty of two cents on each part manufactured, notice to be filed in the copyright office of such use or license to use by the copyright proprietor.

American manufacture is required in the case of a book, not only as regards type-setting in the United States, but "if the text be produced by lithographic or photo-engraving process, then by a process wholly performed within the limits of the United States." The provision is also extended to illustrations within a book, and to separate lithographs and photo-engravings, "except where in either case the subjects represented are located in a foreign country and illustrate a scientific work or reproduce a work of art." The printing and binding of the book must also be performed within the United States. Photographs are released from the present requirement that they "shall be printed from negatives made within the United States or from transfers made therefrom." The "original text of a book of foreign origin in a language or languages other than English" is also excepted from the requirements of type-setting in the United States. A new *ad interim* protection is given books printed abroad in the English language. If one complete copy of such book is deposited in the copyright office not later than thirty days after publication abroad, copyright is granted for a period of thirty days from the date of receipt of the copy. If an authorized edition of the book is produced from type set in the United States during this second thirty days,

the full term of copyright is secured.

The much discussed provisions prohibiting the importation of copyrighted books are considerably modified. The importation of *piratical* copies of any work copyrighted is prohibited, and the importation of any books, "*although authorized by the author or proprietor*," which have not been produced in accordance with the manufacturing provisions, is prohibited. The Act of 1891 permits importation of books in "the case of persons purchasing for use and not for sale, who import, subject to the duty thereon, not more than *two* copies of such book at any one time." The new law permits importation, "not more than *one* copy at one time, for individual use and not for sale," and adds the proviso that "such privilege of importation shall not extend to a foreign reprint of a book by an American author copyrighted in the United States." The Act of 1891 allows importation in good faith for the use of societies incorporated or established for educational, philosophical, literary, or religious purposes, or for the encouragement of the fine arts, or for any college, academy, school, or seminary of learning. The new law confines the privilege to *incorporated* societies or institutions, but adds scientific societies and "any State, school, college, university, or free public library"; but while the Act of 1891 permits "*two* copies in any one invoice" to be so imported, the new law provides for "not more than *one* copy of any such book in one invoice" when "for use and not for sale."

In the case of infringement, an injunction may issue, as now, and damages be recovered as well as all the profits due to the infringement. The minimum damage to be recovered is $250, the same as now awarded, but the maximum is placed at $5,000, only half the maximum enacted by present law for infringements of works of fine arts. In the case of an unauthorized newspaper reproduction of a copyrighted photograph it is expressly provided that the damages shall not exceed $200, nor be less than $50, and it is further expressly provided that in no case shall the damage be regarded as a penalty. The old law prescribes that the damage shall be "for every copy *found*" in the infringer's possession "or by him sold or exposed for sale," whereas by the act the damages are assessed on "every infringing copy *made* or sold by or found in the possession of the infringer or his agents or employers."

The new law is more explicit than the old in regard to the transfer of copyright. This is declared to be distinct from the property in the material object copyrighted, and the transfer of the one shall not imply the transfer of the other; but it is provided in express terms that nothing in the act shall be deemed to forbid, prevent, or restrict the transfer of any copy of a work copyrighted, the possession of which has been lawfully obtained. Copyright may not only be assigned, as the present law provides, but "be mortgaged" or bequeathed by will, and when an assignment of the copyright in a specified work has been recorded, the assignee may substitute his name for that of the assignor in the statutory notice of copyright. Foreign assignments must be acknowledged before a consular officer or secretary of legation, and all assignments shall be recorded in the copyright office.

NEWS FOR BIBLIOPHILES.

One of the most important sales of the season, to be held by the Anderson Auction Company in this city, March 18 and 19, includes the library of William Hermann of White Plains, N. Y. A large number of valuable books, some remarkable for their condition, will be offered. Those with colored plates are perhaps the most notable, among them three of Pierce Egan's books, "Life in London" (1821), "Real Life in London " (1821-22), and "The Life of an Actor" (1825), all in the original parts, fine copies, as issued. A Beckett's "Comic History of England" (1846-48), with colored plates by John Leech, is in parts, and has inserted five of the original finished drawings in color. "The Annals of Sporting" (1822-28), 13 volumes; "The National Sports of Great Britain" (1825); the first, second, and third editions of the "Memoirs of the Life of the Late John Mytton," and "The Life of a Sportsman" are important books, with colored plates by Henry Alken. A complete set of the *Scourge* (1811-16), 12 vols.; Ireland's "Life of Napoleon" (1828), 4 vols.; Combe's "Life of Napoleon" (1815); "The Humorist" (1819-20), 4 vols.; Carey's "Life in Paris" (1822), large paper; and the much rarer book, "Gaieté de Paris" (1825), with the same plates, but with different text by W. H. Ireland, are notable works, with colored plates by George Cruikshank. A set of Grimm's "German Popular Stories" (1823-26), the first volume being the genuine first edition, and both volumes in the original boards uncut, is generally regarded in this condition as the most desirable of all Cruikshank's illustrated books. "Mornings at Bow Street" and "More Mornings at Bow Street" are both the earliest issue, uncut, with four autograph letters of Cruikshank relating to the books. Brough's "Life of Sir John Falstaff" (1858) has inserted three of Cruikshank's original colored drawings, differing slightly from the etchings as published. Books with colored plates by Thomas Rowlandson include "The English Dance of Death" (1815-1817) and "The Dance of Life" (1817).

Three early Shakespeare quartos "King John" (1622), "Richard III" (1629), and "The Life of Sir John Oldcastle" (1600); a Fourth Folio (1685), Suckling's "Fragmenta Aurea" (1646), Ben Jonson's Works (1616-40), and Milton's "Paradise Regained" (1671) are notable seventeenth century rarities. No copy of the first edition of "Robinson Crusoe" (1719) seems to have been offered at auction in America since the Foote sale in 1895. The copy here offered does not contain the third volume "Serious Reflections of Robinson Crusoe" (1820), but that volume, which has not been reprinted in later editions of Robinson Crusoe, is of slight interest to collectors and of small market value. Among the first editions of nineteenth century English authors are several exceedingly rare and valuable items, the most notable, perhaps, a copy of the first edition of "Waverley" (1814), in the original boards, uncut, but with backs and labels supplied. Jane Austen's "Pride and Prejudice" (1813), 3 vols., one of the rarest of modern books, is first offered at auction in this country. Among the first editions of Shelley are "Queen Mab" (1813), a presentation copy, in the original boards, uncut; and "Epipsychidion" (1821), with the rare half-title and with the autograph of Shelley on the title-page. The Lamb items include "Blank Verse" (1798); "The King and Queen of Hearts" (1805), but with the cover dated 1808; and "Beauty and the Beast" (1811). Keats's three books "Poems" (1817), "Endymion" (1818), and "Lamia" (1820), are uniformly bound by Sangorski and Sutcliffe and offered as a set. There is also a second copy of "Endymion" in the original boards, uncut. Matthew Arnold's first publication, "Alaric at Rome" (1840), is a presentation copy in the original paper cover, a book which has never before appeared in an American auction room. Stephen Phillips's "Orestes and Other Poems," a little pamphlet in yellow glazed paper-cover, printed for private circulation in 1884, with a missing line supplied in the author's autograph, is also the first copy ever offered at auction here. The Dickens collection is remarkable. Besides a collected set of first editions, 68 vols., uniformly bound in full levant morocco by Zaehnsdorf, we note a copy of "Sketches by Boz" (1839), the first octavo edition, with an original water-color by George Cruikshank, and an A.L.S. of Dickens referring to the book; "Nicholas Nickleby" (1839), with an A.L.S. of Dickens pointing out an error in the proof; "Martin Chuzzlewit" (1844) with five original drawings by "Phiz" inserted; presentation copies of "Dombey and Son" and "Pictures from Italy," as well as several of the novels in parts, and two books from Dickens's library. Notable Thackeray items are the *Gownsman* (1830), a little college periodical to which Thackeray was a contributor, seventeen numbers, complete in one volume, original boards; and "The Paris Sketch Book" (1840), "Notes of a Journey from Cornhill to Grand Cairo" (1846), and "The History of Pendennis" (1850), each containing one or more original drawings by Thackeray.

The first editions of American authors include Poe's "Al Aaraaf, Tamerlane, and Minor Poems" (1829), in the original boards, but with trimmed edges (similar to the copy which recently brought $1,200 in Philadelphia); Maria Lowell's "Poems" (1855), presentation copy; Irving's "Chronicle of the Conquest of Granada" (1829), with twenty-five lines of the original manuscript inserted; a Whittier leaflet, "In War Time," with autograph corrections; and a fine copy of Thoreau's "A Week on the Concord and Merrimack Rivers" (1849). The Hawthorne "Love Letters," printed for a Chicago book club, the Society of the Dofobs, by the courtesy of W. K. Bixby of St. Louis, the owner of the manuscript, is

the first copy offered at auction. Of sixty-two copies printed two went for copyright, ten were retained by Mr. Bixby, and fifty went to the members of the club. A copy recently changed hands privately at $200.

In tbe list of manuscripts is a folio half-bound blank book belonging to the Thoreau family, first used by Sophia, then by John, and finally by Henry D. Thoreau as a journal. It contains a number of notes about birds around Concord by John and Henry, as well as tbe first rough draft, 25 pages, of "A Walk to Wachusett." Between the leaves are pressed specimens of grasses and wild flowers with their scientific names on little slips of paper written by Thoreau. One of Charlotte Brontë's manuscripts, "Tales of the Islanders," written in 1829; several Washington letters, a volume containing Lincoln autograph letters and documents and letters written to Lincoln, and a similar volume containing specimens of twenty-four Victorian authors, are other interesting items.

Among the Americana are Hakluyt's Voyages (1599-1600), 3 vols.; Hubbard's "Present State of New England" (1677); Hopkins's "Historical Memoirs Relating to the Housatunnuk Indians" (1753); and Hubley's "History of the American Revolution" (1805), Vol. 1, all published.

In addition to the association items already noted, may be mentioned a series of twenty-eigbt volumes from the library of Thomas Jefferson, a book with Hawthorne's autograph and one with Thackeray's embossed stamp. Jefferson's library, sold to the government in 1815, formed the nucleus of the present Library of Congress. Books from his library therefore seldom come upon the market. It was not his custom generally to write his autograph in his books, but instead to make a private mark. Where the signature mark I or J occurred at the bottom of the page he would put a manuscript T before the signature letter; in the same way on signature T he would put a manuscript J after the signature letter. Most of the books offered in the present sale contain one or more of these private marks. Several also have the autograph of his daugbter, but only two or three contain his own autograph signature or notes.

The Merwin-Clayton Sales Company of this city will sell on March 16, 17, and 18 a collection of books including a portion of the library of the late Rev. E. P. Roe. There are several volumes of early English poetry, among them John Donne's "Poems" (1634), first edition; William Cartwright's "Comedies, Tragi-Comedies with other Poems" (1651); Charles Cotton's "Poems on Several Occasions" (1689); and John Lilly's "Sixe Court Comedies" (1632). Notable also are a nearly complete series of the first editions of Robert Louis Stevenson; 24 lots relating to "Don Quixote," including several unusual editions; Pierce Egan's "Life in London" (1821), large paper; and publications of the Club of Odd Volumes, Dunlap Society, and Essex House Press.

On March 16 and 17, C. F. Libbie & Co., Boston, will sell a collection of books, including the library of F. J. Mansfield of Burlington, Ia. Early American almanacs, books on the civil war, and a complete set of the publications of the Maine Historical Society are items of importance.

The second portion of the library of Lord Amherst of Hackney will be sold by Sotheby, Wilkinson & Hodge, London, March 24 to 27. The books printed by Caxton, which would have been included in this portion, are mentioned in their proper places in the catalogue, with the statement that they were sold privately. This collection of Caxton's, as was announced at the time, was purchased *en bloc* hy J. Pierpont Morgan. This portion of the Amherst sale includes two copies of the First Folio Shakespeare, neither absolutely perfect, but the two together will make a perfect copy lacking only the title-page. Only one Shakespeare quarto seems to have been owned by Lord Amherst, the Roberts edition of "A Midsomer Night's Dream" (1600). The collection of editions of English Prayer Books is very extensive, and there are no less than nine editions of Henry VIII's "Primer." Among the early printed books is a copy of Jenson's edition of Pliny's Natural History (Venice, 1472), one of the most beautiful productions of the early Venice press, described as an exceedingly fine copy. Several early English literary manuscripts are notable items; among them is a volume containing English poems by John Northwodde of Bordesley, near Birmingham, written in 1386; a manuscript by Thomas Occleve; and two fifteenth century manuscripts by Richard Rolle of Hampole.

The current number of the *Library*, the English quarterly, contains a Bibliography of Milton, by Alfred W. Pollard of the British Museum. The controversial pamphlets are described, as well as the more interesting and valuable poetical works. In arranging the title-pages of "Paradise Lost," Mr. Pollard agrees witb most of the recent writers, and gives precedence to the 1667 edition, with Milton's name in large type, though in the Amherst catalogue a copy of this form is described as second issue.

Correspondence.

POE'S INDEBTEDNESS TO BYRON.

To the Editor of The Nation:

Sir: A recent book on Byron's vogue and influence in America dismisses Byron's influence on Poe with less than a page. Poe's editors and biographers have, with few exceptions, made more of the matter, and some of them have held that Poe was in his earliest volume of poems—the famous little edition printed at Boston in 1827—pretty completely under the Byronic spell. Prof. G. E. Woodberry, for example, asserts in his life of Poe that "Tamerlane" is thoroughly Byronic, and implies that the rest of Poe's first volume was largely modelled after Byron. Two other distinguished editors of Poe, E. C. Stedman and R. H. Stoddard, have even ventured to specify the works of Byron that most influenced two of Poe's poems: Stedman in one of his essays on Poe proclaimed "Tamerlane" a "manifest adumbration of 'The Giaour'"; and Stoddard has pointed out that parts of "Al Aaraaf" evidence an acquaintance with Byron's "The Deformed Transformed." But no student of Poe has taken the trouble to look into the matter of Poe's indebtedness in detail or with any attempt at exhaustiveness. Such an attempt must have made it clear that Poe's indebtedness to Byron extended considerably farther than has heretofore been held. It is revealed not alone in the volumes of 1827 and 1829, but also in the volume of 1831, and in some of the fugitive poems tbat appeared even later. Furthermore, it involves not only the reflecting of some Byronic mood or the imitation of Byron's general method and style, but also, in several cases, the horrowing of Byron's themes and, in a few instances, the appropriation likewise of his language.

"Tamerlane" not only adumbrates "The Giaour," as the critics bave pointed out; but it also resembles Byron's "Manfred." For "Manfred" has all the significant motives which "Tamerlane" and "The Giaour" have in common; and possesses, besides, in its hero, a better prototype of Poe's hero than does "The Giaour." Moreover, there is a rather close parallel both in phrase and in situation between a passage in "Manfred" (iii, 1, 66-78), the prologue to Manfred's confession, and the opening lines of "Tamerlane" (1-12). Besides "Tamerlane," there are in the volume of 1827 five brief personal lyrics in which Poe sings, in the manner of Byron, of his own joys and sorrows, of his youthful pride and ambitions, and of subsequent disappointment and despair. These are: "Dreams," "A Dream within a Dream," "A Dream," "The Happiest Day, the Happiest Hour," and "Stanzas," the last on the list taking its cue from a mystical passage in Byron's "The Island" (Canto ii, Stanza 16), which Poe uses as the motto of his poem. And in the volume of 1829 there is one other lyric in the same strain as these, the piece there called "Preface," but known in the edition of 1845 as "Romance." Still later poems which strike the same notes are "To One in Paradise" (1835) and the sonnet "To Zante" (1837). Sundry other poems in these early volumes deal with themes or situations that put the reader in mind of themes or situations that Byron had also bandled. Tbe lines "To —— ——" (beginning "I saw thee on thy bridal day"), now usually interpreted as referring to Miss Royster's marriage to Mr. Shelton, will remind one of the partial likeness between Poe's love affair with Miss Royster and Byron's with Mary Anne Chaworth, and will recall Byron's numerous verses on his unhappy passion. Two other early poems with the exasperating title "To ———," beginning, respectively, "The bowers whereat in dreams I see," and "I heed not that my earthly lot," are also Byronic, the latter of the two presenting a situation analogous to that of Byron's lines, "And Wilt Thou Weep When I am Low?" "The Lake," with its wild setting and its mention of suicide, finds a parallel in the situation in "Manfred" (i, 2), where the hero of that drama contemplates suicide amid similar environments. Another distinctly Byronic piece is the blank-verse description of the Coliseum, a subject that Byron had twice dealt with—first in "Manfred," and later in the fourth canto of "Childe Harold." And there is some similarity in context between Poe's fantastic verses "To the River ——" and Byron's "Stanzas to the Po."

But the most interesting examples of Poe's indebtedness to Byron are furnished by two poems not so far mentioned. These are his juvenile production entitled "Spirits of the Dead," and the remarkable dream-fantasy, "The City in the Sea." The first

exemplifies a sort of borrowing that Poe indulged in, so far as is known with certainty, in only one other of his poems, "Al Aaraaf," in the first part of which he incorporated, with slight modifications, several passages culled from "Lalla Rookh." Poe's "Spirits of the Dead" is largely a piece of mosaic, a patchwork made up of words and ideas drawn from a passage in Byron's "Manfred," the memorable incantation at the end of the first scene of the first act. The most striking parallel appears in the following couplets:

Now are thoughts thou shalt not banish—
Now are visions ne'er to vanish;

There are shades which will not vanish,
There are thoughts thou canst not banish—

the first being lines 19 and 20 of Poe's poem —the other, lines 13 and 14 of Byron's. Other resemblances are less striking, but can hardly be held to be accidental. In the concluding stanza of Poe's "Spirits of the Dead"—

The breeze—the breath of God—is still—
And the mist upon the hill
Shadowy—shadowy—yet unbroken,
Is a symbol and a token—

there is pretty close agreement, both in thought and in expression, with lines 7 to 10 of Byron's poem:

[When] the silent leaves are still
In the shadow of the hill,
Shall my soul be upon thine
With a power and with a sign.

There is also some resemblance, though only in thought, between lines 11 and 12 and 15 to 18 of Poe's poem and lines 37 to 40 of Byron's poem. Byron's incantation comprises seventy lines; Poe's lyric, less than thirty. But the two have three rhymes in common, and there are in Poe's poem no less than fourteen lines that find some visible correspondence in Byron's.

The indebtedness revealed by "The City in the Sea" is less obvious than that seen in "Spirits of the Dead," but is, I believe, none the less real. In its imagery and in its melody, "The City in the Sea" puts one in mind of Coleridge, and it may well owe something to "Kubla Khan." But for the general situation with which the poem deals, it is my belief that Poe was indebted to Byron's melodramatic lines entitled "Darkness." Byron's concern in "Darkness" is to picture conditions on earth as they will be on the last day of the world's existence. Poe also appears to be concerned with the end of the world—not, however, with terrestrial conditions on that dread day, but with the destruction of death and hell, of which the apostle writes in Revelation. In painting his weird picture, Poe probably went for some of his details, as Byron had done before him, to the Scriptures, but he appears to have borrowed from Byron's poem two of his most impressive situations: the extinction of all light in the heavens, and the utter stillness of the winds accompanied by supreme calm upon the waters everywhere. The first is depicted in Byron's poem in these lines:

The bright sun was extinguished, and the stars
Did wander darkling in the eternal space,
Rayless and pathless.

and in Poe's poem in these:

No rays from the holy heaven came down
On the long night-time of that town.

The second situation Byron presents thus:

The rivers, lakes, and ocean all stood still,
And nothing stirr'd within their silent depths;
Ships sailorless lay rotting on the sea,
And their masts fell down piecemeal; as they dropp'd
They slept on the abyss without a surge—
The waves were dead; the tides were in their grave,
The Moon, their mistress, had expired before;
The winds were withered in the stagnant air,
And the clouds perish'd.

The corresponding situation in Poe is presented thus:

There open fanes and gaping graves
Yawn level with the luminous waves;
But not the riches there that lie
In each idol's diamond eye—
Not the gaily-jewelled dead
Tempt the waters from their bed;
For no ripples curl, alas!
Along that wilderness of glass—
No swellings tell that winds may be
Upon some far-off happier sea—
No heavings hint that winds have been
On seas less hideously serene.

There are no verbal agreements between the two poems, but the general resemblance seems to me too close to be traced to accident.

Such other resemblances between Byron and Poe as I have stumbled on are less obvious or less noteworthy than those already mentioned; and it may be that most of them are nothing more than coincidences. I submit them, however, since their cumulative evidence may be worth something. First in order of time is the line from the concluding section of "Al Aaraaf":

The night that waned and waned and brought no day,

which is perhaps a reminiscence of the sixth line of Byron's "Darkness":

Morn came and went—and came, and brought no day.

In Poe's "Irene" (the earlier form of "The Sleeper") occur these lines:

The lady sleeps: oh! may her sleep,
As it is lasting, so be deep—
No icy worms about her creep;

the first two lines of which will recall the following couplet from the incantation in "Manfred," already mentioned as the source of Poe's "Spirits of the Dead":

Though thy slumber may be deep,
Yet thy spirit shall not sleep.

And the third line in the same passage finds a parallel in these lines from "The Giaour" (945-948):

It is as if the dead could feel
The icy worm around them steal,
And shudder as the reptiles creep
To revel o'er their rotting sleep.

Finally there is some resemblance between the exquisite song of Nesace in the second part of "Al Aaraaf," beginning:

'Neath blue-bell or streamer—
Or tufted wild spray
That keeps from the dreamer
The moonbeams away—

and the Stranger's incantation in the first scene of Byron's "The Deformed Transformed," which begins with the words:

Beautiful shadow
Of Thetis's boy!
Who sleeps in the meadow
Whose grass grows o'er Troy.

Stoddard a good many years ago called attention to the resemblance between Nesace's song and another lyric in "The Deformed Transformed," beginning:

The black hands came over
The Alps and their snow;

but the resemblance to the Stranger's incantation is closer both in movement and in substance.

Other instances of Byron's influence doubtless remain to be pointed out, but these are sufficient to warrant certain general conclusions as to Poe's indebtedness. With reference to the period of Byron's influence, it may be said that Poe was most under the Byronic spell during the half-dozen years just preceding 1830, and that this spell was not entirely broken before 1837. With reference to extent, it is safe to say that Byron's influence is reflected in two out of three of the poems printed before 1840, and hence in almost half of all the poems that Poe wrote. In some cases, this influence is, as always with the influence of Coleridge, vague and impalpable, but in others it is both substantial and easily perceived. The works of Byron to which Poe owed most appear to have been "Manfred," "Childe Harold," and "The Giaour."

KILLIS CAMPBELL.

University of Texas, Austin, February 20.

GOETHE'S CONVERSATIONS.

TO THE EDITOR OF THE NATION:

SIR: An entirely new edition of the late Baron von Biedermann's standard collection of all known conversations of Goethe is now being prepared with the active encouragement of the leading Goethe scholars. In view of the great importance of this work, every effort is being put forth to make this final edition as complete and reliable as possible in every respect. Hence any one in possession of any additions or corrections to the first edition is earnestly requested to send them to the general editor, Freiherr F. W. von Biedermann, No. 33 Albrechtstrasse, Steglitz bei Berlin; or to the undersigned (who is editing the conversations recorded in English). The accounts of the following Englishmen and Americans have already been examined and prepared for the press: G. Bancroft, Albert Brisbane, G. H. Calvert, J. G. Cogswell, George Downes, H. E. Dwight, William Emerson, R. P. Gillies, A. B. Granville, G. H. Lewes, John Murray, Sir Charles Murray, H. C. Robinson (MSS.), W. R. Swifte ("Wilhelm's Wanderings"), Thackeray, George Ticknor, Joseph Wolff (exact date still undetermined); but there must be many others still unnoticed.

LEONARD L. MACKALL,

Kaiser Wilhelmstrasse, 13, Jena, Germany, February 17.

SAMUEL PEPYS, 1633-1703.

TO THE EDITOR OF THE NATION:

SIR: I enclose a clipping from Catalogue No. 730, issued by the Anderson Auction Company of New York city:

238. [DEFOE (DANIEL).] Memoirs of the life and adventures of Signor Rozelli at the Hague. * * * *Adorned with curious copper-plates.* Transl. from the French by Defoe. 2 vols. 12mo. original panelled calf. Name of Richard Usticke on title. Lond. 1724

RARE. Both volumes bear the fine old bookplate of Reginald Pole. Vol. 2 has the initials S. P. on a fly-leaf—query, Samuel Pepys?

Was it not Eugene Field who chronicled the discovery by a Chicago bibliophile, of Dante's autograph on the fly-leaf of a volume of Ella Wheeler Wilcox's poems? K.

Cincinnati, February 20.

THE DESTRUCTION OF BERYTUS.

To the Editor of The Nation:

Sir: The fate of Berytus (the modern Beirût), a prosperous port of Phœnicia, which was destroyed in 551 A. D. by earthquake and fire, presents such a parallel to the recent disaster at Messina that the following epigrams from the Greek, the first two by the contemporary poet, Joannes Barbucallus, are not without modern interest. There is pathos in the thought that Poseidon, "the earthshaker," appears on coins of Berytus, and that he, as well as the sea-born Aphrodite, proved to be no reliable patron saint.

Palatine Anthology, ix, 425: Here am I, that unhappy city—no more a city—lying in ruins, my citizens dead men, alas! most ill-fated of all! The Fire-god destroyed me after the shock of the Earth-shaker. Ah me! From so much loveliness I am become ashes. Yet do ye who pass me by bewail my fate, and shed a tear in honor of Berytus that is no more.

Anthology, ix, 426: Where is Aphrodite, guardian of the city, that she may look upon the shelterless haunt of the dead, once the abode of the Graces? A tomb of tombless men is the city, under whose ashes we lie, Beroe's many thousands. Inscribe upon a single stone above us, dear mortals who survive: "Here lies Berytus, lamented city, buried above ground."

Antbology, ix, 427: Sailor, stay not thy vessel's course for me, nor lower thy sails: dry land is the port you see. I am become one tomb; to some other place, free from sorrow, shalt thou urge with sounding oar thy advancing bark. Such was the will of Poseidon and the hospitable gods. Farewell, sea-faring men; farewell to you who fare on land!

H. H. Yeames.

Hobart College, Geneva, N. Y., March 1.

THE LOVE OF STUDY.

To the Editor of The Nation:

Sir: An editorial in the *Nation* of February 25 revives a faint hope of a return to the love of study, apparently a thing of the past. Our general system of education well deserves the name "macbine made." It is a rush through grades from the singularly unideal kindergarten to the entrance examinations of college, for which youth is practically fitted with the smallest margin of non-requirements. And from college the exit is accomplished, to quote a schoolboy phrase, "on the shave." The great end to be reached by many of our students seems to be forgetfulness of everything learned that does not directly contribute to the accumulation of dollars and cents.

This is a curious and melancboly state of affairs, difficult to comprehend by a person educated in an old-fashioned way, in a home library where a love of the best in literature and art was developed very early, where learning to read was the deligbtful means to a still more delightful end, the perusal of poetry and story, history, and those beginnings in science called natural philosophy. It was not a college degree that added lustre to early maturity, but an abiding joy in study, a zest in acquiring knowledge that never dims, but presses middle age to further endeavor, and even vitalizes the sluggish current of the general reading of to-day with a copious admixture from the living springs of the past.

S. M. H. G.

Andover, Mass., March 2.

THE TRAINING OF AN ARTIST.

To the Editor of The Nation:

Sir: In your issue of February 25 you publish an article entitled "The Case of the Art School." Mr. Borglum's article in the *Craftsman*, which furnished you with the text, was supposedly read by people who knew something of the truth of the matter in hand; let them judge for themselves. The article in the *Nation* has been read, I imagine, by many who accept your statement as the final word. In justice to the earnest workers who are striving to uplift the public through their teaching in the schools I ask you to publish this protest.

Your main cause of complaint is that art schools profess to produce artists; that this is wrong—that their highest aim should be to create artisans. The first is, of course, not the boast of any art school: the divine fire is not in human gift. But will it burn less brilliantly for being guided? It might, perhaps, if it were true that the student worked under "rare and perfunctory criticism." But by what authority do you state that such is the case—or that he is held to "a stupid routine of drawing the human body" "as an inert and bulging mass." If you will investigate modern methods you will find that the sketch and action classes play large parts in the study of the figure.

You state that the "road to art is through fine handicraft"—and seem to imply that it is the end and aim. None more than art teachers realize that sound craftsmanship is one of the fundamentals; but it is not all. Is Tadema, with all his technical perfection, rated above Watts, whose methods left much to be desired? And you profess that the "only way" is the fifteenth century one of apprenticeship to a great artist. As well state that the only proper way for us to get a classical education would be to sit under Filelfo or an Aretino, as in the good old renaissance days.

If you investigate the modern art school, you will find that the reasoning of all the ages is given the student as a foundation for his structure: will the divine fire be hurt by such methods? As well say that it is folly for the budding poet to study grammar, or to take a course in comparative literature. Where is the wisdom of ordaining that a beginner shall subject himself "to many years of practical servitude" under a master? He will, it is true, learn to be of great help to that master (all that Mr. Borglum desires, evidently)—but will he learn any of the great underlying principles of art? Yes, if the artist be a very great man, and is sympathetic; but in most cases, very decidedly, no. How much better to go to a school where what spark of fire the student may have will be kindled by the enthusiasm of the teachers and the emulation of his fellows; and history and theory and practice given him in such manner that it will be the best stimulus!

You test the "efficacy of modern art education" by the number of former art students "earning their living by the practice of their art," and announce "an insignificant fraction." But only the born artist will be able so to support himself—and the art school merely professes to give good training to those who come, and not to create artists. And as for the adverse opinions given by "great modern painters" concerning their training, it must be remembered that in their student days the old systems still obtained. Though you do not credit them with the fact, the modern art schools are probably almost as progressive as you, yourself. Fortunately you acknowledge that "even in the school, we may hope to make competent craftsmen." Do not mislead the public into thinking that it is useless to try to train the artist also. Investigate before you state that this "so-called training is based on vicious doctrine or sheer pretence"—you may find that the teachers are as sincere and as honorable as you yourself, and, perbaps, as reasonable. Huger Elliott.

Director, Rhode Island School of Design.

Providence, March 3.

[It is proper to say that the article in question was contributed by one eminently qualified to speak on the subject. We believe it is true, for example, that the exhibitions of the so-called "Arts and Crafts" in this country disclose a handicraft not equal to that abroad, where manual dexterity is more exactingly taught. If the modern art school turned out competent work, it would be shown in the competitions for a great post-graduate prize, such as the Lazarus Scholarship for Mural Painting. On the contrary, these competitive works, as various artists testify, display deficiency both in invention and craftsmanship. It is also significant that our commercial decorative houses prefer European labor, because the European hand is better trained than the American. These are some of the considerations which lead us to believe that our contributor was right.—Ed. The Nation.]

POLITICS AND A FEDERAL BANK.

To the Editor of The Nation:

Sir: Would not the same factor (politics) that destroyed the second United States Bank, tend to destroy a similar institution to-day? B. H. Hibbard.

Iowa State College, Ames, March 5.

THE WATER OF THE MIDDLE YUBA.

To the Editor of The Nation:

Sir: There is only one statement in Mr. Edmund A. Whitman's letter in your issue of February 25 that needs an answer. Mr. Whitman says:

Mr. Olney reiterates that San Francisco must go to the Tuolumne because the waters of all other streams are already monopolized, and yet he was present at the hearing in Washington when Mr. Englebright, the member of Congress in whose district Hetch Hetchy lies, called attention to the Middle Fork of the Yuba River, where one hundred million gallons a day can be had, and where the water is now "used for nothing."

Here is the stenographic report of what Mr. Englebright said about the Middle Yuba, pages 376-377 of the Proceedings before the Committee on Public Lands:

The Chairman. Is the water now used for irrigation—the lower Yuba?

Mr. Englebright. No.

The Chairman. Is it utilized for mining?

Mr. Englebright. It is used for nothing. The only use is on the North Yuba and the South Yuba. The North Yuba is used for power and some irrigation. The Middle

Yuba is practically unused at all, except by a single mining company.

The Chairman. It is not available for irrigation, then?

Mr. Englebright. Not at the present time. It would be if canals were constructed.

The Chairman. Is there territory adjacent to that which requires irrigation?

Mr. Englebright. Yes, there is. It has simply never been built (utilized?) on account of the expense.

To the best of my knowledge Mr. Whitman is the only person that has ever suggested the Middle Yuba as a source of water supply for the cities about San Francisco Bay. I know of no statement being made of the quantity of water that can be obtained from the Middle Yuba. Mr. McCutcheon, representing the Spring Valley Water Works, before the committee, had said that the Middle and South Forks of the Yuba could be relied on for one hundred million gallons per day, but it is evident that the South Fork was what he principally had in mind. All people acquainted with the country know that the reservoir sites are on the South Yuba and those have been utilized for fifty years. The largest one is Bowman's Dam. There are two small reservoir sites on the Middle Fork high up in the mountains, viz: English Dam and Milton, but their capacity is small and the watershed above them is small. They are about seventy-five miles northeast of the city of Marysville. A glance at the map will show how impossible it is to utilize the waters of that stream. San Francisco had both the South and North Yubas carefully surveyed, and her engineers have rejected both. The pipe line would necessarily be twice the length of the one from Tuolumne River. If cost were not an element to be considered, New York city could obtain its water supply from Lake Erie.

It is within the power of the United States to make the cost to the bay cities of procuring water from the Sierras so great that the supply cannot be obtained in our time. If we are not permitted to take water from the Hetch Hetchy that water will not be permitted to go to waste, but will be diverted below the line of the National Park and utilized for power purposes, thereby precluding San Francisco from getting that supply, the same as she is now precluded from the other accessible streams of the Sierras. WARREN OLNEY.

San Francisco, March 4.

Notes.

The spring list of Longmans, Green, & Co. contains a number of attractive titles, among them: "A Pluralistic Universe," the Hibbert Lectures for 1908, by William James; "The Springs of Helicon," a study in the progress of English poetry from Chaucer to Milton, by J. W. Mackail; "Roget's Thesaurus of English Words and Phrases," recomposed throughout; "Chapters on Municipal Administration and Accounting," and "Railroad Promotion and Capitalization in the United States," by Frederick A. Cleveland; "The Essentials of Self-Government (England and Wales)," by Ellis T. Powell; "Joseph Cowen's Speeches on the Near Eastern Question," revised by his daughter; "The English Scholarship System, in Its Relation with the Secondary Schools for Boys and Girls," by M. E. Sadler; "The Curious Case of Lady Purbeck: a Scandal of the XVIIth Century," by the author of "The Life of Sir Kenelm Digby"; "Visitors to the New World before and after Columbus," by Marion Mulhall; "Ireland under the Stuarts and during the Interregnum," by Richard Bagwell; "The Political History of England," Vol. IX, 1702 to 1760, by I. S. Leadam; "Unemployment," by W. H. Beveridge; "The Spirit of Christ in Common Life," by Dr. Charles Bigg; "A Memoir of George Howard Wilkinson," by Dr. A. J. Mason; "History of the Doctrine of the Holy Eucharist," by Darwell Stone; "The Dawn of the Catholic Revival in England, 1781-1803," by Bernard Ward; "Historical Letters and Memoirs of Scottish Catholics," by the Rev. W. Forbes Leith, S.J.

W. S. Booth is said to have discovered about two hundred acrostic signatures of Francis Bacon in books, which, with few exceptions, appeared under the names of other men, or with no names at all. Among the authors who are thus robbed of works commonly attributed to them are Spenser, Marlowe, Puttenham, Bodenham, and Shakespeare. His theories are to be published this spring by Houghton Mifflin Co. in a book entitled "Some Acrostic Signatures of Francis Bacon." Many facsimiles will help the reader to test the theory by his own eye. The motto for the volume we have not heard; we should like to suggest as appropriate:

And many are amazed and many doubt.

Among the other books promised for this spring by Houghton Mifflin Co. are: "The People at Play," by R. L. Hartt; "Haremlik," some pages from the life of Turkish women, by Demetra Vaka (Mrs. Kenneth Brown); "Wild Life on the Rockies," by E. A. Mills; "Stickeen," by John Muir; "A Voyage on an Ice-Pan," by W. T. Grenfell; "My Cranford," by Arthur Gilman; "Remaking the Mississippi," by J. L. Matthews; "Human Nature in Politics," by Graham Wallas; "State Insurance," by F. W. Lewis; "Education in the Far East," by C. T. Thwing; "The Life of Edgar Allan Poe," rewritten, by G. E. Woodberry; "The Autobiography of Nathaniel Southgate Shaler"; "The Life, Letters, and Journals of George Ticknor," new edition with introduction by Ferris Greenslet; "The Story of New Netherland," by W. E. Griffis; "Our Naval War with France," by G. W. Allen; "Shakespeare and His Critics," by C. F. Johnson; "Studies in Christianity," by B. P. Bowne; "Is Immortality Desirable?" by G. Lowes Dickinson; "The Silver Cup," by C. C. Hall; "When Lincoln Died and Other Poems," by E. W. Thomson; and "The Poetical Works of John Dryden," Cambridge poets, edited by G. R. Noyes.

Next month Moffat, Yard & Co. promise the publication of William Winter's "Old Friends," reminiscences for the most part not before printed. In May the same house will bring out the complete and final edition of Mr. Winter's "Poems" in one volume.

The much talked-of study of Shelley by Francis Thompson in the *Dublin Review* is to be brought out in book form by Burns & Oates, with an introduction by George Wyndham, who ranks the essay as "the most important contribution to pure Letters written in English during the last twenty years." The volume will also contain further "Notes on Shelley" by Thompson.

Methuen & Co. announce a new edition of Prof. Bury's Gibbon, with illustrations and many additional notes.

"Puck of Pook's Hill" is reissued by Doubleday, Page & Co. in their uniform edition of Kipling in limp red leather. The plates are apparently those of the edition of 1906, but the margins are narrower and the pictures by Arthur Rackham are omitted. The volume is neat and convenient.

The triple section of the "New English Dictionary" from Premisal to Prophesier, prepared by Sir James A. H. Murray, records 4,381 words to the "Century's" 1,960 and Johnson's 584, and 20,450 illustrative quotations to the "Century's" 3,062 and Johnson's 1,657. As the prefixes suggest, a large proportion is made up of unimpeachable Greeks and Romans of easily traceable ancestry. So many, however, have developed new senses or widened their application that the articles in this section are unusually long and entertaining. It is surprising how much poetry and history the deep-going spade of the lexicographer has been able to turn up about the roots of such a modern-sounding word as President. It is found in the sense of a secular ruler as early as 1375. In the same century it is also applied to the head of a religious house. In 1413 Pilate is spoken of as a "false precydent." Still quainter is this from Crooke's "Body of Man," 1615: "The Nymphes are sayed to bee presedents or dieties of the fountaines." It is interesting to note that in King James's Bible, Acts xxiii, 24, Felix is called a governor, whereas in Wiclif's, 1382, he appears as president. The same change took place in the designation of the chief executive in several of the American States. It was not till 1792 that the President of the State of New Hampshire had to content himself with the title of Governor. One is a little irritated to learn that President, meaning the chairman of a business concern, is branded as an Americanism. "In England," says Freeman, 1883, "we never, I think, give it [the title] to the head of a purely commercial body." One misses in this classic assemblage the exotic colors of barbarian visitors, but there are a number of wily monosyllables like Prim, Prink, and Prod which have writhed their way into the language from no one knows just where. The extremely useful Prig is a comparatively recent arrival with a striking career. At its advent in the latter part of the sixteenth century, it was a cant word for tinker. A few years later it was defined as thief. Dekker, who discourses amply on the rogues of his day in "The Belman of London" and "Lanthorne and Candlelight," says definitely that Prigging is riding and a Prigger is a horse-thief. But it is a long journey from Prig, a horse-thief, to Prig, "one who cultivates or affects a propriety of culture, bearing, or *morals*." The steps in the process have not yet been made clear. One may conjecture that the epithet was transferred from a sleek rogue riding another man's horse to a sleek gentleman riding his own horse, thence to a sleek gentleman without a horse, or, one may conjecture, as the editor suggests, that there were two Prigs

entering the language at about the same time. More recent than Prig and of finer lineage is Presentiment, which apparently made its début about 1714, and which seems now to be displacing the older and more solemn Presage and Foreboding. Later still is Preterhuman, the earliest use of which is appropriately credited to Shelley, 1811. At about 1836 our knowing grandfathers began to speak of the Prescientific age. To the age which supervened we are indebted for the excruciating jaw-breaker, Prezygapophysis, 1866. Perhaps the most impressive recent development recorded is that of the prefix Pro—in a polemical sense—a sense developed within the nineteenth century, but volcanically active in the journalistic press of the last ten years, resulting in such choice coinages as Pro-breecher, Pro-liquorite, and Pro-vaccinist.

Part ii of Vol. IV of the Publications of the Philippine Bureau of Science, Division of Ethnology (pp. 109-391) is "The History of Sulu," by Hajeeh M. Saleeby. The volume, when completed, will comprise three studies of the Moros. The third part, yet to appear, will be a history of the Mohammedan missionaries who converted the Malays of the South Philippines. The first part, "Studies in Moro History, Law, and Religion," appeared in 1906, and was mentioned in these columns as the most important contribution yet made to the study of Moro institutions. Dr. Saleeby is a native of Arabia, born of Christian parents, educated and naturalized in the United States. For two years he served as an army surgeon at posts among the Moros of Mindanao, and for four years thereafter under the Philippine civil government as superintendent of schools and a member of the legislative council for the Moro province. His knowledge of Arabic, as well as of Mohammedan customs, and his early acquisition of the principal Moro dialects, gave him an access to these rather difficult races of ours in a degree altogether unique among American administrators. What he says has, therefore, peculiar value. This "History of Sulu" is not, by the nature of the subject, a contribution so distinctly new as the Moro "Studies." Much that is new, to the world that reads only European languages, is, however, brought out from the Moro side, as regards Sulu genealogy, early religion, and history. In the main, the history treats the period of Spanish-Moro relations, 1578-1899. Dr. Saleeby has not fully explored the Spanish bibliography of the subject, and some of his opinions are open to question; but he has presented in the body of the work and its twenty-four appendices, mostly drawn from the Blair-Robertson series and the government archives at Manila, much hitherto unpublished material. Appendix xxiv, we note, is unfortunately credited not to Governor-General Despujols, but to the clerk who attested it. There are four maps and two genealogical diagrams. Lastly, the author's comments on Spanish policy often have great pertinence to-day. For example:

> Temporary military commanders were put in command without the necessary preparation for the requirements of the office. . . . Not one of these felt that it was his duty to institute a permanent policy for Sulu, or believed that he was going to stay long enough to carry it through, and that he was going to be held responsible for its conduct, whether it failed or succeeded—p. 261.

"Ancient China Simplified" (E. P. Dutton & Co.), by Edward H. Parker, is designed to give an outline of authentic Chinese history from 842 B. C. down to the time of Confucius and to describe the life of the people of those days. It is the result of laborious research in the ancient documents by an accomplished scholar who was for nearly thirty years a resident in the country and is now professor of Chinese at the Victoria University of Manchester. The information given is not in the form of a continuous narrative, but in a series of miscellaneous sketches from which one can gain an idea of what the ancient Chinaman was and the principles and motives which governed him. It was a difficult undertaking; for the early Chinese annals, he assures us, contain little more history than the "generations of Adam" in the fifth chapter of Genesis. The uncouthness of the strange names and their similarity—Tsi, Tsin, Ts'in, Ts'u are the constantly recurring names of four of the leading states—also add to the difficulty of making the story intelligible to the English reader. Though as a whole the book will appeal only to the special student, there is much of general interest in it. This isolated people, for there is nothing to show that they had any intercourse with the world outside their little empire (now the province of Honan), except with their immediate neighbors, the Tartars, had customs which we connect with an advanced stage of civilization; for example, the inviolability of envoys. Suffragettes were apparently not the product of the twentieth century, for at a great durbar of princes in the year 651 B. C. the following command was recorded: "Do not let women meddle with state affairs!" In the numerous anecdotes of distinguished rulers and their companions there is occasionally a gleam of humor. A commendable fact, worthy of record, is that though slaves were numerous they were treated so kindly that there never was a slave revolt. A sketch of the life of Confucius and some account of his literary work are to be found at the close of the volume; and a striking portrait is given of a duke, now living, who is the seventy-sixth in descent from the sage. Assistance in following the historic narrative is rendered by nine maps showing the relative positions of the states at different periods, and there is a very full index.

"Skotland's Rímur: Icelandic Ballads on the Gowrie Conspiracy" (Henry Frowde), edited by W. A. Craigie, is an interesting addition to this class of Icelandic texts. The series of six *rímur*—each in a different metre, as was customary with such poems—gives an account of the famous alleged conspiracy of the Earl of Gowrie against the life of James VI of Scotland (afterwards James I of England) in the year 1600. Their author, as we learn from the unique manuscript in the Arna-Magnæan collection of the University of Copenhagen, was Einar Gudmundsson, who was priest at Stad on Reykjaness (Iceland) in the first half of the seventeenth century. The volume contains a sketch of Einar's life from the pen of a living Icelandic antiquarian—Sighvatur Grímsson. The immediate source of the *rímur* seems to have been a Danish prose narrative of the Gowrie conspiracy, which Mr. Craigie reprints in an appendix. The text is not accompanied by translation or glossary. The editor gives us, however, a useful list of poetic terms and kennings employed in the *rímur* and a considerable number of notes which are valuable as a contribution to Icelandic lexicography. It is to be observed that the introductory stanzas of the different parts of the series, with their moralizing pedantries and commonplaces, are quite mediæval in tone—which is not surprising in a man who wrecked his career by bringing absurd charges of witchcraft against his neighbors.

The mythological poems of "The Elder or Poetic Edda," commonly known as Sæmund's Edda, edited and translated with introduction and notes by Olive Bray and illustrated by W. G. Collingwood, constitutes the second volume of the Viking Club Translation Series (published for the club by David Nutt). The book is not addressed to students and scholars, but rather to the wider circle of readers who feel an interest in Norse mythology; and the critical apparatus is accordingly adapted to the needs of this class. Nevertheless, the editor is familiar with the authoritative literature of her subject and has made good use of the two previous renderings of "The Poetic Edda" into English—especially that which is included in the "Corpus Poeticum Boreale." The Icelandic text and the English translation—the latter literal, in the main, and line for line—are printed on pages facing each other, so that it is easy to compare them. It is a pity, however, even in a work of this character that the order of the poems as found in the Codex Regius should not be observed, and still more that the order of the stanzas in the individual poems, as in the case of the "Grimnismál," should be sometimes changed. In giving the interpretations that have been proposed for the word "edda," it would have been well to have added the one which until quite recently enjoyed especial favor, namely, "poetics." A bibliography at the end gives a list of all important editions of "The Poetic Edda" and the principal books and articles which have contributed to its elucidation.

The Carnegie Library of Pittsburgh has issued a "Catalogue of Books in the Children's Department," containing 2,500 titles, and intended, so the preface states, for the use of children. The reference is made easy for the child by an author's index, a subject index, and a title index; some of the annotations are adequate, but the librarian has not yet satisfactorily solved the problem of proper annotation of a work of this kind. It would have been well in a catalogue of such proportion, to indicate the desirability of reissuing certain volumes now out of print. This policy was attempted by Miss Caroline M. Hewins in "A Selected List," when she suggested the republication of Lydia Maria Child's "Flowers for Children," Harriet Myrtle's "Country Scenes," and Grace Greenwood's "Merrie England." This new catalogue represents, however, on the whole, long and conscientious labor. We might ask, in reference to recent books, where is mention of Norman Duncan's "Adventures of Billy Topsail," Mary Raymond Shippen Andrews's "A Perfect Tribute," L. Allan Harker's "Concerning Paul and Fiametta," and Virginia Gerson's "The Happy Heart Family"? We have looked everywhere for some mention

of Boutet de Monvel and of that excellent picture book by Guigou and Vimar, "L'Illustre Dompteur." We are glad to see given the *whole* Bible and the *full* edition of Longfellow. Finally, do not our libraries duplicate work unnecessarily? By co-operation and organization, they might agree on one such catalogue of general authority, which could be added to from year to year in "supplements," and wholly revised every decade. Pittsburgh has laid the foundation for such unified work.

Donald Sage Mackay, whose untimely death two years ago at the early age of forty-four was a serious loss to the pulpit of New York city, came of a long line of rugged Scotch ministers. His father was a Glasgow clergyman, and on his mother's side the clerical ancestry went back to Aeneas Sage, a picturesque pastor of Rosshire in the early eighteenth century. Educated at the University of Glasgow and at New College, Edinburgh, Dr. Mackay spent the years of his ministry entirely in America. While his love for his adopted country was sincere and deep, he spoke of American frailties and failings with discernment and power, which gained from the aloofness of which he never fully divested himself. He was a thoughtful student and observer, a keen analyst of character and moral issues, a sympathetic witness to spiritual truth and aspirations. His sermons, as gathered in "The Religion of the Threshold" (A. C. Armstrong & Son), are well worth preservation. They are vigorous, straightforward assertions of earnest moral and religious convictions, free from partisanship, yet ministering to the best progressive manhood of our time.

To "The Bible for Home and School," Prof. Shailer Matthews, general editor, may be extended a cordial welcome, if the volume "Acts: the Second Volume of Luke's Work on the Beginnings of Christianity," by George Holley Gilbert (The Macmillan Co.), may be taken as representative of the series. The design is "to place the results of the best modern Biblical criticism at the disposal of the general reader." This purpose is accomplished by a brief introduction to the book, discussing date and authorship, literary character, and historical trustworthiness, followed by interpretative comment on the English text. Professor Gilbert's introduction to Acts is a model of succinct presentation of critical results, without argument except through clear exposition of cogent facts. The commentary offers explanation wherever it is really needed and trustworthy information from other sources. The series should furnish good text-books for elementary study for either class or private use.

Much excellent material has been gathered by Dom John Chapman, O.S.B., in his "Notes on the Early History of the Vulgate Gospels" (Henry Frowde). Such a contribution is particularly welcome now that Pope Pius X, as has been announced, has ordered a new edition of the Vulgate, the editorial work being confided to the Benedictine Order. Accepting the results of recent scholars, Dom Chapman inquires what lines are to be followed for the restoration of Jerome's text of the Gospels. The first step, he thinks, will be to recover the readings of the codex possessed by Eugipius (first half of the sixth century), which must be determined by the witness of the Northumbrian family (the most important member of which is the Codex Amiatinus), with the aid of Codex Fuldensis (sixth century). The later Proba, to whom Eugipius dedicated his principal work, was of the same gens (the Anician) as the earlier Proba, one of the great Roman ladies to whom Jerome was a spiritual father. This earlier Proba would probably have had a copy of Jerome's manuscript which might have descended to her namesake and so have come to the knowledge of Eugipius. This, as the author remarks, is guesswork, but it is true that the interval of time between the publication of Jerome's Gospels (382) and the beginning of the work of Eugipius (ca. 490) was not great. Other points discussed are the relation of the Eugipian text to that of Codex Fuldensis and to the Gallican liturgy, the Capuan mass-books, the Irish text, the "Gospels of St. Augustine," and the Vulgate text of Gregory the Great. Chapman also reproduces his paper on Priscillian as the author of the "Monarchian" Prologues; the text of the Prologues is printed in full, and the attempt made to explain them. His view that Priscillian is their author has been favorably received, and it must be allowed that his argument for this view is impressive.

A new and promising venture in the department of German dialectology is the "Deutsche Dialektgeographie" (Marburg: R. G. Elwert), recently begun by Ferdinand Wrede. These studies will appear at irregular intervals. The first two contain papers by Jakob Ramisch entitled "Studien zur niederrheinischen Dialektgeographie," and by the editor on "Die Diminutiva im Deutschen."

C. H. Beck'sche Verlagshandlung of Munich has undertaken the publication in four volumes of a "Deutsche Sagenbuch," edited by Friedrich von der Leven, with the co-operation of F. Ranke and Alexander von Müller. The purpose is to furnish a complete acccunt of the Germanic gods and heroes as portrayed by the literature and folklore down to the Middle Ages. The first volume, with the special title "Die Götter und Göttersagen der Germanen," by the editor, is devoted to the mythology of the Germans. The other volumes will follow soon.

Leonardo Olschki has contributed to the literary history of the seventeenth and eighteenth centuries, a book of 124 pages, "G. B. Guarini's Pastor Fido in Deutschland" (Leipzig: H. Haessel).

In the series of monographs, Wissenschaft und Bildung, edited by Dr. Paul Herre, an interesting new volume is F. Lienhard's "Das klassische Weimar." After an introduction about Germany's intellectual mission, the author gives a general review of the revolutionary and philosophical century, and proceeds to show the influence of Frederick the Great upon the intellectual life of his country, of Rousseau upon Klopstock and the emotional movement, of Lessing upon the literature of enlightenment. The relation of Herder to the folk-poetry of all nations is also discussed, and there are chapters on Kant and Schiller, and on Schiller and Goethe. (New York: Imported by G. E. Stechert & Co.)

The second volume of W. Otto's "Priester und Tempel im hellenistischen Aegypten: Ein Beitrag zur Kulturgeschichte des Hellenismus" (Leipzig: Teubner) brings to a conclusion this comprehensive work, of which the first volume appeared several years ago. The first volume closed with an account of the revenues of the temples; and the present, excluding a discussion of the religious creeds of the period, treats the social status of the priests, including their morality and education; and, finally, the relation of state and church. Many of the details are drawn from reports of recent discoveries. The index is excellent.

Among recent German editions of foreign authors that of Balzac in the Insel-Verlag of Leipzig deserves particular notice. The fourth volume of the Comédie humaine has just appeared, "Verlorene Illusionen." The translator is Hedwig Lachmann, who has hitherto been known chiefly for her excellent translations of Swinburne, Wilde, and Poe.

A volume of reminiscences by the late Jonas Lie has been brought out by Haupt & Hammon of Leipzig, "Jonas Lies Erlebnisse." It is a book of 135 pages, containing letters, portraits, and illustrations. The translator is Mathilde Mann, long associated with German versions of Scandinavian authors.

Pupils and colleagues of Professor L. F. A. Wimmer of the University of Copenhagen, the Nestor of the teachers of Germanic philology in that institution, celebrated his seventieth birthday early in February by publishing a *festskrift*. The main celebration, however, was connected with his having given to the public the last part (Vol. IV, 2) of his Thesaurus of the Danish Runic Monuments, containing the vocabulary for the previous parts, the first of which was published in 1895. Professor Wimmer's work comprises in its four volumes (Copenhagen and Chicago: Glydendal Publishing House) 254 inscriptions and may, as regards artistic reproduction, careful reading, and scholarly and ingenious interpretation of the monuments, be regarded as a standard. Bugge's edition of the early runic inscriptions of Norway is still lacking its vocabulary, and the task of giving the several thousand Swedish runic monuments to the public, auspiciously begun in 1906, by the Royal Academy of Literature, History, and Antiquities of Stockholm, will probably occupy many years.

In the archives of Innsbruck, Prof. Andreas Galante recently found a large collection of hitherto unknown documents relating to the Council of Trent, consisting chiefly of more than a thousand letters addressed to Cardinal Christoph von Madruz, Prince Bishop of Trent (1539-67). The letters came from all parts of Europe, from kings, princes, cardinals, and other high dignitaries in state and church.

The Rev. William Wilberforce Rand died in Yonkers, March 3, at the age of ninety-two. He was born in Gorham, Me., was graduated from Bowdoin and the Bangor Theological Seminary, and then became a minister of the Dutch Reformed Church. Since 1848 he had been engaged in an editorial capacity by the American Tract Society. In addition to the large amount of writing which he did in this way he published a "Bible Dictionary."

Richard Cornelius Barrett, professor of

civics in the Iowa State College of Agriculture and Mechanic Arts, died at Des Moines March 3, at the age of fifty. He had been a county superintendent of schools in Iowa, State superintendent of public instruction, president of the Iowa State Teachers' Association, and editor of the *Iowa Teacher*.

Hinton Rowan Helper, an early anti-slavery agitator and an unceasing advocate of the project of a railway to connect North and South America, died by his own hand in Washington March 9, at the age of seventy-nine. He was born in North Carolina; and thus his "Impending Crisis of the South" (1857), an attack on slavery and an argument that abolition would vastly benefit the South, industrially and socially, was the sensation of the day. The book enjoyed enormous sales, and John Sherman's commendation of it was used against him in his unsuccessful candidacy for Speaker of the House in 1859-60. Helper was consul at Buenos Ayres 1862-66. His other books are: "The Three Americas Railway," "Nojoque," "The Negroes in Negroland," "The Land of Gold," and "Oddments of Andean Diplomacy."

Joseph W. Carr, professor of Germanic languages at the University of Maine, died at Orono March 4. He was thirty-eight years old, a graduate of Harvard, with a Ph.D. from Leipzig. He was president of the American Dialect Society and editor of the *American Dialect Notes*.

Mrs. Frederic Lindsley Drummond, who wrote under her maiden name, Sara King Wiley, died at East Orange, N. J., March 7, at the age of thirty-seven. Her first book was "Alaska, Yosemite, and the Yellowstone" (1898), in which she collaborated with her father, W. H. Wiley. Her other publications are "Poems, Lyrical and Dramatic," "Cromwell," a play (1900); "Alcestis and Other Poems" (1905), and "The Coming of Philibert" (1907).

The death is announced of Albrecht Wagner, professor of English at the University of Halle, in his sixtieth year. Among his works are "Ueber den Mönch von Heilsbronn," "Ueber die deutschen Namen der ältesten Freisinger Urkunden," "Marlowes Tamburlaine," "Shakespeares Macbeth," etc.

OLD LONDON.

The Gilds and Companies of London. By George Unwin. [The Antiquary's Books, general editor, J. Charles Cox]. Pp. xvi+397. London: Methuen & Co. 7s. 6d. net.

The history of gilds and of trading and industrial companies is a proverbially thorny subject. Both in England and on the Continent, it has been for the most part the monopoly of the specialist, ordinarily neglected by the average reader and student. Mr. Unwin's book is an attempt to present in a readable and attractive form the result of the most recent investigation. It lays little claim to originality. The authors from whom Mr. Unwin has drawn most of his material and conclusions are adequately indicated in the footnotes, with the possible exception of Professor Keutgen, many of whose theories in his "Aemter und Zünfte" are reproduced with a faithfulness which would seem to demand fuller acknowledgment than they have received. The book is unhappily disfigured by sundry errors and loose statements. "Schanz, Handelsgeschichte," for instance (p. 250 n), is certainly a misleading designation of Schanz's "Englische Handelspolitik gegen Ende des Mittelalters," especially in view of the fact that Mr. Unwin's book lacks a bibliography; and the opening sentence of Chapter xvii, to the effect that "the simplest account that can be given of the monopolies is that they were a device of the Stuarts for raising money without the consent of Parliament," invites protests from more directions than one. But, despite such blemishes, the general verdict on the book must be favorable. It is the work of a scholar and teacher of considerable reputation in his chosen field, who knows the printed literature of his subject *au fond;* it deserves to be taken seriously; it is attractively put together and amply illustrated.

In view of the prevailing fashion for historical pageants in England and Canada and the strong probability that they will soon be introduced into the United States, the chapter entitled "The Lord Mayor's Show" will probably arouse more interest in the average reader than any other part of Mr. Unwin's book. It contains an admirable description of the different processions and celebrations which usually accompanied royal entries into the capital and other state occasions, and in which most of the different gilds bore parts reminiscent of the more glorious episodes of their past. Thus the Fishmongers' ship which sailed up Cheapside in 1292 when Edward I returned from defeating the Scots, and again in 1312 when Queen Isabella bore a prince to Edward II, was a leading feature of the pageant at the Lord Mayor's show in 1616. The pageants, moreover, were for the most part organized and paid for by the different gilds, which often exhibited an energy and a lavishness that are astounding. When Sir Thomas Middleton, a prominent member of the Grocers' Company since 1582, was inaugurated as Lord Mayor of London in 1613, his gild spent nearly 900 pounds on their show. Included in the account are 500 loaves of sugar, 36 pounds of nutmeg, 24 pounds of dates, and 114 pounds of ginger to be cast abroad to the expectant citizens by those who rode the griffins and camels. Even more remarkable are the originality and ingenuity of the allegorical representations. In this same pageant of 1613, Error is depicted "in ash-colored silk, with an owl on her head, a bat on one shoulder, and a mole on the other, a mist hanging at her eyes, and blank verse in her mouth. With her rides Envy, on a rhinoceros attired in scarlet silk suitable to the bloodiness of her manners, her left pap bare where a snake fastens." Instances of this sort might be indefinitely multiplied, but enough has been done to show that Mr. Unwin's treatment of his subject is such as to make it far more attractive and human than it is usually given credit for being, and perhaps also to induce others to follow in his footsteps.

A Survey of London. By John Stow; reprinted from the text of 1603, with introduction and notes by Charles Lethbridge Kingsford. 2 vols. Pp. c+352; 476. New York: Henry Frowde. $9.25.

In view of the amount of enthusiasm recently displayed for the publication of accurate versions of chronicles, memoirs, and other records of the past, it is somewhat surprising that John Stow, the most trustworthy and important of English annalists of the sixteenth century, should have had to wait more than three hundred years for the appearance of a worthy edition of his most famous work. Two hundred years ago Thomas Hearne recommended that Stow's "Survey" be reprinted as a "venerable original," but John Strype, instead of acting on that wise advice, attempted to improve upon it, and in so doing interfered with the original text of Stow in such a way as to make his edition (1720) almost valueless from the point of view of the historian and antiquary of to-day. The editions of Thoms (1842 and 1876) and of Henry Morley (1889 and 1893) leave much to be desired for the purposes of critical scholarship, but Mr. Kingsford has certainly made up for the deficiencies of the past. Within the limits which he has set himself, he has produced an edition of the "Survey" which will remain definitive for many years to come. Those limits are accurately described in his preface, where he states it to be his object to follow the advice which Strype neglected, and reprint the "Survey" as a "venerable original." The aim of his annotations has been "to correct any errors of statement or fact which might be found; to trace as far as possible the sources of Stow's information; to supplement the text with fresh matter from Stow's own collections; to illustrate it, within a reasonable compass, by quotations from contemporary writers." But he has refrained from any attempt to complete Stow's history, or to carry it beyond his own time.

Mr. Kingsford's book begins with an introduction containing an admirable account of the life of Stow and a description of the materials and composition of the "Survey." Then follows a valuable appendix, containing a number of documents bearing on Stow's career, a bibliography, and an account of Stow's

notes and manuscripts. The personality of the old antiquary, with his learning, his conservatism, his literary quarrels, and his constant fear of persecution through suspicion of Popish inclinations and suspicious practices, stands vividly forth. No better insight could be desired into the humors and asperities of the intimate life of a typical middle-class Elizabethan household than that afforded by the story of Stow's quarrel with his brother Thomas, and of his mother's consequent alteration of her will. The remainder of the first volume and the first half of the second are occupied with the text of the "Survey" according to the edition of 1603, followed by a list of the variations between that and its predecessor, the edition of 1598. One hundred and fifty pages of notes, a glossary, and a luxurious triple index of persons, places, and subjects—would that Continental scholars might take the hint!—complete the work.

And, finally, we cannot forbear to pay tribute to the splendid liberality of the University of Oxford and of the Clarendon Press in putting forth, year after year, accurate and expensive editions of works of this sort in the interests of scholarship pure and simple, without the hope of pecuniary gain, and often in the face of certain loss. Without their aid, and that of a few other institutions, which, if not equally rich, are fortunately animated by the same ideals, the cause of scholarship in England and in this country would be in a sorry plight. If English and American learning are beginning to take the place they deserve, abreast of that of Germany and France, the credit must be shared by the scholars themselves with the institutions through whose munificence a large proportion of their works have seen the light.

CURRENT FICTION.

The Magician. By W. Somerset Maugham. New York: Duffield & Co.

The Explorer. By W. Somerset Maugham. New York: The Baker & Taylor Co.

The reputation which Mr. Maugham has so rapidly made as a fashionable playwright will hardly be enhanced by these novels. They show cleverness, but less of a dramatic than of a journalistic sort, quickness to seize the theme of the moment, and facility in turning it to account. Thus "The Explorer" derives from the latest "little war" in Somaliland, and "The Magician" from the curious wave of occultism which has so lately overrun "smart" English society. Its theme, indeed, suggests rather strongly that of E. F. Benson's "Image in the Sand," and the comparison is not to Mr. Maugham's advantage. What Mr. Benson treated, if not very powerfully or convincingly, yet with picturesqueness, humanity, and decent restraint, what in Poe's hands would have become beautiful in form, however horrible in suggestion, and, brooded on by Hawthorne's imagination, would have taken elusive, haunting shape as a spiritual drama of profoundest significance—this theme Mr. Maugham handles so realistically, so materially, so hideously, as to excite only loathing and disgust. By choice of details and epithets to arouse a horror that is akin to nausea is not a sign of power; in Mr. Maugham's case it merely proves that, in spite of much "tall talk" about famous pictures and quotation from Pater, the writer is wofully lacking in artistic taste.

Fortunately, "The Explorer" is quite innocuous and even comparatively pleasant. The hero, apart from his African exploits, is a sort of Rochester *minus* the vices; inviting the heroine, then a mere acquaintance, to take a stroll with him, he marches her across country at the top of her speed for two hours without saying one word. This attention Lucy receives with pleasure as a true compliment; it is needless to add that she is an English girl. There is an American in the book, however—a sprightly and mildly witty widow, who carries on a series of "Dolly Dialogues" with an amiable and jocose London bachelor until she finally marries him. Thus the lightest of parlor comedy is neatly sandwiched in between blocks of good old melodrama, the agony being piled up by the time-honored device of binding the hero by a solemn promise never to explain the circumstances that make him appear a scoundrel. Not that Alec Mackenzie has any scruples about breaking a promise as such; Mr. Maugham is much too advanced to allow a hero of his to be so old-fashioned. There is something peculiarly irritating, for a small matter, in the pains which he takes to explain that Alec's devotion to truth was purely a matter of taste, and his insistence on decency among his subordinates, in Africa, a mere prudential measure. "I have nothing to do with morality—every one is free in these things to do as he chooses—but I do know that nothing causes more trouble with the natives."

Miss Betty of New York. By Ellen Douglas Deland. New York: Harper & Bros.

A story for the young which is really young throughout is the rarest thing in the world of juvenile fiction. "Miss Betty of New York" is in many ways on the right level for boy and girl readers. One may not murmur at its pranks, circuses, runaways, and abductions, since they are part of the accepted material of youthful literature, however one may wish that other modes prevailed. One wearies, possibly, of the angelic boy of story who softens the heart of the unjust grandfather; and of the lawless girl who is continually defended in her lawlessness by her admiring friend, the author. What is more than wearisome is the boy and girl nonsense that creeps in, how sparingly soever. Consider the pity of such stuff as this between two twelve-year-old children:

"Do you really like me better than Rachel Amy?" asked Betty. . . .

"Why, how funny you are, Betty! I should think you'd know I like Rachel Amy ever and ever so much, but you're a sort of relation. Of course, we think you're the nicest girl we know." . . .

"If it's just because I'm a relation——" she began.

"Oh, you silly!" exclaimed Christopher. "It isn't. It is because you're just Betty. I couldn't possibly like any girl as much as I do you, because—why, because you're Betty Hamilton, and there couldn't possibly be another girl like you."

"All right," said Betty, satisfied at last; "then I'll always be very careful of the locket and never lose it and treasure it forever."

Quite superfluous embellishment this on a story generally wholesome, barring unreproved heedlessness and eavesdropping and a certain absence of spanking.

Rachel Lorian. By Mrs. Henry Dudeney. New York: Duffield & Co.

This novel is written throughout in the rhythm of Alfred Jingle, Esquire, of Pickwickian fame. You are jolted, as you read, as if you were riding a runaway horse; and when you have finished, you draw a deep breath and seek relief in a book of German prose. This sentence is a not unfair example: "He might marry—any woman—who was clever enough to catch him—in the years that were left." A mere matter of punctuation, but done evidently with the idea that a plentiful sprinkling of dashes gives an air of spontaneity, of unchecked emotion. The impression actually produced is, on the contrary, one of painful affectation. There are other irritating tricks of style that distract attention from the story.

Nor is the plot remarkable. A railway accident on the honeymoon leaves the heroine with a crippled husband on her hands; she takes care of him for some years with a rather bad grace, and then falls in love with his "poetic" friend. When the husband dies, and she is free to marry her lover, she refrains because she discovers that another woman is "as good as his wife." In this she is said to "play the prig"; but she retrieves herself by realizing, too late, that her lover's misdeeds were "common little tangles, no more!" and that the tangles did not matter, since his soul was always hers. This dualistic philosophy may be poetic (a favorite adjective with the author); but what a perplexing world it would be if things

were run on such lines! It is to be hoped that the cleverness of the book—and it is decidedly clever—will not avail to make either its style or its ideas contagious.

The Red Mouse. By William Hamilton Osborne: New York: Dodd, Mead & Co.

The pretty American "society girl" in a gilt frame on the cover of this book is a fit symbol of the conventionality within. The conventionality of the characters alone would not much matter, since the story has a good deal of life; but the conventionality of the point of view is tiresome. It is hard enough to believe that a woman still loves her brutal husband when she knows that he is drinking the very dregs of dissipation—especially when the only reason suggested is that "he was still good-looking, and there was an air about him that few men had." To be asked to admire her for such constancy of heart is quite too much. Still more irritating, however, is the assumption that a woman's code of honor is of necessity different from that of a man. It is implied, not merely that women are, in fact, less honest than men, but that they are not even to be judged by the same standards. Not only does the heroine urge her lover, a strenuous reform politician, to buy political "greatness" by fair means or foul, but the hero is not at all repelled by her attitude. He argues the case out with her, it is true; but her utter failure to grasp his ideas does not dampen his affection in the least.

The Poems of Arthur Christopher Benson. New York: John Lane Co. $1.50 net.

From his six books of verse, ranging in date from 1892 to 1905, Mr. Benson has selected enough for a single comfortable volume. He himself, we presume, would not disdain the title of minor poet, if that phrase were spoken with a friendly smile. His work is minor in the better sense that it is unpretentious, and that it is replete with conscious reminiscences. Indeed, it might almost be sufficiently characterized by calling it a mixture of Tennyson and Matthew Arnold. This derivative quality is at times annoying, especially in the lyrical poems of nature, of which there are somewhat too many in the volume. Here and there, no doubt, a line or a passage of natural description justifies itself by its first-hand vividness, as when he speaks of

> . . . thridding the trackless hill,
> O'er tumbled cataracts of shapeless stones—

but for the most part he does not in this genre rise much above the level of magazine respectability. It is different in the poems of reflection. Here such echoes are an integral part of the poet's mood and an essential factor of his art.

This musing habit of one to whom all things have already been thought and felt and expressed, who sits within a magic circle of memories, too weak or too indifferent or too wise to break through the ring into the world of cruder or more immediate emotion—it might seem that such a mood would appeal to few readers; yet we have the undeniable fact that Mr. Benson's prose is widely bought and read. There will be fewer purchasers for his verse, of course; but for those who know, it will have the finer and more enduring flavor. If truth must be told, his prose has grown a little stale from repetition, and its aimlessness has become more pronounced from diffusion. On the contrary, the verse is of little bulk, and, if it also lacks any definite outcome, it has at least just that strong personal note which might have atoned in the prose for the lacking qualities of creative force. There is something astringent in the self-revelation of such a sonnet as "Imagination," with its disillusioned close:

> The rapture fades; the fitful flame flares out,
> Leaving me sad, and something less than man,
> Pent in the circle of a rugged isle,
> A later Prospero, without his smile,
> Without his large philosophy, without
> Miranda, and alone with Caliban.

That note was needed in such a book as "Beside the Still Waters" to bring out the ennui which is the sure result of stagnant revery. And in like manner the shadowy kind of peace there sought—not *la pace* that Dante asked for in the cloister, but its dream likeness—is nowhere in his prose so well intimated as in such a sonnet as this:

> Spire, that from half-a-hundred dainty lawns,
> O'er battlemented wall and privet-fence,
> Dost brood and muse with mild indifference,
> Through golden eves and ragged gusty dawns:—
>
> O cloistered court, O immemorial towers,
> O archways, filled from mouldering edge to edge
> With sober sunshine, O bird-haunted ledge,
> Say, have ye seen her? Shall she soon be ours?
>
> She, whom we seek, most dear when most denied,
> Seen but by sidelong glances, past us slips,
> Waves from a window, beckons from a door,
> Calls from a thicket by the minster-side,
> Presses a flying finger to her lips,
> Smiles her sad smile, and passes on before.

In those fourteen lines is the essence of all his books, the undefined emotion that comes from the reading of his prose, here defined by the reality of a personal experience. In the longer poems, "Thomas Gray" and "In the Iron Cage," the same confession becomes dramatic and just misses greatness.

My Story. By Hall Caine. New York: D. Appleton & Co. $2 net.

It is a curious commentary on the literary life that the one chapter of Hall Caine's memoirs to rouse wide discussion in England was the account of his income at the beginning of his career. One would never guess, from this discussion of pounds and pence, that the heart of the book was an intimate story of Rossetti's life in that muffled house at No. 16 Cheyne Walk and of his two incursions into the country for health. These memoirs, in fact, are merely the outcome, as Mr. Caine states in his introduction, of a desire to enlarge the little volume of recollections of Rossetti published immediately after the poet's death. Mr. Caine was a young clerk in Liverpool when he first attracted Rossetti's attention by a printed lecture in support of the morals of Rossetti's verse—just then a tender point with the author. A brisk correspondence ensued, chiefly on literary topics, half of which we shall no doubt have in print some day. For Rossetti's letters are preserved and make a bulk of writing greater than all his published works. Then the younger man went to live with the elder and was at his side through all the trying months until Rossetti's death.

There is little that is new in the picture of Rossetti as we now get it. He was ailing in body, suffering from his chloral habit, convinced of a general conspiracy against him, a melancholy recluse, yet still showing on occasions those flashes of intellectual power that so imposed on all his contemporaries. Nothing is more remarkable to one who reads largely in the letters and memoirs of the middle Victorian period now appearing so rapidly, than the dominance of Rossetti over all who came in contact with him, and the extent of his influence. It is as another testimony to this force that Mr. Caine's work will owe its chief interest. On some points he is a valuable witness. He denies the rumor that the melancholy death of the poet's wife was the result of bitterness over Rossetti's wild courses, but he says nothing to dispel the belief that this fragile creature simply withered away in the atmosphere of overloaded thought and emotion for which she was totally unfit. It was this, we believe, rather than neglect or knowledge of Rossetti's vain love for another woman, that killed her. When Mr. Caine raises Rossetti "into the place of one of the great tragic figures of literature, one of the great lovers whose lives, as well as their works, speak to the depth of

their love or the immensity of their remorse"—we are inclined to think the writer is putting some of his novelist's art to use, and our opinion is confirmed by such overstrung words as these:

> Thus, too, the solitude of his [Rossetti's] last years, with its sleepless nights and its delusions born of indulgence in the drug, was not the result of morbid brooding over the insults of adverse critics, but of a deep-seated, if wholly unnecessary, sense as of a curse resting on him and on his work, whereof the malignity of criticism was only one of many manifestations.

The course of Rossetti's life was too nearly that of the typical ultra-romantic to need explanation by such an hypothesis of lasting love and remorse. One error of statement needs correction. Rossetti did not become acquainted with Burne-Jones and William Morris when he went to Oxford to paint the walls of the Union. He had been living in the closest intimacy with them in London before they undertook together that wild knight-errantry of art.

For the rest, Mr. Caine gives some fairly entertaining chapters on Ruskin, Wilkie Collins, Robert Buchanan, and others, and an altogether undue number of letters from these great men in praise of his own works of fiction. Perhaps the most striking minor portrait is that of Henry Irving playing a rôle in life as on the stage.

Testimonium Animæ: or Greek and Roman before Jesus Christ; a Series of Essays and Sketches Dealing with the Spiritual Elements in Classical Civilization. By E. C. Sihler. New York: G. E. Stechert & Co., $2.25 net.

This is an unpleasant book. After devoting some thirty-six years to reading the authors of classical antiquity and to following the influence of the classical spirit in modern times, Professor Sihler is seized with a profound melancholy. Himself convinced of the preeminence of the Christian ideal, he notes that academicians exalt ancient literature as something precious and transcendent, and never call it pagan. He intends, therefore, to give the true story of the Greeks and Romans, "to present, *very largely in the exact words of their most eminent writers, in versions made for this work*, their views or aspirations concerning the soul, life, and death, God and the world—in short, whatever we may designate as the spiritual elements in classic civilization."

We can only commend the plan of giving the exact words of the ancients, save that the versions are at times too crudely literal; it is the interpretation of the evidence that arouses dissent. Professor Sihler finds idolatry and sensuality at the heart of Greek culture, while that of Rome, in which literature appears as an exotic, is strongly seasoned with force and fraud. The author has read the ancients with care; his judgments, delivered in a vigorous, eccentric, and not always impeccable English, are his own. Some of his animadversions are welcome, particularly the remarks on that curious Teutonic product, the pseudo-Hellenism of the age of Goethe. Nor does he always condemn: Euripides, Cicero, Seneca, are treated with sympathy. But the author's general estimate of the Greeks, Æschylus above all, is little short of defamatory. Granting, to use his simile, that the flower of Hellenic culture grows from a filthy swamp, we may gather the flower thankfully, and not, as he does, stir up the swamp. The Romans, on the whole, come off with greater praise, and yet scant justice is done them. If, for instance, Horace, whom Professor Sihler is pleased to call an Epicurean, can share a chapter with Lucretius, Virgil surely contributed enough of the "spiritual element" to deserve more than a few scattering and rather discouraging remarks.

Testimonium animæ naturaliter Christianæ. Tertullian, despite his fiery arraignments of the pagan past, felt that it was sound at the core. If his attitude toward ancient culture is rightly called obscurantist, that of the present book is more vindictive still. The author, though he sets forth some of the manifestations of classicism in modern times, fails to suggest to us that a genuine Christian humanism has ever appeared in history. From St. Paul, Prudentius, Boethius, from Dante, to whom he devotes a few perfunctory words, he might have learned what it is ardently to embrace the faith and yet not less ardently, though with discerning eyes, to gather the best of the past. This is possibly what he thinks he has done. But the effect is unpleasant. The book is not a brief for Christian humanism; it is rather a kind of Montanist's History of Antiquity *adversus politos*. Despite its array of first-hand material, it does not truly inform.

Lord Haliburton: A Memoir of His Public Service. By J. B. Atlay. London: Smith, Elder & Co.

To Americans, this short memoir of the successful career of a British colonist, born and bred in Nova Scotia, cannot but be interesting; for Arthur Lawrence Haliburton was personally well known to many American visitors to the old country, to whom he extended a hospitable welcome in Lowndes Square. Moreover, the Haliburtons had been settled in New England before they transplanted themselves to Nova Scotia; while Haliburton's father, familiarly known as "Sam Slick," was, according to Artemas Ward, the founder of the school of American humor. There had been other colonials, before Haliburton, who had risen to high office, and some also to the peerage; but these were for the most part lawyers who stuck to the law. Such, for example, was John Singleton Copley, a New Englander, born at Boston before the American Revolution, who rose to be Lord High Chancellor of England, and peer of the realm, as Baron Lyndhurst. But it was as an exceptionally capable administrator in one of the great departments of state, the War Office, that Haliburton made his solid ability felt; his services, as he rose step by step, being marked by companionship, knighthood, and the Grand Cross, in the Order of the Bath.

Originally intended for the law, Haliburton was called to the bar of Nova Scotia; but, at the time of the Crimean war, his early inclination for soldiering led him to seize the opportunity of entering the commissariat, where he acquired experience that proved most useful when he joined the staff of the War Office itself. Even hostile critics admit that he greatly improved the services of supply and transport. Here his aptitude for business, his previous legal training, his clear brain, his untiring industry, and fearless character, joined to a bright and winning manner, caused him to be recognized as a "strong man"—as the life-like portrait in front of the memoir would suggest. Later, Haliburton went to India, and did his work so well that there was an endeavor to keep him by offering him a permanent appointment with a high salary; but he preferred to resume his post at the War Office. Of his subsequent career, ending in his appointment to the highest permanent office in the department, that of Under-Secretary, an interesting account will be found in this book.

The author, J. B. Atlay, whose "Victorian Chancellors" is well known, has done his work exceedingly well. At the request of Lady Haliburton, he has confined himself to a bare statement of her husband's official services.

Science.

In science the spring list of Longmans, Green & Co. includes: "The Human Species," by Dr. Ludwig Hope; "Tables and Diagrams of the Thermal Properties of Saturated and Superheated Steam," by Lionel T. Marks and Dr. H. N. Davis; "The General Character of the Proteins," by Dr. S. B. Schryver; "An Introduction to the Science of Radio-Activity," by C. N. Raffety; "Spinning Tops and Gyroscope Motion," by Harold Crabtree; and "A Text-Book of Experimental Psychology," by Dr. C. S. Myers.

Anti-vaccinationists contend that the decrease in smallpox has been brought about by better sanitation and the proper isolation of persons afflicted with the disease.

That these are factors, no one professes to deny, but that the general immunity from the disease which now exists could be effected without vaccination, competent authorities agree to be absurd. It is interesting to note the effect of vaccination on some of the tribes in the Philippines, where, until recently, smallpox has been an unchecked scourge, among a people with whom sanitary methods and the isolation of diseased persons are practically impossible as yet. A recent paper in the *Journal of the American Medical Association* on tropical diseases in the Philippines concludes as follows:

> In provinces where there were formerly 6,000 cases of the disease, annually, not one death has been reported from this disease in the past year. No case of loss of life on account of vaccination has occurred, nor have any limbs been sacrificed, nor has there been a case of very severe infection resulting from vaccination reported. The disease has been thoroughly kept under control by vaccination alone.

Seldom do conditions arise for such a demonstration of the efficacy of a method of healing or prevention as this quotation presents. None of the factors which the opponents of vaccination assert to be active agents has been in operation in this case, yet the mortality has been reduced from an appalling figure to zero.

In connection with the proposal for stations to observe earth movements it is interesting to note that the Manila Observatory, established by the Jesuits in 1865 primarily for meteorological work, has been conducting seismological observations for some thirty years. Just now a meteorological and geodynamic observatory is being installed at Baguio, the summer capital, 5,000 feet above sea-level. During the year ending June 30, 1908, 227 microseismic movements and 123 perceptible earthquakes were reported from different regions in the Philippine archipelago, but only one earthquake of any violence occurred, and that caused slight damage.

Henry G. Bryant, well known for his own Arctic and other geographical explorations, read an interesting paper, "Notes on an Early American Arctic Expedition," at the International Geographical Congress in Geneva last August. It was published in the January issue of the *Journal of the Royal Geographical Society* of London, and is reprinted in pamphlet. The story is of value as showing the enterprise and liberality of the merchants of Philadelphia and other seaports in colonial days. As early as 1742 its public-spirited citizens raised funds to send John Bartram, whom Linnæus described as "the greatest natural botanist in the world," on an extensive collecting trip to Oswego and Lake Ontario. His fame is largely due to this opportunity. In 1753 the earliest American expedition to make a scientific exploration of the Arctic regions and to discover the Northwest Passage, was planned and sent out from Philadelphia, with help from subscribers from Maryland, New York, and Boston. Now that in our own day the Northwest Passage has really been achieved, it is of interest to see with what courage it was attempted then. The schooner Argo, sixty tons burden, with fifteen aboard, Charles Swaine, master, sailed from Philadelphia on March 4,1753, to discover the Northwest Passage, supposed to lead from Hudson Bay to the Pacific. Her return to Boston on October 21 was followed by a report in the *Pennsylvania Gazette* of November 17 of the failure to find the Northwest Passage, but the discovery of a fine fishing bank, and the charting of part of the Labrador coast. The return of a second expedition reported even less satisfactory results, for three of the crew, who had gone on land to look for a mine, were killed by the Eskimos. E. S. Balch also gave an account of this early expedition in the *Pennsylvania Magazine of History*, July, 1908.

The large atlas, intended to illustrate the development theory, and prepared by Dr. Konrad Guenther of the University of Freiburg-im-B., entitled "Vom Urtier zum Menschen," has just been completed by the appearance of its seventieth *Lieferung* (Stuttgart: Deutsche Verlagsanstalt). The illustrations are profuse and very good.

The University of Heidelberg has received from an unknown giver the sum of 130,000 marks, to be used for the establishment of a Radiological Institute, which is to be opened by Easter. It will be in charge of the Nobel prize winner of 1905, Prof. Philipp Lenard, the physicist.

Dr. Martin H. Boyè, a chemist, died at Coopersburg, Pa., March 5, at the age of ninety-seven. He was born in Denmark, and was graduated from the University of Copenhagen, the Polytechnic School of Copenhagen, and (in 1844) from the medical department of the University of Pennsylvania. But before finishing his course at the University of Pennsylvania he had assisted Dr. Robert Hare in chemical investigations and had been assistant geologist and chemist of the first geological survey of Pennsylvania. He conducted a laboratory for analysis and instruction in analytical and practical chemistry, 1842-45, and 1845-59 he was teacher of chemistry and natural philosophy at the Central High School, Philadelphia. In connection with the late Prof. Henry D. Rogers in 1839 Dr. Boyè discovered a new compound of platinum chloride with binoxyde of nitrogen. Dr. Boyè was also joint discoverer of the high explosive, perchloric ether. In 1845 he invented a process of refining oil from cotton seed. Before that the product was almost black and very thick. Dr. Boyè's process produced a bland and colorless oil adapted for cooking and for salad dressing. He was a member of many scientific societies and was author of "Pneumatics, or the Physics of Gases" (1856), "Chemistry, or the Physics of Atoms" (1857), and various articles and memoirs in scientific publications.

The death is reported of Dr. James Hamilton, emeritus professor of pathology in Aberdeen University, whither he was called from Edinburgh in 1882. He wrote a "Textbook of Pathology," "The Topography of the Brain in Relation to Disease," and "Pathology of Bronchitis."

From Paris comes the report of the death, in his sixty-second year, of Victor-Émile Egger, professor of philosophy and psychology in the University of Paris, son of the eminent Greek scholar Prof. Emile Egger (1815-85). Besides "La Parole intérieure," which in 1881 roused much discussion, he wrote many articles for the technical journals.

Drama.

A popular edition of Marlowe, edited by C. F. Tucker Booth and Prof. Walter Raleigh, is announced by the Oxford University Press, also a similar edition of Ben Jonson, edited by Percy Simpson. A more elaborate edition of Jonson has for some time been in preparation by Prof. C. H. Herford and Mr. Simpson.

If the plain truth must be told, there was not much to delight the lover of Shakespeare in the revival of "King John," offered by the grace of Robert Mantell and William A. Brady in the New Amsterdam Theatre on Monday evening. To the one credit must be given for a laborious, more or less consistent, but absolutely uninspired and often inefficient impersonation, and to the other for liberal if often misguided management; but the net result of their labors, so far as any resuscitation of the poetic drama is concerned, was something of a fiasco. For the general public there is provided a stage pageant of more than common splendor, with some lively living pictures, much animated posturing, and a vast amount of vigorous if not particularly enlightened declamation, and these features may keep the representation alive for a season, but the artistic gain is slight. The revival, however, may prove serviceable as a costly demonstration of the practical hopelessness of interpreting Shakespeare satisfactorily—or the romantic and poetic drama, generally, for that matter—until some sort of training school has been established, where actors shall be able to learn something about the proper delivery of verse and appropriate romantic action. "King John" is an admirable acting play, rich in vital personages, and abounding in dramatic incident, and yet it missed half of its legitimate effect through the sheer inability of most of the performers, including many of the principals, to comprehend the characters or speak the lines. Mr. Mantell, by exaggerating the pusillanimous and treacherous side of John, and neglecting his intellectual and princely qualities, robbed him of both force and interest. Although his outbreak of remorseful fear, at the supposed murder of Arthur, was theatrically effective, it had too large a measure of melodramatic extravagance to be really impressive. Mr. Mantell realized only part of this subtle and complex character. Of other leading personages, the interpretation was, to say the least, inadequate. The Philip Faulconbridge was merely boisterous and vulgar; the Hubert —with all its possibilities—hopelessly conventional; the Constance, sentimentally feeble, without royalty or tragic fire; the Pandulph, a comic ranter. The Queen Elinor and a few of the subordinate personages were more satisfactory, but the general result was sadly disappointing. Perhaps the most noticeable feature was the slovenly and unintelligent manner in which all the players, save two or three, spoke their lines, with no apparent understanding of either metre or emphasis. In many instances modern pronunciations were given with excruciating results. It is a pity that Mr. Brady, whose generosity in the matter of stage decoration is worthy of cordial recognition, did not think it worth

while to engage somebody to look after the more purely literary and artistic side of the production.

In the "Münchener Beiträge zur romanischen und englischen Philologie," edited by H. Breymann and I. Schick (Leipzig: Georg Böhme), two new volumes have appeared. Vol. XLII is a treatise by Dr. Albert Franz on Heywood's "Life and Death of Hector"; Vol. XLIII by Dr. Ludwig Grashey contains an account of Giacinto Andrea Cicognini's life and work, with special reference to his drama, "La Marienne ovvero il maggior mostro del mondo."

Charles Hawtrey will be seen at the London Royalty Theatre, March 20, in a new comedy by the industrious W. Somerset Maugham, "The Noble Spaniard." This is a free adaptation from the French of Grenet Dancourt. The scene is laid in Boulogne fifty years ago.

Lucien Guitry, according to the dispatches from Paris, is to play the principal rôle in Rostand's "Chantecler," which will be produced at the Théâtre Porte St. Martin, with the opening of the autumn season. M. Guitry, a former associate of Sarah Bernhardt, is one of the most notable French actors of the day.

Céleste Vénard, famous as an actress during the Second Empire, under the name of "La Mogador," has died in Paris at the age of eighty-five. After her marriage in 1853 to the Comte de Chabrillan she took up authorship and wrote a number of novels. Her memoirs, in five volumes, were ready for publication in 1854, but were suppressed at the time, and did not come out until 1876.

Music.

Garcia the Centenarian and His Times. By M. Sterling Mackinlay. New York: Appleton & Co. $4 net.

It is a singular fact that the greatest teacher of the Italian *bel canto* that ever lived was a Spaniard; but this is only one of many remarkable things about Manuel Garcia. He was the father of two women, Maria Malibran and Pauline Viardot, who rank among the greatest singers of all time; he taught these and Jenny Lind, Antoinette Sterling, Charles Santley, Johanna Wagner, and others who became famous themselves or as teachers of Calvé, Eames, Melba, Henschel, Van Rooy, and Scheidemantel; he invented the laryngoscope, which not only put the study of the voice on a scientific basis, but proved such a boon to medical men that when his hundredth birthday was celebrated, sixteen societies of laryngologists from all parts of the world sent representatives to honor him; and he was one of the very few distinguished men who reached such an advanced age in full possession of their mental faculties and with enough physical vigor to go about and make speeches. Garcia was born in 1805, when Wagner and Verdi were schoolboys, Chopin, Mendelssohn and Schumann not yet in existence; and on March 17, 1906, he celebrated the entrance into his one hundred and second year by taking up a guitar and singing a Spanish song.

Such a man's life was surely worth writing, and this task has now been accomplished by M. Sterling Mackinlay, a son of the famous English contralto, Antoinette Sterling. Both mother and son were pupils of Garcia, but this was nothing surprising in the case of a teacher who repeatedly was able to tell pupils of the time when he taught one of their grandparents. When Miss Sterling first went to him for lessons he was so carried away with the beauty of her voice that he neglected his rule of keeping new pupils to exercises, being eager to hear her sing Italian arias; but when she came to a difficult phrase she burst out crying: "You ought not to give me these songs until I have mastered the exercise properly." He agreed with her, and assigned her the exercises. Mr. Mackinlay was the last of his pupils who received the full four years' course, and his jottings regarding these lessons constitute the most valuable pages in his book. While the lessons sometimes lasted two hours, Garcia allowed plenty of intervals of rest, during which he told anecdotes about the great singers he had taught or known. A flood of light was let in by his clear explanation of the different parts of the "instrument": the lungs for tone emission, the glottis for pitch, the oral cavity for timbre and vowel tone, the front of the mouth for consonants. He tried to awaken the pupil's intelligence, to enable him to criticise his own singing. The chief cause of the lamentable number of failures he diagnosed in these words:

> If you find a difficulty, do not shirk it. Make up your mind to master it. So many singers give up what they find hard. They think they are better off by leaving it and turning their attention to other things which come more easily. Do not be like them.

If a pupil repeated a mistake he had once corrected he would say: "Jenny Lind would have cut her throat sooner than have given me reason to say, 'We corrected that mistake last time.'" A whole chapter is devoted to the lessons of Jenny Lind, who, when she first came to him, had so damaged her voice by injudicious training and over-exertion that he said to her: "It would be useless to teach you, mademoiselle; you have no voice left." All his pupils loved him for his patience and his courtesy. Amusing anecdotes are told in this book as to how he managed to get rid of undesirable pupils without hurting their feelings. However profitable such pupils might be, he had no use for them, as he wanted to keep his reputation as a teacher who could point to results.

Valuable pages are contributed to this volume by Hermann Klein, who studied with Garcia some years and subsequently helped him prepare his excellent "Hints on Singing," which was published in 1895. In his earlier work, the "Method of Teaching Singing," Garcia did much to clear up the confusion between "timbre" and "registers." Apart from the success won by many pupils who followed his method, probably the greatest compliment ever bestowed on Garcia was the request made by Wagner that he should undertake the training of the singers who were to take part in the first Bayreuth festival.

Heretofore there has been no uniform complete edition of Wagner's operas, because he had sold them to three publishers. These publishers, Breitkopf & Härtel, Adolph Fürstner, and B. Schott's Söhne, have now got together for the purpose of issuing an edition of the eleven operas from "Rienzi" to "Parsifal." Each is to be sold for six marks ($1.50), but only to subscribers to the whole series. The issue begins in May, and before the end of 1911 all the scores will be in the hands of subscribers.

The musical periodical founded by Schumann, the *Neue Zeitschrift für Musik,* is no more. A year or two ago it was consolidated with another moribund, though once influential, periodical, the *Musikalischcs Wochenblatt.* A few weeks ago the last joint number was printed. The demise was no doubt hastened by the growing popularity of *Die Musik* and *Signale für die Musikwelt* of Berlin.

A feature of the spring opera season at Covent Garden is to be the first production in England of Baron Frederic d'Erlanger's "Tess of the d'Urbervilles." This opera had its first hearing at Naples in 1906, when an eruption of Vesuvius put a sudden end to its career on the second night of its run. It was subsequently staged in Milan. A previous opera by the same composer, "Ines Mendo," was produced at Covent Garden in the jubilee year.

RECENT EXCAVATIONS IN ASSUR AND BABYLON.

For a number of years the German Orient Society has uninterruptedly carried on systematic excavations in two of the most important centres of the ancient Babylonian-Assyrian civilization; in the south in the city of Babylon, which in the days of Hammurabi (about 2000 B. C.) became the capital of Babylonia; and in the north in the city of Assur, the starting point of the political growth of Assyria, now traced back to a period beyond 2000 B. C. Moreover, Assur, even after it yielded its prerogatives to Caleh, and later to Nineveh, still retained considerable of its former prestige. The chief feature of these excavations, conducted in the south by

Prof. Robert Koldewey, and in the north by Walter Andreae, is the systematic manner in which the work has been carried on, without sensationalism or blare of trumpets. One section after the other of the extensive mounds at both places has been attacked and thoroughly explored. Indifferent to merely showy results, the explorers have endeavored to obtain as complete a view as possible of the contour of these two capitals in the various periods, and to make an equally complete study of the different kinds of structures unearthed. A great deal of time was devoted to the mere tracing of walls and to other labors that previous explorers, more concerned to announce striking results, would have regarded as wasted efforts. Reports of progress have been sent at frequent intervals to the home office of the society in Berlin, and there published in the form of *Mitteilungen*. The society has had liberal support from a large membership, and in particular from the German Emperor, who has given several thousand dollars annually, and a Berlin banker, James Simon, whose generosity in aiding archæological expeditions has not been limited to the undertakings in Babylon and Assur. The leading spirit of the German Orient Society is Prof. Friedrich Delitzsch, to whom the interest of the German Emperor is largely due. Professor Delitzsch's lectures on various phases of Babylonian-Assyrian culture, delivered before the German Emperor and repeated in all parts of Germany, have brought the results of Assyriological research to the notice of the general public.

In Babylon, where digging was begun in 1899, one of the chief results was the discovery of the sacred procession street —the *via sacra*—along which the statues of the gods were carried on festivals. It led through the city to the great temple of Marduk, and appears to have been made more particularly for the annual visit which on New Year's day—celebrated at the time of the vernal equinox—the god Nebo, whose seat lay at Borsippa, opposite Babylon, paid to the patron deity of Babylon as a kind of homage to the head of the pantheon. This street, which was raised above the level of the houses, was lined with glazed tiles, on which lions were depicted, accompanying the god on his way. Next to the procession street, the elaborate gateway, likewise leading to the temple and known as the gate of Ishtar, was unearthed and so thoroughly explored that its construction is now known to us in its smallest details. The walls here were likewise covered with glazed bricks, on which dragons and bulls were depicted, which probably represent the designs referred to in one of the visions of Ezekiel. Large portions likewise of the temple area of Babylon were carefully explored, as well as sections of the royal palaces, though the almost hopeless state of the ruins afforded less opportunity here for definite results. Besides the great temple of Marduk, known as Esagila, "the lofty house," sacred structures dedicated to other deities, notably a temple to the solar deity Ninib (one of the most important gods of the pantheon), and a temple to Nin-Makh, "the great lady" (a designation of the chief goddess Ishtar), were also unearthed and their general character determined. These temples lay within the sacred area around Marduk's sanctuary, and from the inscriptions of Nebuchadnezzar we know that, grouped about the chief sanctuary, were special edifices, chapels as it were, to a large number of gods and goddesses. In other words, Babylon, like other centres in the Euphrates Valley, had an entire sacred quarter, and it is this quarter that Professor Koldewey has to a large extent explored. The general character of Babylonian temples has now, thanks to the work of the German Orient Society, been clearly determined. Through a central gate one entered a large court open to the air, around which were numerous smaller rooms for the use of the priests, for storage, and for the temple school. This court led to a smaller enclosure, from which one proceeded to the sacred *cella*, containing the statue of the god or goddess to whom the temple was dedicated. The general resemblance of such a structure to Solomon's Temple leaves no doubt that—whether through direct or indirect copying—the latter was modelled after Babylonian examples.

It was somewhat of a disappointment that most of the earlier diggings threw light on only the latest period of Babylonian history, on the time of the Neo-Babylonian dynasty. This was founded in 625 B. C. by Nebopolassar, the father of the famous Nebuchadnezzar, and it lasted only until 539 B. C., when Babylon was taken by Cyrus. The lack of earlier remains was supposed to be due to the sad havoc made by King Sennacherib of Assyria, who, to punish the Babylonians for their frequent revolts against Assyria, destroyed the city in 689 B. C. In order to make destruction complete, he flooded the city. Happily, however, the latest *Mitteilungen* tell of the recovery of a considerable number of cuneiform tablets, chiefly business documents, dated in the reign of the first dynasty of Babylon, the sixth member of which was Hammurabi (about 2000 B. C.). These tablets were found in a stratum of the mounds that reached down to the water level, showing that the explorers had thus struck the beginnings of the settlement. In part, this oldest settlement was built on an eminence at some height above the water. The ancient wall of the city at the old water level has also been traced for a considerable distance; and among other interesting discoveries, mention should be made of the landing places for small boats, to which stairs led down from the wall itself.

To enumerate the many inscriptions and fragments of monuments found in the course of the excavations would carry us too far. Clay cylinders of various rulers, notably one of Nebopolassar, have furnished many new details; a boundary stone dating from the twelfth century contains some important symbols, while terra-cotta statuettes representing the goddess Ishtar, in various forms, among others with a child at her breast, are examples of the kind of votive offerings that the worshippers deposited in the temples. Of special interest is a stone tablet with reliefs depicting incantation scenes to secure release from the grasp of the demons; while, as a great surprise, a dolorite *stele* with a Hittite god sculptured on it, accompanied by a Hittite inscription, was unearthed during the first year of the excavations in the portion of the mound covering the remains of the royal palace and *burg*. It appears to have been carried to Babylon as a trophy of war.

At Assur, the results have been even more gratifying. The work here was not begun till the autumn of 1903, but it has been carried on uninterruptedly up to the present time. The temple of the god Ashur, which was known as the "House of the Great Mountain of Countries," has been found, the *zikkurat*, or stage-tower, which was one of the features of the city, has been explored, and, perhaps most important of all, the temple which was dedicated to two gods, Anu and Adad, and which appears to have been even more sacred than that to Ashur, has been most thoroughly excavated. A separate monograph on this temple, with a complete series of designs and illustrations by Andreae, is now in press. The homage to the two gods is marked by the remains of two stage-towers, one to Anu, "the god of heaven"; the other to Adad, "the god of storms." Possibly these two stage-towers formed the original portion of the sacred area, and subsequently the temple proper was built with the usual large court, surrounded by a series of rooms. Within the court was a sacred well, and beyond, on the northwest side of the court, was a long room, with the statues of the two gods. Of special interest is a portion of the forked lightning, made of gold, the ordinary symbol of Adad. It is a fair presumption that it belonged to the temple statue of the god and was held in one of his hands. The foundation of this temple can now be traced back to the eighteenth century B. C. Another striking result of the excavations was the discovery near the outer wall of the city of a "festival house" (*bît akîti*) in hon-

or of Ashur, erected by Sennacherib. To this sacred edifice, the statue of the god Ashur was carried from his temple at the time of the new year's festival, celebrated, as in Babylon, in the spring. The new year commemorated the triumph over the monster Tiamat, symbolical of primeval chaos and the establishment of order in the universe. This deed was ascribed in Babylonia to Marduk, while in Assyria the distinction was claimed for the god Ashur, who, during the duration of the festival, took up his seat in the special "festival house," surrounded by the statues of the other great gods. An extensive garden in front of the structure and another in the large court are some of the features meriting special attention. The *cella*, or "holy of holies," was unusually large, evidently serving as the assembly place of the gods on the most sacred occasion of the year.

A feature of the excavations at Assur is the discovery of many private houses, with vaults in which the members of the family were buried. The dwellings of the living thus became also the abode of the dead. Much light has been shed, both upon the interior arrangement of these houses and on the methods of burial. Burial and cremation appear to have existed side by side, and in burial several methods were followed. The body, somewhat compressed, was either forced into a clay sarcophagus, or it was simply laid on the ground, or it was walled in within clay covers. From the large number of such private houses that were excavated, many of the details of the interior arrangement have now become clear. The floors were generally formed of pressed earth, while the courts were, as a rule, paved with pebbles, bits of stones, or bricks. Regular patterns, rosettes and squares, were formed by the combination of the pebbles and little stones. Much care was bestowed on the drainage, and even the simplest houses had at least a gutter to carry off water and refuse to the street canal. The thresholds were made of gypsum slabs, or of brick, and the supports and hinges for the doors were carefully worked out. The streets appear to have been narrow and irregularly laid out, and, at times, the entrance to the houses lay through an alley, running off from the main street. A feature of the houses was the large court adjoining the main room. The approach to the court was from a kind of corridor, leading directly to the main entrance. In this corridor, there was generally a mortar sunk into the ground, and used for crushing the grain. Traces of stairs going to the roof have also been found. The number of rooms naturally varies. An unusually large house that was unearthed had no less than twenty separate apartments, grouped around the central court, including one that served the purpose of a bath-room.

The number of inscriptions of all kinds found in the course of excavations at Ashur is very large, and many of them are of great historical importance. While only portions of these inscriptions have been published, the results have already enabled us to carry the history of Assyria back several centuries beyond 1800 B. C., which a few years ago represented the limit of our knowledge. The oldest Assyrian priestly chief now known to us is Ushpia, the founder of the main temple to the god Ashur. His date can be approximately fixed at 2100 B.C.

Besides the work done in Babylon and Ashur, the German Orient Society has also undertaken preliminary excavations at other points in the Euphrates Valley, and has carefully examined a variety of promising sites. Scarcely less important than the results in Babylonia and Assyria is the extension of the society's activities to Egypt and Palestine and to the Hittite settlement in Boghaz-Köi in Cappadocia (see the *Nation* of February 27, 1908, p. 189) and neighboring sites. In Egypt the site chosen was Abusir, where most important discoveries were made, chiefly in the temple of the dead in honor of King Sahure. In Palestine, the ruins of ancient synagogues in Galilee were thoroughly explored, and last spring the site of the ancient city of Jericho was vigorously attacked and important preliminary results attained (see the *Nation* of February 4, 1909, p. 125).

The rapid growth of the German Orient Society, now numbering more than one thousand members in all parts of the world, is in itself a recognition of the value of the work accomplished, as well as an index of the remarkable interest in archæological research which, during the last fifty years, has so widely extended our knowledge of the past and fairly revolutionized our views of the earliest civilizations.

MORRIS JASTROW, JR.

University of Pennsylvania.

The *Rassegna d'Arte* for February is devoted chiefly to the timely matter of Messina. Of pathetic interest is Lorenzo Fiocca's article on the Cathedral and its restoration, written before the earthquake. Except for the north portal, the decoration of the façade has since been destroyed. Of the interior decoration, the original parts and the restorations were overthrown together. It is possible that the massive blocks of the apses which your correspondent saw lying in the piazza, but still bearing their mosaics relatively intact, may be reassembled for exhibition in the museum. Dr. G. Frizzoni furnished a very complete and interesting list of noteworthy works of art at Messina. Osvald Sirén adds to the list of Lorenzo Monaco's works ten paintings previously unknown. One of these, a large fresco in the Archivio Notarile, Florence, is a substantial addition to our knowledge of this exquisite artist.

Not often has anything come to our table which has given more pleasure than a selection of six colored reproductions from the Medici Series, published by Chatto & Windus of London, and Foster Brothers of Boston. Five of these plates, averaging about 13 in. by 10, give the Head of the Virgin Mary by Luini (Milan: No. 293 Brera Palace), Head of Christ by Da Vinci, Virgin by Lippi (Florence: Uffizi), Fruitfulness by Rubens, and Portrait of an Unknown Lady by Francesca (Milan: Poldi-Pezzoli). The sixth gives Da Vinci's Last Supper in a plate measuring 16 by 31½. The process, a new method of photo-collotype without screen, reproduces the colors and surface quality of the originals with really extraordinary exactness, particularly in the case of the frescos, where one can almost feel the plaster. They are entirely free from the hard dead look of the old-fashioned color prints, and can be heartily recommended for framing. The price of the smaller plates is four and five dollars, that of The Last Supper, ten.

"Jacob Jordaens, his Life and Work," by Max Rooses (E. P. Dutton & Co.), is one of those lovingly elaborate studies in antiquarianism which we have come to expect of the Director of the Plantin Museum. The large folio is abundantly illustrated, and the text is well translated by Elisabeth C. Broers. Readers of Dr. Rooses's standard work on Rubens will be prepared to find the present volume quite as much a contribution to the history of culture as to that of art, narrowly speaking. In fact, there are no more interesting pages than those which describe the roistering, full-blown life of Flanders after the peace. Of this Gargantuan society Jordaens is the best pictorial chronicler. Old Brueghel and Jan Steen, both measurably his superiors, render it less faithfully because with greater artistic prepossession. We agree with Dr. Rooses that Jordaens, who has usually been treated merely as a somewhat rude echo of Rubens, should be studied for his own sake. He never had the reflective quality that goes to make a great composer, and he never achieved an exquisite technique, but in sheer gusto and fertility few are his equals. One rarely sees so great a painter with so little of the finesse that we regard as the mark of the artist. Yet how refreshing he is in his own range of expression! Of convivial drinking he is the very prophet. He alone could have illustrated Rabelais. No one has imagined finer satyrs. Indeed, his mythologies make the overrated inventions of Böcklin seem puerile. The mantle of Rubens weighed heavy upon him, yet he wore it creditably. The best of his big religious pieces represent the Barock of Flanders quite at its best. He was withal an excellent portraitist, and except as a decorator seldom failed utterly. No gift was denied him except that of taste and the patience therein implied. His pictures constitute a world—a world not quite shaped, to be sure, but authentic and as vital as it is turbulent. He has added to the relish of life, and perhaps that is after all the main business of art. Dr. Rooses traces this career with discrimination, admitting freely the lapses to which this sort of a temperament is subject. We would add only that the later drawings of religious subjects seem to betray the influence, in com-

position merely, of that alien and far greater genius Rembrandt. It is a pity that this interesting and useful book is so badly made. The plates are strewn through the text almost at random, and since there are references neither in one case nor the other, the reader is in constant perplexity where to find an illustration, and often wastes time in looking up illustrations that have not been provided. But the book is such a compendium of information that students will be willing to supply with the pen the references that should have been given by the types.

To the series Stätte der Kultur: Eine Sammlung künstlerisch ausgestatteter Städte Monographien, edited by Dr. Georg Biermann (Leipzig: Klinkhardt & Biermann), six new numbers have recently been added. Dr. E. Kroker, in "Leipzig," treats his subject chiefly from the point of view of history; August Grisebach, "Dantzig," from the point of view of an artist and an architect; H. Kesser, in "Luzern, der Vierwaldstätter See und der St. Gotthard," depicts the grandeur of Alpine scenery; Franz Servaes writes his account of "Vienna" in the form of letters to a friend; O. Grauloff, in "Lübeck," tells the story of this old free city, but denounces the religious realism prevailing there in recent years; and J. A. Lux devotes the bulk of "Altholland" to the architecture and the historic art of the Netherlands, to which account the general editor adds an appendix on "Die Kunst von Altholland." The earlier volumes in this excellent series of monographs deal with Berlin, Rothenburg on the Tauber, Frankfort on the Main, and Bremen.

The Metropolitan Museum is exhibiting among its recent accessions a Permagene fragment which bears all the indications of being the work of a great sculptor. It is part of the trunk, the two thighs, and one foot of a Gaul, the jacket and tight-fitting trousers in no way concealing the vigorous muscles. Among other fragments are a tombstone of a woman in relief, exquisite in the simplicity of the folds in the drapery; a replica of the head and shoulders of the statue of which the famous Dresden Satyr is a copy; and the torso of a small statue, possibly of Zeus, with admirable modelling in the back. There are also three fine Roman portrait busts, among them one of Augustus in his later years, showing much of that personal beauty for which he was famed. A gold earring in the form of a Siren playing upon a lyre is in almost perfect condition, and is described as "a marvellous production of the Greek goldsmiths' art of the fifth century B. C." Beautiful, too, are a large Greek drinking bowl, two shallow cups with handles, a jug and a wine ladle, all in silver. Paintings by Frank M. Boggs, J. S. Brown, Miss Mary Cassatt, Winslow Homer, William Sartain, W. Elmer Schofield, F. Ballard Williams, and J. H. Twachtman have been obtained by purchase or gift. The Metropolitan has also bought three of the Sorolla pictures which have been shown here. They are the portrait of Señora de Sorolla in black, the one without the mantilla; the Swimmers, and The Bath, Javéa, in which a little girl is on the point of diving into the water.

The new picture gallery of the Vatican is to be opened March 18, but permission was accorded last Tuesday for a preliminary view. The old Vatican gallery contained sixty pictures, but the new collection embraces 300, displayed in seven halls opening on the Belvidere Court. The additional pictures have been brought from the Lateran palace and the private apartments of the Vatican. The first hall contains a collection of Byzantine pictures; the second is given over to the Tuscan school, headed by Fra Angelico; the third, to examples of the Umbrian school; in the fourth is the gem of the collection, Raphael's Transfiguration, which hangs alone on the main wall; the fifth hall is devoted to the Venetian school, headed by Titian; the sixth, to examples of the sixth century, and the seventh to pictures by foreign artists.

Further details have come concerning the excavations on the Mons Janiculum, in Rome, noted in our issue of February 25, p. 206. Below the level of the court have been laid bare three strata of large oil amphoræ, placed in diagonal rows, with their mouths pointing due north. These contain the remains of sacrifices, bones of wild boars and other animals, and human bones. Here are also innumerable smaller jars, earthen and glass. The statue of Bacchus, mentioned in our former report, is a graceful figure cut in Greek marble, its right hand resting on a grape-twined column. It is of good workmanship, and its head and hands clearly show traces of gilding. The statue in the Egyptian style represents a goddess, standing with right leg advanced and with arms extended and grasping objects not now in place, but reported found. The features and headdress are Egyptian. Over the forehead, the body of a serpent forms a horizontal figure eight and trails down the crown of the head. The goddess wears a short, scant, belted tunic, which seems taken by the breeze, and which brings to mind those worn by Diana. The right leg is broken in two places, and the serpent's, or dragon's, head is missing, but otherwise the statue is in perfect condition. In spite of the rigidity of the type, the work is admirable. The arms of the small statue supposed to be of Kronos are pressed to the side, the legs close together, and from between the ankles a dragon coils to the left, under the limbs, passing over below the thighs, and five times around the body and behind the head, and resting its crested head above the image's forehead. At the point of the dragon's tail is an oval, green object, and now scattered on either side are four broken hens' eggs, natural eggs. The oval object is an egg, and one can plainly see the four original significant places in the spaces between the serpent's coils from which they have fallen. The crest of the dragon shows three clefts and traces of gilding.

Among the exhibitions at the dealers' galleries in this city are landscapes by Carroll John Halliday, at Powell's, till March 13; glass, oil, water-colors, and sketches, John Lafarge, Knoedler's, March 13; pictures, Horatio Walker, Montrose's, March 13; paintings, Charles H. Davis, Macbeth's, March 18; pictures, W. B. Tholen, Noé's, March 20; "old masters," Ehrich's, March 22; paintings, DeWitt Parshall, Bauer-Folsom's, March 23; seventeenth century etchings, Keppel's, April 6.

Elijah E. Myers, the architect, died in Detroit March 5. He was born in Philadelphia in 1832. He designed the capitols of Michigan, Texas, Colorado, Idaho, and Utah, the Parliament buildings at Rio de Janeiro, Brazil, an asylum building in the City of Mexico, and courthouses in nearly every State in the Union. He was also a member of the board of examiners of the World's Fair buildings in Chicago in 1893.

Alexandre Charpentier, sculptor and artist, chevalier of the Legion of Honor and member of the Société Nationale des Beaux-Arts, died in Paris, March 4. Among his more important works are a marble Mère Allaitant, in the Musée de Morlaix; Les Boulangers, plaster bas-relief, in the Place Scipion, Paris; and a Narcisse, in the Luxembourg, Paris.

Finance.

PROBLEMS OF THE TREASURY.

The new Secretary of the Treasury takes office in the face of some peculiarly difficult problems. The government's finances, it is true, are in no such tangle as that into which they had fallen in the last period of after-panic reaction. After 1893 Secretary Carlisle found that, on the one hand, the deficit had drawn on the gold reserve against the legal tenders, and, on the other, no lawful means, except loans, existed for obtaining funds to restore that reserve. The result was that the government had to borrow gold explicitly, with the further consequences that discrimination between our different forms of currency constantly prevailed, and that public attention was converged on the danger of a lapse to the silver standard. That state of things is now prevented by the Gold Standard Act of 1900. The $150,000,000 gold reserve is now set definitely apart for the redemption of legal tender notes; and although no general power of borrowing money to make good a deficit has been conferred upon the Treasury—the Panama Canal loans being strictly limited to canal construction—a proviso of the Spanish War Revenue Act of 1898, not subsequently repealed and not restricted to a period of war, authorizes the Secretary of the Treasury "to borrow from time to time, at a rate of interest not exceeding 3 per cent. per annum, such sum or sums as, in his judgment, may be necessary to meet public expenditures."

That such recourse may become necessary has been openly predicted by the financial experts of Congress, and the statements of the Treasury add force to the prediction. The available cash balance, by Monday's report, is $141,600,000, of which not quite $72,000,000 is in the form of deposits with the banks. The deficit, for the eight completed months of the fiscal year, has been $86,000,000, and, according to the chairman of the House Appropriations Committee, will rise to $150,000,000 by the end of

June. The Treasury's own estimate for the ensuing twelvemonth, on the basis of existing laws, concedes a deficit of $143,000,000; it is therefore easily possible that the government's borrowing powers may before long have to be invoked for other purposes than the Panama Canal. This is one subject to which Secretary MacVeagh must presently address himself.

The still broader question which lies before him and Congress is the readjustment of the revenue. Borrowing to make good a deficit is at best a temporary recourse; the American people, fortunately, have never been disposed to accept a situation, such as many European governments have allowed to prevail indefinitely, of annual deficits which are always met through large additions to the debt. Revision of the tariff, if pursued on scientific lines, should make that source of revenue much more productive; but relief through that expedient will be relatively slow, especially in the present period of business depression; and it is probable that increased internal taxes will soon be up for discussion. Talk of an inheritance tax, of stamp taxes, and even vague intimations—without any very feasible suggestions—of an income tax, are already heard at Washington.

That the fiscal controversy should have taken this turn is by no means a matter for regret. It is time that people had distinct and personal evidence of the real meaning of our government's extravagance. So long as the topic of the day was how to dispose of a surplus, it was impossible to excite general indignation over the rapidly mounting appropriations. The remark of the late Speaker Reed, in a previous era of extravagance, that "a billion-dollar Congress goes with a billion-dollar country," is thought a sufficient answer to protests; larger bills for naval and military outlay are part of the national glory; and thus the spendthrifts have had their way the past half-dozen years at Washington, as also at London and Berlin. Now the shoe begins to pinch; the present concern of European statesmen is to justify their lavish financiering to a people on whom increased taxes are weighing heavily in hard times; and our own statesmen need not expect to escape a similar reckoning.

Just what our extravagance has been of recent years Mr. Tawney of the Appropriations Committee showed last week to Congress. In the eight-year period from 1891 to 1898, inclusive, our annual army appropriations averaged $23,825,922; in the similar period from 1903 to the fiscal year just provided for, the average has been $83,014,660. Naval appropriations, which averaged $27,579,300 annually in the earlier period, average $102,403,029 for the past eight years. In army appropriations alone, Mr. Tawney pointed out, the total increase for the period "exceeds $473,000,000, a sum sufficient to cover the whole cost of constructing the Panama Canal," while the total increase for naval purposes is "a sum greatly in excess of the total appropriations for the support of the whole government for any fiscal year prior to 1898." Forty per cent. of all our public revenue, outside of postal receipts, is now being spent on nothing but preparation for war.

Facts of this kind, which have so long been brushed aside indifferently by a nation which was enjoying "boom times" and "thinking in hundred millions," will be seriously pondered when the citizen is asked directly to give part of his savings for support of extravagant policies.

Alden's Introduction to Poetry

By RAYMOND M. ALDEN, Assistant Professor in Stanford University, author of "The Art of Debate" and "English Verse." 12mo, 371 pps. $1.25.

A discussion of the theory of poetry arranged for use in connection with a course on Versification.

Comprising a sufficient treatment of the technique of the subject for class-room use, this work includes some accounts of the other elements of poetry.

It differs from "English Verse" in attempting to state principles with some fullness, instead of merely bringing together the materials for an inductive study, and in including a discussion of the imaginative and spiritual aspects of poetry, instead of limiting itself to verse form.

The treatment of the fundamental problems of English rhythm is the most individual portion of the book.

Henry Holt & Company NEW YORK CHICAGO

Ready this week.

TWO BOOKS FOR BOYS

C. P. Burton's Bob's Cave Boys

A sequel to "The Boys of Bob's Hill," already in its 4th edition. Illustrated. $1.50.

A wholesomely exciting account of the further doings of a boys' club in a New England village.

H G. Hunting's Witter Whitehead's Own Story

About a lucky splash of whitewash, some stolen silver, and a house that wasn't vacant. Illustrated, $1.25. Has to do with the work and exciting experiences of a wagon boy in a large city department store.

Impressions of American Education in 1908

By SARA A. BURSTALL, M.A. Head Mistress, Manchester High School for Girls, and Lecturer in Education in the University of Manchester. Author of 'English High Schools for Girls.' Crown 8vo. 341 pages. $1.25 net.

CONTENTS.—General Introduction — American High Schools—Private Schools—Colleges and Universities—Methods of Teaching—The Teaching of History in Schools and Colleges—Home Economies—Commercial Education—Industrial Education—The Place of Women in American Education—Conclusion—Appendix.

LONGMANS, GREEN, & CO., NEW YORK

BOOKS—All out of print books supplied, no matter on what subject; write me, stating books wanted; I can get you any book ever published; when in England, call and inspect my stock of 50,000 rare books. BAKER'S GREAT BOOKSHOP, John Bright St., Birmingham, England.

Said a prominent business man recently: "I would as quickly enter a man's office drest in overalls as I would send him a letter written on some of the flimsy stationery that is in use to-day."

Here then is one of the best arguments we could make for

"The Standard Paper for Business Stationery"

OLD HAMPSHIRE BOND

"Look for this Water Mark"

The point is, the man who lacks enough pride to keep up appearances is accorded very little consideration.

Don't lose sight of the fact that your stationery represents you. It goes when you can't go. A specimen book of OLD HAMPSHIRE BOND would interest you. Ask us or your printer.

Hampshire Paper Company

We are the only paper makers in the world making bond paper exclusively

South Hadley Falls, Massachusetts

OUR LIBRARY SERVICE

We have recently supplemented our service to Libraries, by procuring Out-of-Print and Scarce Books, and by importing English books.

Our Educational Catalogue contains a full list of Supplementary Reading, indicating the grade to which each title is adapted.

Our Clearance Catalogue contains overstock at special prices, and an alphabetical arrangement by authors of all cheap editions of Recent Popular Fiction and Standard Library 12mos in one list.

Our Library Catalogue of 3,500 approved titles, following A. L. A. lines, is of great convenience to small libraries.

Our Monthly Bulletin notices promptly every new book of importance.

These Catalogues are sent on request.

Three notable features of our service are: Promptness, thoroughness, and low prices.

The Nation.

NEW YORK, THURSDAY, MARCH 18, 1909.

The Week.

March 15, 1909, deserves to rank among memorable dates. It is the day on which the Republican party set about redeeming the broken promises of thirty years. For that length of time, and longer, it has been assuring the country that it would reduce tariff duties in its own way and time, always through "friends" of protection. As the years sped and nothing was done, the faith of many grew dim. But here we are still alive with a Republican Congress called in extraordinary session to reduce the tariff. Wonders will never cease. The reflections of Democrats, however, cannot be other than bitter. Here is their own issue—a winning issue—deliberately thrown away for twelve years, and now their rivals called to power to do what should have been their own triumphant task. As the failure of mere party tacticians, their mortification is complete. Abandoning their strong position, they went off into the unknown under a leader who vacillated between financial unsoundness and class hatreds; saw themselves defeated time after time; and now have to suffer the humiliation of finding their opponents appropriating the only issue on which the Democrats have been able to win a victory in twenty-five years. Seldom can the whirligig of politics have brought round a more dramatic revenge. We would not speak as though the work were already done, and a satisfactory tariff enacted by the Republicans. Their labor is all before them, and it will be arduous. Great credit is due President Taft for firmly holding Republicans to their pledges. As was said by Judge Parker in his lecture at Princeton on Saturday, there are signs in abundance that many Republicans never intended an honest revision of the tariff, but the sincerity of Mr. Taft's purpose is not questioned even by his opponents.

It is already obvious that the necessity of providing revenue is going to be more controlling in the drafting of the coming tariff than was the case with either the Wilson or the Dingley tariff. The point has been reached where the growth of the country cannot be counted upon automatically to fill the Treasury. In the first place, the sums to be taken out of the Treasury have become increasingly vast. Then, the development of our manufactures and the fluctuations of trade are such that protective duties are less and less to be depended upon to produce revenue. Senator Aldrich predicted in 1897 that this would prove to be so, and the Treasury returns have fully borne him out. At the very time when we most need a constant source of revenue—that is, in business depression—tariff duties most miserably fail. Moreover, even excise duties will not be the sure revenue-producers in the future that they have been in the past. With the strengthening of the temperance and prohibition movements, in various parts of the country, the far-sighted legislator will not reckon upon the old large returns from internal-revenue taxes. New taxes will be necessary, and are in contemplation. A Federal inheritance tax has been suggested by President Taft. Such a tax is correct in principle, but is open to the objection that it would, in many cases, lead to double taxation, as many States now levy an inheritance tax. It is not strange, then, that Congressmen should be discussing a recourse to various forms of stamp taxes, in order to put the Treasury in funds.

The present "war" in the steel trade comes as a complete refutation of an argument—or excuse—of which we have heard much during the past eight years. We mean the tearful protest against reducing the tariff lest the "small producer" be injured. The land has been full of Republicans who would be only too happy to clip the claws of monopoly by taking away its tariff protection, but when they thought of the independent manufacturers, their hearts failed them. They would like to kill Goliath, but they could not do it without cutting off David's head. This assertion was always inherently absurd. But it is not necessary now to rest the case on general considerations. The actual facts are to-day full under the eye, and yield a practical demonstration of the hollowness of the protectionist contention that the tariff must not be touched in a way to lower prices lest the small, independent producer perish on the spot. Exactly how deep is the cut in prices, it is impossible to say. The admitted reductions range from 10 to 20 per cent. Thus the quoted price of steel billets, which was, in 1907, $29.75, and a year ago $28.00, was, on March 10, $23.00. Now, if anybody had ventured to propose two years ago a change in the tariff which would result in lowering the price of steel billets nearly 20 per cent., or forcing tin plates down by the large percentages announced last week, he would have been denounced as an enemy of the business and a deadly enemy of the small and independent steel-maker. But here we are with those low prices and the tariff not altered in a comma. Moreover, the evidence goes to show that the low prices were actually conceded first by the manufacturers outside of the Steel Corporation. Instead of having to maintain high prices or be ruined, they found that they would be ruined unless they went out and got business at low prices.

The calmness with which the public receives news of the acquittal of the Standard Oil Company, in the retrial of the case in which it was fined $29,000,000 two years ago, is more important than the acquittal itself. It betokens a new attitude of the public mind. The excitements, the explosions, the vast agitations of the past few years, the people are preparing to put away like a closed book. It is not that the material for sensation and outcry is lacking; it is only the motive that seems now to be wanting. In this dismissal of the famous prosecution of the Standard Oil Company, so indifferently noted by newspapers and their readers, there is an abundance of good shrieking matter, if powerful politicians could see their advantage in making the welkin ring with it. Merely consider the possibilities. Suppose a Democratic President had been elected; suppose that he had chosen an Attorney-General known for his long service of corporations; and that within a week after the new Administration came into power, the most offensive corporation in the land had come out of a Federal court with a

clean bill of health—would not the Republicans have been calling upon the winds of heaven to blow and crack their cheeks in order faintly to express the outrage? The facts would be just what everybody now knows them to be—namely, that fundamental legal principles were violated when the Standard was fined a sum equal to the revenue of the State of New York, and that the reversal is simply in accordance with the law. Yet all this would have made no difference if the public had been disposed to follow an agitator appealing to violent prejudices. But the people are "most unusual calm" about such things just now, and, consequently, so are the politicians and the young lions of the press.

The reappointment of Major-Gen. J. Franklin Bell, as chief of staff of the army, has a special interest aside from the personality involved, because of the fact that this is the first time that a President has gone out of office since the position of Chief of Staff was created. Under former conditions, the commanding general remained the head of the army until his retirement took place at the age of sixty-four years. The law creating the Chief of Staff, who can be any one of the generals and does not have to be senior in rank, requires that he shall submit his resignation to the new President just as if he were a member of the Cabinet. The President can then choose another officer if he believes that some one else will be more valuable to him, or more in sympathy with his policy. In this case, Mr. Taft has promptly reappointed Gen. Bell, with whom he has had close acquaintance since Philippine days. Gen. Bell has the respect of the service to a remarkable degree, and is a man of such undoubted ability that his rapid rise from captain to general has never militated against him. He has, however, found desk work so irksome that it was thought that he might retire in favor of some other man at this time. He is preëminently at his best when in the field, and such criticism as has attached to his service as Chief of Staff relates to a lack of vigor in his decisions and the failure of the General Staff to realize the expectations of its founders.

In railway rate regulation, one of the chief advantages of a commission is that each case of alleged confiscation may be decided on its individual merits, without jeopardizing the whole mechanism of State control. This is seen afresh in the failure of the attempt in Missouri to regulate by statute. The importance of this question, to the public and corporations alike, appears in the impending struggle at Albany for an amendment clearly empowering the New York Public Service Commission to establish joint rates and through routes over two or more street railways. If reason rules, that struggle cannot last very long. Let the corporations say that the measure imperils their legitimate dividends, and the answer will be that, in so far as they can prove this, the commission will not touch them. The honest corporation has nothing to fear from such government control.

Whatever may be the defects of the probation system in its present form, they are generally understood to be due to the experimental stage through which it is passing, and not to inherent weaknesses. The progress of the past year is evidence. During 1908, the number of cities and counties in New York State supporting probation officers was doubled; 26 municipalities, 8 towns and villages, 23 county courts, and the Supreme Court in 6 counties are now giving offenders a fair chance to mend their ways. We can only take this as testimony that the immediate benefits of probation have already made themselves felt in the quick reform of young and occasional wrongdoers, and in the lessening expense of jails and reformatories. It would be a dull eye that could not perceive something of this in the second annual report of the State Probation Commission. Over 10,000 persons were set free under surveillance last year. All had committed offences which, under the old dispensation, would have put them behind the bars. And yet there has been no "crime wave" in the wake of this liberty; on the contrary, three-quarters of those whose terms ended within the twelvemonth have finished it with credit to themselves.

The demands of the anthracite mine workers are sound in so far that it never hurts to ask for things you have not the least hope of obtaining. A 10 per cent. increase in wages, the establishment of an eight-hour day, and recognition of the miners' union, are concessions which the operators would stoutly resist at the best of times. They are impossible demands in a year of business depression following upon a year of severe panic, with wages settling steadily towards a decline, and unemployment widespread. In 1906, in the very heart of flush times, the coal workers, backed by the benevolent interest of the President himself, got fewer concessions than they now ask for. In 1906, everybody was well off—apparently—and the miners succeeded in making out so strong a case that the increased cost of production involved in their demands became quite secondary. To-day everybody is not quite so well off. There is a growing tendency to weigh the rights of that almost forgotten animal, the consumer, against the rights of the producer; and a possible increase in the price of coal comes home more sharply than it did in 1906. Under the circumstances, it is hard to see why the miners should be disappointed when the operators offer a three years' renewal of the existing agreement. Possibly, the miners are not so disappointed as they profess to be. Possibly, the advantage of having things stay as they are was in their minds when they asked for higher wages and a shorter day.

It is generally believed that the Income Tax bill passed by the French Chamber last week will be rejected in the Senate. It is stated that the government itself has no illusions on the subject; that its real purpose is to create a popular issue for next year's Parliamentary elections; and that only a decisive Radical victory in 1910 will serve to drive the bill through the upper house. But it must not be supposed that conditions in France are analogous to those in Great Britain, where a House of Lords stands in chronic and steadfast opposition to the popular chamber. In England, nothing less than an electoral tidal wave can force the Lords to yield a position on which their hearts are definitely set. The French Senate, of course, constitutes no such rock-bound citadel of conservatism. At the present moment the Clemenceau Ministry can actually count upon a normal majority of between twenty and

thirty in the Senate—this as a result of the January elections for the renewal of one-third of its members. That body, for the first time in its history, is now Radical; and, though a majority of twenty or thirty in a Chamber of 300 may not seem very impressive upon so contentious a subject, it is apparent that the task of putting the Income Tax bill through the Senate is not extremely difficult, and that its ultimate enactment is nearly certain. That the bill has behind it a majority of the French nation, appears even from the fact that Deputies of the extreme Right have voted for it. To explain the popularity of the measure as arising from the desire of the poor to get their fingers into the coffers of the rich, is somewhat crude. A bill which does away with the door and window tax—the name sounds almost mediæval—cannot help being popular, and in a legitimate sense. Furthermore, according to the Associated Press summary, commercial licenses to the extent of 138,000,000 francs and transfer taxes to the extent of 109,000,000 francs are to be abolished or reduced, to the apparent advantage of the trading classes.

The strike of the Paris telegraphers and post-office employees is probably not so serious as would be implied by the amount of inconvenience it causes. Professedly, the strikers' quarrel is a personal one. They complain of oppressive treatment at the hands of the governmental chief of their department. Hours and wages do not seem to enter into the dispute, and a way out will probably be found when the government declares that there has been a misunderstanding somewhere. Yet the strike is symptomatic of the growing difficulties of the state in its capacity as employer of labor. Future Cabinets will confront such troubles again and again, unless the Ministry attempts to decide once for all the status of the government employee with regard to his right to strike. The attitude of the Clemenceau Ministry has been that government employees—in the posts and telegraphs, in the national factories and arsenals, and in the schools—may form unions for the purpose of safeguarding their interests by peaceful means. But the right to strike is denied them under penalty of expulsion from the government service with the loss of accrued pensions and privileges. That right is what the French schoolmasters, to take the most prominent instance, are contending for. Needless to say, they have with them the hearty support of the Socialists.

The Japanese have again taught a lesson to Europe and America. This time it is by showing how to retrench when times are bad and expenses heavy. The budget for 1909-1910, which has just passed the Japanese House of Peers, makes a saving of no less than $178,500,000 by the simple expedient of deferring for eleven years public works heretofore undertaken. Doubtless, this sum, when details are received by mail, will be found to contain many items relating to army and navy. In the chancelleries of Europe and in our own Congress, this policy of the Japanese will, we fear, be taken as another sign of Asiatic inferiority. Our own deficit bids fair to be not less than $130,000,000, and if Congressman Tawney is correct, will go as high as $150,000,000, but nobody suggests any savings. The naval budget is higher than ever and may go to $160,000,000 next year. Germany and England are facing big deficits, but there, as with us, the idea is not to economize but to wring more money out of the people by new taxes. In Japan, however, people actually seem to believe that a nation should deal with its finances as would a private citizen with his.

The long wrangle in the British Cabinet over the navy estimates has ended, as expected, in a compromise. But it is doubtful if the compromise will please many people. It increases the naval estimates by $14,116,000, and the total reaches the enormous sum of $175,713,500. There is nothing peaceful about this, and not the slightest evidence that the Liberal Ministry is less devoted to Imperialism than were the preceding Conservative Cabinets. More than that, the government announces that in addition to its building programme of four Dreadnoughts and six protected cruisers, it will ask authorization to prepare in the course of the year for four more large armored ships to be laid down April 1, 1910, "if necessary." The latter phrase undoubtedly refers to the German shipbuilding programme; if progress with the Kaiser's new ships is faster than expected, the four additional vessels will be rapidly built. All this will sicken those Liberals who have hoped that England, under their party, would take the lead in the limitation of armaments. On the other hand, the Jingoes are sure that England's supremacy at sea will be lost if six Dreadnoughts are not laid down this year.

Lord Esher, one of the editors of Queen Victoria's "Letters," gave a lecture recently before the Royal Institution, in the course of which he read some further extracts from the Queen's journals and correspondence. None of these was of great significance, but some of the things which the lecturer said about the place which Victoria had helped to make for the English monarch, in a Constitutional government, are not without interest. She undoubtedly did much to vindicate the Sovereign's right to keep in hand the threads of important foreign negotiations. It appears that only within the last few months, and by accident, have the Queen's letters to Lord John Russell, when he was Foreign Secretary, turned up. They are surprisingly numerous, since during four years she wrote to him with her own hand at least once a day. Both Disraeli and Gladstone were scrupulous in keeping the Queen minutely informed of all that was going on at the Foreign Office. The former, in particular, addressed elaborate reports to her which, Lord Esher remarks, it is impossible to read without "the conviction that they were written quite as much for his own enlightenment as for that of the Sovereign." That is, he was thinking out loud to the Queen, endeavoring to clear his own mind in reference to critical matters. The impress which Victoria made upon the conduct of British foreign affairs will appear in clearer light, Lord Esher asserts, when her correspondence after 1861 comes to be published. With that date, it will be remembered, the letters already printed abruptly stopped. But it is evident that the useful part played by King Edward in recent years, in helping to secure good understandings with France and Spain, and Italy and Russia, and possibly even Germany, was made possible by the place, in such matters, which his mother did much to win for the Crown.

THE SPEAKER AND THE RULES.

If the House of Representatives does not revise the tariff more drastically than it did the rules, no bones will be broken. The truth is that there was a good deal that was factitious and insincere, or else ignorant, in the fight to change the rules of the House. To run off on that issue was a convenient way of attacking Speaker Cannon without facing him directly. It was easy to find fault with his management; indeed, a formidable indictment could be drawn of his narrowness and dull withstanding of needed legislation. But to sally forth boldly and pluck the popular "Uncle Joe" by the beard required more courage than most of the insurgents possessed. So they took it out in railing at the rules. Of these, however, they secured but the slightest modification. They were able to defeat by a bare majority the motion to adopt the old rules intact, but with that their strength was exhausted. They fell short by twenty-four votes of carrying the motion embodying their own plans for shearing the Speaker of power. And then the compromise, proposed by a Democrat, and opposed by the rebellious Republicans, was easily put through. This leaves the Speaker with all the essential powers of his office untouched.

Aside from what is offensive in Mr. Cannon as Speaker, the recent outcry against the rules of the House seems to us largely ill-judged. It is an old story. The Hon. Demosthenes Napoleon Cavour from Podunk enters the Capitol for his first term as Representative, and expects the floor of the House to sag visibly when he rises. He proposes to enlighten the members early and often. In his pocket he has a dozen bills for the salvation of the country, all of which he intends to insist shall be enacted at once. But he finds his young hopes sadly dashed. He cannot witch the House with his eloquence unless he first catches the Speaker's eye, and that organ seems singularly blind. His bills are incontinently sent to committees, from which few travellers ever return. Such things at first perplex the aspiring member, and then anger him; and he is ready to join in a movement to abolish those tyrannical rules which prevent his happy thoughts from being written instantly into law.

There was plainly something of such raw impatience in this year's insurrection against the rules. But the steadier and more philosophic members of both parties, irrespective of their liking or disliking of Speaker Cannon, are aware that they have to do with an historic political evolution. The rules of the House are not arbitrarily devised green withes wherewith to bind the young Samsons of statesmanship. For each one of them, there is a reason, and it is a reason growing out of the needs of the public business, orderly conducted, and of party government, duly in control of legislation. If these too quick despairers, these unbaked theorizers of the cheap magazines, would take the trouble to reach such books as Woodrow Wilson's "Congressional Government," or Miss Follett's able work on "The Speaker of the House of Representatives," they would discover that they are trying to upset in a night an edifice slowly reared out of wisdom learned by experience. Minor changes can, no doubt, be argued for, but to propose rashly to sweep away the main safeguards which the rules of the House erect against the folly of its members, is itself folly. If the next House is Democratic, it will undoubtedly adopt the existing rules, very much as they are, just as Speaker Crisp, when he succeeded to Speaker Reed, was forced to accept the much-decried Reed rules.

It does not necessarily follow that the upheaval in the House has been unwholesome. We think the reverse. The Speaker has been openly challenged. He has been sharply reminded of the deep feeling against him. This may incline his heart to better ways in the future. He may be led to attempt to organize the House on the basis of intelligence and character, not merely that of seniority and pliability. It is a just reproach to the Cannon régime that, under it, the ablest and most respected men of the House have not been allowed to be its leaders. Routine party hacks and time-servers have been given the seats of authority, and Speaker Cannon himself, through his control of the organization, has put himself again and again athwart the path of desirable legislation. To currency reform, he has been an obstruction, not a help. His ideas about the tariff are much like those of a Turk. His conception of the chief function and glory of the House is that it should do nothing. But the revolt has now come, and may be to even the obtuse and obstinate Speaker as a great light.

One aspect of the House insurrection is peculiarly significant at the present moment, for it has its bearing on tariff revision. Several of the "insurgents" are low-tariff men. They resent the extreme "stand-pattism" which Speaker Cannon has exemplified. He himself is aware of this, for he caused it to be put about that, if these insubordinate Republicans were successful in joining the Democrats to change the rules, the next thing to expect was a union of the same kind to enlarge the free list. But the demonstration has been made. The fact is now known that the prestige of the House organization has been hurt; that a fine brute majority cannot be counted upon to whip through obnoxious bills, be they tariff measures or any others. This will inevitably make the managers cautious. They will not wish to ride to other rebukes. And the net effect cannot well fail to be a tariff bill, so far as the House is concerned, more in the interest of the public, and less in that of the monopolist, than an unterrified protectionist Speaker and his lieutenants would draw if left to themselves.

MOPPING BACK THE FLOOD.

The small politicians, like Barnes, and the big humbugs, like Depew, who are opposing the Governor's plan of direct nominations, are fond of speaking of it as a crank notion, a new-fangled and fantastic idea that nobody ever dreamed of until Gov. Hughes brought it out. True, they confess to having dimly heard of something of that foolish sort being tried in the woolliest West, or where rolls the Oregon, but as for there being anything like a widespread and swelling popular movement in favor of the new method of making party nominations, why, nothing of the sort could exist, because they knew nothing of its existence. It is an axiom with them that their ignorance marks the bounds of human knowledge. Yet facts have a way of persisting, even in the face of a boss busily trundling his mop to keep back their rising flood; and the truth is that the agitation for direct nominations is steadily gaining force, has already won State after State, and is destined to run the same triumphant course as ballot reform and primary reform did before it.

So common has been the plaint that Gov. Hughes was forcing a little invention of his own upon the party, that the Citizens Union has done well to compile information for the benefit of the Legislature. This shows that, as Senator Root frankly told the politicians dining around Barnes's mahogany-tree at Albany, the people everywhere have become more and more dissatisfied with existing methods of party representation and party control, and are casting about for something better. They are finding it, or think they are—which comes to the same thing politically—in one form or another of the direct primary. The movement to abolish the nominating delegate, because both his election and his action are controlled by the selfish few, has taken on proportions that may now truly be called national. Besides those States in which direct nominations have been made compulsory by law, we have the Southern States, in which the system has been made operative by the voluntary action of the parties. Exact statistics may be wanting, for much turns upon definition and upon interpretation of law and of practice, but the gross fact is thus summarized by Prof. C. E. Merriam in his recent book on "Primary Elections":

> In brief, about one-third of the States of the Union, containing about one-half of the population of the United States, employ the direct primary system for practically all elective offices. Including the Southern States, where party rules require direct nominations, about one-half the States are using the direct method.

We can now see how much sense there is in the charge that a restless and meddling Governor of New York has got up a primary scheme out of his own head to vex the righteous souls of Barnes and Woodruff. They did not know what was going on, but Hughes did, Root did. A boss has no means of finding out what the people are thinking of; to him, a popular movement always comes like a bolt from the blue. But to intelligent and disinterested men, in touch with their kind, and able to read the signs of the times, the gathering force of a new political idea is not such an utter stranger. Gov. Hughes did not contrive the plan of direct nominations. He saw it coming; he studied it; he sought to fit it to the traditions and needs of New York, excluding various extreme or untried proposals that have been associated with it in a few States; and thus endeavored to live up to his promise of trying to do something, during his term of office, to make party government better.

As already suggested, the student of politics will see a striking analogy between the way in which the movement for direct primaries is winning in one State after another, and the manner in which the adoption of the Australian ballot in this country, with the legal regulation of party primaries, slowly gained impetus and finally traversed the land. In those earlier instances, as to-day, the objections and reproaches of the politicians were loud. Why interfere with the good old plan of ballots given out at party headquarters, or wonderful "split-tickets," which were so profitably "run out of the boxes" by Johnny O'Brien, and skilled workers of that ilk? Was not the existing system justified by its results? Had it not brought forward great statesmen—Lincoln and Grant and Tilden? Had it not produced *us?* Why, then, all this ridiculous fuss about possible corruption here and there, with the absurd proposal to import a method of voting from a former penal colony of Great Britain, as if American citizens could not devise their own? This is no travesty of the kind of talk which was heard from the Barneses and Gradys and Woodruffs of that day. Men of their tendency instinctively withstand reform of any kind. How long will *they* be safe if an inquisitive people begins asking if its government is all it ought to be? They fought the Australian ballot, tooth and nail, just as they fought the movement to throw legal safeguards around party primaries; but both swept to victory over their prostrate forms. There is no reason to think that the case will be different with the cause of direct nominations. Its chariot wheels will crunch across the necks of politicians, but the great amount of rubber in their composition will enable them shortly to rise and say they did it!

THE HEART OF A CLASS PROBLEM.

The late Hinton Rowan Helper's remarkable anti-slavery book, "The Impending Crisis of the South," which caused months of turmoil and excitement in Congress in 1859 and 1860, was essentially a plea for the "poor white" of the antebellum South, for whom there was no place between the slave-holding aristocracy and the unpaid slaves. For the negro's sufferings and wrongs Helper cared little. What stirred him so deeply that in his thirtieth year he was able in turn to stir the nation to its depths, was resentment at the degraded condition, social and economic, of his own non-slave-holding class. He perceived that free white labor in competition with forced black labor could not only not progress, but that it was scorned by the slave-owning autocracy because labor itself was regarded as fit only for blacks. Hence his tract was an appeal for the freedom of the negroes, that the shackles might also be struck from the limbs of the poor whites.

What Mr. Helper foresaw for the South in the event of the abolition of slavery all came to pass in his lifetime—the diversification of industry, the springing up of manufactures, the opening of mines, the development of commerce, the rehabilitation of agriculture, the spread of education. But one thing he did not look for—that the emancipated poor whites would, after taking control of the politics of the South, become extremely bitter against the negro. As this part of the dominant race has risen socially, industrially, and politically, it has sought to depress the blacks whose condition of servitude the poor whites at times and in certain places had almost envied. Just as ownership of a slave was once the highest sign of social superiority, so the poor whites now seek to mount on the backs of the negro. This fact has been dwelt upon before this. But it has remained for the Rev. Quincy Ewing, like Helper, a Southerner born and bred, to bring out clearly in the current *Atlantic Monthly* the truth that the basis of the race strife in the South is simply a determination to keep the negro inferior to the white at any cost. Mr. Ewing states the matter thus:

> How to keep him what he is in relation to the white man; how to prevent his ever achieving or becoming that which would justify the belief on his part or on the part of other people, that he and the white man stand on common ground.

Fifty years ago slavery was held to show that the two races did not stand on common ground; and it was, therefore, the poor whites that the slave-

holders endeavored to keep in their places. As Mr. Helper put it:

> Poor whites may hear with fear and trembling but not speak. They must be as mum as dumb brutes, and stand in awe of their august superiors, or be crushed with stern rebukes, cruel oppressions, or downright violence. If they dare to think for themselves, their thoughts must be forever concealed. The expression of any sentiment at all conflicting with the gospel of slavery, dooms them at once in the community in which they live, and then, whether willing or unwilling, they are obliged to become heroes, martyrs, or exiles. They may thirst for knowledge, but there is no Moses among them to smite it out of the rocks of Horeb. . . . Never were the poorer classes of a people, and those classes so largely in the majority, and all inhabiting the same country, so basely duped, so adroitly swindled, or so damnably outraged.

To-day in the South, says Mr. Ewing, who has resided all his life in darkest Louisiana, in Mississippi, and in the black belt of Alabama, friction between the races is entirely absent "so long as the negro justifies the white man's opinion of him as an inferior; is grateful for privileges, and lays no claim to *rights*"; the expression "Good Nigger" means, "everywhere in the South, a real negro from the Southern standpoint"; and the "race problem is the problem how to keep the negro in focus with the traditional standpoint." To-day the South approves of Tuskegee because it turns out artisans; it likes Booker Washington because he seems to be teaching the South's own doctrine that the negro shall remain "a hewer of wood and drawer of water." But it scorns negro universities, like that at Atlanta, or Fisk University in Tennessee, because they are putting "false ideas" into the negroes' heads. No negro, however correct his ideas, however noble his achievements, however brilliant intellectually, may cross the line, because, as Mr. Ewing states it, "the logic of the situation requires that to be any sort of black man is to be inferior to any sort of white man." This is the crux of the matter. Volumes may be written about the alleged criminal tendencies of negroes, about their physical repulsiveness, their cranial structures, or their laziness as laborers, and the economic friction arising from industrial competition. At the end one comes back to Mr. Ewing's masterly analysis.

Proof in plenty he offers; it could be multiplied a thousand times. Prating of race purity as they do, the Louisiana Legislators yet vote down a bill to stop illicit relations between white men and black women: it is a badge of racial inferiority to have the black women the prostitutes of the community. In the parlor-car the appearance of a Washington or a Du Bois is an insult; the black nursemaid in her uniform of service is welcome and attempts to expel her by legislation have failed. The negro is allowed in the balcony of theatres, because the place emphasizes his inferiority, but he could not buy a first-class ticket to a ball game, even if he sat in a section apart, for that would be a step toward an alteration of status. So, with rare insight, Mr. Ewing comes to the conclusion that a race problem "arises only when the people of one race are minded to adopt and act upon some policy more or less oppressive or repressive in dealing with the people of another race. In the absence of some such policy there has not been a race problem since the world began." The California hoodlum's jealousy of the successful Japanese is another case in point. But Mr. Ewing might have gone further and used the word *class* problem, for it is not merely a race problem. Helper's book would have given him the text; and Helper's words are also a prophecy that under the principles of a democracy this present attempt to hold a black class in subjection is in the long run likely to be as futile as the effort to suppress the poor white.

INDUSTRIAL ACCIDENTS.

In *Charities and the Commons* appears a remarkable study of a year's accidents to workingmen in Pittsburgh. It is from the pen of a careful student of the subject, Miss Crystal Eastman, and deserves widespread attention. Only a year ago, there was opened in this city an exhibition of safety devices, in the hope of lessening the ever-growing number of industrial injuries, so appalling in their total as to make less formidable the terrors of war, and bearing so heavily upon the workingman as to suggest the recasting of the Employers' Liability law. But statistics of killed and wounded, even when the aggregate equals the losses on a dozen battlefields, no longer stir a people accustomed to wholesale deaths, as at St. Pierre or Messina. Hence the public has been slow to comprehend that the field of industry offers as great an opportunity for life-saving as do the homes of those afflicted with tuberculosis. Then, too, we have lacked precise information as to the causes of accidents and the responsibility therefor—just such detailed studies as *Charities* has now furnished.

All told, Miss Eastman found 526 men were killed in Allegheny County by industrial accidents in the twelve months from July 1, 1906, to June 30, 1907. During the same period it is estimated that 2,000 injured workmen were received in the city's hospitals. How many others were treated in their homes it is impossible to say. Out of 294 hospital cases analyzed by Miss Eastman, 75 of the injured were discharged as permanent wrecks. If this proportion held in 2,000 cases, some 500 men must annually be turned out of the Pittsburgh hospitals so crippled as to make the earning of their livelihood almost if not wholly impossible. There is no respite in this recruiting of the army of the infirm; year by year its ranks are swelled by at least 500 men, with corresponding suffering and misery. Moreover, it is by no means the old or middle-aged who suffer. Analyzing the 526 deaths, Miss Eastman found that 82, or 16 per cent., were of persons under twenty-one, while 42 per cent. were between twenty-one and thirty, 26 per cent. between thirty-one and forty, and only 16 per cent., or 81 cases, over forty. It is really the young men who are being sacrificed.

Nor is it true that deaths are almost wholly among the teeming foreign population of Pittsburgh; for 228, or 42.5 per cent., of those killed were American born. Equally erroneous is the prevailing idea that these victims of the steel mills, railways, and factories are of the lowest class of laborers. Only 16 per cent. earned less than $10 a week; while 36 per cent. of them earned between $15 and $20; and 94, or 10 per cent., between $20 and $30 a week. In other words, Pittsburgh, says Miss Eastman, "loses more than 500 workmen every year, nearly half of whom are American born, 70 per cent. of whom are workers of skill and training, and 60 per cent. of whom have not yet reached the prime of their working life." So great a loss of power and strength to the community, with the resultant drain for the support of the dependent, surely could not be regarded with complacency, even if the waste

were unavoidable, due wholly to the character of Pittsburgh's chief industries.

Is this the case? When Miss Eastman began her work, superintendents, claim agents, and general managers assured her that 95 per cent. of all accidents were due to the carelessness of those injured. Investigation showed her, however, that only 28.54 per cent. of the 410 deaths, about which accurate information could be obtained, were due to unavoidable causes, such as two explosions, which killed 19 men, and apparently could not have been prevented. Taking 132 cases for analysis in which the victims were at fault, we find that in 22 cases "carelessness" was ignorance, in 13 cases youth, in 8 cases drunkenness, and in 4 cases physical weakness. Of the other cases considered, 13.65 per cent. were due to fellow workmen, 11.95 per cent. to foremen, and 35.85 per cent. were attributable to the employer's negligence, as indicated by the breaking or falling of scaffolds, chairs, ladders, planks, floors, etc. "Some of these defects," Miss Eastman says, "prove inexcusable neglect," but others are due to the speed and pressure of the work; and she reaches a conclusion every one must be reluctant to accept, that "there can be no absolute standard of safety here, for no employer can keep his equipment in perfect repair every day in the year."

As to the results of the accidents, nearly one-half of the people killed were married men, regularly supporting families; three were women, supporting others, and 265 were single men of all ages. Of all the 526 killed only 19 per cent. left no "private economic problem" to be faced. As to the compensation, Miss Eastman has this to say:

> Thus out of 304 cases of men killed in a year's industrial accidents in Allegheny County, all of whom were contributing to the support of others, and two-thirds of whom were married, 88 of the families left received not one dollar of compensation from the employer; 93 families received not more than $100, a sum which would cover reasonable funeral expenses, but would not replace any of the lost income; 62 families received something over this $100, but not more than $500; 61 families received more than this, some few as much as $3,000, but most of them under $1,000. In other words, 181 families, or 59.5 per cent., were left by the employers to bear the entire income loss, and only 61 families, or 20 per cent., received, in compensation for the death of a regular income provider, more than $500—a sum which would approximate one year's income of the lowest paid of the workers killed.

Taking six men, totally disabled for life, at random, Miss Eastman found that the total loss, based on earnings and expectation of life, was $123,065, and the total compensation only $520. As a result of her study, she feels that her facts would justify legislative interference for the purpose of reducing the number of preventable accidents and for adjusting more fairly the economic burden entailed by them. She does not, however, believe in the employers' liability principle, so vigorously urged of late by Mr. Roosevelt, but suggests a policy of uniform compensation for all industrial accidents, except those due to wilful misconduct. Whether her opinion on this point be accepted or not, it is obvious that the facts she has set forth will call fresh attention to the gravity of the evil, and must lead to a readjustment of many ideas hitherto held as to the best method of attacking the problem.

REGENERATING THE COUNTRY SCHOOL.

A quiet revolution is stirring in the country school. The institution is struggling hard to lose its wild, chaotic variety. Only the other day, no two districts had like text-books, like desks, or like courses, save by pure chance. Many a village read four brands of American histories in as many classrooms, and let First Street fill its copybooks with vertical handwriting, while Second Street slanted its letters, as Heaven ordained. Against such perfect home rule, rebellion has been brewing ever since the large cities proved its wastefulness. To-day ten States have commissions searching out the causes of the wretched condition of schools in villages and the countryside; and these commissions are putting the blame upon the bric-à-brac equipment and lack of unified management. At least ten more States have advanced to the point of clearing away these obstructions. Small or poor districts are rapidly being consolidated. The county is displacing township and hamlet as the educational unit. Prof. Edward C. Elliott, in a digest of recent school legislation compiled for the United States Bureau of Education, names another group of ten States which, within the past two years, have created text-book commissions to compel the use of uniform books and to prevent rapid change.

But these are only the beginnings. So long as the country school employed its own teacher and taught what the neighbors liked, it remained a beggarly, uncertain thing, now losing a good schoolma'am because she would not eat the fried mush where she was requested to board, now getting a miserable pedagogue because he was the constable's cousin. Professor Elliott's digest, however, shows that in these two matters also small communities are rapidly surrendering autonomy. The State is giving the crossroads more money and exacting, in return, more power over instructors and courses. Since October, 1906, no fewer than twenty-six States have materially increased their school funds and adopted more liberal rules of distribution. Minnesota has agreed to furnish each of fifty consolidated rural schools with ten acres of land for buildings and lessons in agriculture; and pupils are transported from house to school at the State's expense. Ohio, a pioneer in this system of transportation, has centralized schools in 157 townships. Connecticut is not especially radical in offering aid to schools in all her towns having a valuation of less than $1,000,000. Everywhere there is the inclination to bring all save the largest communities within the circle of State support. The price of this favor is central supervision, generally through a county official. Seven States have gone further by ordering annual meetings of county school officers and making attendance compulsory, thus insuring more active coöperation.

With difficulty the city-dweller catches the import of these almost unnoticed changes. But let him recall that two Americans out of every three live in farmhouse or small town; he will then see that the policy of centralization must end in bringing good educational facilities to more than 50,000,000 people who have been more or less deprived of them. For the fact is that, in spite of our excellent urban schools and colleges, our rural schools have been heroic without becoming efficient. American farmers and villagers have made pathetic sacrifices to educate their children, but only too often the reward has not measured up to a tithe of the effort. And all because of too much home rule—or rather too little State control,

for our communities have not been so vehement in asserting their own local rights as the commonwealths have been in denying their obligations. The folly of independence has, however, had its day. With the extension of good roads and trolley lines, larger and larger areas will bring their pupils together under one roof; and the county high school, an ambitious experiment to-day in the West, will cease to be a dream. Wonder-working, however, need not wait on these rural improvements. By trebling its annual school funds many a State can bring about the fairest transformations for which country-life commissions are clumsily striving. Through the regeneration of the country school along lines already laid down, the social life will be quickened.

The cry for Federal aid, which must be expected whenever something new is proposed, has, of course, been lustily raised. The Wisconsin Legislature started it when it invited Congress to establish a national school system. And the idea has been taken up by numerous educators whose real wish is a much more laudable one—namely, to increase the usefulness and power of the Federal Bureau of Education. Every such suggestion, it need hardly be said, is a mere evasion. Few States are too poor to educate all their children properly, and there is probably not one today that is spending for rural schools as much as it can and should.

ENGLISH NOVELS AND ENGLISH LIFE.

Looking back at the leading Victorian novelists, Dickens, Thackeray, Trollope, George Eliot, Kingsley, Charles Reade, Mrs. Gaskell, and Meredith, one is struck by the sustained optimistic note of their work, even when they are painting depressing or sordid aspects. Thomas Hardy is the only novelist of rank who lays insistent stress on the melancholy and tragic elements inherent in the web of human life. Victorian optimism reached its high-water mark in the sixties, but the generation that found expression in the late eighties showed itself conscious that its robust fathers, while attacking manfully the appalling social evils bequeathed from the first half of the nineteenth century, had superadded many of their own making. The cheerfulness of the prosperous middle-class Briton became conventionalized in the novels of Besant and Rice, whose bustling humor and domestic sentimentalism were derived no less from the popular example of Dickens than the painful gray realism of George Gissing was a logical development of Dickens's work as social reformer. The middle-class Englishman was, however, as unwilling to accept Gissing's depressing pictures as the upper-class Englishman was unable to assimilate Meredith's brilliant wit and spiritual nobility; and the two most significant novels of twenty years back, "Demos" and "One of Our Conquerors," can scarcely be said to have affected the British mind. To-day our middle-class audience, constantly recruited from below, is more accessible to new ideas, but if a George Eliot appeared now among us, she could not look for earnest moral and spiritual support from our enormous villa public, occupied chiefly with social appearances, and politically consolidated by fear of the labor movement and the spread of Socialism.

Mrs. Humphry Ward, whose novels are as well known in America as here, has inherited the moral Victorian earnestness of the sixties; but the reason of her wide popularity is probably that the impressive façade of her works gives the public right of entry to the society of our wealthy, fashionable, upper-middle, official governing class. Written with intellectual breadth and much insight into character, and typically English in the tone of their class bias, these novels betray the internal struggle between the moral purpose of the preacher and the intentions of the artist. Her serious, lofty-minded, and brilliant statesmen heroes, such as William Ashe, and her accomplished, high-souled, and patriotic heroines, such as Diana Mallory, are in truth personifications of an ideal upper-class Englishman and Englishwoman. Though proud of the standard of integrity of our public life, we are uneasily aware that a solemnity of moral purpose has always served us as the cloak to cover our pursuit of national advantage. And the imposing moral banner that is held aloft in Mrs. Humphry Ward's clever novels is perhaps dangerously pleasing to the middle-class Briton, who is already too prone to ignore the spectacle of our gaunt and sullen industrial system, and to congratulate the peoples of India and Ireland on the beneficence of our rule. No generation can keep healthy without the stimulus of sharp criticism, and it is some small consolation that we have satirists and critics among us as acute as George Bernard Shaw, H. Belloc, G. K. Chesterton, and H. G. Wells. We shall not speak here of Mr. Shaw's and Mr. Chesterton's novels, which are of small importance beside their work in drama and the essay. Mr. Belloc's two satirical novels, "Mr. Burden" and "Mr. Clutterluck's Election," though savagely bitter in their exposure of fresh currents of greed and financial corruption in our political life, have enough truth in them to make Mrs. Humphry Ward's contemporary pictures seem a little too much like mellowed Victorian tapestries.

A new generation is knocking at the door, and while it is clear that we cannot live on the traditions of Victorian liberalism, the indeterminate battle waged between vested interests and social reformers does not seem to bring into being the new party that is wanted for social reorganization. Imperialism and the Federation of the Empire are, no doubt, based on grand ideas, but it is difficult to detect any renovating force for the Englishman at home in tariff reform, and, perhaps, a war with Germany. The American reader must understand that our Victorian literature reflected the energy and the impetus of the new ideas and social forces by which the English people swept from the countryside into the big towns, 1820-1860. A counter movement is now growing more and more imperative for the national health, but the forces of landlordism and capitalism combined have hitherto blocked the way to the reorganization of rural life.

This prelude is necessary to explain the real bearing of the finely wrought pictures of English society presented to us by John Galsworthy. In "The Country House," this novelist has made an absolutely truthful and brilliantly executed study of the old-fashioned landed gentry's life, and the unwritten laws of its pursuits, habits, tastes, prejudices, and ideas. He treats sympathetically all the typical characters he introduces, such as the well meaning and obstinate squire, Mr. Horace Pendyce; the sound and hearty rector, the Rev. Hussell Barter; the exquisite and gracious English lady, Mrs. Pendyce; her son, George Pendyce, the clubman and man of pleasure; Sir James Malden, "a Justice of the Peace, a Colonel of Yeomanry, a keen Churchman, who is much feared by poachers," etc. In the provincial insularity of these country gentlemen's ideas, their relations to the tenant farmers and the villagers, who, "with the exception of two bad characters and one atheist, were also believers in the hereditary principle"—you have the key to the caste system of rural England, and the immense power still wielded by the land-owning aristocracy. In "The Island Pharisees," an earlier and less artistic novel, Mr. Galsworthy has analyzed with much subtlety the ruling ideas that govern English "good society," its ideal of "good form," its contempt for intellect, its mental self-complacency, its individuality and kindness of heart, its practical love of comfort, its genius for compromise. The portrait of Antonia, the charming English girl, is a triumph of delicate drawing, and we may here note that our author, in contradistinction to his cool intellectual scrutiny of men and women, shows

a genius for delineating the rich, complex shades of the passion of love. Unlike Mr. Wells, Mr. Shaw, Mr. Chesterton, and Mr. Belloc, who satirize English society from without, Mr. Galsworthy, born inside it, understands its intimate feelings of social caste, while remaining outside its prejudices and convictions. Again, the special value to us of "A Commentary" is that the author is about the only upper middle-class writer we have who has had the moral courage to disclose the bad conscience of the rich in respect to the exploited under-world of the sweated masses. We say "bad conscience," but it is rather the sub-conscious uneasiness of people who refuse to consider unpleasant realities; and in his new novel "Fraternity," Mr. Galsworthy has treated with great subtlety the profound disturbance which invades a typically cultivated, amiable Kensington household when the latter is forcibly brought into personal relations with the life of the London poor. Although there is a humanitarian tendency in all his work, Mr. Galsworthy is not a propagandist or a preacher, but, as an artist pure and simple, he exposes better than any of our other novelists the practical outlook of the modern Englishman, the soft sentimental spot in his soul, if once his feelings are reached, together with his amazing capacity for protecting himself from any inroad of disturbing ideas. No other modern writer has so intimately understood and expressed the contradictions of the English temperament, in its manner of acting and feeling, or the rich diversity of our individual types, all chained together by the accepted bond of conventional thinking, yet all separate through the streak of romanticism in the blood. These conflicting qualities appear in "A Man of Property," a story of an unhappy marriage in a typical middle-upper-middle class English family. The social progress and rise to fortune of this family, the Forsytes, is practically the social history of that enormous phalanx of "the propertied and investing classes," which, embracing both manufacturers and professional men, is bounded by the landed gentry at the top and the small tradesman at the bottom. In this novel, the nebulous background of London's multitudinous human life is used with much poetical feeling to give depth and perspective to the detailed class study.

Next to Thomas Hardy, our most important novelist of country life is Mrs. Mary E. Mann, who deals not with the landed gentry and their conservative influence, but with the social affairs of the parish as viewed by the doctor, the lawyer, the parson, the small residential gentry, and the better class of tradesfolk. Mrs. Mann is one of the few realists we have in latter-day fiction, and her art, inspired by great sharpness of vision and a warm and generous heart, forms a connecting link between the spiritual realism of George Eliot and the matter-of-fact realism of Trollope. One of her earliest books, "The Fields of Dulditch," which contains extremely powerful sketches of the stagnant, suffering, and brutalized life of the field laborers, would have given the writer a great reputation abroad, had she been a Continental writer. Our middle-class reading public, however, only encourages novelists whose idealized or sentimentalized pictures please, amuse, or flatter its susceptibilities, and Mrs. Mann, standing isolated, has not received the stimulus or encouragement of being "one of a school." The defects of many Victorian novelists, even of so great a writer as Thomas Hardy, appear in her workmanship, *i. e.*, a tendency for the plot to hinge too much on coincidence, to be forced, or stage-managed. Her novels, indeed, as with nearly all English fiction, rarely embody a general idea; but nobody has painted with so much exactitude or with so firm and sharp a touch the cramped and petty horizon of the shrewd country folk of East Anglia. In the best of her stories and sketches, such as "The Sheep and the Goats," "Olivia's Summer," "The Mating of a Dove," "Mrs. Peter Howard," "The Memories of Ronald Love," "A Sheaf of Corn," etc., the author shows a deep knowledge of human nature, a ruthless sincerity, and no little imaginative intensity. Her individual note is a pleasing feminine malice mingled with a deep sympathy for the fine side of human endeavor. She is, happily, almost entirely devoid of sentimentality, and she inspires the reader with great confidence in the soundness of her judgments. While speaking of novels of country life we must also mention the remarkable literary quality of a young author, Mrs. Gertrude Bone, whose spiritual studies of humble peasant life in "Provincial Tales" and "Children's Children," recall the beauty of drawings by Millet. Three other novelists may also here be mentioned: Mrs. Henry Dudeney for her naturalistic studies of Sussex life, James Prior for his hearty and unconventional pictures of Nottingham folk, and A. T. Quiller Couch for his humorous character studies of the Cornish people.

Since Mrs. Gaskell's death in 1865, the industrial life of our great manufacturing centres in the north of England has gone almost unchronicled in fiction. This is a sign of the significant fact already noted—the instinct of our well-to-do classes not to look backwards or downwards, in their ambition to climb the social ladder. Two remarkable studies on the delicate subject of "social origins" may be cited here, "Anna of the Five Towns," and "The Old Wives' Tale," by Arnold Bennett, both of which, though delineating life in the Staffordshire pottery towns, are fairly typical of manufacturing England in general. As we have said elsewhere, our modern novelists are, to-day, bewildered by the comparison of standards, tastes, and ideals in the modern townsman's life, a confusion which is due to the commercialization of our society and the incursion into every class of new swarms of successful people from lower social levels. Hence a general adulteration of standards, a vulgar pretentiousness and plebeian uneasiness to appear not what you are, but something a little better. Mr. Bennett's two novels, both admirable works of art, are of special value, because his characters are genuine local products of the manufacturing midland towns, where a powerful middle-class, by brains and energy, has pushed its way out of the people, and has risen to social affluence on the backs of the operatives. In "Anna of the Five Towns," the old-fashioned, hard-headed peasant forbears are hit off in the person of a shrewd, miserly man of business, who keeps an iron grip on his money and his daughter's life. In "An Old Wives' Tale," we have delineated the life of a generation of pottery tradesfolk, a chapel-going, money-worshipping race, yet not without imagination and romance relieving its hard utilitarianism of soul. The formidable worldly shrewdness, innate Philistinism, and commercial aptitude of the British middle-class is built up on the social foundations of the old-time yeoman and the small farmer, who, as Mr. Bennett shows us, have become transmogrified into the modern commercial man. None of Mr. Bennett's midland characters show any inheritance of gentle breeding in their mental refinement, even in this third generation of manufacturers, which, through its increasing wealth, is conscious of its social power. In a third novel, "Whom God Hath Joined," Mr. Bennett has made a very clever and penetrating study of the middle-class Briton's attitude to marriage and divorce, of the pressure of public opinion in the regulation of his sex relations. The careful picture of the household life of two provincial lawyers, and the analysis of the atmosphere of the London divorce court, both in general grasp and masterly execution, recall the best novels of Trollope. Mr. Bennett has written a series of inferior popular novels to please the public taste, but it is to be hoped that he will work in future on the high artistic level of the three novels we have cited. He has himself satirized in "A Great Man" (a clever but blunt piece of work) the tastes of that vast section of the Philistine public, that cannot distinguish a rubbishy from a mediocre, or a mediocre from a true, work of art, and just as Mr. Galsworthy is

the only novelist of rank we have whose novels form an effective criticism of the life of the upper-middle class, so Mr. Bennett's work seems to qualify him as the fairest critic and interpreter of the commercial classes. Here we will mention Pett Ridge's humorous and penetrating fiction, especially his novel, "Name of Garland," as being the best guide we have to the lower-middle class outlook.

We have, of course, no less than America, scores of popular favorites whose work rests on the basis of satisfying and emphasizing the tastes and outlook of the majority of readers. These novelists, such as A. E. W. Mason, Sir Conan Doyle, Stanley Weyman, Sir Gilbert Parker, Anthony Hope, W. J. Locke, Mrs. K. C. Thurston, etc., satisfy the "huge demand" of a public which will not suffer its equanimity to be disturbed by any reversal or negation of current valuations. Certain members of the popular school, such as Anthony Hope in "A Servant of the Public," have, indeed, shown that they are capable of creating a mental atmosphere, and establishing a point of view highly individual, and not a mere popular emphasized reflection of mental atmospheres and standpoints already projected by the public mind. But they have not developed this rarer original vision to any degree, and we will therefore pass to four novelists who have something unique in their artistic gift, and a finer quality of mental outlook. The first of these is Leonard Merrick, who, though repeatedly praised by our best critics, seems to have eluded the public's attention. No doubt the quiet subtlety of Mr. Merrick's touch, his unassuming tone, and his restrained, ironical humor are qualities that do not impress the public at large, but one suspects that his pictures of semi-Bohemian life make his circulating-library readers somewhat uneasy. Mr. Merrick does not deal with that sham Bohemianism which is both a pose and an advertisement in certain fourth-rate London literary and artistic circles, but with the genuine Bohemianism of unpopular novelists, journalists, and hard-working and hard-up professional folk who are connected actively with the life of the stage. The ups and downs and general vicissitudes of this shabby but interesting world Mr. Merrick paints with great exactitude and brilliance; and with the cunning of a true artist he shows us its life in relation to the larger human background of London respectability, both in the genteel suburbs, and in the lower-middle-class environment of boarding houses, cheap lodgings, and bar-parlors. Mr. Merrick's experience of life is both "extensive and peculiar," and his sharp insight into the weakness and pettiness of ordinary human nature is offset by his intimate understanding of the pressure and struggle of the workaday world. He is quite delightful, however, in the way he blends sweet and sour in the literary salad, and one of his novels, "Conrad in Quest of His Youth," is perhaps the most piquant and appetizing dish of fiction that our generation will taste. Other works of his to be mentioned are "Whispers about Women," "Cynthia," "The Man Who Was Good," and "The Stage of Fools." His little vignettes of French Bohemian life do not, however, seem to us to spring from that sensitive response to reality which is the artistic basis of his finest work.

A younger novelist who has taken the British Philistine in flank, so to speak, is E. M. Forster, whose two books, "Where Angels Fear to Tread" and "The Longest Journey" would have excited the admiration of Matthew Arnold. Mr. Forster has had the happy idea of transporting a typical British family into Italy and contrasting its dilettante æstheticism and drab Protestant ideas—a bizarre mixture!—with the frank and graceful materialism of the natives. The novel is an extremely clever study of national types and the author has followed it up with "The Longest Journey," a book which, bearing traces of George Meredith's influence, contains a most spiritual, witty, and elusive philosophy of life. The bland and smug forces of Sawston, a provincial town, are indicted in the novel on the ground that "people live together without love, they work without conviction, they seek money without requiring it. They die and nothing will have happened either for themselves or others." The novel, which will puzzle the commonplace mind, should present little difficulty to those who appreciate Meredith. Another story with much the same tendency, but mystical in its pleading for the life of the soul rather than of the senses or the understanding, is Mrs. Evelyn Underhill's "Lost Word," a book which turns the tables very cleverly on the utilitarian world of "the practical man," who has created the squalid mess and muddle of our "mean streets" and all the sordid, tangled hideousness of modern "civilization." The futilities, absurdities, and falsities of our matter-of-fact world are exposed here in a pitiless fashion. And on a different emotional plane Miss May Sinclair's "The Helpmate" and "Kitty Tailleur," novels which are probably as well known in America as in England, are a significant sign that the conventional code of our social life cannot prevent the infiltration of ideas instinct with social charity and a fine justice, into the head of the thoughtful citizen.

In this connection, we must remember that the leading Victorian creative minds, such as Carlyle, Matthew Arnold, George Eliot, Meredith, Ruskin, William Morris, and Kingsley spent much of their energy in opposing directly or indirectly the hide-bound Philistinism of their day, the greed, cant, vulgarity, lack of "sweetness and light," implicit in the conventional outlook. The cruder vulgarities of Victorian life have disappeared, along with the more crying social evils, and middle-class life suffers now most from the monotony and pettiness of its horizon, from its preoccupation with the small proprieties of social ritual and the keeping up of appearances, and from its lack of generous width and direct contact with first-hand realities. Thus it comes about that the most vital pieces of fiction fall into the class we have been discussing, or into the class of the mildly satirical novel of manners, as the work of Percy White, Paul Neumann, and Archibald Marshall. Our clever young authors show an increasing tendency to be critical of their surroundings. Ford Hueffer's "An English Girl," a criticism of New York life, and his "Mr. Apollo," a satire on London, are cases in point. William De Morgan's work, in its vigorous breadth, delightful breeziness, and large optimism, is a striking exception, but not only is the author spiritually a survival of that healthy Victorian circle of which Madox Brown and William Morris were typical forces, but his novels are a literary resurrection of the robust mid-Victorian school, which, in its humor, its pathos, and its celebration of the sweetness of domestic life, is far removed from our modern self-consciousness and spiritual narrowness. What has wrought this striking change in fifty years or less? We have already answered the question: the Victorian fund of animal spirits, mental vigor, and optimistic impetus has been used up in two generations of competitive strain in town life. Our outlook, though not pessimistic, is lacking in spiritual conviction. We require a new source of spiritual energy, and from what can this spring but from some new departure in social reorganization, precipitated, perhaps, by some national crisis, or the pressure of economic necessities? Has any novelist among us grasped the general situation and come forward with an answer that embodies a new social creed? One, and one only, of our novelists has done this. I speak of H. G. Wells.

Americans, I believe, are as much inclined to underrate Mr. Wells as to overrate Mrs. Humphry Ward. They prefer to see us not as we are, but as we appear against the sentimental background of historical traditions, "the stately homes of England," etc. And one may hazard the guess that America, in the exuberance of her teeming national life, despite the gathering pressure of her own social problems, is still in that stage of youthful expansion which is always impatient of criticism. What England needs to-day, however, in her writers is spiritual and mental audacity In spite of all the material benefits con

ferred, capitalism, commercialism, and industrialism combined have impressed on the bulk of our population a servitude to a narrow, petty, and mean town life that dwarfs and stunts the spirit. We are cramped, congested, and bound hand and foot by a network of "vested interests." Our middle class has entrenched itself in comfortable surroundings to enjoy the fruit of its own and other people's labor. Mr. Wells, who is not a pure artist, and who expands his fluent, stimulating ideas with great rapidity, has assailed in "Kips" and "Tono-Bungay," with a cruel humor that is electrifying, the absurdity of British shibboleths and conventions, and the haphazard irrationality of our social organization. In general, one distrusts the programmes of the social reformer as lacking in intellectual breadth, humor, and sympathy with human passion. Mr. Wells, however, unites the artist's zest and joy in life's ceaseless fecundity and diversity, with a cool scrutiny of the man in the street, an attitude that recalls the detachment of a professor examining a test tube. His imagination has been fired by the topsy-turvy spectacle of man's powers over nature being indefinitely increased by science, while his powers over himself have been diminished by the irruption of incalculable, new forces. What needs putting under the laws of science, in short, is modern man himself, and Mr. Wells is the only English novelist who, with large and generous democratic sympathies, has perceived that a "civilization" that is guided by the jerry-built ideals of an ignorant democracy and of plutocratic cunning, is running counter to the laws of social health. In "Tono-Bungay," his last novel, Mr. Wells has analyzed with an amazing brilliance and force the structural ideas of our modern commercialized society. It is a biassed analysis in some degree, but how fundamentally true is the criticism!

In this hasty survey I find I have left myself no space in which to speak of a little group of remarkable artists, of whom Joseph Conrad, Cunninghame Graham, W. H. Hudson, and Maurice Hewlett are the chief. I may perhaps recur to them on another occasion.

EDWARD GARNETT.

Crockham Hill, Kent.

NEWS FOR BIBLIOPHILES.

Robert Hoe has just issued the concluding part of the catalogue of printed books which make up his magnificent library. This portion, describing books in foreign languages printed after 1600, is in four volumes, uniform with the preceding issues. One hundred copies were printed at the University Press. Here are described books from the Elzevir, Bodoni, and other seventeenth century Continental presses, as well as the first and later editions of French classics, such as Molière, Racine, and Corneille, some of the famous French illustrated books, and many modern French works. Mr. Hoe is the possessor of one of the ten known copies of the first and unauthorized edition of Molière's "Sganarelle ou le Cocu imaginaire," Paris, 1660. Of the ten known copies, three are in New York city. Included in this portion also are a few important American books. Among them are the first edition of Champlain's first book, "Des Sauvages" (1603), and later editions of Champlain's voyages, 1613, 1619, 1620, and 1632; Sagard's "Histoire de Canada," 1636; and the three rarest and most important Dutch books on New York, "Beschryvinghe van Virginia, Nieuw Nederlandt," etc., which contains the first engraved view of the city of New Amsterdam, and both editions of Vander Donck's "Beschryvinge van Nieuw-Nederlant," 1655 and 1656. The fifteen volumes which make up the whole Hoe catalogue describe 14,030 titles of printed books, without including Mr. Hoe's collection of illuminated manuscripts unmatched in America.

The Society of Iconophiles has just issued a descriptive catalogue of the engravings published by the society, from its inception in 1894 to 1908. The text has been prepared by Richard Hoe Lawrence. William Loring Andrews, the actual founder of the society, has supplied an introduction, interesting, as is everything which comes from his pen; and at the end of the volume is printed an autobiography of the late Edwin Davis French, prepared by him in 1901 at the request of the society. The book is a quarto, handsomely printed at the Gillis Press, 125 copies on hand-made paper, and 12 copies on Japan paper.

The first quarterly part of Vol. VI of Frank Karslake's "Book-Auction Records" has appeared. It covers the period from the beginning of the London season, October 1 to December 31, 1908 and contains 3,383 records. The most important sale is that of the first portion of the library of Lord Amherst. The preliminary matter in this part is a series of "Notes on Authors, Booksellers, Printers, and Stationers of the City of Hull, England," prepared by W. G. B Page.

On March 24 and 25 the Anderson Auction Co. of this city will sell a portion of the library of John La Farge. Among the books to be offered are publications of the Bibliophile Society, including "André's Journal": several books by William Loring Andrews, including "Jean Grolier"; publications of the Grolier Club; a first edition of "Gulliver's Travels" (1726); a presentation copy of Samuel Rogers's "Italy" and "Poems" (1830-34); the first edition of Edward FitzGerald's "Polonius" (1852), and of "Sálaman and Absal" (1856).

Correspondence.

VARIANT READINGS OF GOLDSMITH'S POEMS.

TO THE EDITOR OF THE NATION:

SIR: A reference to Anderson's Bibliography of Goldsmith (1896), in the *Nation* of October 15, 1908 (p. 357), led me to look up the book; and I was surprised to find the list of editions of the poems (the only part that I examined with any care) somewhat incomplete as to those published in Great Britain, and far worse as to American reprints.

Of the English editions of "The Traveller," one which I found in the Athenæum Library (Boston) when preparing my "Select Poems of Goldsmith," in 1875, is unique in some respects, and of peculiar interest to the bibliographer. It contains some readings, including one entire couplet, which I have found in no other edition, early or recent, and which seems to have been overlooked by all the editors and critics. The title-page of the quarto volume is as follows: "The Traveller, or, A Prospect of Society. A Poem. By Dr. Goldsmith. The thirteenth edition. London: Printed for the Booksellers in Town and Country." It is undated, and bears no name of publisher or printer. It appears, however, to have been edited with notable care and discrimination, and shows a familiarity with the earlier editions. I was able to compare it with the first, third, and fourth editions in the Athenæum Library and sundry others in the Boston Public and Harvard Libraries. A noteworthy feature of it is the restoration of not a few readings of the first edition, which do not appear in the other early editions, so far as I have examined them. The following are readings that I noted as only in the first and thirteenth editions:

Line 50: "Creation's tenant, all the world is mine"; now "Creation's heir, the world, the world is mine."
Line 124: all this nation (all the nation).
Line 126: Men seem (man seems).
Line 140: Soon Commerce turn'd on other shores her sail (Commerce on other shores display'd her sail).
Line 205: And as a babe (and as a child).
Line 222: Nor quench'd by want, nor fan'd [fann'd] by strong desire (unquench'd . . . unfann'd).
Line 312: Dull as their lakes that sleep beneath the storm (slumber in the storm).
Line 349: As social bonds decay (As nature's ties decay).
Line 358: And monarchs toil and poets pant for fame (Where kings have toil'd and poets wrote [*sic*] for fame).
Line 416: And the brown Indian takes a deadly aim (marks with murderous aim).
Line 421: Casts a fond look where England's glories shine (long look).

In most of these passages the editor evidently prefers the earlier reading, which is, perhaps, as good or better, *me judice*. Some readings seem to be entirely his own. In line 255 he has "So bright a life" for "So blest a life." In 342 (which, with 341, is not in the first edition), he has "All kindred claims that soften life unknown" for "All claims that bind and sweeten life unknown"; and in 357: "Where noble stems [that is, families] transmit the patriot claim," which seems to me better than Goldsmith's "patriot flame," a metaphor that does not go well with "stems."

After line 374 we have the couplet to which I have referred above:

> proportion'd Loads on each;
> Much on the Low, the Rest, as Rank supplies,
> Should in columnar Diminution rise;
> While ["Hence" in the standard text], should one
> Order, etc.

As this thirteenth edition must have been published some years after Goldsmith's death, this couplet could hardly have been his, if, indeed, it is quite like him. The metaphor is ingenious, but rather far-fetched, though evidently suggested by the context; for the form of a Greek column, even in the earliest Doric, shows so slight a "diminution" as to be scarcely perceptible to the average eye. The couplet, however, is a curious interpolation on the part of the

editor (if it was his), and interesting as the only noteworthy one he ventures to make.

Goldsmith himself made many little changes in successive editions of his poems, but very few of them have been recorded by the editors, critics, and commentators.

W. J. ROLFE.

Cambridge, Mass., March 1.

THE PRONUNCIATION OF THE CLASSICS.

TO THE EDITOR OF THE NATION:

SIR: Is it wise, or necessary, to perpetuate longer the custom of teaching the classics with the Roman, or Continental, method of pronunciation?

Greek is still a spoken language, and yet it is not the language of Homer, Xenophon, Demosthenes, or Plato; and the student of the preparatory school and college who attempts to read his Iliad, or "Anabasis," or "De Corona," or "Gorgias," with the pronunciation and accent of Athens to-day, acquires thereby neither culture from an ancient tongue nor fluency in a modern language; he attains nothing which is real. But Latin has ceased altogether to be a spoken language. The comparatively few who employ it in academic or in ecclesiastical circles use it not as native speech, and seldom as a means of communication, but more commonly as an artificial mark of erudition, or of sanctity. In either case it is not a vital, fluent tongue. There is, therefore, no present warrant for a standard pronunciation in present or prospective conversational uses. The classics to-day have no appeal to the universal ear, and their opportunities to be heard in speech are daily becoming less and less. Why, then, erect one more barrier in the way of easy acquisition of these highly cultural languages? Why perpetuate longer a custom of less than thirty years' duration, which has naught but a worn-out theory to commend it? Why longer prejudice the vanishing number of novices who hesitate at the threshold of Greek and Latin?

It has been proved that though a German and American study the classics according to the same "method," they will still pronounce according to racial and national characteristics. English and American scholars have a different twang; and even American pupils from New York and New Orleans will not sound the vowels alike. I had occasion once, when fresh from college and seminary, after eleven years of enthusiastic and fruitful study of the classics, to essay the difficult task of exchanging with a bright, classical German student some commonplace thoughts about a trunk which had been for several weeks detained in a German custom house. The German's English was as scholastic and as impracticable as was my German at that time. We had both studied Latin, we had been trained in the same "method," and we did not lack for a Latin vocabulary; but we were as unintelligible before each other as a jackdaw and a donkey, until, with the help of a pencil and the back of envelopes, we submitted to the eye what the ear could not understand.

But the attempt to pronounce by one common method a language long since dead is worse than useless; it prevents a large part of the cultural ministry of which the language is capable. I ardently believe that there is no means for acquiring linguistic taste and skill in any native tongue quite equal to that acquired through the medium of Latin and Greek, the languages from which all our modern speech has been so profusely enriched and adorned. The poise of judgment in the fine discrimination of sense and synonyms, when making a translation from Latin or Greek, is an incomparable exercise in one's mother tongue, leaving behind the rare crystallization of taste and refinement, even when the languages themselves are forgotten; and the appreciation of etymological derivations is an æsthetic delight as well as an incentive to precision of meaning. But how can etymological derivation be detected by a spoken symbol which departs entirely from the standards of the mother tongue? At least the ear is cut off from suggestiveness and reminder. When the eye reads "Cicero," it is immaterial how the word is pronounced. The mind through the eye knows that the Latin "Cicero" is the same, at least in origin, as the English "Cicero," judged as words merely; but what ear would ever understand that "Kekāro" is the same as "Sisēro"? The novice, who pronounces "veni, vidi, vici," in the English manner, may by his ear be reminded that "veni" is related to "advent"; that "vidi" may be related to such a word as "evident," or even "vision"; and that "vici" at least is the same as the "vici kid" made into shoes. But what will any mind at first think if the famous phrase be pronounced "wany, weedy, weeky"? There are enough distractions into by-paths and pitfalls for any mind, however watchful and wary, without confusing sense by sound and leading off into the mazes of puns and pleasantries! If the Roman or Continental method of pronunciation be used, the mind has the double task of correlating sounds unlike and then detecting derivatives, while the native pronunciation of the ancient speech brings that speech at once into vital linguistic relations with the native speech and gives the mind the simple task of making direct comparisons, wherein the recognition of derivatives and relationships lies.

Why then should the foreign method be perpetuated, (1.) If it does not give the student acquaintance with a spoken language? (2.) If it cannot be the intelligible meeting place of scholars of all lands and all cities? (3.) If it places an added difficulty in the way of acquiring the languages? (4.) If it tends to fix the mind upon external and whimsical relationships to the loss of etymological kinship and derivation? (5.) If it multiplies the mental burden and complicates the psychological operations? What vindication is there for the method?

ALFRED WILLIAMS ANTHONY.

Bates College, Lewiston, Me., March 9.

RACE PREJUDICE.

TO THE EDITOR OF THE NATION:

SIR: In reading the observations on the negro question in the United States by Sir Harry Johnston in the London *Times*, to which you refer in your editorial of February 18, I was struck with the detached and impartial tone of the writer as well as with his strange inability to appreciate the transparent fact that some millions of people in this country who live with the negro do not, cannot, and will not like him or tolerate him as an equal. There seems to be really no substantial reason why, as rational human beings, they should not like him; they ought to; and, in fact, they are quite absurd in not doing so—at least it so appears to that amiable foreign observer.

Perhaps the attitude of the South towards the negro has never been better hit off than by John T. Morse, jr., in his "Life of Lincoln," when, describing the Fall of Richmond, he says with a delicious touch of irony (and of the baldest fact):

> The negroes were intoxicated with joy and the whites with whiskey; the convicts from the penitentiary had broken loose; a mob was breaking into houses and stores and was pillaging madly. Erelong the Fifth Massachusetts Cavalry, a negro regiment, under Colonel C. F. Adams, jr., paraded through the streets, and then the Southern whites hid themselves to shun the *repulsive spectacle* [italics mine].

In all modern history, I recollect no scene more significant, portentous, perhaps ominous, than that of those intelligent white men of affairs hiding behind doors and windows and peeping out upon a regiment of former negro plantation hands, clothed, armed, and trained by their opponents—complete masters of the situation.

Some of us who felt a savage thrill of exultation at the passage of the Fifteenth Amendment as being a well-merited humiliation for the South have, after forty years of reflection and observation, come to see why the negro on horseback is still a "repulsive spectacle" to Southern eyes. One generation of Southern whites has passed and gone, and still the spectacle is to their children just as repulsive as ever. Predictions are notoriously incapable of proof or refutation, but it is safe to assume that, until human nature greatly changes, the white race in this country will never view with equanimity the spectacle of the negro on horseback—logic, reason, justice, and all the virtues in the calendar to the contrary notwithstanding. Or, to drop the metaphor, there is no evidence to show any disposition on the part of the native whites, or of those Northern people who have come into intimate contact with conditions in the South, to allow the negro to make the laws for the locality where he lives with white men or to administer its public affairs. If one may venture to interpret the trend of popular thought on the race question, it is that we are willing to accept almost any European white man, because, however unprepossessing he may be on landing on these shores, he and his ancestors have undergone more or less the same social and political evolution as ourselves, and he has good stuff in him somewhere; the red man has practically disappeared; the little brown man is too far away to bother about; the yellow man we fear, admire, and suspect because of his intelligence and industry; but the average negro—taking him by and large and making a rough average out of the ten million in this country to-day—is neither formidable nor admirable for intelligence or industry. He has now had a half century of trial on the theory of a political and social equal of the whites; if the question were now fairly put before the seventy million of whites in this country whether or no he has made good or shown any prospects of ever making good, there can

be no doubt that the popular verdict would be a decided negative.

Whether the popular verdict is right or not, I am not discussing here; but I venture to call attention to the substantial unanimity of that verdict. Sir Harry Johnston dismisses this view of the case as "provincial"; rather an inapt epithet for him to apply to the deliberate conclusion of practically a whole nation.

E. L. C. Morse.

Chicago, March 1.

LINCOLN AND THE NEGRO.

To the Editor of The Nation:

Sir: A few days ago I read with interest your editorial article of February 18, on "The Negro Problem in Foreign Eyes." You will agree with me that it is the truth alone to which we must look to set us free from prejudices and differences, the whole truth, got only by considering the testimony of both sides to our controversy.

Perhaps no American could have had a stronger desire to be the well-accepted head of a whole people than Abraham Lincoln. When you put the issue of the "War between the States" (to use a Southern term) on the basis of a war waged by "those who gave their lives for the liberty of the slave," are you not, by implication at least, doing Lincoln an injustice? He professedly waged war "to preserve the Union," which he said was his great purpose to maintain, whether "all free," the more desirable, and in agreement there with highest Southern sentiment; or "all slave," the less desirable. I am sure that those biographers of Lincoln who are considered the least favorable to his memory have taken pains to show that he was no hypocrite, as Dr. Goldwin Smith has laboriously and unwittingly made out, in order to reconcile the theory of a war for negro emancipation and the above-mentioned strongly expressed views of the President. I hold the memory of Lincoln in high regard, and I do not believe I dishonor his memory when I remind you of the fact that his Emancipation Proclamation was regarded by him as a necessary or desirable war measure, designed to bring the protracted conflict to a speedier close, a result to be desired by patriots; although that particular measure might have resulted in a slave uprising and massacres, after the manner of some of the islands in the West Indies. Violent radicals of the John Brown type might have hoped for this extreme; yet it was averted, not by "lash-torn flesh and mutilated face," but by the close and even affectionate relations between the vast majority of English masters and their African slaves lately redeemed from the lowest strata of uncivilized existence. Lincoln probably foresaw this. Again, the Emancipation Proclamation applied only to those portions of the country without the control of the Union arms; and Lincoln expressed very forcibly his belief in race supremacy, that, as between the black and the white, there could not be coequal races dwelling together, and that he preferred the control to be in the hands of the white race.

Sir Harry Johnston would solve the race question theoretically in the way he proposes in London or New York; but would he do differently in practice in Louisiana or Georgia? I live in Maryland, and should vote against the locally advocated disfranchisement of negroes, because it is not needed here to uphold Lincoln's view of the necessity of white supremacy. In the far South, as to the black African, or in California, with reference to the yellow Chinese, it is considered necessary for the race in control of our national and State governments.

Matthew Page Andrews.

Baltimore, Md., March 6.

To the Editor of The Nation:

Sir: The correspondent in your issue of March 4, criticising your editorial of February 18 on the race problem, does, I think, both Lincoln and the *Nation* an injustice. Lincoln's sentiments regarding the negro, as disclosed by the citation from the Lincoln-Douglas debate, were certainly not of the higher and nobler kind, and it would seem, superficially at least, that the correspondent is right and the *Nation* wrong in the contention at issue. But, in the light of conditions when Lincoln made the speech and the subsequent developments from the time of Lincoln's death, it is manifestly unfair to assume that Lincoln's views would not have undergone a change. These debates took place in 1858, before the notion of negro citizenship had thoroughly dawned upon the great masses of the American commonwealth, and before Lincoln was elected to the Presidency.

The negro problem, stated tersely, is this: Shall a man physically, intellectually, and morally the equal of other men be denied equal treatment because his skin is black, or because his ancestors had been oppressed? It is unlikely that Lincoln, the emancipator, would have answered the foregoing question in the affirmative.

Charles S. Duke.

Chicago, March 7.

Notes.

Besides the works recently mentioned by us in special notes the Oxford University Press has the following titles on its spring list: Hobbes's "Leviathan," edited, with introduction, by the late W. G. Pogson Smith; "Critical Essays of the Seventeenth Century," Vol. III, 1685-1700, edited by J. E. Spingarn; "Specimens of Middle English," edited by J. Hall; "Roger Bacon's Works," edited by R. Steele (hitherto unpublished); Dante's "Convivio," translated by W. W. Jackson (Oxford Library of Translations); "The Forerunners of Dante: a Selection from Italian Poetry before 1,300," edited by A. J. Butler; "The Englishman in Italy: An Anthology," edited by G. H. Wollaston; "Aristotle's Poetics," a revised Greek text, with critical introduction, translation, and commentary by I. Bywater; "Plato's Theory of Ideas," by J. A. Stewart; "The Cults of the Greek States," Vol. V, by L. R. Farnell; Theophrastus, edited by H. Diels, Euripides, Vol. III, edited by Gilbert Murray, and Cicero, "Orations" (another volume), edited by A. C. Clark, these three in the Oxford Classical Texts; "The Origins of Christianity," by the late Charles Bigg, edited by T. B. Strong; "The Sikh Religion, Its Gurus, Sacred Writings and Authors," six vols., by M. A. Macauliffe; "The Aitareya Aranyaka," edited by G. A. B. Keith (Anecdota Oxoniensia, Aryan series); "Law and Custom of the Constitution," Vol. I, by Sir W. R. Anson (new edition); "Tudor and Stuart Proclamations," edited by Robert Steele; "The Rhodian Sea-law," edited by W. Ashburner; "Historical Essays," by the late Henry Francis Pelham, edited by F. Haverfield; "The English Factories in India, 1624-1629, A calendar of Documents," by William Foster; "Ionia and the East," lectures by D. G. Hogarth; "A Collection of Pieces in Prose and Verse in the Irish Language," printed in facsimile from the manuscript in the Bodleian Library (Rawlinson B. 502), with introduction and notes by Kuno Meyer; "Gray's Poems," edited by W. Bang; "Memoirs of Shelley," by Thomas Love Peacock (with Shelley's letters to Peacock), edited by H. F. B. Brett Smith; "Shelley's Prose in the Bodleian," edited by A. H. Koszul; "De Quincey's Literary Criticism," edited by Helen Darbishire; "Milton Memorial Lectures read before the Royal Society of Literature," edited by P. W. Ames; "Poe's Poems and Critical Essays," edited, with life, by R. Brimley Johnson; "Author and Printer," by P. H. Collins (popular edition); "An Illustrated Guide to Westminster Abbey," by Francis Bond; "The Edicts of Asoka," edited by Vincent A. Smith; "Aristotle's Criticisms of Plato," by J. M. Watson; and "The Odyssey," printed in Proctor Greek type.

George Allen now announces a final volume of the great Library Edition of Ruskin's Works, consisting of a Complete Bibliography, a Catalogue of Ruskin's Drawings and MSS., Addenda and Corrigenda, and a general Index.

The *Athenæum* reports that important letters from J. S. Mill are likely to be given to the public.

"The Ancestry of Abraham Lincoln," by J. Henry Lea and J. R. Hutchinson (Houghton Mifflin Co.) is an excellent piece of special genealogical investigation. Many points of the family history in the United States were in doubt, and the President characteristically said it was "the short and simple annals of the poor." The English line had long baffled investigation. It was known to begin in Hingham, and the name of the emigrant to New England was known, as well as that of his father; beyond that nothing definite, until by a discovery not unlike that which established the Washington line, a chance finding of papers in a chancery suit, solved the problem. This suit left the father of the emigrant in rather straitened circumstances—probably one of the leading motives of his removal and that of two brothers to New England. The line of descent is then traced to New Jersey, Pennsylvania, Virginia, Kentucky, Indiana, and Illinois, affording a good example of the manner in which New England has spread into the West. The value of this volume rests upon the fact that it is the work of trained investigators, who have carefully weighed their evidence, and who have not hesitated to mark what is doubtful or misleading. The many errors of other writers are corrected, and some of these errors were more than curious. While the style is at times pitched in a high key, no unreasonable claims are made. In England the family were "ostensible yeomen, with a dominant strain of gentle blood in their veins"; in America, they were plain pioneers, with fine in-

herited traits. The book is handsomely illustrated, and is in every sense worthy of its object.

Vols. V and VI of the "Works of James Buchanan" (J. B. Lippincott Co.) cover five years, from 1841 to 1846. In the first period Buchanan was in opposition, a critic in the Senate of Capt. Tyler's administration, and an authority on international questions. In 1845 he entered the cabinet of Polk as Secretary of State, and thus became identified with the Texan policy of his chief. He was still very local in his interests, and had a really better knowledge of what Pennsylvania expected of him than what national concerns required. He was opposed to a national bank, and fought the policy of distributing among the States the revenue from public lands. He professed to be opposed to a high protection tariff, but incidental protection on the products of his own State could hardly be too high for its prosperity The proposition to frame a horizontal tariff, in which a uniform rate of duty was imposed on all articles, was ridiculed, and the pauper labor of Europe was introduced as a serious political argument in favor of higher duties. In Texas he saw an ally, for he believed Texas would be another sugar producing State, and in the cause of incidental protection "sugar and iron are indissolubly connected in interest." For Tyler he had a moderate contempt, "a President without a party," and he clearly indicated his growing dislike of Van Buren, who was confidently thought to be the coming man. This opposition to the leader of his party never became open. In the Department of State he encountered some pressing questions. Congress had determined that Texas should immediately be annexed, and it remained only to arrange the details, and throw the real burden on other departments, as war with Mexico was inevitable. As for slavery, the negroes would flock to Mexico where there was no racial objection to them, and this would draw off the possible dangers hanging over the country. "All Christendom is leagued against the South upon this question of domestic slavery"—and Texas was to be the outlet to relieve the pressure! On the Oregon question, much discussion passed betwcen Buchanan and Pakenham, and the important notes on both sides are printed in this volume, though in the equally important and more delicate intercourse with Mexico Slidell's dispatches are omitted. While robbing Mexico of Texas, Buchanan sought to educate the Californians, still foreigners, tc annexation. "It would be difficult," he wrote to Slidell, "to raise a point of honor between the United States and so feeble and degraded a Power as Mexico," and he thought the hehavior of the Texans "one of the grandest moral spectacles which has ever been presented to mankind." Unfortunately, Buchanan was without a sense of the humorous, and when he does undertake to be light, the result is heaviness. Mr. Moore includes the foreign affairs paragraphs in Polk's messages, and prints not a little that is trivial and of neither personal nor political consequence. The accuracy of the text is noticeable.

A leading fact in the history of South Africa in recent years is the progress of the natives. There have been remarkable economic and social changes among them, as well as the awakening of a wide-spread desire for education, independent churches, and a larger share in the government. This awakening, together with the labor question, has hrought about a new order of things; and perplexing race problems are to be solved. To give information in regard to the present conditions and to aid in the adoption by the different colonies of a uniform and progressive policy toward the natives, the South African Native Races Committee has published a volume entitled "The South African Natives: Their Progress and Present Condition" (E. P. Dutton & Co.). It is largely a collection of facts derived from the reports of commissions appointed by some of the colonial governments. The subjects treated are occupations, land tenure, taxation, administration, legal status, education, and churches. The chapter on administration was written hy Sir Godfrey Lagden, chairman of the Inter-Colonial Commission on Native Affairs of 1903-5. The largest space is given to education, and the general impression left is very encouraging, especially from the introduction of manual and agricultural instruction in the schools, the establishment of institutions for the training of teachers, and a college for the higher education. The Ethiopian movement is described in the chapter on churches, its principal aim being to secure for Africans an independent, self-supporting church. The treatment of the different subjects is remarkably fair and temperate, the difficulty of finding ready solutions for the various prohlems presented being always acknowledged, and helpful suggestions, rather than criticisms, being offered. The work has a value for all who have to deal with a similar condition of one race ruling another of a lower grade of civilization, but vastly superior in numbers. None can read it without feeling with the committee that prepared it that in South Africa "the outlook is hopeful."

Two slender volumes give us F. B. Sanborn's reminiscences of "Bronson Alcott at Alcott House, England, and Fruitlands, New England (1842-1844)," and of "Hawthorne and His Friends." They are put together in a rambling fashion, but reproduce the atmosphere of those transcendental days, as no one else now living can do. The Torch Press of Cedar Rapids, Iowa, has printed the books in excellent form.

Morris Hillquit's "Socialism in Theory and Practice," just published by the Macmillan Co., is a fair example of the new tone now getting into the better socialistic books. The note of defiance is less heard, that of persuasion, at times almost of compromise, is more pronounced. When, for instance, Mr. Hillquit enumerates the transitional measures to be adopted hetween the present régime and the perfect state, he is on ground of rational debate. The initiative, the referendum, puhlic ownership, etc., are to be accepted or rejected for no à priori reasons, but as each is, or is not, expedient. As a reaction against the extreme individualism of the middle nineteenth century, this tendency is wholesome; but like all reactions, apart from any consideration of final constitutional changes, their advocacy seems to most judicious minds to run to irrational excess. When Mr. Hillquit, however, passes from questions of transitional expediency to his socialist ideal, there enters, as always, an entirely different set of questions. Society has passed successively through slave-holding and feudalism, to industrialism, and is now struggling through this stage to socialism. That some change will occur in the near future is quite possihle; but according to the law of analogy, to which the socialist appeals, it would be to a new order of leadership taking the place of the present "captains of industry," not to a uniform equality. And by the same argument, the change in moral standards would be to a new form of more or less suppressed egotism, and not to a state in which there is no motive for selfishness. In one section Mr. Hilquit reflects particularly the common weakness of his school. When he comes to the question of payment for lahor, he simply says that "socialists do not offer a cut and dried plan of wealth distrihution." Yet it is just here that the real psychological crux occurs: what conceivahle plan of distribution will maintain a degree of content sufficient for the working of any communistic scheme?

In May, 1888, a little party, including John Addington Symonds and his daughter Margaret, visited Vescovana, where the Countess Pisani lived and managed what was left of the estate of the ancient Venetian family. She was the daughter of Dr. Julius van Millingen, the physician who attended Byron at Missolonghi, and she had married Count Almorò Pisani in 1852. The visit gave rise to an intimate friendship, and this to a charming book by Miss Symonds, published in 1893 under the title of "Days Spent on a Doge's Farm." A new edition of this work now comes from the Century Co., revised by the author and embellished with a numher of new illustrations. It is an interesting account of Italian country life and gives a picture of an unusual woman.

"The Magic Casement" (E. P. Dutton & Co.) is a taking name for an anthology of fairy poetry, and Alfred Noyes has brought together a good volume of verse from Shakespeare to several suhstantial writers still alive. There is a common prejudice against the insertion of the editor's own work in such books; it savors somewhat of pushing one's self uninvited into illustrious company, but it is hard to find fault with a procedure which gives us so elfin a poem as Mr. Noyes's "Sherwood," with its dancing close:

Robin! Robin! Robin! All his merry thieves
Answer as the bugle-note shivers through the leaves;
Calling as he used to call, faint and far away,
In Sherwood, in Sherwood, about the break of day.

"Deutschland unter den Kulturvölkern," by Dr. P. Rohrbach (Berlin: Buchverlag Hilfe), of which the second edition has followed rapidly on the heels of the first, is a patriotic and yet critical discussion of the political relations of Germany to its neighbors. While pointing out the prominent place and even leadership of Germany in international politics, the author freely and frankly dwells on the weaknesses of its foreign policy.

It is generally held by Jewish and Christian scholars that the Sanhedrin trial of Jesus, as described in the Gospels, was not in accordance with the Jewish law of the time, and the facts in the case are well set forth by Walter M. Chandler in "The

Trial of Jesus from a Lawyer's Standpoint" (New York: The Empire Publishing Company). He has consulted good authorities, and his statements of Jewish law may be taken to be correct. As irregularities in the trial he mentions among other things: the private examination before Annas (or Caiaphas), and the facts that the trial was at night and on the eve of a Sabbath, that it was concluded within one day, that, according to one account, Jesus was convicted on his own uncorroborated testimony, and that there was not a unanimous verdict by the whole Sanhedrin. It thus appears that Jesus was condemned by a Jewish clique, and that neither the Jewish people nor the Sanhedrin as a whole is to be held responsible for his death. To his legal discussion Mr. Chandler has prefixed a defence of the authenticity and credibility of the Gospel narratives, but the work would be improved by the omission of this part; the author is not at home in New Testament criticism, and might properly have contented himself with the assumption that the Gospel narratives of the trial, though not free from difficulties, may be taken as giving in general a trustworthy statement of the facts. The first volume of the work is devoted to the Jewish trial; in the second volume the Roman trial is discussed, the author's conclusion being that Pilate's procedure was legally correct in the first appearance of Jesus before him, but not in the second appearance. There are added two chapters on Græco-Roman religion and social life, bringing out mainly the darker side of the religious life, and an appendix gives an English translation of the apocryphal "Acts of Pilate."

An edition of all the Gothic literature extant, together with the lexicographical and other aids necessary for the thorough study of this language and its literature has been begun by the publication of the first volume of Wilhelm Streitberg's "Die gotische Bibel." This issue is entitled, "Der gotische Text und seine griechische Vorlage mit Einleitung, Lesarten und Quellen," a volume of more than 500 closely but clearly printed pages (Heidelberg: Winter). It constitutes the latest addition to the series Germanische Bibliothek, edited by W. Streitberg. The editor has endeavored to cover the whole ground in a new and independent study.

In view of the approaching four hundredth anniversary of the birthday of Calvin, the new volume of Dr. Adolf Zahn of Stuttgart, entitled "Studien über Johannes Calvin," is timely. The special purpose of this well-known conservative theologian is indicated by the subtitle, "Die Urteile katholischer und protestantischer Historiker im 19. Jahrhundert über den Reformator" (Gütersloh: C. Bertelsmann). These views the author, himself a member of the Reformed Church and a close student of Calvin's life and works, as evidenced by a number of publications, criticises and weighs in a fairly objective way.

In "Kirche und Gegenwart" Prof. Erich Schaeder of the University of Kiel (Gütersloh: Bertelsmann), publishes two lengthy lectures in which, from a moderately conservative point of view, he tries to show how the church can meet the wants of the times. The special topics are "Kirche, heiliger Geist und Geister von heute," and "Die Kirche die zentrale Geistesmacht auch im Kulturleben der Gegenwart." As to the timeliness of this discussion there can be no question, but Professor Schaeder is not willing to yield to modern thought what apparently must be conceded before the church can resume its old prominence.

Prof. Johannes Weiss of the University of Heidelberg, in "Die Aufgaben der neutestamentlichen Wissenschaft in der Gegenwart" (Göttingen: Vandenhoeck & Ruprecht), gives an exceptionally comprehensive and clear birdseye view of the status and problems of modern New Testament research. He recognizes progress especially in textual criticism. He is among the critics who take a more conservative view of the authorship of the fourth gospel; for he maintains that it must be regarded as the work of an eyewitness and suggests that the writer was John the Presbyter of Ephesus.

Although there are several good commentaries for the study of Kant's "Prolegomena," yet the new "Kommentar zu Kants 'Prolegomena'; I, Die Grundprobleme der Erkenntnistheorie," by Dr. M. Apel (Berlin-Schöneberg: Hilfe) is anything but a work of supererogation. This volume of 224 pages is exceptionally clear in explanation of Kant, and is well adapted to make the reader an independent student of his system. The work is also one of the signs of the revived interest in the study of Kant.

There certainly can be no lack of detailed data in the recent work of Otto Nirrnheim, who devotes 624 pages to the material alone on the first year of the Bismarckian era, "Das erste Jahr des Ministeriums Bismarck und die öffentliche Meinung" (Heidelberg: Winter). The matter, taken chiefly from the public press, is intended to give the student the data for independent research. The author draws no conclusions.

Unsympathetic as has been the attitude of Dr. Adolf Bartels towards the German moderns, that group which was supposed to have founded the new *Heimatskunst* met with his approval from the very beginning. It is therefore not surprising that the name of Dr. Bartels should appear on the cover of a little book of 140 pages, entitled "Wilhelm von Polenz," and containing an appreciation of the personality and the work of that writer, who was one of the sanest and most mature representatives of his generation in the literature of contemporary Germany (Dresden: E. A. Koch).

The interest in Hebbel, evident even from the latest issue of *Poet Lore*, which contains a translation of his "Agnes Bernauer," is still growing and producing studies of his character and his work. Among the most recent are "Der Fall Hebbel: Ein Künstlerproblem," by Friedrich Paul (Leipzig: Xenien-Verlag); "Friedrich Hebbels philosophische Jugendlyrik," by Dr. Paul Zincke, the first book of the Prager deutsche Studien edited by Carl von Kraus and August Sauer (Prague: Carl Bellmann); "Friedrich Hebbel," by Dr. Anna Schapire-Neurath, contained in the series Aus Natur und Geisteswelt (Leipzig: B. G. Teubner); and "Hebbelprobleme: Studien," by Dr. Oskar F. Walzel in the new series of his Untersuchungen zur neueren Sprach- und Literaturgeschichte (Leipzig: H. Haessell).

A handsome book on Paris is the volume of notes by Karl Scheffler (imported by G. E. Stechert & Co.). Scheffler is the editor of the art magazine *Kunst und Künstler* and the author of a number of works on modern art. What he saw in Paris, he saw with an artist's vision, and the record and reflection of these impressions is of distinction. The author must also be given credit for an impartial attitude which is most agreeable.

"Le Messianisme chez les Juifs," by M. J. Lagrange (Paris: Victor Lecoffre), covering the period from 150 B. C. to 200 A. D., treats the origin of the teachings of Christ, particularly on eschatological subjects. The author, who has the sources well in hand, opposes the views of Loisy and his school, who insist that the contents of Christ's doctrines were taken mainly from the Apocalyptic literature of the inter-Testament period. While not denying the influence of this world of thought, Lagrange sees rather in the Old Testament itself the fountain head of what Christ preached.

The *Studi di Filologia Moderna*, a periodical devoted to the study of the modern literatures, has recently been founded by a committee of distinguished Italian scholars, and has been entrusted to the editorship of Prof. Guido Manacorda of the University of Catania. The first two numbers, which have already appeared, indicate a higher level of scholarship than can be claimed for any periodical of the same kind in this country. They contain two Schiller studies by Arturo Farinelli, and numerous other contributions of similar merit, besides more than usually competent reviews, and briefer notices of virtually all works of literary scholarship recently published in Europe and America. Our own Modern Language Association might do well to model its Publications on lines similar to those successfully followed by this Italian venture.

Prof. Ettore Pais, who is now connected with the University of Rome, has begun the publication of *Studi Storici ner l'Antichità Classica*, a quarterly review devoted to articles on classical history, archæology, and culture. Unlike the earlier journal written by Professor Pais and his pupils, this one has a long list of contributors, among whom are German, French, English, and American classicists. Articles will be printed in other of the important modern languages, as well as Italian. The first number has six monographs and nearly forty pages of critical reviews and notes. Each volume of the *Studi* will contain at least 550 pages of text. Subscriptions (16 lire per annum) should be sent to the publisher, Enrico Spoerri, Lung' Arno Regio, Pisa; manuscripts and books for review to Prof. Ettore Pais, 76 Via dei Sediari, Rome.

The estimates of appropriations for the United States Bureau of Education for the fiscal year ending June 30,1910, as transmitted to Congress, included under the general head of salaries estimates for additional employees as follows: Expert in higher education, $4,000; expert in industrial education, $3,000; expert in the welfare of children, $3,000; editor, $2,000; additional clerks, $12,100. Of the new employees requested, Congress made provision for an editor at $2,000; one clerk at $1,200, and one clerk at $1,000. The salary of the commissioner of education was increased from $4,500 to $5,000, making a total increase in the appropriations for the general work of the bureau of $4,700 over the appropria-

tions for the current fiscal year. The requests for a lump sum appropriation of $40,000 for educational investigations; for an increase of $1,500 in the appropriation for the library; for an increase of $8,000 in the fund for collecting statistics, and of an appropriation of $39,000 for rent, metal shelving, additional furniture, and removal of the bureau to new quarters, did not receive the favorable consideration of Congress.

The trustees of the Rhodes Scholarships have decided that henceforth any candidate from the United States shall be eligible who has passed the qualifying examinations in Latin and mathematics, without Greek. Such a candidate, however, must satisfy the Responsions Examiners in Greek before he can offer himself for any examination which presupposes Responsions.

Mrs. Francis Ransom Lane (born Elinor Macartney), the novelist, died at Lynchburg, Va., March 15. She was author of "The Mills of God" (1901), "Nancy Stair" (1904), and "All for the Love of a Lady" (1906).

George Thorndike Angell, founder and president of the American Humane Education Society, died in Boston March 16, at the age of eighty-five. He was editor of *Our Dumb Animals,* which he founded in 1868.

The Rt. Hon. Hugh Oakeley Arnold-Forster, Secretary of State for War, 1903-1906, died last week. He was born in 1855, son of William Delafield Arnold, and was adopted by the late Rt. Hon. W. E. Forster. At Oxford he secured high rank, and he became a Member of Parliament in 1892. His books are: "How to Solve the Irish Land Question," "The Citizen Reader," "The Laws of Everyday Life," "This World of Ours," "In a Conning Tower," "Things New and Old" (7 vols.), "Our Home Army," "A History of England" (1897), "Army Letters" (1898), "The Coming of the Kilogram" (1899), "Our Great City" (1901), "The Army in 1906: a Policy and a Vindication" (1906), and "English Socialism of To-day" (1908).

Frédéric-Salomon Rauh, of the Faculté des Lettres in the University of Paris, has died at the age of forty-seven. His published works include: "Essai sur le fondement métaphysique de la morale," "De la Méthode dans la psychologie des sentiments," "Psychologie appliquée à l'éducation" (in collaboration with M. d'Allonnes), and "L'Expérience morale."

Eginhard von Barfus, one time officer in the Prussian army and author of a number of books of travel and fiction, has died at the age of eighty-three. Among his works are "Durch alle Meere," "Bis in die Wildnis," "Deutsche Marine am Kongo," "Treue Kameraden," "Im Lande der Buren," and "Auf Samoa."

Vice-Admiral Reinhold von Werner has died at Charlottenburg in his eighty-fourth year. Besides his active duties, he wrote several works on naval topics, including "Die preussische Marine," "Erinnerungen und Bilder aus dem Seeleben," "Berühmte Seeleute," and "Bilder aus der deutschen Seekriegsgeschichte."

PROGRESS OF CLASSICAL STUDIES.

A History of Classical Scholarship. Vol. II: from the Revival of Learning to the End of the Eighteenth Century (in Italy, France, England, and the Netherlands). Vol. III: The Eighteenth Century in Germany, and the Nineteenth Century in Europe and the United States of America. By John Edwin Sandys. New York: G. P. Putnam's Sons. $3.50 each.

With the volumes before us, Dr. Sandys has acceptably completed an important undertaking, desired by many since the days of Francis Bacon, "a just history of learning." A history of classical scholarship only partly fulfils Bacon's plan, but it is nevertheless a useful part of the larger undertaking. Dr. Sandys has had no precursor in this attempt. Valuable studies of special periods exist, as well as biographical dictionaries of scholars. Prof. A. Gudeman some years ago published a useful outline which has recently appeared revised and augmented in a German translation; but this work suffers from two noticeable defects, the neglect of scholarly achievement in the nineteenth century outside of Germany, and the absurdly meagre treatment of the Occidental Middle Ages. On the significance of this period even the brief statement of Dr. Sandys in his final recapitulation (Vol. III, p. 471 f.) is more satisfactory than the page or two in Gudeman; the whole story appears in Vol. I, which, issuing in 1903, was given a second edition in 1906. The three volumes together sum up successfully the history of classical scholarship from the sixth century B. C., well-nigh to the present day.

Beginning in Vol. II with the Italian renaissance, which period is treated with greater detail in the author's Lane Lectures at Harvard University (1905), the course of scholarship is followed through the sixteenth and seventeenth centuries in Italy, France, the Netherlands, England, and Germany. In the eighteenth century, however, this order is rightly abandoned, and England, owing to the influence of Richard Bentley on the Dutch scholars, precedes the Netherlands; indeed, England might appropriately head the entire list, as Germany does in the treatment of the nineteenth century. The lesser countries are skilfully fitted in, and the work closes with a courteous and even too complimentary review of American scholarship. The great periods are broadly characterized, with due consideration of exceptional phenomena. In the Italian period (fourteenth and fifteenth centuries) the chief aim of scholarship is described as the *imitation* of classical models of style and of life; the French period (sixteenth and seventeenth centuries) is that of many-sided *erudition*, accumulation; the English and Dutch period (eighteenth century) is that of *criticism;* the nineteenth century, which belongs to the Germans, introduces the *systematic* or encyclopædic type of classical learning; it is an age of classification.

Our main criticism of this work is that history is at times submerged in biography. We sympathize with the enormous difficulties of the task; with so brief a compass and so long an array of names, the external aspect of the work almost perforce suggests a biographical dictionary arranged on the chronological instead of the alphabetical plan. This effect is in part overcome by the divisions into periods already noted, and might be still further diminished by emphasis of the larger movements of which individual achievements are typical. Such movements are not neglected, but they are not set forth prominently in introductory sections; slight rearrangements of the material offered could be easily and profitably made. Thus the various Italian academies deserve further description and differentiation; there is no comprehensive treatment of the aims of the Pleiade (which name is lacking in the index); the Querelle des anciens et des modernes is tucked into the account of Bentley; and Cambridge Platonism is likewise incidentally introduced. Most conspicuous of all is the failure to emphasize the importance of Jesuits and Benedictines in the history of French scholarship, and, particularly, the significance of the contest between them in the age of Mabillon; there is even no mention of Papebroch.

Coming, though, to Germany in the nineteenth century, we find, at the first, a better arrangement, with due regard to the principle just explained. Gottfried Hermann and August Boeckh are confronted in a special chapter, and, as in Bursian and Gudeman, the schools formed by their influences are then described. Comparative philology, too, deserves its separate chapter, but a further experiment at classification impresses us as unfortunate, namely, the segregation of editors of Greek and editors of Latin classics. This leads not only to curious inclusions—no one would think of Usener as primarily an editor—but to the partition of one name under two categories, as in the case of Mommsen. There is also an attempt to group the important nineteenth-century editions under the names of the ancient authors. Such lists are more appropriately and more adequately treated in other manuals; they necessitate here the frequent mention of living scholars. As to this last point, the writer's practice varies. If Comparetti is introduced because "no account of scholarship in Italy would be complete without him," is that of England complete without the mention of Robinson Ellis? Much more satisfactory is the classification suggested in the summary at the end of the work, namely, the

school of Hermann, the school of Boeckh —with not too many names under either—and "independent scholars with a certain affinity" with this latter school. In short, in the third volume, Dr. Sandys deserts somewhat the biographical method which he has followed thus far, and which is the only safe basis for a history of the subject. If he should care to present in a subsequent volume complete accounts of such matters as editions of the classics, the history of the different disciplines, of libraries, of universities and learned institutions, we should be grateful; there are suggestions on various topics of this sort in the present work, but nothing like consistency in the treatment.

But these considerations are of secondary importance. The strength of Dr. Sandys's work is the biographical part. He has succeeded in introducing the reader not merely to a collection of names, dates, and publications, but to a glorious company of scholars. In compact and felicitous phrasing, with a touch of wit here and there, he makes his subjects persons whom one is interested to know. He has an instinct for the picturesque and the anecdotal, and contributes several new anecdotes. Here is a story—not one of the new ones—after which the reader is not likely to forget Mabillon and his relations with the eminences of his day:

> After its publication [that of the "De Re Diplomatica"], the King desired to see the author, who was accordingly presented by Le Tellier, the Archbishop of Reims, and by his rival, Bossuet, Bishop of Meaux. In introducing Mabillon, Le Tellier said: "Sire, I have the honor of presenting to your Majesty the *most learned* man in your realm." Bossuet, regarding this as a reflection on his own learning, quietly suppressed the proud archbishop by adding, "and the *most humble*."

Such touches as these make the book more than a history of scholarship. The term is interpreted broadly in other matters, too; Dr. Sandys finds room for occasional discussions of literary imitation, as the relation between the "Prolusiones Academicæ" of the Roman Jesuit Strada and Ambrose Philips and Crashaw, or the ancient origin of a metaphor used by Grotius, supposed by one critic to be the only touch of modernity in the latter's verse. This tendency to view the subject largely is not carried too far. Solid information, including a sufficient amount of bibliography, is always presented; various summaries are of help, such as the list of *editiones principes* and that of important collections of Neo-Latin poetry. With regard to the space assigned to different scholars, opinions will differ; for ourselves we regret that Gantrelle is given as much as Usener, Lucian Mueller and Roersch twice as much, while Rohde and Traube are reduced to fine print. Though it seems ungrateful to say it, fine print would be appropriate for many of the American scholars.

One most important feature of the book is the inclusion of a large number of portraits, some reproduced from new or inaccessible sources. Facsimiles of autographs occasionally appear, and works of art are described, such as the tomb of Leonardo Aretino in Santa Croce, or Ghirlandaio's fresco containing portraits of four Humanists of the Florentine Academy. Dr. Sandys has been reminded, in pursuing his subject, of the Roman practice of adorning the atrium with the painted masks of ancestors; he has certainly given the reader the same sense of personal communication with illustrious men of the past.

In no spirit of captious criticism, but rather as a token of gratitude, we subjoin a few random suggestions on matters of detail, some of which may be of use for a second edition. Vol. II, p. 6, the remark that Ovid was too frivolous for Petrarch's taste should be qualified, despite Petrarch's own statement, by the obvious fact of his imitation of Ovid's work; thus one of the models of the "Trionfo d'Amore" is "Amores," i, 2. *Ibid.;* Petrarch was not only "familiar with the comedies of Terence," but wrote a commentary on them, with an introductory *Vita.* P. 12: the traditional statement that, "while Petrarch is interested in the *spirit* of the ancient classics, Boccaccio is absorbed in trivial items of *subject-matter*," should be applied only to Boccaccio's later career; the "Ameto," the "Decamerone" show that he could form various suggestions from Latin poetry into literary creations. P. 14: Boccaccio, despite Symonds, did not cease to be a poet after 1361, but wrote both Latin eclogues and Italian sonnets. P. 120: Add to the list of editions of Neo-Latin verse the convenient collection, perhaps by G. Bottari, "Carmina Illustrium Poetarum Italorum," 11 vols., 1719-26, which contains the otherwise well-nigh inaccessible eclogues of Boccaccio. P. 245: Instead of the ferocious portrait of Buchanan from Boissard, we hope that Dr. Sandys may now avail himself of some one of the admirable reproductions in the "Glasgow Quatercentenary Studies" devoted to Buchanan, 1907. Vol. III, p. 1: The autograph letter of Leibnitz to Huet on the proposed edition of Martianus Capella is in the possession of Harvard College Library (see *Nation*, February 25, 1909, p. 194). P. 140: Geppert's interest in Plautus is mentioned, but not his still valuable article on the text of Terence.

CURRENT FICTION.

David Bran. By Morley Roberts. Boston: L. C. Page & Co.

The giant figure on the cover of this book, clad in fisherman's garb, with tam o'shanter and jersey, standing with folded arms on a rocky cliff under a purple sky, and gazing out dreamily over the sea, is that Natural Man of whose actual existence even Rousseau was skeptical. His soul is at one with storms and darkness and stars and deep waters. By day he draws out turbot with a hook. By night he meets according to nature with Lou Trevarris, a dark Welsh girl with a deep soul and a terror of child-birth. Anon there is brought into the village of Trescas a white and gold and rosy girl of the North, also with a deep soul, but of another sort. And there rises in the deep soul of the hero a mighty love for the fair Kate and a mighty instinct for paternity. He marries her, and she is "fruitful," and brings forth a son, and he is exceeding glad. Yet he does not fall away from the dark girl—not a jot; he feels a mighty love for them both. Neither is Kate estranged, nor Lou:

> She had given Kate to David. Thus might one wife of some patriarch of the desert bring in another one to give children when she could not. For there are women who know, and do not uselessly repine at the knowledge, that men can love more than one.

Gossips of Trescas and the hero's mother, a mad old woman who reads the Bible, attempt to make the devil's own time for Lou and David. The strength of David sustains them all:

> The sense of sin was not in him, for he was strong, drawing his nutriment straight from the earth. Sin is known only to the weak and those who are afraid, and it abides like a curse upon the poor of spirit. These things he knows who lives. And David lived greatly.

In the end Nature overrules opposers. Lou and Kate and David at last are allowed to live together like sweet children of the earth, and a "strange and almost wonderful peace" falls upon Trescas.

We fear the foregoing exposition may be a trifle confusing to the boys and girls who read English novels in pretty red covers. Let us therefore divest the account of its Old Testament phraseology, its Roussellian rapture, and its Nietzschean commentary, and tell the story in quite simple English. In the degenerate fishing village of Trescas lived a sensual and ignorant bully named Bran. After consorting a long time with a low woman of the town, he married a pretty girl of distinctly domestic type. though deficient in intelligence and destitute of moral sense. His old habits, however, reasserted themselves, and at almost the time of his child's birth he returned, with ineffable brutality, to his mistress. His mother, in a last mad flash of decency, tried to murder the evil woman. The attempt failed, and in the end the whole village, including the mother, subsided into its accustomed apathy and moral rottenness. This is a fair sum-

mary of the facts. But Mr. Roberts was shrewd enough to know that he could not make out a case for depravity on mere facts. He saw that if his book was to circulate from public libraries and penetrate freely to the firesides of the dear novel-reading public, it would not do to present this story of nasty acquiescence in adultery in its raw animality and inherent repulsiveness. Accordingly, he suffused the whole scene with an exultant, hypæthral spirit, prated volubly of the large sanity of nature, metamorphosed his bestial fisherman into a superman and his woman of the town into an earth-spirit, sought out Biblical language to clothe vile thoughts, spoke steadily of disease as health, and represented what was shallow and muddy as deep and mysterious. The book is one of many of the same stamp, false to civilization, false to life.

An Idyll of All Fools' Day. By Josephine Daskam Bacon. New York: Dodd. Mead & Co.

The author herself in the dedication characterizes the book as a bit of busy nonsense, and it would be hard to better this description. The action is continuous and amuses by its very impossibility: into its ethical trend—what there is of it—it is perhaps more discreet not to inquire. Of course, from the time Mrs. Bacon's youthful Benedick and Beatrice exchange hostilities at first glance, one foresees that on the last page the moon will be throwing a needless glory over youth and love and laughter, but the events of the day that works the change are none the less piquantly unexpected for leading to a foregone conclusion. The dainty and spirited pen-and-ink sketches with which R. M. Crosby enlivens so many of the pages, add greatly to the attractiveness of the volume.

The Three Brothers. By Eden Phillpotts. New York: The Macmillan Co.

> From great Trowlesworthy's crown of rosy granite, the world extended to the moor-edge, and thence, by mighty, dim, air-drenched passages of earth and sky, to the horizons of the sea.

With this familiar touch of verbal magic, Mr. Phillpotts re-ushers one into his moor-country. He really has the faculty of word-painting, if there be such a thing, and his descriptions are never invented for their own sake. His moors and tors, however lavishly he may picture them, are always a background or a setting for the human scene: he never presents a landscape without a figure or two to give it point. The story of the three brothers Baskerville is less sombre than most of its predecessors. There is a less sharp contrast between rustic comedy and tragedy, and the spirit of comedy prevails. The three brothers are all well past middle life when the story begins; their differences of temperament have long ago resulted in totally different ways of life. One is a thrifty farmer, huge of frame, an ex-wrestler, proud of his strength, looked up to for his thrift, dull, prejudiced, a remorseless egoist. The second is an innkeeper, brisk, generous, sanguine, much loved and trusted for his good heart and ready hand. The third breeds ponies upon a lonely hillside to which he welcomes no man. He thinks himself a misanthrope, and tries to make himself independent of the chances of human happiness and unhappiness by attaching himself to his kind as little as possible. And, of course, he is hated and distrusted by all men. It is of this man, Humphrey Baskerville, that the story is chiefly told. Each of the brothers in the end appears in his true character. The wrestler-farmer dies a hard and dull and unrepentant self-worshipper; the popular innkeeper ruins himself and many others by speculations into which he is led by his weak and cheerful nature. It is the savage recluse who by stealth rights the wrongs laid to the door of both his brothers, and is at last discovered for what he is—a great-hearted man, whose oddity and surface harshness have been really due to a quivering sensitiveness. In the treatment of a theme like this, Mr. Phillpotts's sincere method is at its best. How the affair would reek of sentiment in the hands of most of our magazine story-tellers!

The Perfume of the Lady in Black. By Gaston Leroux. New York: Brentano's.

The present volume is a sequel to that exceptionally clever detective story, "The Mystery of the Yellow Room." We presume that it is no disadvantage in a sequel, from the practical point of view, that it shall send the reader back to the pages of its predecessor. That is what M. Leroux does in the present instance, though indirectly. Yet it would have been better to insert a frank recommendation right at the beginning that the earlier work be read as a preparation for the treat to come; for without a previous acquaintance with the two men whose deeds fill the pages of both stories, the reader will find it somewhat difficult to enter into the spirit of the latter events. "The Perfume of the Lady in Black" can be described as inferior to the "Mystery of the Yellow Room" and yet remain a tale of mystery and "ratiocination" very far above the average. Its inferiority consists in this, that the same device which was employed with simple and direct ingenuity in the earlier book, appears here in a somewhat mechanical and cumbersome setting. Still, the highest judgment a book of this kind can aspire to is that it cannot be laid down till it is finished. That verdict can be justly pronounced in the present case.

The Mystery of the Pinckney Draught. By Charles C. Nott. Pp. 321. New York: The Century Co. $2 net.

Five days after the meeting of the convention which framed the Constitution of the United States, Charles Pinckney of South Carolina, one of the youngest delegates, only thirty years of age, presented what James Madison, the unofficial reporter of the convention, described as "the draft of a federal government which he had prepared," and it was referred to the Committee of the Whole. "This draught," says our author, "was not a subject of notice or comment by any speaker or writer of the time." The journals of the convention were sealed up on adjournment and not reopened till they were printed by order of Congress under the supervision of John Quincy Adams, Secretary of State. Several important papers presented to the convention were missing, among them Pinckney's draft; and Adams wrote to him for a copy. He sent a paper which so much resembles the finished Constitution, that, reading it without further knowledge, one would "be tempted to speak of the Constitution of the United States as the Constitution of Pinckney."

After Pinckney's death, however, James Madison, who was regarded as the authority on the proceedings of the convention, discredited Pinckney's alleged draft, pointed out inconsistencies between its provisions and Pinckney's known and spoken views in the convention, and declared that Pinckney, at the time he sent it to the Secretary of State, had constructed it from memoranda of measures adopted in the course of debate in the convention. Madison suggested that this method had been followed because of Pinckney's defective memory of events which had taken place thirty years before, and endeavored to convey the impression that Pinckney had probably deceived himself into believing the draft he sent to Adams to be the same in effect as his original plan.

In his letter transmitting the draft, Pinckney said that some of his opinions had undergone a change after the convention met, and this explanation, Judge Nott says, does away with part of Madison's argument. Judge Nott also thinks it a suspicious circumstance that Madison should have allowed the draft printed in 1818 to go unquestioned till 1830, when every member of the convention was dead. Judge Nott freely admits that the draft sent to Adams was not the actual draft submitted to the convention, but that it was written just before it was forwarded in

1818. Pinckney said in his letter of transmission:

> I have already informed you I have several rough draughts of the constitution I proposed & that they are all substantially the same differing only in words & the arrangement of the articles—at the distance of nearly thirty-two years it is impossible for me now to say which of the 4 or 5 draughts I have was the one but enclosed I send you the one I believe was it—I repeat however that they are substantially the same differing only in form & unessentials.

This Judge Nott construes as meaning that Pinckney was simply complying with Adams's request and sending a copy:

> Either Pinckney gave to the convention a draught substantially like that in the State Department or he fraudulently fabricated that draught after the Secretary of State had called upon him for a copy.

Madison's argument against the draft is, in Judge Nott's opinion, due to the fact that he was really ignorant of its nature. He never saw it in the convention or afterwards till it appeared in 1818, and cannot qualify as a witness in the case.

Judge Nott discusses briefly the drafts of James Wilson in the Committee of Detail, printed by Prof. Andrew C. McLaughlin in the *Nation* on April 28, 1904, those brought out by J. Franklin Jameson in the Report of the American Historical Association for 1902, and the Randolph draft given in Meigs's "Growth of the Constitution"; and argues that the basis of all the drafts was Pinckney's, and that the copy of the report of the Committee of Detail given to the printer was Pinckney's draft itself, with interlineations—a fact which, of course, satisfactorily accounts for its disappearance. In the space of a review it is impossible, however, to follow in detail the reasoning by which this conclusion is reached.

A book written by a man of Chief Justice Nott's attainments is entitled to respect. He is a learned lawyer, a scholar of parts, and from 1865 until his retirement a few years ago he served with distinction as judge of the United States Court of Claims. Nevertheless, regard for the truth of history compels the statement that his book is not convincing in itself, and is marred by remarkable omissions. It seems almost incredible that he should have utterly ignored an entry in John Quincy Adams's Diary on May 4, 1830, wherein is described the visit paid to Adams by Jared Sparks when the latter was investigating the records of the convention. Sparks, just returned from a week at Montpelier, told Adams that Madison bad said that the plan presented to the convention was "nothing like the paper now in the book" (the printed journal), and Adams adds:

> *I told Mr. Sparks that Rufus King had spoken to me of C. Pinckney's paper precisely in the same manner as he says Mr. Madison now does; that it was a paper to which no sort of attention was paid by the convention,* except that of referring it to the committee, but when I compiled the Journal of the Convention Charles Pinckney himself *sent me the plan now in the book as the paper which he had presented to the Convention,* and with it he wrote me a letter which obviously held the pretension that the whole plan of Constitution was his and that the Convention had done nothing more than to deteriorate his work by altering some of his favorite provisions.

Judge Nott has trained his guns on Madison; but here is Rufus King, an enemy as powerful as Madison, unnoticed in his rear. Moreover, Judge Nott has not fired a single shot at Adams, who evidently believed that Pinckney had foisted a spurious draft upon him.

Judge Nott says Madison "had a poor opinion of Pinckney, a very poor opinion," and he quotes Madison's letters to Washington and Jefferson soon after the convention closed in which he speaks slightingly of Pinckney; but Judge Nott fails to quote Washington's letter in reply:

> Mr. C. Pinckney is unwilling . . . to lose any fame that can be acquired by the publication of his sentiments. (Washington to Madison, Oct. 22, 1787, Ford's "Writings of Washington," XI, 175.)

Evidently, the president of the convention was no more impressed by Pinckney than its reporter was.

Immediately after the convention adjourned, Pinckney printed what purported to be a speech delivered by him at the beginning of the session, and Judge Nott relies upon it as helping to sustain the authenticity of the draft; but he admits that the speech was never delivered. The title of the pamphlet containing it was:

> Observations on the Plan of Government Submitted to the Federal Convention in Philadelphia, on the 28th of May, 1787. By the Hon. Charles Pinckney, Esq., LL.D., Delegate from the State of South Carolina. Delivered at different times in the course of their Discussions.

But this is a continuous speech worded throughout as if spoken soon after the convention met. It will be hard to convince an unbiassed mind that a man who would print a spurious speech in 1787 would not be capable of constructing a spurious draft in 1818.

Judge Nott speaks of Mr. Jameson's studies of the Pinckney draft; but though they are the most important that have ever appeared on the subject, he does not pursue Mr. Jameson's discoveries and conclusions at all. With relentless minuteness Jameson discusses everything in print and manuscript bearing upon the draft, and the question of what it really contained. In twenty-two pages he presents the whole subject with a completeness which Judge Nott fails to attain in his 300. Mr. Jameson traces through the medium of Pinckney's speeches his whole connection with the finished Constitution, and thereby partly constructs a Pinckney plan; he takes the Wilson draft used in the Committee of Detail and finds interlineations which he argues must have come from the New Jersey and Pinckney plans; and his conclusion is:

> As a maker of the Constitution Charles Pinckney evidently deserves to stand higher than he has stood of late years, and he would have stood a better chance of doing so if in his old age he had not claimed so much.

Whether Jameson has not claimed too much for Pinckney may be questioned; but Judge Nott's failure to discuss his paper is the most deplorable of the omissions.

The mystery of the disappearance of the original draft is not solvable, because there are so many probable hypotheses, the easiest and simplest of which is that it was burned up by Major Jackson, the secretary of the convention, along with the other papers which he regarded as useless, and was not preserved with the journals because it was not a part of them—a fact which Judge Nott fails to notice. The precise extent to which it was used is also a question which can never be answered; but the most reasonable probability is that Rufus King and Madison spoke the literal truth when they said it was not used at all. Pinckney's friends may comfort themselves by accepting Madison's charitable suggestion that Pinckney constructed his fictitious draft in the belief that it was a true one; and they need not necessarily embrace the disagreeable alternative which Judge Nott offers to those who cannot accept his argument.

The War-Time Journal of a Georgia Girl, 1864-1865. By Eliza Francis Andrews. Pp. 387. New York: D. Appleton & Co. $2.50 net.

It is hard to believe that the entries in this diary could have been made under the given dates. The days are so filled with talk, action, discomfort, dauntless gayety, and the contemplation of distressing sights, that the nightly records constitute an amazing instance of the force of the diary habit. The result is a crowded but evidently veracious picture of life as it had to be lived during the last months of the Confederacy.

The introduction and notes, written by the same hand nearly half a century later, make a sane and interesting comment on the work of the vivacious young woman of twenty-four. Miss Andrews's father, Judge Garnett Andrews, was perhaps the most prominent Unionist in Georgia. Yet her brothers were in the Confederate armies, and she her-

self utterly devoted to the Lost Cause. Their home was at Washington, Georgia, where the Confederate government finally disbanded, and through which the men of Johnston's and Lee's armies, whose homes were in the lower South, passed by thousands after surrender. But other Georgia towns are visited, and there is a gruesome account of Andersonville, accompanied, however, with instances of the destitution of the Confederates themselves hardly less pitiable. Miss Andrews has done well to let the passion and partisanship of the diary stand unsoftened; otherwise it would not be the convincing record it is. The excellent spirit of the introduction and notes leaves nothing to be desired.

The book should take rank as one of the more valuable of the remarkable number of accounts of life in the Confederacy which have been finding their way into print.

Science.

The Oxford University Press will publish this spring "The Œcology of Plants," by E. Warming, translated by Percy Groom; "Elementary Biology," by J. W. Kirkaldy and B. N. Drummond; and "Elements of Non-Euclidean Geometry," by B. J. L. Coolidge.

Mycologia, in continuation of the *Journal of Mycology*, is now issued bi-monthly by the New York Botanical Garden. It is edited by William Alphonso Murrill, with the following associate editors: Joseph C. Arthur, Howard J. Banker, Giacomo Bresadola, Frederic E. Clements, John Dearness, Franklin S. Earle, Bruce Fink, Thomas H MacBride, Paul Magnus, Narcisse Patouillard, Lars Romell, Fred J. Seaver, Cornelius L. Shear. The first issue, now at hand, contains a good color-plate as well as drawings in black and white.

Dr. Thaddeus Asbury Reamy, an authority on gynæcology, died at Cincinnati, March 11, in his eightieth year. He was born in Virginia and studied at the Starling Medical College of Columbus, O. In the civil war he served as an army surgeon, and then after study abroad he settled in Cincinnati. There he had been on the staff of various hospitals, and had been professor of materia medica and therapeutics at the Cincinnati College of Medicine and Surgery, professor of diseases of women at Starling Medical College, professor of gynæcology at the Medical College of Ohio (now the medical department of the University of Cincinnati), and president of the Cincinnati Academy of Medicine, the Ohio State Medical Society, the Cincinnati Obstetrical Society, and the American Gynæcological Society. He had been an extensive writer for medical journals and the publications of medical societies, and he had contributed the article on "The Sub-involution of the Uterus and Vagina" to "The American System of Gynæcology."

Major Edmund Louis Gray Zalinski died March 10 in this city at the age of fifty-nine. He was born in Kurnich, Prussian Poland, and at the age of four came to this country with his parents. He entered the army as a volunteer in 1864, and served till the close of the civil war. From 1872 to 1876 he was professor of military science at the Massachusetts Institute of Technology, and from 1883 to 1889 he devoted his time to the perfecting of the pneumatic dynamite torpedo gun, which he had invented. He also invented an intrenching tool, a ramrod bayonet, a telescopic sight for artillery, and a system of range and position finding for sea-coast and artillery firing.

Mark Vernon Slingerland, professor of economic entomology at Cornell University, died at Ithaca March 10. He was born at Otto, N. Y., in 1864, and was graduated from Cornell in 1892. He had published many bulletins on injurious insects.

Dr. Simon Somerville Laurie, emeritus professor of the institutes and history of education in the University of Edinburgh, has died at the age of seventy-nine. He had published largely on philosophical and educational topics, including: "Constable's Series of Educative Reading Books," "Philosophy of Ethics," "Primary Instruction in Relation to Education," "Life and Educational Writings of John Amos Comenius," "Metaphysica Nova et Vetusta," "Ethica," "Mediæval Education and Rise and Constitution of Universities," "Language and Linguistic Method in the School," "Institutes of Education," and "Studies in the History of Educational Opinion."

The death is reported, in his sixtieth year, of Dr. Hermann Ebbinghaus, professor of philosophy in the University of Halle, and known especially for his work in experimental psychology. His publications in book form are "Ueber das Gedächtnis" "Theorie des Farbensehens," "Eine neue Methode zur Prüfung geistiger Fähigkeit," "Grundzüge der Psychologie," and "Abriss der Psychologie."

Drama.

"A Shakespeare Word Book" (E. P. Dutton & Co.) is a "glossary of archaic forms and varied usages "of words," prepared by John Foster. It is a laborious and comprehensive work, compiled from various annotated editions of the poet, and the notes of such authorities as Nares, Halliwell, Dyce, and Skeat. Upon a cursory comparison with earlier publications, it seems to be both full and accurate. Like many other commentaries of a similar kind, it is likely to reject the obvious and simple meaning in favor of one that is more abstruse or far-fetched, while some of its distinctions of meaning are so slight as to be unimportant or altogether fanciful; but its explanations of obsolete words and phrases, its parallel quotations, and copious references will make it very useful to all younger students of the text and to many of more advanced experience.

Arno Holz, who during the storm and stress of the eighties collaborated with Johannes Schlaf in that first product of German naturalism, the now historical play, "Familie Selicke," is still one of the most belligerent spirits of his generation. The first of his dramas, with the sub-title "Berlin: Wende einer Zeit in Dramen," was "Sozialaristokraten," a satire upon the reformers and radicals among his colleagues. Now he has published another, "Sonnenfinsterniss" (imported by G. E. Stechert & Co.), in which artists discuss art problems, while the leading psychological motive reminds one of the story of Beatrice Cenci. The almost unmitigated gloom of the play is oppressive, but the work bears the stamp of seriousness and sincerity and proves that the author has lost none of his power in the twenty-five or more years that he has been before the public.

Elizabeth Robins's play, "Votes for Women," which had a considerable run in London a year or two ago, and which was produced in Wallack's Theatre on Monday evening, is entitled to respect on account of its serious purpose, its entire sincerity, and its literary skill, but is not particularly impressive as drama, or startling as a social and political document. For the one it is lacking in plot and action; for the other in freshness and logical force. It is in the nature of a special plea, and, as is apt to be the case in appeals of that sort, advances a special instance as a proof of general conditions. Such arguments as it uses are familiar, and well put, and were received by a very large and sympathetic audience with fervent applause. Naturally, the debate was of rather a one-sided character, the feminine champions easily confounding their stage opponents. It is not likely that the piece will make many converts, but there will be general agreement among all intelligent and fair-minded persons that many of the conditions imposed upon fallen and helpless women, as described by Vida Levering, are a disgrace to modern civilization, and cry aloud for remedy. In London, this character—that of a pure and noble-hearted woman deceived and cruelly abandoned by a brilliant politician, who, having risen above her own misfortune, devotes the rest of her life to the cause of her more feeble and miserable sisters—was taken by Edith Wynne Matthison, whose emotional eloquence gave it a significance which Miss Mary Shaw, good actress as she is, was unable to impart to it here. Moreover, the scene of the woman's rights meeting in Trafalgar Square, where Vida and other women plead their cause and finally prevail over an irreverent mob, had the advantage of being staged by Granville Barker, and proved an extraordinarily effective bit of realism. Here it was only moderately effective, although Miss Grace Griswold contributed a very striking bit of acting as a working-woman orator. Miss Shaw and she were the only redeeming elements of an exceedingly feeble cast. The mob itself was fairly well handled, but the representation of the play itself was far from satisfactory.

"The Bachelor," the latest comedy of Clyde Fitch, just produced in Maxine Elliott's Theatre, is a slight sketch of no serious dramatic or literary purport, but thoroughly characteristic of its author, in its adroit utilization of the humorous side of every day life, its facile construction, its flashes of cleverness, its per-

vasive flippancy, and its essential triviality. It has, however, the distinguishing merit of being consistently amusing and absolutely sweet and wholesome. On this account, if on no other, it would deserve a word of special recognition and commendation. Trifling as is the story—the romance of a middle-aged bachelor with a pretty typewriter and the mischief made by her foolish brother—it nevertheless serves to exhibit the fine technical skill of Mr. Fitch as a theatrical craftsman. It is a pity that so much ability should not be employed to better purpose. The leading character is exceedingly well played by Charles Cherry, an admirable light comedian.

On March 22, "An Englishman's Home" will be produced at the Criterion Theatre in this city.

Beerbohm Tree is soon to make a notable production in London of "The School for Scandal." He tried to secure the coöperation of John Hare, but was not successful. He purposes to play Sir Peter himself, and has engaged Irene Vanbrugh for Lady Teazle. The Lady Sneerwell will be Ellis Jeffreys.

Robert Hichens's comedy, "The Real Woman," which has just been produced in London, does not seem likely, judging from the current reviews, to create any sensation. It aims at a contrast between the frivolous and the serious life. A lovely woman of fashion, Lady Arden, impelled by the impulse of the moment, leaves a merry supper party after the opera to visit an East End slum where an injured boy is dying. In the presence of pain and suffering the best womanly part of her is revealed, and an earnest young tenement worker, seeing in her a ministering angel, declares his passion for her. Then he learns that he had been an object of ridicule in her intimate set, and had been made the subject of a thoughtless bet. He is deeply wounded and indignant, but soon discovers that Lady Arden has experienced a change of heart, although she is not in love with him, but with his bosom friend, in whose favor he retires.

Music.

Papers and Proceedings of the Music Teachers' National Association. Third Series. Published by the Association. $1.60.

Once a year, the Music Teachers' National Association meets, and the papers read on these occasions are subsequently printed as "Studies in Musical Education, History, and Æsthetics." The last meeting was at Washington, on the last three days of 1908; twenty-five papers were read, and these, with the "Proceedings," make a volume of 336 pages. In the opening paper, following the address of welcome, Frederic W. Root refers with justifiable pride to the "wealth of interesting material" contained in the first two volumes of this series. The third is even better; from it one can obtain a clear view of the present condition of musical culture in this country and of the powerful forces which are at work in its behalf.

So far as vocal instruction is concerned, Mr. Root feels gratified that the old vagary of "Italian method" is practically retired; yet the preposterous claims still made about new and revolutionary discoveries in voice training show that there is need of further growth of intelligence. In pianoforte teaching, there has been a decided movement from "mere keyboard sport" to a kind of practising and playing which involves the mind as well as the muscles. A quarter of a century ago the only one of Beethoven's works which pupils had heard of was the "Moonlight Sonata," as Constantin von Sternberg remarks in his "Report of Piano Conference." He claims for the piano teacher a large share of the improvements since made. The influence of opera and symphony concerts is great and good, as far as it goes; but "it bears no comparison with the influence which the piano teacher exerts." He has taught the parents the value of music as well as the children; he has helped to create an audience for good music.

One of the best papers in this collection is that on the works of Edward MacDowell, written by one of his Columbia University pupils, W. H. Humiston, who is a good writer, as well as a musical scholar. His article is not merely a review of the works of the greatest of American composers, but it includes instructive comparisons of revised editions with old ones, and throws light on a number of points not dwelt on in previous articles on MacDowell. Few of his admirers know that at one time he wrote a number of pieces—excellent ones, too—under the pseudonym of "Edgar Thorn," to assist a helpless woman who had once worked for his family. Mr. Humiston also prints an interesting extract from a letter by Mr. Baltzell, editor of the *Musician*, to Mrs. MacDowell. Mr. Baltzell, on visiting, a few years ago, his native city, St. Petersburg, was nettled to hear the masters of the new Russian school make light of American music. He thereupon sent for copies of MacDowell's first three sonatas and sent them to the eminent composer, Glazounoff.

> The effect was—as I expected—a complete reversal of the previous opinion, and praise was expressed on all sides in a most generous and enthusiastic manner.

Another eminent American composer, George W. Chadwick, director of the New England Conservatory in Boston, is a contributor to this volume. In a paper entitled "The Curriculum of a School of Music" he discusses Wagner's plan for an ideal high school of music and its suitability for American conditions. This paper contains many valuable suggestions as to the functions of a true teacher, the need of allowing for individual peculiarities of students, the desirability of suppressing the unfit, and of raising funds for the talented pupils because "it seems to be almost invariably the case that the musically gifted student is without means to pay for his education." Mr. Chadwick agrees with Wagner's fundamental proposition that a music school should be, first of all, a school of singing. Prof. Charles H. Farnsworth contributes a valuable paper on school music in Berlin, Paris, and London. It is worthy of note that one series of music books much used in German schools has on it the name of Lowell Mason, the American pioneer of school music, with that of the German editor.

That the American music teachers—some of them, at any rate—are far from being buried in pedantic practices, oblivious to present tendencies in music, is shown by several papers in which the harmonic innovations of Debussy and Strauss are discussed. David Stanley Smith wittily remarks that in examining some recent Debussy songs, he fancied he saw the composer "turning over the leaves of one of those rigid French text-books on harmony and making a list of all the rules and conventions contained therein, with the sole purpose of wantonly breaking these rules."

O. G. Sonneck, the indefatigable, judicious chief of the division of music in the Library of Congress, supplies much interesting information on the inside working of that institution. Six persons are now engaged in the music division, and it is largely due to the liberal, broad-minded attitude of the chief, Herbert Putnam, that that division of the Congressional Library now exceeds the collections in the Lenox in New York, the Newberry in Chicago, and the Boston Public. The Washington Library's collections included, on July 1, 1908. 500,587 volumes, pamphlets, and pieces of music.

Our operatic repertory is becoming more and more international. Italian, French, and German opera we have always with us. Paderewski's "Manru" was a sample of Polish opera. A Russian opera, by Tchaikovsky, is to be launched before the end of the season. A few weeks ago a Bohemian opera, "The Bartered Bride," was successfully produced at the Metropolitan; and now the Manhattan has provided an opportunity to sample the new Flemish school of composers, who are trying to revive the glory of the Netherlands of a few centuries ago, when that country was the world's musical centre. In 1896 there was produced at Antwerp, under the name of "Herbergprinses," and in the Flemish language, an opera of which the music was composed by Jan Blockx, to a libretto written by Nestor de Tière, one of the leaders of the Flemish literary movement. It proved so successful that it was promptly translated into French, and in that version it was heard in a num-

ber of cities. It was well worth producing in America, although it cannot be called a masterwork. The power of creating new melodies, which is of paramount importance in opera, is not strongly developed in Blockx, but he has helped himself to some effective national airs, and he is a master of orchestral coloring. The hero of the opera is a young composer who competes for a prize and wins it; but the announcement of his victory comes just as he has been stabbed by a rival for the affection of a dissolute woman known as La Princesse d'Auberge—the French title of the opera. There are some fine spectacular effects.

The New York Philarmonic Orchestra is to be increased to one hundred players for the two special concerts to be given under the direction of Gustav Mahler, on the evenings of March 31 and April 6, at Carnegie Hall. For the first concert, the Schumann "Manfred" overture, Beethoven's Seventh Symphony, the "Siegfried Idyll" and the overture to "Tannhäuser" are announced. These works have never before been conducted in New York by Mr. Mahler. For the concert to take place on April 6 he will present a Beethoven programme. It will begin with the "Egmont" overture, to be followed by the Ninth Symphony. In addition to the augmented orchestra there will be for the final movement of the symphony the Bach Choir of Montclair, comprising two hundred and fifty voices under the direction of Frank Taft, and a quartet of soloists to include Mrs. Rider-Kelsey, Janet Spencer, and Daniel Beddoe.

The opportune discovery of two violin concertos by Joseph Haydn has been made just before the celebration of the hundredth anniversary of his birth. J. G. I. Breitkopf, son of the founder of the Breitkopf & Härtel firm, had, somewhere about the middle of the eighteenth century, put to one side a quantity of manuscript music, and it was among this that the parts of the two works in question were found. In a supplement to a thematic catalogue drawn up by the firm in 1769, the concertos were indicated, but until now were regarded as lost. They were written between 1766 and 1769 for Luigi Tomasini, leader of the prince's band at Esterhaza, and in a catalogue in Haydn's own hand the one in C is marked as "fatto per il Luigi." Haydn greatly admired this violinist's style of interpreting his music.

A cheap edition of the works of Brahms, which he himself often begged his publishers to issue, is at last to gladden the hearts of his admirers. N. Simrock of Berlin announces that, beginning next month, those of the Brahms compositions that are published by him and by B. Senff, will be issued at about one-half their present price, in a Simrock Volksausgabe, which will also include the copyrighted works of other composers, among them Dvorák, Rubinstein, Bruch, Goldmark.

Proof of the increasing interest in Germany in American music may be seen in the fact that G. Schirmer of this city is issuing a special catalogue for that country of "Ausgewählte Compositionen" by Americans, among them Chadwick, Bartlett, De Koven, Hadley, Homer, La Farge, Loeffler, MacDowell, Parker, Shelley, Schindler, Brockway, Huss, Klein, Joseffy, Liebling, and Whiting.

Art.

THE SPRING ACADEMY.

In reporting the National Academy last autumn we pointed out the prevalence of what may be called exhibitionism, or the false values consciously or unconsciously put into a picture destined to attract attention amid a multitude of other pictures, rather than in a private chamber. The exhibition now holding in the Fine Arts Building in West Fifty-seventh Street displays less of this militant trait, but still too much of it for our taste. There is less manifestation of explosive force, less exploitation of method, but still, as one glances through the three galleries, one feels the lack of any idea dominating the collection as a whole, and individually most of the pictures have the same lack. So often one says, "That is a good bit of painting, but who could possibly want it as a companion in a private room?" If this feeling is analyzed, it will commonly reduce to a perception of the fact that the picture in question is simply a skilful combination of lines and colors without any moral meaning, without any real interpretation of life, and that, lacking these, it has little power of retaining interest.

There are exceptions which only emphasize the general rule. Sargent's full-length portrait of Miss Vanderbilt, besides the supreme mastery of the brush which he always shows, has a grace that adds an interpretative value to youth. The hands are rather carelessly done, and the lower part of the figure has no indication of anatomy, but as a whole the picture suggests that refinement of the eighteenth-century English painters who refashioned life according to their ideals. Something of this same quality is found in two portrait groups (Nos. 222 and 232) by Lydia F. Emmet and Ellen G. Emmet, of which the latter especially, two young women, is marked by a scheme of translucent colors delicately harmonized. As a contrast with these may be mentioned Irving R. Wiles's near-by figure of Mlle. Gerville-Reache as Carmen, a brilliant work in yellow and red possessing almost every quality except a controlling taste. How clearly the fault here is a lack of idea, not of skill, may be learned from his Quiet Corner, a swift sketch where cleverness is the only quality needed, a "stunner," to use Rossetti's favorite slang. Among the other portraits we can only stop at H. R. Butler's Miss M—— of Los Angeles, somewhat strained and unpleasant in face, but notable for the masterly manner in which the gown suggests the figure without any illegitimate straining or wrapping; in contrast, J. M. Lichtenauer's Portrait of Mrs. Walter Scheftel, where the green drapery is deliberately drawn to suggest the figure, but with ill success; a Portrait (No. 157), by Cecilia Beaux, piquant in face, but showing a harsh scheme of reds; William H. Hyde's Portrait of Bishop Potter; and a Portrait of Carleton Wiggins, by J. C. Phillips, which has what is almost universally lacking, character in the countenance.

Among the figure groups and fancy portraits, two stand out preëminently for their moral values. The Saltus medal has been well bestowed on George De Forest Brush for his Family Group, consisting of mother with child on her lap and, sitting behind her, a boy. It is in Mr. Brush's usual style, but he has been more than usually successful in instilling the very spirit of the family into the design without falling into what has seemed at times almost a sham idealism. The triangular composition of the figures is itself significant of an inner harmony. The other picture we had in mind is the Lemon Girl by Charles W. Hawthorne, notable for the blending of yellow lemons, the dull yellow of the bowl and shawl, and the duller yellow of the girl's face; still more notable for the poetry of poverty, if that phrase will be understood to-day, that envelopes the whole. From these the interpretative value extends in diminishing degrees through W. T. Smedley's Two Dutch Dolls, Charles A. Winter's conscientious but strained Pandora, to such hideous manifestations of unreflecting realism as John Sloan's Making Faces, such flaunting ugliness as Albert Herter's Mary of Magdala, such pink inanities as William Cotton's Calypso, and such bar-room photographs as Harry W. Watrous's "Some Little Talk."

As a transition from human to inanimate nature we may take the group of paintings that attempt with more or less success to win picturesque effects from the city. Best among these are two bits of New York: one, by C. C. Cooper, giving a glimpse of the train yards at Grand Central Station, with the usual romance of blurring smoke and steam; the other a view of Washington Square, by W. J. Glackens, in which a green 'bus in the foreground makes a pleasant contrast with the bright red houses beyond the Arch.

It is scarcely necessary to say that the landscapes in general display the same lack of interpretation, of moral values, if the phrase will be accepted, as the portraits. It is a fair criticism that most of these artists while at work had in mind the making of a picture which by its manifestation of energy or bold method should hold its own in the terrible competition of the galleries. In some cases this descends to sheer brutality, as in Charles Rosen's winter scene in which an Old Willow sprawls its boughs across the white background in lines of merely hateful ugliness. The effort to reproduce nature in her crud-

est, most intrusive nakedness is painfully evident. It is scarcely conceivable that any one should care to own and look constantly at a scene so devoid of human meaning. There are other snow scenes of the same class, though none so exaggerated as this, and there are one or two sea scenes in which a tempestuous mess of colors is devised for the same expression of inhuman energy. In the same category, if on a lighter scale, is Hélène F. Metcalfe's Villa Torlonia, in which that small and secluded fountain, by means of rather crudely applied colors, is made to look almost like a bit of wind-stirred sea. Better every way, but still lacking the final transmutation of art, are a number of landscapes over which we must pass with undue rapidity: E. C. Clark's Over the City, in which a burst of sunset from behind a cloud scatters an explosion of light over the sky, a brilliant study; E. W. Redfield's Harbor of Boulogne, large and spacious, but laid off in tiresome horizontal strata; Cedar Hill, by the same artist, a fine study of snow in the foreground with a long look into the distance, but not exactly comfortable; The Golden Moon, by Paul Dougherty, a view of ocean and rocks bathed in a rich golden light, excellently painted with a bold stroke that does not lapse into mere daubing; The Valley, by C. F. Ryder, in which height, a difficult effect, is obtained by setting the hill behind a row of bare poplar trees, but which is marred by the harshness of the greens; Northern Coast of France, by the same artist, showing a really noble slope of land up to a lighthouse in the far horizon; and W. Ritschel's Lifting Clouds, in which the land, foreshortened to a narrow strip, still conveys the look of distance, and by its glinting light leads the eye into a mysterious distance. But of all the landscapes the two by Ben Foster, Early Moonrise and Morning After the Rain, conveyed to us the finest impression of the healing charm of nature, seemed to us most capable of bestowing the true quietude of mind and of winning us to comfortable companionship. Early Moonrise obtained the Inness gold medal, and deserved it; but the Morning After Rain was almost more seductive, with its hillside of pure green and its grayish white curves of cloud. We have necessarily passed by many paintings worthy of remark, but to these two landscapes we would point as embodying most perfectly the interpretative and, in the broader sense, moral values which as a whole the exhibition lacked.

In art the Oxford University has three titles on its spring list: "Decorative Design," by A. H. Christie; "The Stone and Bronze Ages in Italy," by T. E. Peet; and "Bushman Paintings," reproduced from tracings by Helen Tongue and Dorothy Bleek.

From Curtis & Cameron of Boston we receive a portfolio of fifteen photogravures (price $5) of E. A. Abbey's Holy Grail frieze in the Boston Public Library. The pictures come out well in the process, and give a good notion of the romantic charm which has attracted so many sightseers to the originals. These Copley Prints might well be framed for hanging in a library or hall.

Twenty-four years ago Copenhagen resolved to erect a new City Hall. Fifteen prominent European architects competed, and the task fell to Martin Nyrop, who began building in 1892 and was not done until thirteen years later. What he has achieved is told, in word and picture, in the artistic folio published by F. Hendriksen under the auspices of the municipality. "Kobenhavns Raadhus" (August Bangs) is a worthy literary memorial of one of the most original and most interesting modern European structures. The volume describes the architectural details, of design, construction, and expense alike, minutely and with a wealth of superb illustrations. It is more useful than many other similar studies because Nyrop has broken with tradition and evolved a new effect, in which classical hints and modern tendencies are admirably fused. Unconventional without being inchoate or falling into the extremes of novelty, the structure, upon which nearly $1,500,000 has been spent (apart from the approaches and site), well repays the foreigner's attention. Unfortunately for English readers, the text of the descriptions is in Danish. There is, however, an English index.

The excellent collection of colored reproductions of old masters that has been published under the title of Galerien Europas by E. A. Seemann, Leipzig, will in the future appear in the form of monthly instalments. In addition to the four colored plates which each issue will bring, there will also be a descriptive and critical letterpress, discussing problems of art. The last five instalments are filled with reproductions from the paintings in the Alte Pinakothek in Munich.

Seven large marble bas-reliefs have been discovered on a farm two miles and a half outside the Porta Maggiore, Rome, between the Via Prenestina and the Tiburtina. They are admirable specimens of Greek or perhaps neo-Attic art, and together form a magnificent circular base over twelve feet in circumference. They represent dancing figures, maenads or Bacchantes, of which illustrations are given in the current number of *Notizie degli Scavi*. Their discovery at this point, however, has raised the question whether they may not have been carried and secreted there, but the president of the Roman Archæological Society, Prof. Giuseppe Tomassetti, states that in studying the history of the Vicolo Malabarba he had found that an important temple of Bacchus once stood in this neighborhood, impressing its name on the surrounding land, which was known in the years 987, 999, and 1010 as the *fundus Bacculi* and *Bacculas*, as records in the archives of Santa Prassede prove. This statement gives rise to the hope that the statue for which this foundation was designed may now be found.

At an auction in the Fifth Avenue Art Galleries in this city March 11, Jacob Maris's The Dome, Amsterdam, brought $9,000. Other high prices were: Adolph Schreyer, The Raiding Party, $7,250; B. J. Bloomers, Children on the Beach, $5,200; Ziem, Canal la Giudecca, Venice, $8,000; J. B. C. Corot, Morning in the Valley, $5,000; Marie Diêterle, Cattle at the Pool, $5,000. On March 12, at a sale of paintings belonging to Cottier & Co. of New York, these prices were paid: Millais, Little Miss Gamp, $6,250; Diaz, A Girl and Her Dog, $9,000.

At an auction at Christie's, London, February 27, N. Maes's Portrait of an Old Lady, with black dress and white ruff and cuffs, brought £2,152.

Following the great success of the exhibition of pictures by Sorolla, there will be an exhibition of the paintings of Ignacio Zuloaga at the museum of the Hispanic Society, March 21 to April 11. There will be a private view March 17 to 20.

An exhibition of bronzes by Barye will be held at the Grolier Club till March 27.

Raphaël Collin, after a protracted contest, has been elected to the Académie des Beaux-Arts in place of the late M. Hébert.

We have to record the death of two French artists: Raymond Balze, at the age of ninety, a pupil of Ingres, painter of historical subjects; and the Comte du Passage, at the age of seventy, a cavalry officer by profession, who studied sculpture under Mène and Barye, and produced a number of statues, including a successful Jeanne d'Arc.

News comes of the death of Madame Henriette Ronner at the age of eighty-seven. She was born at Amsterdam, being the daughter of J. A. Knip, a well known painter of animals and landscapes. Her first work to attract much attention was La Mort d'un Ami, exhibited at Brussels in 1860, a picture of a hawker with a cart drawn by two dogs, one of which lies dead. But her favorite subject was the cat, which she painted in a variety of styles.

BOOKS OF THE WEEK.

The Nation.

NEW YORK, THURSDAY, MARCH 25, 1909.

The Week.

It is easy to credit the Washington report that Senator Aldrich has informed the President that it will be very difficult, if not impossible, to get the inheritance tax through the Senate. This is not because the Senate is the entrenched defender of wealth, but because it directly represents the States. Now, no less than thirty-three of the States have laws levying an inheritance tax. The rates on inheritances in the direct line vary from one-half of one per cent. to 5 per cent.; and on collateral inheritances from 1½ per cent. to 15. The amounts collected for the latest fiscal year accessible ranged from $200 in North Dakota to $5,435,000 in New York. (We quote from the figures furnished by the State Tax Commissioner of Connecticut, to the meeting of the International Tax Association, at Toronto, last year.) It is natural that the States should look with jealousy upon an invasion of their tax preserves by the Federal government. The objection is not only that double taxation would result, but that the fruitfulness of the tax itself would be certain to be impaired. The tendency would increase to make gifts during lifetime, instead of waiting for a legacy to be taxed twice. It is, of course, highly desirable that Federal taxes should impinge upon those best able to pay them. That is one of Adam Smith's fundamental canons of taxation from which our government has too much departed. Wealth ought to be taxed, not poverty. And if the inheritance tax cannot be taken up, the movement for a national income tax will become strong. President Taft has declared that such a tax can be levied in a form to obviate the objections made by the Supreme Court to the income-tax clauses of the Wilson bill.

One of the first nominations sent to the Senate after Mr. Taft's inauguration was that of Z. Lewis Dalby of Virginia, as Indian inspector. The nomination had failed of approval in the last Congress. It was twice confirmed, but then reconsidered, and was thereupon laid aside, pending further inquiry as to the fitness of Mr. Dalby, against whom a number of charges have been made. His name was once more sent to the Senate on Monday. An Indian inspector is a very important official, because he must judge between the Indians on the one hand and the agents on the other. The Indian Rights Association charges Mr. Dalby with brow-beating and cursing an Indian witness when the man's evidence was unfavorable to the sheep and cattle interests. Not unnaturally, the Indians have lost confidence in Dalby. An educated Chippewa Indian charges Inspector Dalby with having shown himself at an inquiry "unscrupulous, untruthful, and unreliable"—this at the White Earth agency, Minnesota. Other complaints on file against him come from the Winnebago reservation in Nebraska. The very helplessness of the Indians makes it absolutely necessary that only men of the highest character be permitted to come into such vital relations with them.

There is no higher parliamentary authority in this country than Asher Hinds, so long clerk to the Speaker, and his opinion of the slight changes in the House rules will hardly be challenged. He declares that they leave the Speaker stronger than ever, since they take away none of his essential power, while relieving him of certain irksome responsibilities. These relate chiefly to his consent to the calling up of bills in which particular members are interested. The giving or withholding permission has often been the cause of bitter enmities. Mr. Hinds recalls the political hostility which Speaker Reed incurred in that way. Hereafter, there is to be a "unanimous-consent" day, in which bills that have reached a certain parliamentary stage may be brought before the House, provided nobody objects. That will take the burden from the Speaker, and put it upon the members. They will have to rage at each other, after this, and not at a tyrannical Speaker, for preventing them from getting their great measures enacted. The check on hasty legislation will remain, but will not lie wholly in the Speaker's hands. As Mr. Hinds puts it, the result will be to tend to make "a perpetual Speaker and an ephemeral membership." This was scarcely the intention of the insurgents.

The Second Public Service Commission at Albany has refused assent to the plan to build the proposed Buffalo, Rochester and Eastern Railroad, from Troy to Buffalo, a line parallel to and competing with the New York Central. For months the commission held hearings along the projected route, listening to the evidence of shippers and merchants in all the leading cities between Albany and Buffalo. The volume of fault-finding with the New York Central was astounding. Shippers, it seems, would route their consignments in the most devious ways to escape the inevitable delays on the Central. The fact was settled beyond all dispute that the conditions inflicted grave injury upon business. Naturally, the New York Central appeared in opposition, but speedily found itself in the difficult situation of having either to admit that its management had been bad but could so be improved as to enable it to handle properly all the traffic offered it, or else to confess that the volume of traffic had passed beyond the limits of its utmost powers as a four-track railway. After hearing the evidence, the commission took months to weigh it and to examine the scheme from all possible points of view.

Now the commission has rejected the proposal, not because the new road would parallel an existing line, or, we take it, because the members of the commission are satisfied with the traffic arrangements between Albany and Buffalo, but for wholly different reasons. The commission found that one excellent defence offered by the New York Central, the inability of the Boston and Maine to care for the business offered to it by the Central, would be a fatal obstacle to the new line; for the Boston and Maine would be its only Eastern outlet. An average of 770 cars a day was the utmost that the Boston and Maine could handle in 1907. Yet to earn enough for its fixed charges the new road would have to offer to its Eastern outlet at least as many additional cars per day. Another ground for disapprov-

ing the application was the underestimates of the engineers, $85,559,018, as against the $100,000,000 estimated by the commission's engineers. That capitalization would call for an earning capacity of $48,000 a mile—over $8,000 a mile more than the gross earnings of any road in 1906. Furthermore, the financial responsibility of the backers of the road did not satisfy the commission. Whoever recalls the era of speculative, overcapitalized, parallel railways from 1870 to 1885 must rub his eyes in amazement as he reads of this quashing of a plan because it has the very features which characterized the wild building of that period. The history of American railroading would have been far different had Public Service Commissions with similar powers been established even so recently as thirty years ago.

The conviction of the Coopers for slaying ex-Senator Carmack is highly creditable to Tennessee and to the South, where crimes of precisely this nature have more than once gone unpunished. When the former Lieut.-Gov. Tillman of South Carolina killed N. G. Gonzalez, editor of the Columbia *State*, without the shadow of an excuse for his crime, he was promptly acquitted. The Cooper jury was apparently just the one that would be expected to let the murderers off, because of its lack of literacy and general intelligence. Its members one would think precisely the persons to sympathize with the feud spirit of the Tennessee and Kentucky mountains. Yet they have bravely vindicated the courts by balking the clever attempts of the lawyers to bring about acquittal on the ground of self-defence. This conviction, we believe, will be of great value to the entire South, as a precedent. Henceforth every public prosecutor in that section who is compelled to put on trial a bully with the pistol-carrying habit will be encouraged by the result of the Cooper trial. This interference with the long-established prerogative of one gentleman to kill another may mean the breaking up of an old custom, but it is a custom that should have gone decades ago.

The strike of the postal employees at Paris has been settled in the inevitable way. The strikers are going back to work in reliance upon fair treatment by the government. In all probability they have received pretty definite assurances that their enemy, M. Simyan, will be got out of the way. Thus another victory of the somewhat peculiar Clemenceau brand is added to the French Premier's record. He has settled labor troubles before this by sternly refusing to yield, next getting the strikers back to their places, and then yielding with grace and dispatch. The Opposition may accuse M. Clemenceau of hastening on the social revolution by compromising with the enemies of social order. But in that talk there is a good deal of humbug. What the Opposition cannot forgive M. Clemenceau is that he should compromise with the labor leaders instead of bringing on a crisis by stern measures, get the Opposition into office, and let *them* compromise with the strikers. After all, France is a radical nation at present. It has an overwhelming Parliamentary majority of men who are not afraid to call themselves Radical-Socialists. It has a large out-and-out Socialist party. It has two Socialist members of the Cabinet.

The Balkan war-clouds melt away as the skies in the North Sea begin to lower. In this there is food for optimist and pessimist alike. It is too bad that trouble should follow upon trouble. It is fortunate that one difficulty should pass away before another arrives. The outcome in the Balkans is distinctly encouraging to this extent: if there are forces in Europe working for conflict, there are also powerful forces making for peace. Austria-Hungary comes out of the long quarrel with her coveted pound of flesh, but with nothing added to her reputation. Her warlike intentions could never have been very serious, seeing how very exacting she was while winter made war impossible, and how suddenly she grows placated when spring is on the threshold. Von Aehrenthal and his associates banked upon Europe's present fear of war. In justice it must be admitted that they played a bold game; but "bluff" it was nevertheless. Yet if Russian diplomacy can now take advantage of the exasperated feelings of the Balkan Slavs, Austria may find her way to the Ægean Sea barred more solidly than ever.

Mr. Asquith has set at rest the rumors that he was about to give way to the Jingoes and decide upon eight new Dreadnoughts instead of the four he has asked for. Mr. Balfour's resolution of censure is still before the House, and will come up for discussion within the next ten days. If his own party wishes, therefore, to take sides with Mr. Balfour for eight battleships, it may do so. We cannot, however, see that there is any danger of this, unless the House, like the public, should go stark mad over battleships. Mr. Asquith also spoke out bravely against the anti-German agitation; "the artificial agitation," he called it, "that is now being engineered" and is "unpatriotic, unscrupulous, and misrepresenting the situation." These are the correct adjectives to apply; and the Premier helped to establish his claim to be a leader by stating positively that there is "no friction, no unfriendliness, and no suspicion" between England and Germany. That country is endeavoring to set before the world the facts as to its building programme. It ought speedily to agree with England on a definite limitation, lest both peoples go out of their heads.

The details of the libel suit won by Mr. Lloyd-George, the British Chancellor of the Exchequer, make it plain that the proprietors and editors of the offending paper, *People*, have reason to be grateful that they are not in jail. A sort of English *Town Topics*, this newspaper announced that the Chancellor of the Exchequer had been guilty of adultery, but that, thanks to the efforts of his friends and the expenditure of $100,000, the price of peace, the case would be kept out of the divorce court. Naturally, Mr. Lloyd-George brought the paper to book, and the proprietors, Sir William Armstrong and W. T. Madge, were compelled to admit that "they were unaware of the insertion in their paper of these scandalous libels"; that the last thing they would desire is that their paper should circulate such accusations, for which there was no justification or foundation. The defendants were let off with a fine of $5,000. The judge praised Mr. Lloyd-George for his extreme moderation in not going further in the punishment of the offenders. He gave the case an immediate place upon his calendar, not because Mr. Lloyd-George was a man of influence and position, but because anybody plac-

ed in his position was entitled to immediate relief, as the defendants had confessed guilt. There would be less libelling in this country if our courts moved more promptly and were as keen to see justice done.

In Persia, a crisis seems approaching. The greater part of the Empire is in open revolt against the Shah, who would apparently be content to hug his quiet at Teheran if Russia and England would only let him. The loose structure of Oriental states allows life to go on in spite of dismemberment. Morocco furnishes a parallel instance of a revolution extending over almost a dozen years, without greatly disturbing the monarch in his capital. The West, however, is more impatient, and neither Britain nor Russia can be content with Tabriz, Ispahan, and other great cities in a permanent state of revolt. It rasps on the political nerves and hurts trade, besides. So far, winter has exercised the same restraining influence that is ascribed to it in the Balkan imbroglio. With the melting of the snows fighting will take on new life about Tabriz, and even Teheran may not remain permanently intimidated by the Shah's Cossacks. There is talk of a convention being summoned by the Shah to draft a new constitution. Foreign influence is undoubtedly behind that move.

THE PAYNE TARIFF BILL.

By the way in which a tariff bill is received, one may get light upon the theory on which it is drawn. The Payne bill has a mixed reception; the inference is that it was drawn on mixed principles. That is otherwise clear. No man can even read the vast mass of provisions in the various schedules, with their minute subdivisions and qualifications, without becoming convinced that no one clear principle runs through the whole. Now it is revenue that is sought; now protection; now a dubious mingling of the two. More than one clause is subject to the suspicion of having been inserted only as a "joker." Many such will doubtless be discovered as the examination and discussion of the bill goes on. The whole is too much like a mighty maze without a plan. A rigidly and consistently protectionist tariff would be easier to understand. We could both more heartily praise and more readily comprehend a tariff strictly for revenue. The Ways and Means Committee has given us neither.

Concerning the efficiency of the bill in producing sufficient revenue, its very framers are evidently in grave doubt. The statement put out by the Ways and Means Committee predicts an adequate government income in 1910, only in case the next fiscal year prove "prosperous and the normal conditions of 1906 return." Hope is also expressed that the returns will be larger "on account of the large increase in population," during the past three years. But nobody seriously expects conditions to become "normal," in the committee's sense, until after the next fiscal year is pretty well gone. The committee itself plainly does not, and is not certain that its bill will wipe out the deficit by means of fruitful taxes, for it goes on to provide methods of borrowing money to meet the deficit. Authority to issue Treasury certificates is continued, and the maximum amount of them is pushed up from $100,000,000 to $250,000,000. That is a good-sized anchor to windward. Furthermore, Panama bonds, to the amount of $40,000,000, may be sold and the proceeds used to "reimburse" the Treasury for the money paid in the original purchase of the canal. Once let the principle be recognized of capitalizing previous expenditures for "permanent utilities," when revenue fails, and we are treading the path of danger which has thrown the public finances of Germany and Russia into their present disorder. If the Treasury is to be "reimbursed" for revenue spent in good faith on the Panama Canal, then why not "reimburse" for fortifications, for post-offices, for river and harbor improvements, paid for out of the ordinary revenue in years gone by? It is proposed not only to set up a principle new to American public finance, but quietly to override the old and salutary principle of paying for the needs of government as we go. This provision is the surest evidence that the Ways and Means Committee is not at all confident of the revenue to be got from the new tariff. Yet to make it yield sufficient revenue was declared by President Taft in his message to be the main object.

Whatever may be the defects and the offences of the Payne bill, it still represents, as compared with the McKinley and Dingley bills, an enormous advance towards common sense. The idea of cheapness has ceased to be anathema to these latter-day protectionist tariff-makers. They hold out the hope, and have done their work on the theory, that the cost of many of the necessaries of life may be reduced by reducing taxes. Shoes and clothing, glass, and steel, wood and paper, it is proposed to make cheaper. At last, the forgotten consumer is given a thought. After long years of argument, it has been beaten into the heads of high-tariff fanatics that low duties mean both more revenue and more trade. And the old idea of universal, all-round protection, every single product getting its just recompense of reward in a perfectly equitable tariff, is now admitted to have broken down.

The most conspicuous proof of this is the restoration of hides to the free list. They were taxed 15 per cent. ad valorem in the Dingley bill, as a distinct sop to the farmer. He was being heavily taxed for his ploughs and hoes and harvesters and harness, therefore, in order to conciliate him, concede him the right to tax other people on leather. The duty on hides was explained by the great Lodge in the Senate as a necessary part of consistent protectionism. His constituents in Massachusetts might not like it, and he himself was opposed to it *per se*, but there stood the fact that the blessings of protection must be extended to all, or none would enjoy them long. Manufacturers might desire free raw materials, but could not have them. From all this sophistication, the Payne bill executes a sharp retreat. It would make not only hides free, but iron ore and coal; and the taxes on other raw materials it would cut down. This is the greatest single achievement of the bill. It marks progress. Upon some of the hoariest absurdities and outrages of protection, it plants a heavy foot. Free hides are a kind of signboard, pointing the way in which the whole bill is headed. That provision alone will do more to stimulate our trade with South America than could the establishment of a score of steamship lines, unprofitable and therefore to be subsidized.

The new tariff bill will now be fought over in Congress. It will have to en-

dure the assaults of selfishness and intrigue. Powerful interests will fall upon it in the process of what the *Tribune* elegantly calls "adjustment, equalization, and compromise." Others, instructed by the history of the framing of previous tariff bills, would call it grabbing, squeezing, and threatening. In what shape the bill will finally emerge, it is impossible to say. It ought to be freely debated and so amended as to add to its good features and diminish its vices. But, even as it stands to-day, the Payne bill must be confessed to be a more enlightened and promising measure than any tariff bill ever fathered by the Republican party.

PUBLICITY FOR PARTIES.

If we might believe certain Albany correspondents, the Governor's bill for direct primaries is "doomed." It is to be variously ignored, despised, and rejected. Neither it nor he has any friends in the Legislature. But this is an old story. All of Gov. Hughes's capital measures have been "doomed" just before they were adopted. His Public Service Commissions bill hadn't a ghost of a show until it suddenly passed triumphantly. As for his bill to abolish race-track gambling, the scorn with which the knowing regarded those simple-minded people who thought it might be enacted, was overwhelming. Did we not remember this usual course of important legislation urged by Gov. Hughes, we might think it a waste of time to examine the actual text of the primary bill. As the probability is high, however, that it will pass the Legislature either this year or next, it is just as well to ask what it purposes to do.

Enormous labor has plainly gone to the preparation of this measure of 135 printed pages. This was made inevitable partly by the need of fitting the new scheme into the general election law of the State, of which the bill is offered as an amendment. The scrutiny of details and the recasting of sections and a thousand minute changes in phraseology are enough to account for the delay in perfecting and introducing the bill, to say nothing of thinking out and drafting all the provisions and applications of the new plan. The result is no mere happy-thought legislation, but a serious measure to the preparation of which able lawyers and men skilled in affairs and in politics have given days and nights of toil. It is as far as possible from being a doctrinaire production. There are no sweeping theories going through it unbroken. No unvarying logic shapes its provisions. The bill is made flexible, intended to fit varying conditions in varying parts of the State. It admits differences of procedure in Presidential years. The entire plan is not something wholly extraneous to our political system and party practices, violently forced upon them, but an expansion and extension of what already exists—all wrought out with the sole object of making party management truly representative of the wishes of the party. Let no off-hand critic get it in his head that he can at a glance point out objections which have not been duly considered and provided for in some part of this bill. It is a document about which politicians may rage, but upon which they will break their teeth.

If the bill were to be described in a phrase, one could say that its dominant purpose is to enforce publicity upon parties. If the Governor has his way, they will be compelled to come out into the open and do their work where everybody can see. This is the one idea running through the whole measure. We have had a powerful movement for publicity in corporations: here we have publicity for parties. To show how great is the change proposed from the old secret methods of "addition, division, and silence," we will take the prescriptions for a political committee setting about the work of making nominations. In the first place, every meeting of a committee for that purpose shall be "open to the public." No more "going into executive session," where the thimble-rigging can be done in the dark. The public can now be present, newspapers can report all that takes place. Moreover, the new law provides for a public calling of the roll of the committee, each member of which shall then "arise and declare the name" of his favored candidate. One can understand how terrifying all this transparent procedure will appear to the old practitioners of the secret arts of politics, but how simple and natural it all seems when once you have gone over to the wholly sound theory that the party is entitled to know what its managers are doing!

The "directness" of this primary plan consists in getting rid of delegates and conventions, and acting instead through committees, whose work and whose personalities are continually coming before the voters of the party for direct approval or condemnation. Nominations for membership in these committees must be made only on petition, and long in advance of the primary. There is to be entire freedom in the nomination as in the election of these men, who are to have party affairs in charge. They hold office for but one year, and they and the candidates for office whom they favor, must come before the September primary. About that primary election itself, new safeguards are thrown. There can be no raiding of a Republican primary by Democrats, or vice versa, as in Oregon. Nor can party funds of any description be used in a primary fight. This provision, with the general law governing the expenditure of money in elections, will effectually prevent such a scandal as that attaching to the purchase of a seat in the Senate by Mr. Stephenson of Wisconsin. By the way, the Albany bill does not contemplate a primary election for United States Senators. And the argument that the city vote would always swamp the country vote, in the political committee, is met by the provision that each city committeeman shall have one additional vote for each thousand votes cast for Governor by the party in his unit, while country committeemen are to have an extra vote for every hundred votes so cast. Herbert Parsons will also discover that ample provision is made for fusion movements in municipal elections. Sincere objections to the direct primary have been largely met in the bill; there remain the dishonest pretences of politicians who love darkness rather than light, because their deeds are evil. But Gov. Hughes has triumphed over them before, and we look to see him do it again.

THE DECLARATION OF LONDON.

The announcement of the conclusions arrived at by the conference of the maritime Powers at London, confirms previous forecasts. Agreement was reached in several disputed matters of naval warfare, and principles were laid down to guide the Hague Tribunal in passing upon any cases that may be brought before it involving the rights

of neutrals, the definition of contraband, the effectiveness of blockades, etc. All told, this Declaration of London is in line with the general humane progress that has been made since the famous Declaration of Paris in 1856.

To that convention, the United States did not adhere. This was not because it went too far, but because it did not go far enough. This country, as represented by Secretary Marcy, stood for an absolute rule against the destruction of private property at sea in time of war. How does the case stand now for our own historic contention? The Declaration of Paris itself represented a certain advance. It excepted certain classes of private property from capture. Neutral goods were better protected than before, and even an enemy's goods under a neutral flag were safe, unless contraband of war. Since that time, the practice has grown towards larger exemptions, with more ample recognition of the principle that the flag covers the goods. Capt. Mahan could write in his "Influence of Sea Power" that "the principle that the flag covers the cargo is forever secure." But that left enemy's goods in enemy's ships still a legalized prey.

At London, attention was fixed less upon the flag than upon the nature of the goods. A fuller definition of contraband was sought, and was found in a division into articles that are always contraband, articles that are always free, and articles that may sometimes be free and sometimes contraband. In the first class fall, of course, powder, arms, military equipment of all kinds. They may be seized on any vessel at any time. Conditionally contraband are supplies of food, fodder, money, flying-machines, and articles which might be used as munitions of war; the question would have to be determined by a prize court. But for the first time the leading nations of the world have agreed upon a list of articles which shall be at all times and places non-contraband, and which, under no circumstances, not even in a ship flying the enemy's flag, can be seized. This list includes many raw materials of manufacture, together with machinery and chemicals used in agriculture and the arts. Our State Department estimates that the export of such absolutely free articles from the United States amounts to $400,000,000 a year, while the conditionally contraband goods among our exports would figure at some $900,000,000 annually. One sees what the new agreement would mean for our trade in time of war. The honorable position striven for by the United States has not yet been attained, but is more closely approximated.

With much skepticism is to be taken the statement from Washington that another triumph for the United States is to be read in Article 47 of the London convention. This provides that any person belonging to the armed forces of the enemy may be made a prisoner of war on board a neutral vessel, even though there be no reason for seizing the vessel herself. It is said that this is a recognition of the principle under which Capt. Wilkes removed Mason and Slidell from the British steamer Trent, during our civil war. It is added that the British representatives at London renounced the doctrine under which the release of Mason and Slidell was demanded and obtained. This we must think highly doubtful. Mason and Slidell were not a part of the "armed forces" of the Confederacy. They were diplomatic agents; and the right of neutrals to convey them to a neutral port can scarcely be questioned. Lincoln had Mason and Slidell given up on the technical ground that Capt. Wilkes should have brought in the Trent for adjudication of the question in dispute by a prize court; but when Seward came, later, to argue the justice of their seizure, he put it on the ground that they were contraband. It has been generally admitted by American writers on international law that the capture of Mason and Slidell was illegal; and it is hard to believe that the Declaration of London can have intended to justify it. The mistake probably arises from supposing that Mason and Slidell could be regarded as part of the "armed forces" of the enemy.

We will not dwell upon the new regulations affecting blockade and defining "continuous voyages." Those matters, though hotly debated, are of minor importance. The decision respecting them appears to be enlightened. The whole endeavor of the delegates of the various Powers at London seems to have been honestly to seek to make war less terrible. They could not, however, take any steps to make war impossible, or to lead the nations to disarm; and as long as this was so, their work cannot be thought to go to the main question of the day. Of what use to regulate naval warfare when nothing can be done to stop the insensate jealousies and hatreds and provocations which are now being used to goad England and Germany into war, or at least to heap up burdens on either people almost as grievous as those of war itself? An international agreement to ground arms is much more needed than one simply to decide how arms may be used. The really statesmanlike proposal was that made by Campbell-Bannerman to leave off building battleships if Germany would do the same. From that to the present fury for Dreadnoughts—dreading not even national bankruptcy—is a painful change.

THE FOURTH ESTATE IN RUSSIA.

The St. Petersburg *Novoe Vremya* is the Russian London *Times*. On March 12, Alexei Suvorin, its founder, owner, and manager, celebrated the fiftieth anniversary of his entrance on a journalistic career. The event took on national importance. An Imperial rescript dealt with the veteran editor's services to his country. Leading members of the Duma joined with members of the Cabinet in paying homage. The rival newspapers brought forward their tribute handsomely. For M. Suvorin is preeminently a type of the editor who rises to be a national force. He has had other interests than his newspaper. He is the owner of a great theatre at St. Petersburg, which he does not run as a money-making institution. He is the publisher of a popular library which has distributed the masterpieces of Russian and foreign literature by the millions at nominal prices. But, though he is quite aware that Russia has much to learn from abroad, Suvorin is, above all things, an intense, almost a violent, patriot. His may be the high-class jingoism of the London *Times*, but a jingo he is. That is the predominant characteristic of the *Novoe Vremya*. Generally regarded as a conservative, M. Suvorin claims the merit of having been among the first to voice the nation's desire for liberty in the stormy days that followed the outbreak of the war with Japan. When no one as yet ventured to speak of a constitution, the *Novoe Vremya* is said to have demanded the convoca-

tion of the Zemsky Sobor, the ancient Russian Estates. Only when the Liberal agitation took on, to M. Suvorin's view, the character of a separatist and disintegrating movement, when the unity of the Russian Empire and the safety of monarchical institutions with which he believed it bound up were in danger, did he break sharply with the radical progressives.

That is the apologist's view. An opponent might argue that, as an expert and prudent journalist, M. Suvorin must have scented a change in the air some five years ago, and have taken measures accordingly. Possibly he played safe. It is an interesting fact that, while the *Novoe Vremya* was Moderate during the short-lived days of freedom which followed the Constitutional Manifesto of October, 1905, a son of M. Suvorin was among the founders of the Radical organ, the *Russ*, whose brief career was made up of almost weekly suppressions and revivals. In any case, the *Novoe Vremya* has kept its patriotic character and its influence. It has been prominent in the present Balkan crisis in a rôle similar to the one it played in 1876. Then it helped to provoke the upheaval of Slav sentiment which forced the Czar into war with Turkey in behalf of Servia and Montenegro. To-day, M. Suvorin's journal fulminates against Austrian aggression and gives the Czar's ministers cause to be anxious. The outside world finds it hard to understand that in Russia to-day there should be such a thing as public opinion, capable of being roused by a newspaper, and directed against an omnipotent government. Yet that would seem to be the fact. Within certain limitations, the fourth estate makes its power felt under the worst of despotisms.

The power of the press may be appraised in two ways. There is its influence on the total mass of a given population, and there is its influence on the class of newspaper readers. Evidently, the newspapers are a greater force in our own country where everybody reads them, than they can be in Russia where perhaps three per cent. of the population reads them. But, man for man, it is pretty certain that the Russian newspaper reader is far more susceptible to the journalist's influence than the American. The very fact that free expression is a forbidden art in Russia, makes the free word, when it does reach its audience, all the more potent. The very fact that the printed word in Russia often carries a price on its head, makes the printed word sacred. Whereas the average man in New York reads his two or three papers daily, in Russia a copy of the daily journal is still circulated from hand to hand. But whereas in New York the path of every newspaper is straight from its owner's hands to the gutter or the waste-basket, in countries where newspapers are rare a single copy leaves behind it a luminous trail of debate and speculation. We often tend to forget how powerful was journalism in its youth when the lettered classes were the rich classes, and circulation was small. The London *Public Advertiser* did not circulate by the hundreds of thousands when Junius's letters drove a King and his ministers to fury. There was no enormous reading class in Paris when the restored Bourbons were baited by the Opposition press. The beginnings of Russian journalism, itself, show a rare instance in the case of Alexander Hertzen. From its London office, Hertzen's *Kolokol* (the Bell) had to be smuggled into Russia. Yet, passing secretly from hand to hand, read in secret, commented upon in whispers, it came to exercise a tremendous influence, which even its comparatively large circulation by itself could not account for. Alexander II was said to be a faithful reader of the journal which he would not allow within his dominions.

At the present time, the liberties granted less than four years ago are mutilated. The censor is busy once more. The Russian journalist is again compelled to practise the arts of half-meaning, insinuation, and innuendo, which made his predecessors of a generation ago marvels of subtle expression. But that is only when a writer would say everything he wants to say. Undoubtedly, the range of the permissible has grown immensely since the early days of even Nicholas II. To write of labor wars, of conspiracies, of constitutional liberties, Russian newspapers need no longer confine themselves to telegraphic reports of foreign strikes, conspiracies, and constitutions. They need only print what the radicals in the Duma utter. Not even the full reports of the Duma may be privileged at present, but, after all, the Russian censor is a stupid fellow. The censorship, like the autocracy in general, is inefficient, spasmodic, allowing to-day what it prohibited yesterday, or even allowing in one column what it strikes out from another. St. Petersburg and Moscow in 1890 had eleven daily papers and twenty weeklies. In 1900 the number had risen to twenty-four dailies and thirty-three weeklies. In all Russia there were then 287 periodical publications. In August, 1905, the number had risen to 1,630, of which St. Petersburg alone had 534. There were fifty daily papers at St. Petersburg and twenty-five at Moscow in those short days of freedom, when the pent-up speech of ages burst out in Russia. This, of course, was inflation. Periodicals were born and died with the rising and setting of the sun. The numerical strength of the press must be far smaller now. But much that was gained for freedom of speech in those stormy days has not been lost.

SHELF-ROOM AND CULTURE.

When President Eliot said that a row of books five feet long, read at the rate of ten minutes a day, would supply a man with a liberal education, he was not dealing in impossibilities. Two books lie on the desk before us. One is 1⅝ inches wide and contains 380 pages, with about 300 words to the page. That would give the proposed "Harvard Library" between 35 and 40 volumes, comprising some 15,000 pages and 4,500,000 words. It is not too little. Athens succeeded in training her citizens upon a far smaller expenditure of words. As to the time involved, we may assume that 2,000 words may be managed in a ten-minute session by the ordinary reader. This would give us between six and seven years for the entire five-foot journey. But there is no reason to suppose that Dr. Eliot lacks Yankee shrewdness. Let us count on. The second book on our desk is one inch thick and holds 1,272 pages of about 600 words each. The matter it encloses happens to consist of the complete works of William Shakespeare. Here we see our "Harvard Library" grow at once to 60 volumes of some 76,000 pages, and 45,600,000 words. This should satisfy the more advanced student, who is willing to pursue knowledge for sixty-five years, or at the rate of thirteen years a foot. Finally, Dr. Eliot has not specified the height of his shelf. Take thought, add one-tenth of a cubit to the

stature of your volume, and there is another gain of 25 per cent. in contents. Without question, the scheme is practicable.

We should have less doubt of the authenticity of Dr. Eliot's scheme if the newspapers a week ago had not reported him as favoring the expulsion of the Irish from this country, and if we were sure that the newspapers will not report him next week as favoring a system of modified polygamy. Mere justice to the college professor requires that we take what the papers say about him as *prima facie* untrue. In the present instance, however, the first impression goes the other way. We have shown that Dr. Eliot's plan is practicable. We can also find reasons why it should have been formulated. Dr. Eliot stands now at the culmination of his career. Whether he will choose to rest or not, he is at the age when most men prefer to rest, to reflect, and to review. When a wise man looks back over his life, he is first struck with the vast mass of chaff out of which he has garnered his permanent stock of wisdom. Old age, in the retrospect, recalls something more than deeds done that should not have been done, and words said that should have remained unuttered. It sees labors lost that should never have been begun, friendships that should not have been formed, faiths that should not have been embraced, and, with the others, books that should never have been read. That is why learned old men have been fond of drawing up lists of the world's ten or fifty or one hundred best books.

One weak point there is in President Eliot's scheme. It is by no means certain that, in this country at any rate, the most condensed library is likely to prove the most popular. The great mass of us, precisely those who stand in need of a home system of liberal culture, buy books in bulk. Dr. Eliot's original three-foot shelf of books ought in theory to sell more readily than his revised five-foot shelf. But in practice, it often seems easier to sell five feet of books than three, ten feet than five, and twenty feet than ten. Take the extraordinary development of the traffic in "standard sets," in so-called editions *de luxe*, in "libraries" of hundreds of volumes of all kinds. And beside them come the cohorts of English authors less well known, and of the men of strange tongue and distant lineage. There are Trollope, Charles Reade, Jane Austen, Fielding; there are Voltaire, Balzac, George Sand, Flaubert, Maupassant; there are the numberless histories of literature, of science, of art. The predominant tendency is towards more volumes with heavier paper, bigger type, and more illustrations. We have, of course, the pocket edition and the India-paper edition. But the pocket edition only provokes to a Shakespeare in forty volumes, and the thin-paper edition seems only to tap new and inexhaustible sources that make our last condition worse than our first.

We can call this passion for long and gayly equipped library shelves a passion for furniture and not for books, and yet refuse to be discouraged. What if the young physician buys his forty volumes of Shakespeare as an effective piece of furniture for his reception-room? What if Balzac, dead and turned to gorgeous morocco, is bought as the mechanical piano is bought and the pictures in gilt frames? The point is that the books have won a footing. With time to back them, the battle is henceforth theirs. Like the hidden plague germs, like a subtle malaria, the infection of their presence saps and conquers—if not the first generation, then the next. A restless hand, on a day of illness, will fall upon one of these volumes; a child poring over those striking illustrations, on a day of rain or punishment, will turn to the text; and then suddenly our piece of furniture becomes an enchanted garden, and the "standard set" becomes a world.

That is why Dr. Eliot's plan may sin on the ground of undue economy. Once upon a time, it is true, we thought that immortal literature could be carried in small bulk. The author who travelled light was supposed to travel far. Now it is apparent that the more serried the ranks of his volumes, the better is his chance of popularity. That, probably, is part of the reason for Balzac's or Voltaire's vogue among us, and not a sudden awakening to the high worth of French literature. Shakespeare is made to assume a merit when he hath it not, by being put into large type and 16mo. They call these pocket editions, but the people who carry about "Hamlet" with them must be very few, after all. These are really wall editions, and no shame attaches to them for being that, or for being as handsome as they can be made. Some day, they will leave the wall and walk abroad throughout the house.

"MUCKRAKING" IN THE COLLEGES.

At the recent dinner of the Oberlin Alumni Association of New England, President King is reported to have said:

> I am beginning to think that we are on the verge of an era when there will be tests for efficiency such as this country has never seen. There are only two institutions to which the "muckraker" has not turned his attention—the church and the college. But, mark my words, it is our turn next. There are plenty of colleges which are not doing what they ought to do. There is such a thing as getting money under false pretences.

The church, unless our senses deceive us, has been under the harrow for a number of years; and certainly the attack on the colleges has already fairly begun. The issues of *Science* for March 5 and 12, for example, contain four papers discussing the aims and the shortcomings of the American college—papers that were read before the Section of Education at the Baltimore meeting of the American Association for the Advancement of Science. A few months ago Abraham Flexner, in a little book, "The American College," charged that the college suffers from many defects of organization and discipline; and Clarence F. Birdseye's "Individual Training in Our Colleges" (1907) has provoked such wide discussion that he is, according to the publisher's announcement, preparing a new book in which his criticism will be further elaborated.

These books and articles are evidence of a growing belief that our colleges are, as President King puts it, "not doing what they ought to do." Too many of our youth spend three or four years in comparative idleness, and come out with minds appallingly empty and amazingly undisciplined. Alumni of Harvard or Yale, for instance, will freely confess that they were drilled severely at Exeter or Andover; but that, by the time they had gone through college and entered the law school or medical school, they had almost forgotten how to work. They were forced to acquire again that habit of concentrated application which they had lost in the happy hours of undergraduate ease. College professors themselves admit the facts. Prof. James H. Tufts of Chicago (*Science*, March 12) speaks of the "more or less definite feeling" that college work "lacks intel-

lectual seriousness." Prof. Josiah Royce of Harvard says flatly (*Science*, March 12): "I agree with our critics that many college boys do not now work hard enough." Mr. Flexner (*Science*, March 5) argues that under the elective system the college is tolerant of every form of intellectual capacity, and therefore has the right to demand, as unhappily it does not, "a genuine performance at every point. To make opportunities abundant and standards low is thoroughly immoral." Prof. William North Rice of Wesleyan (*Science*, March 5) takes as his thesis "A Danger Arising from the Popularization of the College." After noting that "in the olden time it was assumed that every student in college was dedicated to a distinctively intellectual pursuit," he goes on to show that with the influx of students who are not looking forward to scholarly careers, a pressure is "exerted upon college faculties to tolerate a lower standard." He adds:

> The trouble is not simply that some men do not study. That was always the fact. No system ever fulfils its own ideal. . . . But then the men who did not study knew and confessed that they ought to study. Now it is gravely asserted in influential quarters that [as] many students in college . . . are never intending to be scholars, there is no need of their being particularly scholarly even during their school life.

Thus it is that influential alumni and alumni clubs want the college to admit boys who are unprepared and "to graduate men who have accomplished very little in the line of study." Especially, says Professor Rice, is this plea raised "in behalf of men who are distinguishing themselves as athletes during their school and college life, and in behalf of men who are likely to come into possession of considerable money." No one who is familiar with the inner working of our colleges can deny that the conditions are as Professor Rice describes them.

How, then, can we change them? Professor Royce would "reject or dismiss" the unfit or the unworthy. But while the colleges are competing for numbers; while Amherst keeps an anxious eye on the registration at Williams; while Brown is proud of a larger attendance this year than last; while Harvard men point with scorn to the smaller enrolment at Yale, this talk of rejecting or dismissing the unfit is a counsel of perfection. The lad who fails to pass his entrance examinations at Harvard or Yale, is gladly received on certificate elsewhere. And once he is in college, anything that may by any stretch of language be described as diligence in study will serve to keep him there. A remedy which is sometimes proposed is to adopt the methods of certain foreign universities in imposing extensive and searching examinations before granting degrees. But this procedure seems to us applicable rather to advanced university courses than to the college proper. Professor Royce would apply the plan which President Wilson is trying at Princeton—give the boys "more good work to do" and employ "more instructors whose duty it should be to follow them up personally."

We have high expectations of the Princeton experiment if it can be generously backed and persisted in through a period of ten years. We shall also look for important results from Clark College in Worcester—an institution which, though very new, avowedly strives to be a Johns Hopkins for undergraduates. We hope, moreover, that the rumors are true that under President Garfield, Williams will set its ambition on a small but select group of students. There is no reason why at least one of the older colleges of New England should not have its course as rigorous as that of the best fitting schools—reject both the dull and the indifferent, and make its task the stimulation of a picked body of ambitious youth. The sharp discipline would not mean that students could not enjoy ample opportunities for athletics, music, and all other forms of legitimate recreation, and it would certainly mean that the graduates would soon be as notable for efficiency as are the graduates of the finest secondary and technical schools. The maintenance of such a model college would have a tonic effect on our whole system of education. We come back then to the idea we have so often advanced. Again we say, let college boys have a taste of the policy of Thorough; and as Professor Rice urges,

> If they do not want to study Greek, they may study French or German or Spanish; they may study applications of science, as well as pure science; if they do not want to study philosophy or advanced mathematics, they may study the labor problem, or banking and currency, or commercial geography and commercial law; only let it be understood that whatever they profess to study they must really study. In a college, as in a railroad station, there is no room for loafers.

RECENT GERMAN FICTION.

Much of the fiction recently published in Germany bears evidence of seriousness without that emphatic insistence on purpose which is so often detrimental to artistic quality. An example in point is Ludwig Ganghofer's "Waldrausch" (imported by G. E. Stechert & Co.), a novel in two volumes, neither in theme nor treatment of striking originality, but of refreshing spontaneity. The narrative opens with a charming woodland idyll. Two little boys set out to explore the mysteries of the woods and of the mountain stream which, when the spring floods swell it, overwhelms man and beast. One of them says that when he grows up he will build a wall around the turbulent waters. As they stroll through the underbrush they meet the aged *Waldrauscher*, who gathers the medicinal bear-berry, and all the while sings *Schnadahüpfl* that reflect his reading of life. This chapter is the prelude of the drama that forms the plot of the story, and the centenarian is its chorus. A remarkable creation is this sage and poet of the people, who has a stanza for every problem coming within the range of his observation and whose rhymes sink into the hearts and stir the souls of his listeners. The boys carry the memory of their meeting with him into their manhood. The dream of Brosi comes true, for he chooses engineering as his profession; and the building of the dam and his experiences with the native peasantry and the hated Italian laborers enter largely into the tale. There are some strong love episodes, too—the love of Toni for the wild-wood beauty Beda, and the ideal affection springing up between the engineer and the princess as they play together sonatas for the piano and the violin. Nor is the element of rough and primitive passion wanting, and the humor that relieves the tension of tragic complications. A cheerful acceptance of the inevitable facts of life, a smiling resignation to fate is the lesson to be read between the lines.

Two remarkable first books breathe the same wholesome spirit. "Funchal," by Norbert Jacques (Berlin: S. Fischer), a native of Luxembourg, but a resident of Switzerland, is a story of unfulfilled longing. A child born on the island of Madeira is the only survivor of a ship wrecked on a voyage to a northern port. A Danish fisherman, already blessed with a numerous family, adopts the boy who at the time of the catastrophe is only twenty months old. As he grows up, his dark skin, eyes, and hair set him apart in the community of fair-skinned and flaxen-haired Scandinavians. He is a serious, quiet lad, with the temperament of a dreamer; and even before his foster father shows him a board of the sunken ship with the

name Funchal upon it, he is haunted by visions of sunny skies and flowery shores against a background of towering mountains. At times an irresistible *Wanderlust* seizes him, and as he tramps and works his way through the little country, he seeks in its seaports for a ship bound for Funchal. But he never finds one, and as his love for his foster-sister ripens into the desire to make her his wife, he is resigned to remain in the little Danish fishing-village. As the daughter born to them grows up into a girl of strange beauty, an artist comes as suitor for her hand; but one day the father, mother, and daughter go out in their fishing boat to ply their trade as usual, and never return. The distracted lover erects a block of granite near the shore, on which he has graven the girl's image; but the boys of the village, ignorant of its meaning, pelt it with pebbles, until in time the outlines are obliterated. The charm of this story is its atmosphere and admirable style.

The second of these first-stories is distinguished by poetical sentiment and by a noble ethical message—Hans Kyser's "Der Blumenhiob" (Berlin: S. Fischer). The hero is a modern Job, a man persecuted by an extraordinary series of misfortunes, yet in his despair never quite blind to the beauty of the world. The home which he had earned for his little family is destroyed by fire. The gifted boy who has been the light of that home is snatched away by sudden death. Crazed by the loss, the wife gives birth to a daughter and dies. The girl proves an idiot, and becomes a sore burden to the bereaved father, who in rescuing her from an approaching train is crippled and loses both of his legs. The book would be unendurably dismal were it not for the hero's patient acceptance of his fate. The story shows such great promise that one looks forward with interest to the author's volume of verse and his tragedy "Medusa," which the publishers announce as in preparation.

Bernhard Kellermann is a comparatively new arrival. His strong individuality announced itself in that delicate fantasy, which could hardly be called a novel, "Yester und Li," and appeared matured and deepened in "Inge," published about two years ago. Now he has given us "Der Tor" (imported by G. E. Stechert & Co.), of which the hero is a simple vicar in a provincial town, going about, like another Nazarene, doing good to his fellow-beings, forgetful of self. Into the joyless life of a poor consumptive, he sheds a ray of happiness. The dormant soul of a miser, he rouses to the consciousness of good to be done, and the conscience of frivolous worldings he stirs until they are fired with the desire to begin life upon a more spiritual plane. Yet this vicar is simple and almost awkward in his manner, apparently dull and ignorant, and only in critical moments startling those about him by his clearness of judgment and independence of action. No one in the town escapes the influence of his strong personality. But after all his labors, he falls a victim to a disease contracted in his Samaritan service, and goes to an inglorious and undramatic end. The style is well adapted to the subject, unadorned, yet strangely impressive.

Marie Eugenie delle Grazie's work as poet and dramatist has so overshadowed her fiction that a novel from her pen comes almost as a surprise. Yet it was her story "Bozi" which, years ago, first brought her wider recognition. Her new work, "Heilige und Menschen" (imported by G. E. Stechert & Co.), is a remarkable achievement. The heroine, a member of the old Italian aristocracy, which is divided to-day into friends and foes of the Church, is Alba Chietti, the older of the two daughters of Prince Chietti. He is as faithful an adherent of the Pope as his brother is an enthusiastic admirer of Haeckel. From books in her uncle's library Alba has derived a knowledge of zoölogy which is barred from convent schools, and her story of the lizard and casual mention of the "Natural History of Creation," strikes the pacific atmosphere of her class-room with the force of a cyclone. This experience opens the eyes of the girl to many abuses in the school, and makes her a friend of Elena, the illegitimate scion of an old Roman family, who is continually made to suffer for the sins of her parents. Alba takes Elena home with her during vacation and a love springs up between her brother Flavio and the high-spirited, beautiful girl. Flavio is destined for the church, but his rebellion, strengthened by his love, ripens into open opposition. Thus through a succession of moving incidents, the breach between the two generations widens, until the spiritual estrangement is complete. The characterization of the women is excellent, the girl types in the convent school being particularly well presented.

The idea that the sins of parents are largely responsible for the sins of the children is the theme of Kurt Aram's "Jugendsünden" (imported by G. E. Stechert & Co.). It is also a tale of school life, in the rigid and strait-laced household of a worthy pedagogue, the Oberlehrer Sieg, whose own son is the victim of his father's ignorance of the child-soul in that trying period which precedes maturity. Into the joyless routine of the boy's life comes the meeting with little Baroness Thea. The guileless love of a boy and girl barely in their teens is delicately and tenderly depicted. A childless couple become interested in the youthful lovers and save them from a dismal ending of their innocent escapade into the world. The types by which the school, the bourgeoisie, and the aristocracy are represented bear the stamp of real life.

The woman novel with a distinct *Tendenz* is still popular in Germany. The "Tagebuch einer anständigen Frau," by Hedwig Hard (Munich: Albert Langen), has gone through several editions within a short time. It is the simple and pathetic record of a rescue from a life of disgrace. The story is concerned with only two people, the redeemed woman and the man who has married her. The espionage practised in European cities by landlords, janitors, and police force, more tolerant of sin than of the regenerate sinner, makes of their life a purgatory. Even when salvation comes to them through the protection of an influential philanthropist, one is not quite sure whether the mistakes committed by the legal authorities will not continue to influence public opinion and to breed trouble. The Diary is very unpretentious, and has a far more convincing ring than the "Tagebuch einer Verlorenen," which may be remotely responsible for this new sociological document.

Else Jerusalem is a Viennese writer whose "Venus am Kreuz" some time ago attracted no little attention. Her new book, "Der heilige Skarabäus" (Berlin: A. Fischer), is the record of the life of a girl born an outcast, who develops a remarkable intelligence. Inheriting a fortune, she does not seek admission into the world of respectability, but devotes her money and energy to the rescue of children like herself, for whom she founds a home in the mountains. There is a host of characters not ordinarily met with in fiction, and the author shows great skill in their delineation; the heroine's evolution is amazing in its consistency. The subject matter is unpleasant, but the treatment is dignified.

The problem of rehabilitation seems to engage many minds at present, for even Bernardine Schulze-Smidt, who has been a conservative in her long career as novelist, makes it the theme of her new book, "Fliessendes Wasser" (imported by G. E. Stechert & Co.). Her heroine, homeless, motherless, but intelligent and high-spirited, seeks refuge in a pious institution, where she is tortured with moral precepts and Scripture texts. An aristocratic patroness sees through the crust of hardness in Rose Diener and gives her the love that the girl has lacked. But finally Rose cannot bear the oppressive atmosphere of the place; goes out into the world, becomes a nurse in the Boer war, and in due time dies on the battlefield. There are other interesting characters and incidents, among the latter the discovery that Rose is the prodigal daughter of an aristocratic family—a rather well-worn device of fiction.

Ernst Zahn is a Swiss writer whose

work has given him a prominent place in recent German fiction. "Die da kommen und gehen" (imported by G. E. Stechert & Co.) is a volume of short stories full of interest. They are records of lives that come and go, of whose existence the earth bears but a faint impress, lives without complications, yet not without psychological interest. In "Requiem" the eyes of a robust fisherman are suddenly opened to the delicate beauty of his invalid wife, and when death takes her from him, he continues to live ever after as under the spell of a dream. There is an admirable tenderness about "Eine Begegnung," and even "Ein kleiner Frühling," stories of passing fancies, of loves barely reaching the threshold of consciousness and passing away without a crisis, leaving nothing but a faint memory. The author is a keen observer of life and reflects his impression with the tact and the discretion of an artist. A. von Ende.

NEWS FOR BIBLIOPHILES.

The following are the prices paid for a few of the more important items at the Hermann sale, on March 18 and 19, at the rooms of the Anderson Auction Company in this city: Shelley's "Queen Mab" (1813), a presentation copy, original boards, uncut, $875; "Epipsychidion" (1821), with the autograph signature of Shelley on the title-page, sewed as issued, uncut, $500; Thackeray's "Paris Sketch Book" (1840), with an original drawing by Thackeray inserted, $215; "Notes of a Journey from Cornhill to Grand Cairo" (1846), with three original drawings by Thackeray inserted, $180; "Pendennis" (1850), with an original drawing in colors by Thackeray inserted, $250; Scott's "Waverley" (1814), 3 vols., original boards, uncut, $400; Matthew Arnold's first publication, "Alaric at Rome" (1840), original paper cover, $345; Charles Lamb's "The King and Queen of Hearts" (1808), $430; FitzGerald's "Rubáiyát of Omar Khayyam" (1859), uncut, $246; Milton's "Paradise Regained" (1671), $260; Butler's "Hudibras" (1663-1678), first edition, 3 vols., $240; Burton's "Anatomy of Melancholy" (1621), $180; Poe's "Al-Aaraaf, Tamerlane and Minor Poems," original boards with trimmed edges, $1,460; Grimm's "German Popular Stories" (1823-26), with illustrations by George Cruikshank, original boards, uncut, $540; the *Scourge* (1811-16), a complete set, 12 vols., with colored plates by Cruikshank, $300; the *Annals of Sporting* (1822-28), a complete set, 13 vols., with colored plates by Henry Alken, $420; "Tales of the Islanders," an original unpublished manuscript by Charlotte Brontë, $470 (this manuscript sold in November, 1905, for $120); unpublished manuscript of Bret Harte, fifteen pages, $120; a collection of fifty-five letters of Robert Southey to Mrs. Hodson, $360; a collection of letters by and to Abraham Lincoln, more than 250 items in two folio volumes, $835.

On March 29, the Anderson Auction Co. will sell the second part of the library of the late William Harvey. Among books with colored plates by Rowlandson are Burton's "Adventures of Johnny Newcome in the Navy" (1818); the three "Tours of Dr. Syntax" (1812-20-21), first editions; "The English Dance of Death" and "The Dance of Life" (1815-17); the "Journal of Sentimental Travels in the Southern Provinces of France" (1821); and "Naples and the Campagna Felice" (1815). Brough's "Life of Sir John Falstaff" (1858) and "The Table Book" (1845), in the original parts, are important Cruikshank items. A copy of Stith's "History of Virginia" (London, 1753), reprints of Indian captivities, publications of the Caxton and Rowfant Clubs, and an original drawing by John Ruskin, are other notable lots. On March 30 and 31, the same firm will sell the library of L. D. Griggs of Waterbury, Conn., including books on art and a collection of editions of the Book of Common Prayer.

On April 1 and 2, the Merwin Clayton Sales Co. of this city will offer the libraries of the Rev. William Laurie and the Rev. Joseph M. Clarke. Early American periodicals, pamphlets relating to Yale College, and books on Ireland are important classes represented.

On March 30 and 31 and April 1, C. F. Libbie & Co. of Boston will sell the library of George Alfred Townsend, better known as "Gath." Books on the civil war and American local history, especially Maryland, Pennsylvania, and New York, make up a large part of the collection. Among the rarities is a copy of the famous Martyr-Book, "Der Blutige Schau-platz oder Martyrer Spiegel," printed at Ephrata in 1748 and 1749, the largest book printed in America before the Revolution. This copy has the frontispiece (slightly damaged) not in all copies.

Frederik Muller & Co. of Amsterdam send us the advance sheets of a sale of autographs to be held by them on April 19. Included are documents signed by Charles V, Maria Theresa, Louis XV, etc.

Correspondence.

THE "LOST LEAF" OF "PIERS THE PLOWMAN."

To the Editor of The Nation:

Sir: Prof. J. M. Manly's notable article, "The Lost Leaf of Piers the Plowman," which appeared something more than three years ago (*Modern Philology*, III, 359), has reawakened the lively interest of scholars in the critical problems presented by Langland's poem. Professor Manly pointed out for the first time the manifest lack of connection in Passus V of the A-text between vv. 222-35, which describe the confession of Sloth, and the passage which immediately follows (vv. 236-59). In this fact he found evidence of the disappearance from the author's manuscript of a leaf, containing between sixty and eighty lines, in which, he believed, the confession of Sloth was concluded and the figure of Robert the Robber introduced. Moreover, he reminds us that from the company of deadly sins who make their confessions Wrath is omitted, and brings this omission into connection with the break at v. 235, by advancing the theory that the confession of Wrath covered the two pages of another lost leaf in the original manuscript, and that the two lost leaves were the halves of a folded sheet, "the next to the innermost of a section or gathering," in the bound volume in which, as he supposes, the author committed his poem to paper.

Dr. Henry Bradley, reviewing Professor Manly's article a few months later (*Athenæum*, April 21, 1906), accepted his view that vv. 236-59 do not properly follow the confession of Sloth, but proposed a different explanation:

> Professor Manly has failed to perceive that the proper place of lines 236-59 is after line 145, at the end of the confession of Covetousness. In this position they not only fit perfectly, but actually improve the sense.

Dr. Bradley's explanation of the mistake which has occurred is, that the author wrote his text on loose sheets instead of in a bound volume, and "that one (or more) of these leaves (containing the confession of Wrath and the end of the confession of Envy) got lost, and that another (containing lines 236-59) was misplaced." This theory of the "misplaced sheet," which has the advantage of being simpler than Professor Manly's "lost leaf," has recently been endorsed by Dr. Furnivall (Forewords to the Offprint of Manly's "Piers the Plowman," Early English Text Society, Original Series, 135 B (1908), p. iii) and M. Jusserand (*Modern Philology*, VI, 287). Nevertheless, a still simpler explanation of the difficulty, it seems to me, may be offered.

All are agreed, it will be remarked at the outset, that some displacement of the text has occurred immediately following v. 235. The break in the sense at this point was instantly evident as soon as Professor Manly pointed it out. The lines which follow are in no wise appropriate to Sloth. But shall we transfer them, as Dr. Bradley would do, to Covetousness? To me, as to Professor Manly, they seem rather to belong to Robert the Robber. It is nowhere hinted that Covetousness would have found difficulty in making restitution, as is implied in vv. 236-8 (I transliterate to modern English characters):

> And yit I-chulle yelden ageyn, yif I so muche haue,
> Al that I wikkedliche won sethe I wit hade.
> And thauh my lyflode lakke letten I nulle—etc.

On the other hand, these phrases fit well with the situation of Robert the Robber, who looked on *Reddite*, "And for ther nas not Wher-with he wepte ful sore." Again, the penitent's determination to seek St. Truth "er I seo Rome" (v. 241), may be compared with earlier lines in the poem (A. iv, 111) where "Rome Renners" and "Robbeours" are mentioned together.

But perhaps the most serious difficulty in Dr. Bradley's rearrangement of the passage lies in the fact that if vv. 236-59 be transferred to Covetousness the latter would then give utterance to two vows hardly consistent with each other:

> (1.) I and my wife will wend to Walsingham,
> And bidde the Rode of Bromholm bringe me out of dette (v. 145);
> (2.) I schal seche seynt Treuthe er I seo Rome (v. 241)

Each of the deadly sins (except Envy), it will be noted, closes his confession with a vow. And it might be supposed that Robert the Robber would follow their example in this. But if in vv. 236-41 Covetousness is the speaker, Robert is left without a vow, though there can be no question as to his contrition.

This omission, now, will be supplied—

and most appropriately—if we recognize the troublesome lines 236-41 as forming the conclusion of Robert's prayer, and restore them accordingly to their proper place following v. 253. Let us see how the lines read thus placed (the shifted lines being marked hy asterisks):

Robert ye Rohbour on *Reddite* he lokede,
And for ther nas not Wher-with he wepte ful sore.
But yit the sunfol schrewe selde to him-seluen;
"Crist, that vppon Caluarie on the Cros dlyedest,
Tho Dismas my brother bi-souyte the of grace,
And heddest Mercl of that mon for *Memento* sake,
Thl wille worth vppon me as Ich haue wel deseruet
To haue helle for euere yif that hope neore.
So rewe on me, Robert, that no Red haue,
Ne neuere weene to wynne for Craft that I knowe.
Bote for thi muchel Mercl mltigaclon I he-seche;
Dampne me not on domes day for I dude so llle,
*And ylt I-chulle yelden ageyn glf I so muche haue,
*Al that I wlkkedllche won sethe I wlt hade.
*And thauh my lyflode lakke letten I nulle
*That vche mon schal hahhen his er Ich henne wende:
*And wlth the Resldue and the remenaunt (bl the Rode of Chester!)
*I schal seche seynt Treuthe er I seo Rome!"
Ak what fel of this Feloun I con not felre schewe,
But wel Ich wot he wepte faste watur wlth hls elyen,
And knouhlechede hls gult to Crlst ylt eft-sones,
That *Penitencia* is [plke he] schulde pollssche newe,
And lepe with him ouerlond al hls lyf tyme,
For he hath lelyen hi *latro* lucifers hrother.
A thousent of Men tho throngen to-geders,
Weopyng and weylyng for heore wlkkede dedes,
Crlyinge vpward to Crist and to hls cleue moder
To haue grace to seche seint treuthe: god lene thel so mote!

Thus arranged, the whole passage seems to me to fit together perfectly. With the words, "I beo-hote to the Rode" (v. 235), the vow of Sloth comes naturally to its conclusion (for I cannot feel with Prof. Manly that this is an ahrupt ending). In the next line Robert is introduced—abruptly, if you will, hut in the same fashion that Sloth is introduced at v. 222. His prayer for mercy concludes with a vow which could not be better suited to the situation. The next six lines (254-9) serve to dismiss Robert and thus to clear the stage for the throng of nameless penitents, who, like Robert, will seek St. Truth. Consider, on the other hand, how ahruptly vv. 260-2 would come in if placed, as Dr. Bradley suggests, directly after v. 235. It is unnecessary, then, in the case of this much discussed passage, to assume either a "lost leaf" or a "misplaced sheet." The text as we have it appears to he intact. The whole confusion has arisen through the carelessness of the scribe, who introduced vv. 236-41 at a point 12 lines earlier than they belonged.

Nor is this the only blunder of the kind committed by the scrihe of the A-text. Professor Manly ("Camhridge History of English Literature," II, 33) has recently pointed out a precisely similar case in Passus VII. Here we find four lines (71-4), which the author plainly intended to follow v. 90, inserted 16 lines ahead of their proper place. Dr. Furnivall, commenting on the misplacement of these lines in Passus VII, explains graphically how the mistake occurred. The four lines were added by the author, "no douht at the top or hottom of the page, with a tick to show where the lines ought to come in." But the scrihe "shovd them into a piace 16 lines earlier, where they've nothing to do with what came before or after them." This explanation is eminently satisfactory, and will apply equally well to the misplaced lines in Passus V. Here also the lines were written in hy the author, at the top rather than the hottom of the page, since in both instances the scribe has hrought them in earlier than they belong. These two passages taken together are instructive, not only as to the careless hahits of the A-scribe, but also as to the method of the author in revising his lines. It would not be surprising if further scrutiny of the A-text should result in the discovery of still other misplacements of this sort. For example, in Passus II, vv. 37-9, would certainly fit better if placed after v. 51; and in Passus III, as Skeat has already remarked, vv. 266-9 "ought to be put lower, having ll. 270-271 above them." One also suspects some misplacement at IV, 64, and at VIII, 77.

The absence of Wrath from the congenial company of the deadly sins, which Professor Manly used to confirm his theory of the "lost leaf," is a matter which requires to be considered separately. If we assume that the poem as Langland wrote it included a confession by Wrath, it is easy to explain its disappearance on the hypothesis of Dr. Bradley, that the poem as it passed from the hands of the author to the scribe was written on loose sheets, and that one (or more) of them has been lost. I do not feel certain, however, that the author's text included the confession of Wrath. Langland shows a free hand in his treatment of the deadly sins, by varying at pleasure from the stereotyped order in which they stand in the works of edification. May he not have felt himself at liherty to omit one of the seven if he feit that it did not suit his purpose? Let it be noted in this connection that in Passus II (vv. 60-74), where the other six sins are marshalled, Wrath is likewise ahsent. Professor Manly is mindful of this omission, but assumes that a line in which Wrath was mentioned has dropped out. This would be, to say the least, a singular coincidence.

In conclusion, I wish to make it clear that the restoration of the passage in Passus V here proposed in no way militates against Professor Manly's view that the revisions of the poem which we know as the B- and C-texts were not the work of Langland. Though it was the theory of the "lost leaf" which led him to reëxamine the relation of the revised texts to the original form of the poem, Professor Manly's subsequent investigations enahle him to base his conclusion on more general grounds. In regard to this larger question of the authorship of the B- and C-texts, however, it will perhaps he well to reserve final decision until Professor Manly presents his evidence in full, as he promises to do shortly.

CARLETON F. BROWN.

Bryn Mawr, Pa., March 8.

P. S.—I discover, after writing the ahove communication, that Mr. Theophilus Hall in the *Modern Language Review* for Octoher, 1908, remarks hriefly with reference to the break at V, 236, that "the lines in question are surely part of the confession of 'Robert the Rohber,' to which they form a fitting close" (p. 1). To him, therefore, belongs the credit of first pointing out this solution of the passage. That two persons should have arrived at this solution independently makes it the more conclusive.

March 13.

A MEMORIAL TO JOHN NEWBERY.

To the Editor of The Nation:

Sir: The month of July in the year of 1913 will see the two hundredth anniversary of the birth of John Newhery, the philanthropic publisher of St. Paul's Churchyard, whose life I publlshed ahout thirty years ago under the title of "A Booksellner of the Last Century." Newbery was immortalized by Goldsmith in his "Vicar of Wakefield," by Dr. Johnson in the *Idler*, hy Washington Irving in "Bracebridge Hall," and hy many other writers who have recognized the influence of the first man who published, wrote, edited, and compiled books for "all those little Masters and Misses who are good, or intend to be good."

We have travelled a long way since Newhery and Goldsmith coöperated on that famous list of books of which "Goody Two Shoes" and "Tommy Trip" may be taken as among the best examples, but if it were only for the fact that Newbery was the first to give the "Rhymes and Jingles of Mother Goose" to the world in collected form his memory should he kept green hy English-speaking children wherever they may he found. Newbery's original collection of Mother Goose's melodies has, morcover, an added interest, for there is no doubt that Goldsmlth had a hand in the editing, annotating, and arranging of the first edition, while he was living with and working for John Newbery. Neither in London, at the scene of his lahors, over against the north door of St. Paul's Churchyard, nor at Canonbury House, Islington, where he and Goldsmith lived and worked together, nor at his birthplace, Waltham St. Lawrence, is there anything of prominence to keep John Newbery's name in remembrance. "Mother Goose" has enriched countless puhlishers, who have banished both the name of Goldsmith and of Newhery from their editions, and has delighted children innumerahle on both sides of the Atlantic, and the year of the two hundredth anniversary of his hirth would be an appropriate one in which to commemorate in some enduring way the lifework of a man who was, as Goldsmith said, "not only the friend of the children, hut the friend of all mankind."

This would seem to he the more necessary, for a claim to have been the originator of this collection was made about forty years ago on hehalf of a Mrs. Goose, or Vergoose, the mother-in-law of one Thomas Fleet, a printer who flourished in Boston, Mass., during the eighteenth century. The ahsurdity of thls contention was amply demonstrated by H. W. Whitmore, a former city reglstrar of Boston, in hls preface to a facsimile of Newbery's edition, which he published in 1893; but ancient superstitions and modern myths alike die hard, and there are thousands in America to-day who cling to the idea that Mother Goose was an American lady, instead of a *nom de plume* borrowed by Newbery from Charles Perrault's "Contes de ma Mère l'Oye," whlch was published in the seventeenth century, and which had

an origin even still more remote, as any one may learn who will read Longfellow's "Ancient French Romances."

The Marquis of Northampton, the owner of Canonbury House, where, as a contemporary poetaster has it,

> Learned Chambers treasured lore for men,
> And Newbery there his A B C's for babes,

has recently restored it and made of it a museum of North London Antiquities; and a movement is on foot to secure subscriptions to raise some enduring monument, either in Canonbury House or elsewhere, to the memory of the father of children's books, a most laudable enterprise. And in doing this let us not forget our great American publisher, whose name forever deserves to be linked with that of John Newbery. For he reprinted all of the Newbery-Goldsmith books in America as fast as they came out in England, among them the famous "Mother Goose's Melody." Therefore the memorial to John Newbery by grateful English and American children should in some way enshrine also the name of Isaiah Thomas.

CHARLES WELSH.

Winthrop, Mass., March 13.

MAINTAINING IDEALS OF STUDY.

TO THE EDITOR OF THE NATION:

SIR: In your editorial of February 25 on "Making Scholarship Attractive" you present certain aspects of the subject so convincingly that it seems worth while to call attention to certain other considerations which you have overlooked or undervalued. As regards two of the remedies suggested, you have, I think, quite effectively disposed of the arguments used in their support. "Honor days," or by whatever other name occasions of doing public honor to "high scholars" may be called, will never be effective agencies in stimulating a spirit of scholarship that is worthy of the name. There will never be any lack of public honor for anything the community regards as honorable. To put the honors first and expect the scholarship to follow is putting the cart before the horse indeed. Affairs of this kind are purely a worked up demonstration on the part of the government and find no spontaneous support in the feeling of the student body. I recall an occasion of the sort when, as each good boy's name was called by the presiding official, the small company of students present responded with perfunctory hand-clapping, until at the sound of one name they burst out into a round of perfectly genuine applause. It was the name of the champion strong man of the college!

Equally futile, as you well indicate, would be any organized attempt to make scholarship the basis of social distinction. Societies of the type you refer to are not charitable institutions, but natural groupings of men of similar social tastes and habits. A common interest in the higher things of life will draw those who feel this interest together as surely as any other form of attraction, and it may safely be left to take care of itself. In any of the larger colleges the intellectually superior youth do now, in spite of the apparent contempt of seriousness, come together in societies of their own, and these are regarded by their mates with the kind of respect that serious interest in any worthy thing always commands. Only, young men are still happily far from accepting the official standards of scholarly accomplishment. They have an instinctive sense of the fictitiousness of distinctions won in official ways. They admire and respect a clever man, but they distrust the stamp by which the institution marks its "distinguished" scholars. The real problem of college administration is to bring about some kind of harmony between this instinctive appreciation of good work that exists even in the penal colonies of our parasites and their imitators, and the methods of teaching employed to stimulate such work.

It is at this point that I find myself differing from the conclusions of your article. You lay the blame of present ills chiefly upon the existence in our larger colleges of courses of instruction in which it is easy for the student to win the certificate of accomplishment with a minimum of intelligence and a shameful absence of work. You connect with these courses the charge of incompetency on the part of the teachers. Now, as a matter of fact, the most notorious of such courses have been at Harvard, and I think the same would be true elsewhere, in charge of men of the highest scholarly repute and of altogether exceptionally stimulating quality as teachers. Such courses were deliberately planned to furnish to large numbers of students not aiming at special results in the given field of study, glimpses at the larger aspects of the several subjects treated. In the scheme of a great university they have had and always ought to have their honorable place. They were intended to correspond to the so-called "public courses" of the German universities, where hundreds of students not enrolled in the department concerned come together to hear what men of the highest standing in their several professions have to say about the relations of their subject to learning as a whole or about some aspect of it specially interesting to thinking people at the time. Such courses were never intended to be used as tests of scholarship, and it is in their use for this purpose, not in their essential quality, that the real evil consists.

Now the remedy you suggest is that the teachers proceed "to keep the undergraduates up to the mark." That is easily said, and there is no doubt that it can be done. It would be possible for our colleges to revert frankly to the conditions of a half century ago, to divide their students up into small groups, set them lessons to learn, and maintain an army of useful young men to see to it that they learned them. But we may be perfectly sure that no sooner would this machinery have got into working order than we should begin to hear the same old criticisms over again. The lame and the lazy would simply have a new set of devices to escape the consequences of their own action or inaction, and the authorities would have to begin devising new means to meet them. We gave up this way of approach to the problem more than a generation ago, and we are not going back to it. Whatever is done to meet the very real evils you have pointed out must be done on the basis of the ideas which underlie our present educational conditions.

In other words, the principle of liberty with which the present movement in education began must still be maintained. It has been grotesquely misunderstood and misapplied, and we are suffering from these misunderstandings and misapplications. But in spite of all this, the principle that in higher education the student must be made responsible for his own actions remains unshaken. The only question is how this responsibility can be brought home to him wisely, and, in the best sense of the word, safely. I venture to believe that the chief obstacle to a right attitude on the part of students toward their work comes from the wrong aim set before them by the college itself. Formerly the aim of the indifferent student was to do a moderate amount of prescribed work in a way to escape disgrace, and then, after the lapse of a fixed period of residence, to take the degree which was the certificate of such performance. In the desire to escape from that system we have run, or slid, into another equally dangerous, if more seductive. We now set before our youth the ideal of accomplishing so many "courses" in as little time as faculties can be persuaded into permitting. In place of units of time we now talk and think in units of acquirement vaguely supposed to correspond to units of instruction. The "course" has come to have an almost mystical meaning as a kind of mysterious entity independent alike of the quality of the man who "gives" it and of the kind of youth who "takes" it. We hear of "good" courses and "bad" courses, "hard" and "soft" courses, "big" courses and "small," until the college community comes almost to believe that these qualities attach in some occult fashion to a given presentation of a subject without special reference to the personality of the teacher.

"Counting courses" has come to be almost synonymous with getting an education. In many places the unit is deliberately made as small as possible. We began with courses representing several hours of classroom work per week through a year. Now a "course" may mean instruction covering a half or a quarter, or even an eighth of a year. Then we patch these odds and ends together and give a certificate that the youth has "done enough work" to entitle him to membership in the goodly company of educated men. All this degree giving rests upon a system of credits differing little from the method of reckoning piece-work in a factory. It has not greatly changed since the days of required studies. It does not vary essentially from the method used in grammar schools. It is a device unknown to the higher education of any other civilized country, and would be repudiated anywhere else as unthinkable, in connection with any intellectual ideal. Good teachers have fought against it. Faculties in their higher moments have tried to infuse into it some degree of reasonableness, to make it bear some relation to the intellectual life. But the business side of college administration has regularly defeated such effort, and we stand to-day in the grotesque position of trying to maintain ideals of study for study's sake and then dealing with our students on a commercial basis which makes it possible for them to win all the certificates of accomplishment without ever feeling for a moment the breath of the ideal

we would fain have them live and work by.

The remedy I propose is at one stroke to knock the bottom out of all attempts to get or to give something for nothing by giving up all credits on courses as such. It should not be possible for a student to ask "Is this course hard or easy?" Work is hard and loafing is easy, and such inquiries relate, not to the intrinsic difficulties of a subject, but solely to the point whether the given teacher will make it easy for the student to gain credit toward his degree. It is obvious that if no credits were given on courses such questions would disappear at once. In their place would come questions like this: "Is this course one that will best lead me toward the goal of learning I have set before myself?" "Is this course one that an educated man, such as I hope to become, ought to pursue?" "Will this course and that and the other, put together, make such a combination as a reasonable man would approve?"

Then, as the condition for a degree, we should provide in every department a series of graded tests, consisting of oral and written examinations at considerable intervals, and these should be *the only tests upon which credit should be given*. Under the term "examinations" should be included any form of test, such as extended theses, laboratory reports, drawings, charts, or whatever proof of the candidate's real accomplishment at the time may best serve as a basis for academic recognition. All these tests should be set by departments, not by individuals alone. The subjects of examination should not regularly correspond to any specified courses of instruction. The degree should be given in a subject or definite group of related subjects. For example, to win the degree, the candidate must have passed primary examinations in several subjects, thus securing a broad basis of general knowledge and an adequate preparation for further study. Then he must have passed a smaller number of secondary examinations in subjects, some of which will be in continuation of those pursued for the primaries. Finally, he must have passed one or two final examinations in subjects which he shall have carried from the beginning.

It will be seen that this scheme combines some of the advantages and avoids some of the dangers of the German, the English, and the American ideals. It retains the free choice of studies up to a certain point, where a moderate degree of specialization must come in. It frees the teacher from any direct personal responsibility for the standing of the student, but it does not, as in England, put him at the mercy of an examining board in which he has no part. As a member of the department he has a voice in determining the tests, while at the same time, he is subject to the wholesome correction of his immediate colleagues. The plan retains the American idea of reasonably frequent examinations and stages of advancement without the present evil of examination by courses. It opens up to faculties the opportunity of illustrating a broad, generous idea of a liberal education without the fatal scrappiness from which we at present suffer. The plan would not prevent any teacher from using any amount of tests which might seem to him useful for purposes of instruction or discipline; only, such examination would never be thought of as bearing directly upon the student's academic standing. No course would be "hard" because there would be no such thing as "passing in a course." No course would be "easy," because slackness in instruction would be followed by failure in the credit tests. The student would get out of a course much or little to help him in gaining the training which alone would enable him to pass successfully the stages leading toward his degree.

It is, of course, idle to imagine that under this or any other system, the deliberately useless student will be greatly improved. He will always spend what energy he has in devices to defeat the purposes of his own academic existence. Academic systems must be planned with no further reference to him than is necessary to keep him from blocking the ways and to save the college from stultifying itself by certifying to his accomplishment of work it knows he has not done. The worst evil of the present conditions is that they are teaching, not only the loafer, but the better man as well, to look to fictitious and immediate rewards, instead of working for more real and more remote attainment.

Cambridge, March 18.

INTELLECTUAL DEMOCRACY.

To the Editor of The Nation:

Sir: Your editorial of February 25 on "Making Scholarship Attractive" strikes undoubtedly at the root of the whole matter. There are, to be sure, in college too many "spoiled, lazy boys"; nor can any one rightfully look for a remedy until, as you suggest, "our colleges themselves firmly assert the authority of intellectual interests." And yet true as both these statements are, they are likely to remain unheeded, because they fail to meet specifically the world of complexity that lies below the surface of any large university. Rigorous reform will probably result not from broad generalizations, but rather from a careful analysis of the various attitudes toward the student held by instructors the land over—obviously a colossal task. The slightest step in this direction, however, would reveal an alarming array of men who in one way or another are essentially opposed to making on the student more than shockingly lax demands; nominally they may stand for high standards of scholarship, but they lapse variously into indulgence.

With one class of such men, as I have observed them in two or three universities, I wish here to deal, for though they are relatively few in number their influence is, I am sure, disproportionately harmful. These are they, strangely enough, who desire to make knowledge human and attractive for the student; to be not only teachers but friends too. These are they, also, who all too plainly wag the tail when some "rich parasite" in passing gives them a smile—usually an ulterior smile, looking for future favors. These are they who find it far easier to be friends with the rich than with the poor. With them the student of only ordinary circumstances, or less, gets a square deal; and the student of wealth and social position does not—he gets more. These are they who are indeed enthusiastic about this friendship game.

Truly, the little brothers of the rich on any faculty are a mighty foe to the traditional ideals of education. Instead of holding all students up to reputable work, they easily find reasons for making exceptions, being always scrupulously careful, however, to convince themselves by specious logic—even sophistry—that their reasons are cogent. It is largely due to the easing off processes of such men that an instructor is often confronted by a boy who refuses to buckle down to any prescribed task whatsoever—he has been led to believe that really to use his best intelligence on such a matter is bourgeois—or who essays without a blush to defend from a low mark a slovenly piece of his own handiwork, brain-work it is not. These men, too, are the kindergartners of the college, who maintain that a student, like a child, should be taught amusingly rather than by requiring him to give any severe attention. Whence, otherwise, those sullen, pampered faces which seem to say, on entering the classroom, "Well, now that you've got us here what are you going to do to make us happy?" All students deserve on occasions, of course, to be treated with the gentlest good humor; just as all students most of the time need fierce directness, if they are to grow. Teachers might well take the hint in this respect from the treatment accorded by coaches of athletic teams; the result would be more winning wits. The test should always be that a student is really applying his mind to the matter in hand. In this connection I recall the case of a boy who, when asked to write a composition embodying something learned in a college course, replied in a panic, "Oh, I couldn't." He was true to his word.

On the other side, let a good round note be blown for these very fellows whom men are trying to spoil. For experience convinces me that the majority of them, whenever they can break loose from the pamperer, really delight in mental competition—just as they do in competition at games—and in a rough encounter of intellects. They often have virile, revolutionary ideas which they wish to test on an older, maturer judgment; they ask for no quarter, they demand only fair play. How stupid, then, how criminal of an instructor, when approached in this way, to waste time by feeling flattered, or by surreptitiously shifting the conversation to the boy's prominent people! I remember once hearing a captain of a crew rebuke an instructor by saying meekly, "I can talk about something else than rowing." Boys of any brains, no matter what their social position, are, as a rule, I believe, bored by this sort of attention and at heart give more respect to the teacher who maintains in his relations with them a strict intellectual democracy, showing partiality neither to the grind nor to the more leisurely disposed, and who, above all else, recognizes and tries to stimulate any eager, active mind.

Intellectual democracy, that, it seems to me, should be the rigid ideal of every teacher. In the undergraduate body, of course, there will always be exclusive clubs and the condescension of the great man to the little man, as in society at large. But

in the attitude of the instructor what student really desires to see any respecting of persons! Surely, not until it is weeded out will our colleges discharge the magnificent duty with which they are entrusted—to guide youths during their most formative years; to give flexibility and reach to their imaginations; to grant them an opulent chance, which your young men should always have, to see visions; to encourage in them mental correctives for the rougher and readier standards of the world outside. Just so long as intellectual democracy continues to be vitiated in the manner I have cited, just so long will this duty remain unfulfilled, and just so long shall we observe rich men's sons learning, even at college, the shifty ways of unfair influence.

HAROLD DE WOLF FULLER.

Cambridge, Mass., March 12.

THE UNDERGRADUATE POINT OF VIEW.

TO THE EDITOR OF THE NATION:

SIR: In an editorial of February 25 on low standards of scholarship in the universities, the *Nation* laid a large part of the blame on the "benevolent gentlemen" whose easy courses are the sheltering fold of idlers.

While the existence of such professors and their damaging effect upon the students who elect their courses are not to be denied, yet it seems more likely that they are merely by-products of general conditions, rather than prime causes. Of course, they make it far easier for a determined loafer to keep his head above water for the specified four years, but it is too much to say that they produce loafers from new material, or that they exert any influence over those not idly inclined. If there were a general desire among the students to do effective and creditable work in college, and thereby prove their ability to do likewise in life, these kindly incompetents would lecture to empty seats, and their courses would die of malnutrition. They were called into being, and their continued existence is made possible by the presence of a large percentage of students who wish to coat themselves with the fashionable veneer of a college "education" with the least possible annoyance from such obsolete old fogies as Homer, Molière, or Newton.

The difficulty lies much deeper than the shortcomings of a few professors more charitable than wise, for it springs from the characteristic undergraduate point of view and standard of values. The ludicrous inaccuracy and distortion of student ideas of life and student judgment of men and things are perfectly well known, except in the one place, where such knowledge would be of use—among the students.

The undergraduate regards himself as a mature and important personage, who, for reasons of his own, has elected to live for a few years with some hundreds or thousands of personages almost as mature and important as himself, in a community where the conditions of life are as favorable as, and in some cases much more favorable than, those he has been accustomed to. The only drawback to this delightful scheme, with its great freedom from disciplinary restraint, lies in the fact that each of these communities is encumbered by a number of men, called the faculty, who are so far advanced in age, or so biassed in opinion, as to be utterly incapable of comprehending the ambitions of the full-blooded college man. As far as possible, the undergraduate ignores this superannuated body and applies himself with vigor and enthusiasm to the real affairs of life—the making of a team, the election to a club or fraternity, the acquisition of a reputation as a good fellow or a hard drinker, according to his tastes and talents—in short, to becoming a "big man" in some branch or other of the college activities. That expression "big man" nearly every one can remember having used at the boastful age when one dons his first trousers and scalps his sister's doll as a proof of manliness. "I'm not a baby, I'm a big man." Likewise, the undergraduate, "I'm not a callow boy with an unformed mind and a half-formed character, but I'm a big man with important matters on my mind."

Until the Almighty or President Wilson or somebody can make it plain to the student that what appears to be a big man from the campus point of view is really nothing but a small boy with an inflated ego, the "soft course" professor will still lecture to large and somnolent classes, and the undergraduate will continue to circulate noisily and violently in a sphere which approximates the mathematical definition of a point, "that which has position, but no magnitude." HERBERT JONES.

Princeton, N. J., March 10.

WORK FOR TARIFF REFORM.

TO THE EDITOR OF THE NATION:

SIR: After an interval of twelve years, Congress has met to revise the tariff. This rare occasion makes the opportunity for the most effective work of a decade by the Tariff Reform Committee of the Reform Club. The essential conditions surrounding the present revision are novel. For the first time we have a vigorous tariff reduction movement originated by Republicans and manufacturers, and spreading in the party of "protection." This movement, quite naturally, is not in accordance with our views in important particulars, and is apparently not yet strong enough to control the revision; but it makes a serious division among the protectionists. In this clash a great deal of damaging truth about "protection" can be brought out and used to widen the breach. This situation permits of forcing the discussion of the whole tariff question, in Congress and before the people, practically free from considerations of party. This, in itself, is a long step toward the just settlement of the question.

Moreover, the imperative need of a great and prompt increase in the revenue now compels the party of "protection" to recognize the insufficiency of any tariff, and to consider various plans for more direct taxation, as well as for increasing revenue by reduction in certain rates of duty. This makes the opportunity to show, in Congress and out, and likewise without partisanship, the advantages of more direct taxation over tariff taxation.

Under these exceptional circumstances this committee can accomplish, by reason of its experience and connections, and at comparatively small expense, a great deal toward the final breaking down of the protective system, by supplying the most effective facts, figures, arguments, and suggestions to members of Congress and newspapers. Persistent and intelligent work on our part now can accomplish in a few months results that ordinarily would be the work of years. We need at once several thousand dollars for carrying on the work which has been already begun. We can supply a large number of country newspapers with convicing information in the interest of the consumer, in plates which they are ready and willing to use, if we can meet the necessary expense, and we ought to carry on this service largely just now. We ask all interested, therefore, to send a liberal contribution, to the fund of the Tariff Reform Committee. Checks should be made payable to the order of Louis Windmuller, treasurer, Reform Club, No. 42 Broadway, New York.

BYRON W. HOLT, Chairman.

New York, March 18.

POSTPONING INAUGURAL CEREMONIES.

TO THE EDITOR OF THE NATION:

SIR: So far as I have observed, no mention has been made in your columns or elsewhere of a simple solution of the inauguration question. A Constitutional amendment for so small a matter as a date would be almost "much ado about nothing." And yet the people want their pageant: certainly the tradesmen and hotels in Washington would miss it sorely. Why not adopt your plan for your proposed change of date to January 1, without any change of date at all? The President-elect shall take the oath in the Senate chamber without ceremony on March 4; but inauguration day shall be fixed for the last Wednesday of April or the first Wednesday of May.

This plan would make our inauguration correspond to the coronation of all monarchical nations. The new President's address on taking the oath, if any be needed, would be to Congress only, and his fuller declaration to the people would come all the better after two months in office.

WOLCOTT CALKINS.

Newton, Mass., March 12.

Notes.

The University of Chicago announces the following books as in press: "The Cameralists," by Albion W. Small; "English Poems: The Elizabethan and Caroline Periods," edited by Walter C. Bronson; "The Wars of Religion in France: The Huguenots, Catherine de' Medici, and Philip the Second, 1559-76," by James Westfall Thompson; "Christ and the Eastern Soul," by Charles Cuthbert Hall; "The Teachings of Jesus about the Future," by Henry Burton Sharman; "The Development of the Idea of Atonement," by Ernest D. Burton, John M. P. Smith, and Gerald B. Smith; and "Studies in Galilee," by Ernest W. G. Masterman.

Sir Leslie Stephen was almost as well known for his walking feats as for his literature, and it is an odd fact that his mountaineering book on "The Playground of Europe" has never been published in this country. Putnams, the regular publishers of Stephen's other work, are now making good this deficiency.

The recent duel between Messrs. Lang and France will attract attention to the announcement that Prof. Charles Roessler has undertaken to publish by subscription "Jeanne d'Arc; Documentary Evidences of the Heroine and Christian Healer." His work, written in English, is based on investigation of the original documents and is said to throw new light on her story. His address is No. 30 Rue Le Marois, Auteuil, Paris.

A flood of light was thrown upon the history of Guiana—that vast country lying between the great rivers Amazon and Orinoco—by investigations made in connection with questions of boundary between Great Britain and Venezuela, and Great Britain and Brazil. In these papers Laurens Storm van Graavesende, the first Directeur-Général of the United Colonies of Demerara and Essequibo, loomed large. The letters of this old-time Kruger are soon to be published, in two volumes, by the Hakluyt Society, London. They will be edited by J. A. J. de Villiers of the British Museum, and C. A. Harris of the Colonial, both of whom rendered much help to the British government in the preparation of its cases for submission to the Arbitration Tribunal at Paris and to the King of Italy, respectively.

Published by Mitchell Hughes & Clarke of No. 140 Wardour Street, London, a magazine, *Caribbeana,* has recently appeared; future issues are to be made quarterly. The proprietor and editor is Vere Langford Oliver (a member of the West Indian branch of the New England family of the same name), who, a few years ago, published, in three volumes, a genealogical "History of the Isle of Antigua." While family pedigrees fill much space in this magazine, with extracts from registers of births, marriages, and deaths, and copies of monumental inscriptions, the editor proposes to include legends and folk-lore, grants of land, and other deeds, old letters, bookplates, engravings, and a miscellaneous collection of reliques. The name Washington frequently appears in the first number of *Caribbeana,* especially on page 10, but there is nothing to connect it with the Virginian branch. Thomas Washington of Nevis, whose will was proved in London in 1719, mentions "my brother Simon of County Westmoreland."

Harper & Bros. have a new edition of Trevelyan's "Life and Letters of Lord Macaulay," giving the two volumes bound together. The paper is not all it should be, and the index is quite inadequate for a book abounding in striking opinions on a great variety of men and things. The advantage of the edition is an additional chapter at the end, containing Trevelyan's delightful disquisition on "Macaulay's Marginal Notes" published separately two years ago. Macaulay was one of the great readers to whom the margin of a book is as important as the letterpress, and to have his running comment on Shakespeare and Pope and Warburton and the classics is to be admitted into a curious intimacy with his ways of thinking.

An interesting contribution to our Revolutionary history has been made by a Harvard senior, Robert E. Peabody, in an account of the "Naval Career of Captain John Manley of Marblehead," published in the Historical Collections of the Essex Institute. Manley was the commander of one of the armed vessels which Washington sent out to intercept supplies for the British troops in Boston at the time of the siege. There has always been some doubt as to the status of these American vessels, whether they were privateers or "state cruisers." But original documents in the possession of the Beverly Historical Society show that "they were chartered at the Continental expense, but their captains were captains in the army of the United Colonies and their crews were soldiers from the army who still received their pay from the army paymaster." Manley's vessel was the Lee, a fishing schooner manned by fifty men from Col. John Glover's "Amphibious Regiment," so called because it was largely composed of fishermen and sailors. His greatest exploit was the capture of the Nancy with a cargo of military stores valued at £20,541. This prize was brought into Gloucester harbor on November 29, 1775, and on December 3 a long, heavily laden, flag-bedecked train of wagons bearing the cargo came rolling into the camp at Cambridge. An officer present writes:

> To crown the glorious scene there intervened one truly ludicrous, which was old Put [Gen. Putnam] mounted on the large mortar which was fixed in its bed for the occasion, with a bottle of rum in his hand, standing parson to christen, while godfather Mifflin gave it the name of "Congress."

Manley took many other prizes during the war, and at its close in 1783 he was cruising in the West Indies. Being pursued by four British frigates, he unfortunately ran ashore on a sandbar and the British opened a tremendous fire. "For two whole days the American vessel withstood and returned this cannonading," and on the third day Manley succeeded in floating his ship and escaping. He fired thirteen guns as a farewell defiance, probably the last gunshots of the war. Little has been written about this "father of our navy," and this account is largely the result of the examination of original documents, American archives, and contemporaneous newspapers.

The "Historical Catalogue of the Members of the First Baptist Church in Providence, Rhode Island," compiled and edited by the pastor emeritus, the Rev. Henry Melville King, with the aid of Charles Field Wilcox, is a volume of no little genealogical and biographical value. It lists and indexes over 4,000 names of persons who have been members of the church since 1775. There is also a brief outline of the history of this parish, which has played so large a part in the development of the Baptist denomination in America. The volume contains numerous pictures of the building itself, of the ministers, and of others who have been active in the work of the church. The printing has been done by F. H. Townsend, Providence.

"Germany in the Later Middle Ages (1200-1500)," by William Stubbs, edited by Arthur Hassall (Longmans, Green, & Co.), is a second and final instalment of Dr. Stubbs's lectures on the History of Germany in the Middle Ages. What we had to say about the first volume (*Nation,* October 22, 1908, p. 388) applies with little change to this. Mr. Hassall's preface, or rather advertisement, promises "immense pleasure" to all students of the middle ages from its perusal. If this promise is realized, we can only say that the English historical student is easily pleased. He will find here a bibliography of a dozen general and more or less relevant books, a rambling narrative of events, any amount of "character sketching," and very little else. From an author who is advertised as the English historian most "eminently qualified to undertake the task of describing the history of Germany, and indeed of Europe during this period of transition," we might at least expect some little account of the fundamental changes in the German Constitution which mark the period here treated. There is a shabby summary of the Golden Bull without explanations; but the Kurverein at Rense is not mentioned, the Sachsenspiegel is not referred to, and the whole epoch-making reign of Ludwig the Bavarian is dealt with on the basis of personal motive and with only the slightest indication of its constitutional importance. Worst of all, the really moving forces of German public life in the fourteenth and fifteenth centuries, the immense development of cities, the expansion of trade, and the whole eastward movement of civilization in consequence are touched upon only by the way and without bringing out their organic value as factors in the national structure. Equally flimsy is the presentation of what Dr. Stubbs still calls the "reforms of Maximilian I." Except for one obscure sentence, the delighted English student would certainly be led to imagine that Maximilian was a popular leader in political reforms instead of being compelled, as he was, to grant these reforms as the price of men and money to carry out dynastic ambitions distinctly in opposition to German interests. Altogether, if we were compelled to choose, we should certainly prefer any one of several historical manuals to this "brilliant" presentation.

One is in doubt whether to treat P. F. William Ryan's "Queen Anne and Her Court" (E. P. Dutton & Co.) as history or fiction. The characters and events are historical, and the facts except in some minor points are correctly presented; but withal Mr. Ryan suffers his imagination to riot so luxuriantly in pallid cheeks, quivering eyelids, and palpitating hearts; he knows so precisely the inner feelings of every actor and the stage setting of every act, that one seems to be reading a novel, and no tame one at that. With this method, if it were artistically and frankly carried out, we should have no reason to quarrel; and with all his faults Mr. Ryan does succeed in giving life to the Queen and her courtiers. The scene at St. James's when Abigail Hill was married to Mr. Masham in Arbuthnot's chambers, and the scene at Kensington when the Duchess Sarah thrust herself upon the Queen while Prince George lay dying, are, for instance, effective bits of writing, in a genre midway between history and fiction. But for the most part Mr. Ryan's hysterical English and gushing sentimentality arouse a feeling of opposition in the reader's mind, and make the whole work seem more unreal than necessary.

"It is indeed strange," as Joseph Fort Newton remarks in his biography of "David Swing, Poet-Preacher" (Chicago: The Unity Publishing Company), "that so far there has been no adequate record of Swing's life, no serious appraisal of his ministry, no attempt to set him in due or-

der among our teachers of faith." He was not, perhaps, a fighter, but one cannot but commend the delicacy of his conscientious scruples. Convinced that he could no longer hold to the doctrines of the Presbyterian Church, he refused to occupy an ambiguous position, to say one thing while he really meant another; and consequently he resigned. It is not without significance that Dr. Patton's victim was always spoken of as "Professor" Swing, a title which clung to him from his early connection with Miami College. His kinship was with Erasmus, not with John Knox. Mr. Newton has done well in recounting his life, with sympathetic portrayal of his intellectual qualities, but it is difficult to see how Mr. Newton can say that Mr. Swing "was a man of such high and tender humanity, of such unique and persuasive beauty of soul, of personality so opulent, engaging, and lovable, that one finds it difficult to form a deliberate and calm estimate of him." The portrait has been drawn with care, with intelligent analysis of its subject's mental and spiritual qualities, but affection and personal enthusiasm have often pushed the pencil.

Richard DeBarry's "The Land of Promise" (Longmans, Green & Co.) has for its sub-title the alluring phrase, "an account of the material and spiritual unity of America." Of all the recent writers who have committed to print their "impressions" of the United States, none, certainly, has outdone Mr. DeBarry in high-sounding rhetoric, or rushed with more breathless enthusiasm at the task, weakly imagined by some timid souls to be a rather serious one, of determining our exact place in the social, philosophical, and æsthetic universe. Of course, he saw Niagara, "a drama of that liquid cosmic energy which sculptures continents"; and Colorado, "a model of all the freedoms of humanity," whatever that may mean; and "the vast Western Shrine of the Infinitudes," commonly referred to as the Rocky Mountains; and New York, "the pictorialized embodiment of the newly intercommercialized mankind"; and Boston, dedicated to the "unique office of framing and fashioning the mythology of the present mind of America." Racing across the country from Chicago to San Francisco and back to New England, he casts sweeping glances at our valleys and plains, wonders at our newspapers, patronizes our schools and colleges, sniffs the faint aroma of our religions, admires our restless and masterful energy, apologizes for our political failings, and adores our women: in short, does all the things that a well-bred and ready-to-wear tourist is expected to do, and dresses it all up in catchy phrases and sententious generalizations that sparkle like the tinsel armor of the stage warrior. If there be among us any one so mean, so low, so debased as not to be vividly conscious every moment of his waking life that we are the greatest, busiest, finest, and most interesting people on the face of the earth, let him read Mr. De Barry's book.

"More Japonico: A Critique of the Effect of an Idea—Communityism—on the Life and History of a People," by James L. De Benneville (Yokohama: The Japan Gazette Press), represents one more of the many recent attempts at an interpretation of Japan. The author, a resident of the Far East, writes with a familiarity with conditions in Japan that gives no little weight to his statements. But that Japan shows an inherent propensity to extinguish the individual in the communal mass, is not altogether a new theory. In the incessant and carefully designed efforts of the Japanese authorities to repress individualism to the advantage of the family and the state, the writer sees the prolific source of many of the evils that retard the social and moral progress of the nation:

> The dangers of individualism are strenuously preached from every official pulpit. . . . There remain many prejudices in Japanese thinking. The greatest of these is the prejudice against the individual, still found among the mass of the Japanese. They can appreciate the material progress of Europe, without seeing that at the root of it lies Europe's individualism, and that their own history is stamped by the lack of it.

It is contended that the main differences between the East and West are accounted for by the "comparatively recent and greater plasticity" of the latter peoples, and by their "elastic use of the apparatus of thought." More explicitly the theory is that what one finds in the East is merely a distortion or stunting of a perfectly natural process which in the West has had free development for centuries. The Occidental is advised to bear in mind that in his contact with things Japanese he is being transported back to the England and France of the thirteenth century. The author of this volume seems convinced that the wisest course for Japan is to reverse her present drift toward communalism, and to encourage a wholesomely developed individualism capable of leading the nation to accept the highest to which human civilization has attained. He sees some hope of the triumph of this idea; but it is not very pronounced.

William Guild Howard's learned treatise entitled "Ut Pictura Poesis" (reprinted from the Publications of the Modern Language Association), reminds us how long the battle of the books has been raging over Horace's innocent dictum. The question as to the respective limits of the arts of the poet and the painter, handed down by Aristotle, occupied some of the greatest minds of the renaissance, and resulted in a bulky literature, dogmatic mostly rather than æsthetic, whose pretensions finally gave way to the logical processes of Winckelmann and Lessing. Nevertheless, as Mr. Howard points out, we get a better conception of "Laokoon" if we regard it as "the descendant of a long and not ignoble ancestry." It is the purpose of his historical investigation to show in detail how great is the indebtedness, alike of the artist and the art critic, to those who centuries ago, crude as were their theories, formulated practical rules long since adopted by masters in their respective crafts. Much of what, for instance, Leonardo da Vinci laid down in his "Libro di Pittura" as the result of his scientific study of painting, has remained common artistic property, though, as Mr. Howard says, poetry fares as ill in his remarkable parallel between the sister arts as does painting in Lessing's "Laokoon." Dante and Petrarch, with many lesser lights, confused the terms of poetry and painting, while Dryden's curious "Parallel," though without originality, loomed large as, in Saintsbury's language, "the first writing at any length by a very distinguished Englishman of letters on the subject of pictorial art."

In the eleventh volume of the Harvard Oriental Series, which has just appeared, Prof. C. R. Lanman has introduced a new feature which is likely to awaken the interest of Sanskrit scholars. By a free use of the *virāma* and other devices he has presented a text separated and subdivided into individual words easily distinguished by the eye, thus lightening materially the labor of interpretation. For beginners this is indubitably an excellent plan, and probably older Sanskritists will admit its utility, even if it is rather shocking to the reader accustomed to the long unhyphenated compounds of the ordinary text. A preface replete with instructive and amusing examples of texts not furnished with visible aids, even in English, beguiles the reader to give involuntary assent to the practical advantage of the new system. The work selected for this volume is the collection of Hindu tales known as the Panchatantra, in the *textus ornatior* of Pūrnabhadra, which appears here for the first time in the original, edited by Dr. Hertel, who some years ago discovered the oldest recension of the text, known as the Tantrākhyāyika. The arrangement of the "tale within a tale" is clearly indicated in this edition by different types and waving lines on the margin, so that the various stages of "emboxments" may be easily followed. No better book for arrangement and for matter could be chosen as a first Sanskrit reader. The fact that it gives a critical text for the first time makes the volume indispensable to the advanced scholar. The brief glossary at the end of the book supplements existing lexicons with a list of over a hundred rare or new words.

Of the articles which make up the last number of the Proceedings of the Society of Antiquaries of Scotland (Vol. XLII, Fourth Series. Edinburgh: Neil & Co.) the most considerable are Fred. R. Coles's "Stone Circles in Perthshire—North Eastern Section" and the account by James E. Cree of a prehistoric kitchen-midden and superimposed mediæval stonefloor found at Tusculum, North Berwick. William Bannerman presents notes on the Newton Stone and the Ogham inscriptions of the Lunnasting and Golspie stones, and the Rev. Angus Mackay discusses "Sunderland and Caithness in Ancient Geography and Maps." Among the contributions on the mediæval and modern period, the most interesting are Lord Guthrie's "Mary Stuart and Roscoff"; "The Churchyards of Prestonpans," by Alan Reid; "Boyamund's Valuation of Ecclesiastical Benefices in the Archdeaconry of Lothian (1274-5)," by the Rt. Rev. John Dowden; "A French Mission to Scotland in 1543," by William Moir Bryce; and the Rev. James Hewson's "Bands or Covenants in Scotland, with a List of Extant Copies of the Scottish Covenants."

In "The Administration of Public Education in the United States" (The Macmillan Co.), Prof. Samuel T. Dutton and David Snedden of Columbia University have done a valuable piece of work; for they have shown the evolution of the organization of public education, its present condition, and

its tendencies. That public education has grown to enormous dimensions in the United States is revealed in the fact that more than one-fifth of all public expenditures during the year 1905-6 were for this purpose. Whether value commensurate with this great outlay shall be returned to the country depends no less upon an efficient and wise administration than upon a correct apprehension of the educational process. Indeed, it is probably true that the most important problems to be solved in increasing the efficiency of the schools are those of organization and administration. Hence, the scholarly and very comprehensive volume now before us is a distinct contribution to the literature of education; and it should aid further progress.

Two large volumes, "Moral Instruction and Training in Schools" (Longmans, Green, & Co.), present the result of an international inquiry set on foot in the autumn of 1906 by a number of persons interested in educational work in England. The inquiry itself was extended to the leading countries of Europe, the chief English colonies, Japan, and the United States; and these findings should focus attention upon the subject and obtain for it a more important place in the schools. For though there is no general agreement as to method, all who contribute to the report admit that the opportunities for moral education in the schools are not fully understood or utilized. On the side of moral training the factors of greatest influence are the personality of the teacher; the corporate life of the schools, its building and surroundings, its traditions, its discipline, its organized games; and the curriculum through which in part the personality of the teacher must make itself felt. These elements should be so organized as to develop more directly a good moral character. As to moral instruction—whether it should be direct or incidental, from what source its materials should be sought, whether or not it should have the sanction of religion—there are many opinions. Most observers in all the countries represented were, however, in accord as to the value of direct ethical instruction if given at the right time and in the right way. A necessary condition of success is agreed to be the preparation of the teacher for this most responsible phase of his work. The report is edited for the committee by M. E. Sadler.

"Memories of Brown: Traditions and Recollections Gathered from Many Sources" has been published in Providence by the *Brown Alumni Magazine* Company. The editors are Robert Perkins Brown, '71; Henry Robinson Palmer, '90; Harry Lyman Koopman, the university librarian; and Clarence Saunders Brigham, '99. The volume contains nearly five hundred pages, well indexed, and there are numerous illustrations. The interest of the book is primarily for graduates of Brown, for whom the personalia will have a significance that men of other colleges can hardly be expected to discover. Among the names in the list of contributors are those of the late Prof. Albert Harkness, George William Curtis (who never was graduated), President J. B. Angell of the University of Michigan, the late President E. H. Magill of Swarthmore, Dr. W. W. Keen of Philadelphia, President B. I. Wheeler of the University of California, and President Faunce.

It seems strange that there should have been no complete verse translation of Empedocles in English, but if we have waited for this work it has at last been well done by Dr. William Ellery Leonard ("The Fragments of Empedocles"; Chicago, The Open Court Publishing Co.). The full text is given with the translation, and a sufficient apparatus of notes explains the meaning of the more crabbed passages. In some of the most poetical lines Dr. Leonard has had to encounter the rivalry of Matthew Arnold in his "Empedocles," who was hampered by no such necessity of exactness as binds the present translator. Apart from any such unfair test as that, Dr. Leonard has succeeded admirably in reproducing something of the oracular tone and *sæva indignatio* of the great poet-philosopher. The second fragment may be taken as a fair example:

For narrow through their members scattered ways
Of knowing lie. And many a vile surprise
Blunts soul and keen desire. And having viewed
Their little share of life, with briefest fates,
Like smoke they are lifted up and flit away,
Believing only what each chances on,
Hither and thither driven; yet they boast
The larger vision of the whole and all.
But thuswise never shall these things be seen,
Never be heard by men, nor seized by mind;
And thou, since hither now withdrawn apart,
Shalt learn—no more than mortal ken may span.

We congratulate the author on accomplishing well a desirable piece of work.

Prof. Edmund Goetze of Dresden has found in the Frankfurt City Library ten specimens of Hans Sachs, which had been regarded as lost. Though mentioned in old bibliographies, they were not known to be in any public library. They consist of pieces printed in Nuremberg, two occupying only two pages each, and the other eight, in booklets of eight or ten pages, illustrated with wood cuts. Goetze will publish his finds in his twenty-six-volume edition of the works of Hans Sachs.

"Zeitiges und Streitiges: Briefe eines Schulmannes an eine Mutter," by Hugo Gruber (Leipzig: Dürr), is an interesting and instructive collection of essays on pedagogical problems, dealing largely with the education of girls and women.

The eleventh volume of the *Quellenbuch*, published by Felix Dahn, under the general title, Die Könige der Germanen, has now been issued (Leipzig: Breitkopf & Härtel), as "Die Burgunden." The special purpose of this series is indicated by the sub-title, "Das Wesen des ältesten Königtums der germanischen Stämme und seine Geschichte bis zur Auflösung des karolingischen Reiches." One more volume, on the Lombards, is announced to complete this set.

Vol. II of the "Geschichte des Frühjahrsfeldzuges 1813 und seine Vorgeschichte" (Berlin: E. S. Mittler & Sohn), by Lieutenant-General von Caemmerer, will be found helpful to students of the events of Napoleon's campaign from the end of April to the treaty of peace. There are fifteen sketches and three maps in the work, which is founded on material in government archives.

"Aus guter alter Zeit: Berliner Bilder und Erinnerungen," by Alexander Meyer (Stuttgart: Deutsche Verlags-Anstalt), is one of those charming little volumes of gossipy reminiscence which only an old soldier can produce, and which those whose lives reach back a few decades can best appreciate. Meyer was an *echter Berliner*, and knew the city long before it became a heap of enormous tenements and flats, with elevated and underground railways. A student of the old university, he has not only seen the changes in Berlin student life which shock the young *Kandidat* coming from the provinces, but he remembers Neander well, and talks of him as if he had met him but yesterday. The volume concludes with a number of reminiscences of Bismarck in his relation to Berlin, not the least amusing of which is the story of the Iron Chancellor entering a book store and promising the proprietor immunity if he would sell a caricature of him that the police had *strengst verboten!*

The newest addition to the series Der alte Orient is Dr. Otto Weber's "Eduard Glasers Forschungen in Südarabien," in which the archæological researches of this pioneer and pathfinder in South Arabia are instructively described. A good picture of Glaser accompanies the booklet (Leipzig: Hinrichs).

J. C. B. Mohr, Tübingen, announces an important publication in the new work of Prof. Hugo Gressmann, entitled "Altorientalische Texte und Bilder zum Alten Testament." It is the author's purpose, first, to give a purely objective and scientific presentation of all the extra-Biblical material needed for the interpretation of the Old Testament; and, secondly, by means of explanatory notes, to render this material intelligible to the reader. The texts, chiefly from Assyrian, Babylonian, and Egyptian sources, are translated.

Prof. Wilamowitz-Möllendorff has decided to devote the sum of money raised in honor of his sixtieth birthday to publishing editions of Basilius and Gregory of Nyssa. The work on the text will be done by Dr. Giorgio Pasquale of Rome.

Of the large and critical life of Jerome prepared by Prof. Georg Grützmacher of the University of Heidelberg, and published by Trowitzsch & Sohn, Berlin, under the title "Hieronymus: Eine biographische Studie zur alten Kirchengeschichte," the third volume, discussing the life, times, and writings of the great Latin church father from 400 to 420 A. D., has now appeared. In chronological matters the author agrees almost throughout with the recent work of Brochet, "St. Jérôme et ses ennemis." Very interesting are Professor Grützmacher's discussions of Jerome's commentaries on Daniel, Isaiah, Ezekiel, Jeremiah, and the Apocalypse, as also the ample use made of the results of the research of Roman Catholic scholars. At least one more volume is to follow.

"Cavalleria e Umanesimo," the twentieth volume of the complete works of Giosuè Carducci, is announced by the publishers, Zanichelli of Bologna. Its contents, wholly reprints of magazine articles and introductions to volumes now out of print, treat of society and literature in the middle ages and renaissance. Its range may be inferred from the titles of its essays: "Gli Aleramici," "Galanterie cavalleresche del secolo XII e XIII," "La Poesia e l'Italia nella quarta crociata," "Della Eccrinidi

e dl Alberto Mussato," "Cino da Pistola ed altrl rimatori del secolo XIV," "Delle Poesie toscane dl Messer Angelo Poliziano."

William Wirt Howe, an eminent lawyer of New Orleans, and twice president of the American Bar Association, died March 17, at the age of seventy-six. Judge Howe had delivered lectures on law at Yale, Columbia, the University of Pennsylvania, and elsewhere. He was the author of a "Municipal History of New Orleans" and of "Studies in the Civil Law."

The Rev. John William Jones of Richmond, Va., a chaplain in the Army of Northern Virginia during the war and chaplain-general of the United Confederate Veterans since the founding of that order, has died in his seventy-second year. He wrote a number of books from his recollection of war days, including: "Personal Reminiscences," "Anecdotes and Letters of R. E. Lee," "Army of Northern Virginia Memorial Volume," "Christ in the Camp," and "Jefferson Davis Memorial Volume."

A CLAIMANT TO THE LETTERS OF JUNIUS.

Thomas Pownall, M.P., F.R.S.; Governor of Massachusetts Bay, Author of the Letters of Junius. With a Supplement Comparing the Colonies of Kings George III and Edward VII. By Charles A. W. Pownall. London: Henry Stevens, Son & Stiles.

It was an excellent idea to bring forward a man who played an important, but almost forgotten, part in America during the Seven Years' War and in the Parliamentary battles against Bute and Grafton and North. Pownall was born in 1722, the younger son of John Pownall, who had a good estate at Saltfleetby on the Lincolnshire coast. He was graduated at Cambridge in 1743, and then went up to London to take advantage of the patronage of his elder brother who was Secretary of the Board of Trade and Plantations. He was thus early introduced into colonial affairs, and in 1753 came over to New York as secretary to Sir Danvers Osborne, the new Governor. He quickly made himself familiar with the political and material conditions prevailing here, penetrating shrewdly into the causes of discontent with the mother country, and foreseeing the nature of the conflict then imminent with the French. In his scheme for a general plan of operations, drawn up by special command of the Duke of Cumberland, he analyzes unerringly the difference in the attitude of the Indians towards the English and French. In 1756 he was back in London consulting with Pitt on the measures necessary for stopping the maladministration of the war. The next year he was gazetted "to be Captain-General and Commander-in-Chief of Massachusetts Bay in New England, in the room of William Shirley, esq." His tenure of that office for three years is a part of American history. He returned to England in 1760; was appointed in 1761 First Commissary-General to the English-Hanoverian army, then serving under Prince Ferdinand against the French on the Rhine; entered Parliament in 1767, and served in the opposition for fourteen years without due reward. The close of his life was passed in the pleasant pursuits of antiquarianism. He died in 1805.

These events are related by the present Mr. Pownall, who belongs to a collateral branch of the family, with a knowledge based on a full study of the documents and of Gov. Pownall's published works. It must be added that he shows no special skill in the art of narration, and that he swells his book to an uncomfortable size by entirely unnecessary excursions into American history. Of the political comparison of his past hero with his present hero, Mr. Chamberlain, nothing need here be said.

To most readers the heart of the work will be in the two chapters which elaborate an old argument* to prove that Pownall wrote the "Letters of Junius." It may be admitted at once that the circumstantial evidence for this theory is curiously neat. We go with the author in never having been convinced that Sir Philip Francis was the man; we even think that he has not stated the case against Francis as strongly as it might be put. There are no doubt many coincidences that point to this authorship, and there is the testimony of Mr. Chabot, an expert, to the effect that the handwriting of Junius is that of Francis disguised.† One may be more skeptical of such testimony than is Mr. Pownall, who grants the point, and even if the hand was that of Francis, he may have acted as amanuensis for another than Gov. Pownall. Against Francis must be weighed the facts that he was a comparatively poor man when Woodfall offered Junius half the profits from the sale of the collected letters, that he was notoriously grasping in money matters, and was in no respect a man to refuse such an offer in the tone of proud independence. There is further the direct statement of Lord Shelburne, in 1805, that he knew "all about the writing and production of those letters," and that the grounds of secrecy were then "removed by death." Francis was living at this date, and, notwithstanding Lord Shelburne's character for assuming a mysterious omniscience, it is hard to believe he would have made such a statement without some acquaintance with the circumstances. Another argument can be drawn from the letters themselves. Though politically they agree with the opinions of Francis, they have all the tone, especially those of early date, of having proceeded from one of high social position rather than from a needy clerk in the War Office. It is clear, moreover, that their inspiration was not primarily political, but personal, and it does not appear that Francis had any cause for such rancorous hatred of Grafton, Granby, and Bedford as forms the chief animus of the correspondence. Nor is it conceivable that a man of the exorbitant vanity known to be characteristic of Francis would have failed to rivet his name to that of Junius by some definite posthumous testimony. That must be plain to any one who has read of Francis in such memoirs of the day as the recently published Journal of Lady Holland. His blustering denial of the connection at one time, together with his attempt to intimate his authorship to his wife without committing himself to a direct avowal, would be wholly within his character if he hankered after an honor which he was afraid boldly to assume.

Possibly this last argument has lost part of its force since Junius and his identity have ceased to be a stirring question. It is necessary to go back to the writers of the day and see how tremendously Junius loomed up as a power to be hated and feared and admired —to read, for example, Wraxall's account of the effect of the letters on the Duke of Grafton, who for several days after the appearance of the avenger's name in the *Public Advertiser* would be so disturbed as to be unfit for the work of his office; or to hear Burke in the House of Commons belittle himself and his friends as vermin beside this "mighty boar of the forest," whose attack upon the King made his "blood run cold." And the letters themselves, if one will go through them afresh, still have their power upon the mind, although King and court whom they attacked are now, like Junius himself, *nominis umbra.* They do not impress one exactly as the work of a specially trained writer in the ordinary sense of the word; when they abandon their cue of hatred they often fall pretty flat. One or two tricks of rhetoric they use with monotonous but deadly effect, chiefly that of ostensibly praising while really condemning. From this they change to a direct and malignant invective, which seems to flow from a sorely wounded and brooding heart. Above all, Junius had the art of moving the imagination by the cover of anonymity. "At present," he says in a private letter to Wilkes, "there is something oracular in the delivery of my opinions. I speak from a recess which no human curiosity can penetrate, and darkness, we are told, is one source of the sublime." It is this terror

**Junius Discovered.* By Frederick Griffin. Boston: Little, Brown & Co. 1854.

†Given in *The Handwriting of Junius,* by the Hon. Edward Twistleton, London, 1871. Charles Chabot was the expert in the great Roupall and Tichborne trials.

of the unknown that speaks in his threat upon the Duke of Bedford:

> If, from the profoundest contempt, I should ever rise into anger, he should soon find that all I have already said of him was lenity and compassion.

It is the same terror that pervades his almost inhuman claim upon the future when torturing the Duke of Grafton:

> I would pursue him through life, and try the last exertion of my abilities to preserve the perishable infamy of his name, and make it immortal.

And it is that again which added to the shuddering indignation of his enemies when he coupled the tenure of his influence with that of the Bible.

In the end, we must look to the personality of Junius to discover the man, rather than to his political views, which may be attached to a number of different names. And it is just here that the attribution of the letters to Gov. Pownall quite fails. The politics of Junius may have been those of Pownall, there may be some curious circumstantial evidence to connect the two, but the disappointment of Pownall in his career is no adequate cause of such devouring personal bitterness. Nor does the known temperament of Pownall at all fit. In Massachusetts he was rather censured for the levity of his manners, and his many acknowledged writings show no mark of this inveterate malignancy. A comparison of his style, too, is against the theory. His biographer prints two extracts side by side to support his case:

JUNIUS.	POWNALL.
But it has pleased God to give us a Ministry and a Parliament who are neither to be persuaded by argument nor instructed by experience.	This corruption sunk to ignorance, and inspired with insolence, the nation and Providence gave it leaders and governors exactly suited to lead it to its just punishment.

The parallel is deadly. The slow style of Pownall is exactly not the language of Junius.

If a conjecture on our part—not a new one—will be tolerated, it is that the mighty boar is no other than Lord George Sackville. We cannot here go into all the details that lead us to this view; they may for the most part be found collected in George Coventry's "Critical Enquiry," published in 1825; they were no doubt also in the mind of Woodfall when he admitted that Sackville was the only person he had ever suspected. Briefly, however, it may be said that the political views and affiliations of Sackville are confirmatory. Though not a professional author, he was famed for his skill with the pen; his known letters are pointed; his speeches are described by contemporaries in language suitable to the writing of Junius. In particular, we would call attention to his extraordinary speech at the opening of Parliament in January, 1770, with its insistance on the rights of the people:

> The minds of the people are alarmed, and they have high expectations from the deliberations of this house. . . .
>
> Their all is at stake; they apprehend that is in danger, and therefore they have a right ["have a right" is a favorite phrase of Junius] to demand security. The powerful influence in this House is too visible. The people see it, and dread it. But a snare is now laid to involve our Sovereign in the gulph of his corrupt administration; to draw him in as a party. . . .
>
> But the people are in agitation throughout the whole British Empire. . . .

The tone is only heightened, not changed, in the famous letter to the King printed a few days previously, and the somewhat unusual emphasis on the word people points forcibly to the same use throughout the letters and to their brave Dedication to the English Nation.

The character of Sackville, as it may be read in contemporary records, suits better than that of any other of the high-placed politicians. His reserve and vigor created about him an atmosphere of suspicion. His motives for writing were such as would forever have prevented self-revelation. Nor is it easy, on any other ground than that of remorse, to account for his strange summoning of Mansfield just before his death and for the remarkable scene recorded by Richard Cumberland. "There was a death-like character in his countenance," writes Cumberland, "that visibly affected and disturbed Lord Mansfield, in a manner that I did not quite expect, for it [Mansfield's countenance] had more of horror in it than a firm man ought to have shewn, and less, perhaps, of other feelings, than a friend [he was not a friend], invited to a meeting of that nature, must have discovered, had he not been frightened from his propriety." Sackville, we read, apologized for any wrong he had done Mansfield in the past, and the great judge departed, as if eager to be released from a painful situation.

Above all, Sackville had such a motive for personal rancor against Grafton and Granby and the court as cannot be found in any other statesmen of the day. In 1758 he was appointed lieutenant-general of the British army and sworn as member of the Privy Council. He accompanied the Duke of Marlborough to Germany, and on the death of the Duke at Munster took command of the forces. The next year he was present at the battle of Minden fought by Prince Ferdinand. For reasons not necessary to consider here, he was charged with cowardice by the prince, and by Lieut.-Col. Fitzroy, brother to the Duke of Grafton, and his command was turned over to Lord Granby. He returned to England, demanded a court-martial which he obtained with difficulty, was pronounced guilty of disobedience and unfit to serve in any military capacity, and was forbidden the court. Besides this affair, there was with the house of Bedford a family quarrel arising out of the marriage of the Dutchess of Bedford's sister with Lord John Sackville. Junius hated Mansfield for the libel suit against Woodfall, and in December, 1770, Lord George Sackville delivered a speech on a motion to inquire into the administration of criminal justice, which treats Mansfield in a vein of sarcasm that is *aut Junius aut diabolus* —or both. But the charge of cowardice with its intolerable consequences, against which all regular appeal had failed, would be the chief motive of Lord George for assuming the rôle of concealed justice. For ten years, from 1759 to 1769, the bitterness of that disgrace rankled in his breast, and then prompted the blind and crushing blow, the more bewildering because the wrath of the personal avenger was disguised in the political rage of the nation. Seeing that long-delayed and fatal stroke, we think of the words of "Mnemon," presumably no other than Junius himself, in regard to the temper of the British people:

> Their slowness to passion has also another advantage. No wise man will lightly venture to do them a real injury. Their anger is not suddenly kindled, nor easily extinguished; it is dark and gloomy; it is nourished to a gigantic size and vigor, under a silent meditation on their wrongs, until at last it arrives at such a mature and steady vehemence, as becomes terrible indeed.

CURRENT FICTION.

The Story of Thyrza. By Alice Brown. Boston: Houghton Mifflin Co.

The distinction of Alice Brown's writing has always been preëminently its simplicity; and from that stronghold she has not departed in this book, despite the complexity of type that she portrays. An almost austere restraint of style gives the work a peculiar charm, especially shown in the figure of Barton Gorse, which is of singular beauty, and drawn with the delicacy of silverpoint. The story in itself is neither new nor pleasant; the impulsive visionary girl, "too avid of earth's bliss," and the unscrupulous youth, caught together in the hand of circumstance, and the long years of repentance and expiation, in which not even for the sake of her child will Thyrza shirk her punishment, but like that other whose story her own recalls, does much to rob her Scarlet Letter of its shame by the spirit in which she bears it. The interest of plot, however, is subordinated to that of the characters and their reaction upon one another. The situations are rich in suggestion beyond what is actually developed. The conflict of will between Thyrza and her son is the concrete representation of mysticism confronting

BIRMINGHAM PUBLIC LIB

pragmatism; and in the few pregnant pages that describe Thyrza's last vigil beside her one true and unselfish lover, we find in the wisdom that comes to him upon the threshold of death, what is unmistakably the author's own theory of the solvent that shall reconcile the best of both doctrines—the ministering love that walks upon the "paths above the paths."

Henry of Navarre. New York: G. P. Putnam's Sons.

This "Romance of August, 1572," is confined to the brief period between the entrance of the merry Gascon into Paris to claim his bride, and the dreadful night of St. Bartholomew. Henry of Navarre and his faithful follower, De Mouhy, enter the city unknown, and not yet expected, and overhear enough in the busy streets to make the King say:

> You see, my dear De Mouhy, I was not unwise in my fancy to learn something of how the wind blew in this dear Paris, before launching myself in the teeth of a gale.

The story closes with Henry and De Mouhy saved from death, and side by side with their respective lady-loves, watching the dawn of a new day from the windows of the Louvre.

The never-failing lure of an historical romance is a good deal like that of a play where there are employed "real" horses, "real" automobiles, "real" swimming tanks. Whether this is because of the innate love of truth in the human breast, we need not inquire. But the fact remains that, be the romance good, bad, or indifferent, it acquires dignity in the public eye from dealing with "real" names. The present one is much better than bad, and yet not conspicuously good, being constructed according to a thoroughly conventional pattern. One asks in the historic novel for something less sentimental in style than the inveterate commonplaces here congregated—the perpetual soft-white hands, the lustrous black hair cascading over the shoulders, the laughing gray eyes and smiling blue ones, and the incessant Béarnais smile, bringing together hooked nose and curling chin. In fine, for all the grim and gory topic, the manner is that of pink and white fiction. But the image of the time is vivid, and when all is said, an hour, even an undistinguished hour, in the presence of a colossal event, is better than many another thousand.

Catherine's Child. By Mrs. Henry de la Pasture. New York: E. P. Dutton & Co.

Let it be said at the outset for the sake of the apprehensive reader that Mrs. de la Pasture has here curbed her instinct to marry her heroines to men old enough to be their grandfathers. Philippa's choice is merely old enough to have married her mother—barely twice her own age, in fact. Catherine, it will be recalled, made one of the grandfather-matches; and a singularly chilly old prig of a grandfather he was. Philippa, Catherine's child, is, barring her age and sex, just like him. It is, however, Philippa, not Catherine, that the very attractive David, with the usual fatuousness of the story-book lover, aspires to. As he is very much the kind of man Catherine herself should have been allowed to marry in the first place, one feels a little indignant that her creator should bring her so near a chance of happiness, and yet pass her by. But so it is: the chit of a daughter wins the prize, and sweet Catherine (one's indignation shows how real and engaging her sweetness is) is left in her early thirties to be housekeeper and grandmother for the rest of her life:

> The belief that belongs to youth, that life must be holding some definite prize in reserve—some wonderful happening that time will presently reveal—gradually died away, and she asked herself, "Is this all?" with the wistfulness of middle age; yet realizing her destiny at last, with a submission to Fate that held more of amusement than regret.

The old Lady Sarah, who will be recalled as the chief ornament of "Catherine of Calais," is still alive, still irrepressible and shocking to the younger and more proper generation. The terrible old lady seems to be a leading figure just now in our fiction. Lady Sarah has the full piquancy of the rôle. We doubtless enjoy as novel from her reverend lips much good-natured cynicism that would sound commonplace enough in the speech of a middle-aged man of the world; yet she has a savor of her own. There is in this book, besides, a delightful and touching fragment of a child's diary, which, like Lady Sarah's tirades, reassures one that, however this novelist's humor may lapse in the conduct of her love-affairs, it undoubtedly exists.

The Passing of the Third Floor Back. By Jerome K. Jerome. New York: Dodd, Mead & Co.

The story in this collection which first draws the attention of the reader is naturally that which gives the volume its name. Dramatized, and staged more or less successfully by Forbes Robertson during the present London season, it attracted some comment by a supposed resemblance to "The Servant in the House." The angel whom Mrs. Pennycherry entertains unawares in her third floor back, is the incarnation of the Better Self from which each person who meets his eyes finds it impossible to escape. It is a fine conception, delicately handled, but it is easy to see how its subtle charm might be lost if expanded and fitted with dramatic machinery.

Two other stories in the book deserve more than passing notice—"The Philosopher's Joke" and "The Love of Ulrich Nebendahl"—both of which are good work in a different vein from that which has hitherto been associated with Mr. Jerome's name. "The Philosopher's Joke," a plunge into the occult, tells us that, were people given a chance to repeat their lives in the full consciousness of all to which their actions would lead, the old motives would still be strong enough to sway them in the face of foreknown disaster. The comforting conclusion is that the average man meets his problems as they come, to the best of his ability, and consequently, in retracing his steps, would find it inconsistent with his ideals of conduct to choose another course, even should expediency dictate such a change. The story of Ulrich Nebendahl, unable to give his whole heart to any woman, and finding his love at last in the village for which he sacrifices his life, strikes that chord of tenderness which Mr. Jerome has shown us by snatches in "Paul Kever."

The other stories of the book are of no especial distinction, but these that we have cited will suffice to endear it to those who have wished to go deeper than laughter with this modern master of fooling.

Some Aspects of Rabbinic Theology. By S. Schechter. Pp. 384. New York: The Macmillan Co. $2.25.

Those who expect to find in this volume a broad, systematic, and exhaustive study of rabbinic theology—in other words, a formal work which shall discuss its origin and development on the plan of any elaborate treatise on Christian theology—will be disappointed. As the author modestly states in his preface, he aims at "no philosophical exposition of the body of doctrine of the synagogue," but merely at a presentation of rabbinic opinion on a number of theological topics. He has been careful, too, to avoid too much interpretation or paraphrase, with its obvious dangers, and prefers wisely to let the rabbis speak their own thoughts, gathered with tireless industry and scholarly exactness from a wide domain, and duly classified and arranged. He has written, then, a kind of source-book, whose preparation required no little sober discrimination, due as much to the immense mass of evidence that was to be examined and sifted as to frequent divergency or conflict of opinion, which often leaves in doubt what was the real authoritative doctrine of Israel. The difficulty is greatly increased by the fact that the literature under treatment stretches over such varied ages and climes. At times, too, it must be confessed, a rabbinical text is a cryptogram, and the riddle is hard to read, with a different meaning according to

the interpreter's point of view. To a task of this magnitude, the author, who for a few years has been president of the Jewish Theological Seminary in New York, brings broad and thorough erudition, a certain enthusiasm for his subject which, while usually held in check, gives warmth and coloring to an otherwise sterile disquisition, and a style remarkably clear, compact, and pungent. What might become in the hands of one less admirably equipped a mere bundle of fragments, an encyclopædic epitome of opinions, of value purely for reference, receives here a fulness and completeness to render it a permanent and authoritative contribution in its field, where such workers as Dr. Schechter, who came to New York fresh from his triumphs in Cambridge, England, are deplorably rare.

The successive chapters treat, among other topics, God and the World; God and Israel; the Election of Israel; the Kingdom of God, invisible, universal, material; the Law; the Joy of the Law; Holiness and Goodness; Sin as Rebellion; Forgiveness and Reconciliation with God; Repentance and Means of Reconciliation. The author cites the opinions of the rabbis on these matters as they have been transmitted in Talmud, Midrash, literature, and liturgy; and with "the least modicum of interpretation or re-interpretation," shows that "they are equal to the highest aspiration of the religious man of various modes of thought." It is thus a forceful vindication of the essential humanity of the rabbinical schools, all of whose elaborateness and pedantry could not destroy, and did not aim at supplanting, but at reinforcing, the moral and ethical beauty of psalmist and prophet who constructed the main trunk line of Jewish thought. A rigid critic might dispute whether scattered individual opinions, of the early rabbis at least, can be rightly called theology, which to-day is more of an exact science. One, too, would like to know more distinctly the extent of rabbinic indebtedness to non-Jewish sources along the lines under treatment. There is ample material for an additional volume which the author indicates his desire to write. The value of the book is enhanced by a full and exhaustive index, prepared by Miss Henrietta Szold. Both the cultivated general reader and the theologian will find the work enlightening in a surprising degree.

Die Engländer in Indien: Reiseeindrücke. Von Graf Hans von Koenigsmarck. Berlin: Allgemeiner Verein für deutsche Literatur.

From the title, perhaps, one might be led to think that Count von Koenigsmarck had given us a record of English possession and rule in India, with some reflections on the wisdom and results of the policy there. The book, however, is rather the summing up of what the author saw of English and native social life during a tour of India when he was repeatedly the guest of Englishmen in high station, and, through them, of native nobility. Criticism there is, to be sure, but it is almost always sympathetic and friendly, as when he praises the English wife, and especially the English woman long associated with Indian service, who, standing by her husband to the last, bears all the inconveniences of travel and the evil effects of climate and plague, in order to cheer and support him whom she promised to love and obey. Here and there, in an amusing anecdote or two, the German Count appears to have received a somewhat less favorable impression of a few *Amerikanerinnen*, who were clearly masters of their husbands; but, of course, these were "typical Western millionaires," flitting across India. As a true German, the Count draws a line, in his admiration of the English, at their cooking. "Pepper and Worcestershire sauce," he says, "are relied upon to make up all other deficiencies in the meal." Such a detail as this, however, is quickly forgotten in the charming atmosphere of the Anglo-Indian home, where the best of English virtues are more zealously preserved because of the vast distance between the mother country and the new domicile. One thing that impressed the German favorably was the religious freedom granted by the English to natives, and it is evident that the author regards the rule or management of India by English of the present day as, in general, on a high and liberal plane. He praises, also, English gardening and forestry and what it has done for India. In various cities, Count von Koenigsmarck came across colonies of his countrymen, doing well in their energetic pushing of German industrial projects which, "thanks to the enterprise of his Majesty, the German Emperor, have become widely and favorably known throughout India."

The most timely chapter in the book, and one that has some added significance as coming from a German, is that devoted to "young India," a "people who, whether Mohammedan, Hindu, or Parsee, have studied at English universities, mastered the languages and science of the Western world, travelled in Europe and America, take to the baths every year at Homburg or Carlsbad, and who can accomplish all that the Occident demands of them." Gone are the days when the white race may rule India at the cost of the native, or coop up the native in foul and inferior quarters: the vast change that has taken place is in no way better shown than in the occupation to-day by wealthy natives of the finest sites and best residences in Indian cities. The native enjoys the protection of the English rule, without half the care or responsibility, and in the end remains, to the core, a native, determined more and more on Home Rule. In the meantime, the Englishman, having given the best years of his life to bringing order out of chaos there, wanders home, broken in health, to die a premature death from work and worry.

By way of summary, we may say that the author is a good traveller, who sees, remembers, and reproduces, giving many interesting "snap-shots" rather than lengthy descriptions. The volume contains thirty-four engravings and a map.

Letters of a Japanese Schoolboy. By Wallace Irwin. New York: Doubleday, Page & Co.

Mr. Irwin deserves the credit of returning at an opportune moment to a vehicle of satire utilized nearly two hundred years ago by Montesquieu, some years later by Goldsmith, and very recently by G. Lowes Dickinson. There is an irresistible piquancy in Oriental comment upon Occidental civilization, whether made by a Persian in Paris, a Chinese in London, or a Japanese in San Francisco. Mr. Irwin has made one important modification in this satirical genre: Montesquieu's Persian wrote excellent French, and Goldsmith's Chinese, as well as Mr. Dickinson's, wrote excellent English, while Mr. Irwin's epistolographer is capable of only an extremely sophisticated Anglo-Japanese. This innovation, natural enough in our cosmopolitan society, has had two not altogether happy effects: It has caused the author to indulge in some rather far-fetched "pigeon-Englishing" for the sake of those whose lungs are tickled o' the sere, and it has partly concealed numerous diffuse and pointless passages produced when the author's inspiration was low. In general, the schoolboy falls somewhat short of the shrewd and trenchant intelligence displayed by his compatriot, Mr. Dunne's Irish-American. In some of the later letters the Oriental point of view is quite lost sight of, and the poor Japanese becomes the medium of a mere professional jester. The series starts, however, with the recent race riots in California and British Columbia, where the schoolboy's comment is really pertinent:

> During my residence in Hospital to enjoy brick-bat wound sent there by Labouring Union, I give some large quantities of thought-attention to future life. What business would be swiftest for making success of it? Waiting on table-board of Mrs. O'Brien, honorable lady, is repulsive to proud Japanese Boy any more do. Which would be better for me: To learn to be Christian Missionary or to study for book-keeping and stenography? Both ways lead to good jobs. My cousin Nogi, who return from British Columbia leaving front teeth

with English friends there, say, "Missionary jobs are no longer needed for Japan, because our dear country already have rapid fire fleet . . . sufficient to make all Japanese Christians."

In something like this vein the comment spreads out over race questions, labor questions, sports, fashions, Polar expeditions, Presidential elections, and the rest. For rapid or intermittent reading, it is not a bad book; it will add to the wholesome laughter of the passing hour.

Science.

"Times of Sunrise and Sunset in the United States," by Prof. Robert W. Willson, is a little book published by the Harvard Coöperative Society, Cambridge. The problem of working out the times of sunrise and sunset is a fairly complex one. The almanacs usually give them for some central latitude, but their figures are quite in error when applied to places north or south of the assumed place. Furthermore, these figures are usually in local time, and, as one rarely knows the longitude of his own residence place, they are of small value to the ordinary seeker for exact information. Professor Willson has given by means of carefully computed diagrams the times of sunrise and sunset for the whole of the United States at intervals of eight days throughout the year. By a simple interpolation the reader may get in standard time, to the nearest one or two minutes, the hour of sunrise or sunset for any part of the United States and for any day of the year. The tables are convenient and practical.

"Das Pferd und seine Geschichte," by Wilhelm Böische, the second volume of his well-known "Tierbuch," traces the evolution of the horse from his wild state until subdued by the Arabians. (Berlin: Georg Sondé.)

The great interest shown by Germans in the problem of conquering the air, by one form or another of airship, is evident from the almost daily publication of book or brochure on the subject. The last work to appear is from Dr. R. Wegner von Dallwitz, "Hilfsbuch für den Luftschiff- und Flugmaschinenbau" (Rostock-i.-M.: C. J. E. Volckmann). The forty-four illustrations are designed as practical helps to those wishing to try for themselves the building of an airship.

William Henry Wahl, for more than twenty-five years secretary of the Franklin Institute, Philadelphia, died in that city March 23, at the age of sixty. He was born in Philadelphia, was graduated from Dickinson College, and later took the doctor's degree at Heidelberg. Returning to America, he taught science in the Episcopal Academy of Philadelphia, and later at the Central High School there. He had been editor of the Philadelphia *Polytechnic Review*, associate editor of the New York *Engineering and Mining Journal*, editor of the New York *Manufacturer and Builder*, and of the *Journal* of the Franklin Institute. Among his writings are "Galvanoplastic Manipulations" (1883), "Technochemical Receipt Book" (with W. T. Brannt, 1885), "Handbook of Assaying" (translated, with additions, from the German), Vol. V of the "Iconographic Encyclopædia" (treating the constructive arts, 1893), "Historical Sketch of the Franklin Institute" (1894), and "Report on Petroleums, as to Their Safety and Danger."

Drama.

Griselda. By Gerbert Hauptmann. Berlin: S. Fischer.

The nineteenth play by the author of "Die versunkene Glocke" is a great advance over its predecessor, "Kaiser Karls Geisel," and is likely to meet with more popular favor than the fairy-tale, "Und Pippa tanzt." "Griselda," presenting some twenty-two persons, as contrasted with half a dozen in the "Friedens Fest," was staged simultaneously at Berlin and Vienna on March 6, and was, in general, warmly received. If in Vienna especially the audience held its breath for a while, doubting whether to applaud, the coolness was probably due to Hauptmann's boldness of speech rather than to any lameness in the early action. This extreme frankness of utterance eclipses anything found in Hauptmann before.

As in "Florian Geyer" and "Kaiser Karls Geisel," Hauptmann sometimes turns to German history and tradition, and "Griselda" is founded on the old story of Griseldis, a poor farmer's daughter, whose husband, a count, having chosen her for her exceptional beauty, puts her devotion to the test by depriving her of her children, and finally sending her back home. At last, when she has borne every trial and indignity patiently, the noble count takes her back. This material Hauptmann transforms and remodels so that but little suggestion of the traditional Griseldis is left. He brings before us Markgraf Ulrich, a roystering, untamed heir, and the buxom peasant girl, with whom Ulrich is fascinated at first sight. His decision to marry her follows the attempt of his kin to make him take to wife a lady of the court. Thus far the figures are neither of wood nor of straw, but warm-blooded, if not always warm-hearted, creatures. Griselda's sudden transformation, however, in the fourth scene, at the wedding, from a peasant girl to a court lady, is fanciful rather than possible; and Ulrich's change of mien, implying an inner regeneration, is a little too celestial. In portraying Griselda as a meek, suffering wife, looking forward to motherhood and doubting the love and fidelity of her husband, Hauptmann holds somewhat to the ancient tradition; but he changes the motive of the count in removing the baby from the mother's reach, in that Ulrich is depicted as so passionately in love with his wife that, from jealousy alone, he cannot bear to think that even the newborn child may come between him and the object of his affection. So, too, Ulrich does not drive Griselda from home, but, with soul aflame, she leaves the castle of her own accord and returns, in her peasant dress, to her parents' cottage. An impelling love for her child, however, draws her back, but only as a scrubwoman, to clean the steps of her palace. It is at this moment that her lost child comes into her arms, from a passing nurse, and in her hour of joy, Ulrich reappears, to be told by her, in answer to his question as to what he must do to atone, that he should love her, but less passionately.

In the scenes which exhibit persons in the higher walks of life, Hauptmann is less individual and forcible, but in the farmyard of the poor old Helmbrechts, the author of "Die Weber" is at his very best. Nowhere is his language more poetic. The colloquies between the aged parents of Griselda and the visit of the affectionate and bent old man to the bedroom of his daughter, to bring in some magic ointments prepared by the thoughtful Mutter Helmbrecht, show Hauptmann at his highest. The play is marked also by veins of humor.

When all has been said in its praise, however, it remains that "Griselda" is not equal to "Die versunkene Glocke," and probably not equal to "Hannele." But at least Hauptmann has not experienced the failure of "Florian Geyer" or stopped at the height attained in "Kaiser Karls Geisel."

"The Taming of a Shrew," the old play from which Shakespeare drew the plot of "The Shrew," has been reprinted several times before. The advantages of the new reprint in the Shakespeare Library (Duffield & Co.) are the neat and handy form of the book, the division of the play into acts, and the modernizing of the spelling. In other words, it is issued so as to attract the general reader as well as the special student of Elizabethan drama. The editor, F. S. Boas, furnishes a satisfactory introduction, in which he discredits the attribution of the play to Marlowe, Kyd, Greene, or (a theory revived by Prof. Courthope in his "History of English Poetry") Shakespeare. The usual appendixes follow the text, including a list of the extraordinary plagiarisms from Marlowe. The nature of these alone would disprove the Shakespearean authorship of the play, for our Stratford poet was not in the habit of spoiling what he borrowed.

Another volume in the Shakespeare Library presents a more complicated problem. "A Midsummer-Night's Dream" is one of the three plays whose plots Shakespeare seems to have invented himself; yet even here, as may be seen in Frank Sidgwick's compilation of "Sources and Analogues," the material was taken in free-handed manner. In his introductory study of the sources, Mr. Sidgwick considers separately the main or sentimental plot of the four lovers, the grotesque plot with

the interlude of "Pyramus and Thisbe," and the fairy plot. The discussion is excellent, although here and there, for example in the pages on fairy-lore, some of the material may seem too elementary for the scholar, and some of it too minute for the layman. The actual sources reprinted are Golding's translation (1575) of the story of "Pyramus and Thisbe" in Ovid's "Metamorphoses"; "Robin Good-fellow," from Collier's edition for the Percy Society in 1841; "The Romance of Thomas of Erceldoune," chiefly from the Thornton MS. in Lincoln Cathedral Library; selections from Scot's "Discovery of Witchcraft"; "Strange Farlies [marvels]," from Thomas Churchyard's "Handful of Gladsome Verses" (1592); "The Mad Merry Pranks of Robin Good-fellow," from a black-letter broadside of the seventeenth century; with extracts from Ben Jonson, Drayton, and others.

Dr. Willibald Klatt is the author of a work on Molière's relation to the pastoral drama: "Molières Beziehungen zum Hirtendrama. Mit einer Vorstudie: Haupttypen der Hirtendichtung von Molière" (Berlin: Mayer & Müller).

Frank Wedekind, an aggressive and tenacious personality, has succeeded in finding a following in Germany, and has attracted the attention of French critics. After his repulsive "Musik," in which he presented with unnecessary brutality the unscrupulous licentiousness of a vocal teacher and the incredible weakness of a girl-student, he condensed into one act the tragedy of the poet and his muse, "Zensur: Theodizee." His latest play, however, "Oaha" (imported by G. E. Stechert & Co.), is a picture of life in the editorial world of a German magazine, so full of allusions to the *Simplizissimus* as to be barely comprehensible to the general reader.

There is one thing to be said about "An Englishman's Home," the play by Major Guy Du Maurier, which has been the cause of so much military hysteria in England, and which was produced in the Criterion Theatre on Monday evening, and that is, that, whatever may be thought of its motive or its logic, it is a mighty effective piece of work of its kind. Moreover, it is a veritable drama, admirably constructed in accordance with classic principles, and with a strict observance of the unities. The whole story is unfolded in action, the catastrophe is the legitimate result of the premises, and there is the closest correlation between incident and character. And, in addition to all this, the dialogue, although utterly devoid of literary pretence, and often studiously silly, is uncommonly good, because of its verity, its conciseness, its satirical significance, and its perfect appropriateness. Technically it is an astonishingly well made piece for a first effort, and incomparably superior in all dramatic essentials to the "Trilby" which made the fortune of the author's father. Regarded as a recruiting document and as a plea for the organization of a citizen soldiery for home defence—without reference to the vexed question of the likelihood or practicability of the imaginary invasion—and as a bit of fierce social satire in the mood of Kipling's muddied oafs and flannelled fools, it is a striking achievement. Of course it is flavored strongly with the professional contempt of the trained for the amateur soldier, but those who are familiar with the quality of the ordinary British volunteer in the rural districts will realize that the picture drawn of the local Essex forces, if somewhat exaggerated, is by no means destitute of truth. If it be once granted that a sudden invasion of Great Britain is possible, the picture of fussy and comical incompetence, with all its disastrous consequences, becomes plausible enough. But the real sting of the piece lies in its merciless ridicule of that section of the vast middle class of the British population, the great body of smaller commercial men, shopkeepers, clerks, mechanics, and idle youth of all kinds, having no sense of social, individual, or national responsibilities, or much interest in anything except the music hall, the football field, and prize contests in the yellow journals. There is so much bitter and wholesome truth in all of this that the play acquires a special significance wholly apart from its merely military sensations. It is not difficult, after seeing it, to understand the stir it made in London, but it by no means follows that it will attract as much attention here, where it has no local application. The American audience laughed at the exhibition of incapacity which would have made most Englishmen grind their teeth. But the piece is good entertainment, taken simply as realistic melodrama. It is pleasant to think that in the original form Major Du Maurier brought it artistically to a tragic end. The present boastful finish is not only idiotic in itself, but makes nonsense of the whole representation. In this city there is absolutely no excuse for it.

E. H. Sothern will begin his engagement at Daly's Theatre in this city, April 29, with a revival of "Richelieu." He will also be seen in "Hamlet," "Lord Dundreary," and "If I Were King."

There seems to be no doubt of the fine quality of John Galsworthy's play, "Strife," which has just been produced in London. It is a story of a fierce fight between capital and labor; of a strike in which the employers on the one hand and the men on the other are prevented from making mutual concessions by the unrelenting obstinacy of their respective leaders. Incidentally, the sufferings of the innocent wives and children of the idle workmen are set forth in a series of realistic pictures which are said to be of almost harrowing pathos. An especially strong impression was made by Norman McKinnel in the character of the rigid old capitalist, John Anthony.

Oscar Asche and Miss Lily Brayton produced their new play, "Count Hannibal," at Bristol, England, last week. The adaptation of Stanley J. Weyman's novel has been done by Mr. Asche himself, with the assistance of Norreys Connell. Mr. Asche appeared as Count Hannibal Travannes, and Miss Brayton as the fair Huguenot, Clotilde.

A. E. W. Mason, who is better known in America as a novelist than as a playwright, has written a new comedy of modern life called "Colonel Smith," which has been accepted by George Alexander for production in London. Mr. Alexander will play the principal male part, with Miss Irene Vanbrugh as the heroine.

Beerbohm Tree will produce "The School for Scandal" in London April 10. He himself will play Sir Peter Teazle, Edward Terry will be the Crabtree, Henry Neville the Sir Oliver, Lionel Brough the Moses, Robert Loraine the Charles Surface, and Basil Gill the Joseph. For the part of Lady Sneerwell, Miss Ellis Jeffreys has been engaged, and Miss Marie Lohr will represent Lady Teazle.

F. R. Benson's company, in England, has sustained a severe loss in the death of George R. Weir, the oldest and one of the ablest members of the organization. He was born of Scotch and Welsh parents in Glasgow, and began his stage career with Barry Sullivan. For twenty-six years he undertook all the leading comic rôles in the Benson company's productions, such as Stephano in "The Tempest," Sir Toby Belch, Autolycus, the First Gravedigger, and the Fool in "King Lear."

Music.

The Peasant Songs of Great Russia. By Eugenie Lineff. London: David Nutt.

Hopi Songs. By Benjamin Ives Gilman. Boston: Houghton Mifflin Co.

In the opinion of Eugenie Lineff, the chief strength of the modern Russian music which at present plays so important a part in the concert halls of two continents, lies in this: that it reflects the life of the people collectively, the masses having helped in creating this music. In other words, the Russian composers, from Glinka, the creator of national opera, through Dargomijsky, Borodin, Seroff, and others, to Rimsky-Korsakoff and Tchaikovsky, wrote works which are full of the echoes of popular melodies. These melodies have been frequently collected and printed in a more or less—generally less—satisfactory manner, and they are frequently sung in Russian music halls and sometimes in ours. Some years ago, when Eugenie Lineff gave some "lecture-concerts" in this country, she was frequently asked whether her company sang "genuine folk-songs." She could only reply that they sang according to the best existing collections; but on her return to Russia she determined to make a thorough study of the originals, with the aid of a phonograph. She soon discovered that the collections she had followed were frequently misleading, the songs having been noted down by ear, a process particularly untrustworthy in the case of the Russian songs that are sung in two, three, or four parts. She compares the recording of a song by phonograph to the kinematographic process, and asserts that the twenty-three songs printed in her volume are the first record of Russian peasant tunes made in this manner. In transcribing them from phonograph to piano some of the exactness of the phonograph had to be sacrificed because the piano has only the "tempered" intervals; but in other respects, apart from tone color, these part songs are as sung by the people—

at times, for the singers incessantly vary them in accent and other details in accordance with the district, village, street, and the inspiration of the moment; for these performations are largely improvisations. There are also chapters on the singers of these songs and on the tonality and musical scales. The second half of the volume, containing the musical illustrations, is printed in the Russian language; but, fortunately, the Russians use the same musical notation that we do.

If the tonality, the modes, and scales of the older Russian folksongs present puzzles to our ears, far more does the American Indian music of which Mr. Gilman presents specimens in his volume on Hopi songs, which completes an inquiry into Pueblo music begun in 1891 with a study of Zuñi melodies. The records upon which these investigations are based were obtained in Arizona by Dr. J. Walter Fewkes, now of the Bureau of Ethnology, Washington, at the time in charge of the Hemenway Southwestern Expedition. He first applied the phonograph to the preservation and study of aboriginal folklore. To the lay mind nothing seems simpler than the taking of such phonograph records, but these pages show that the securing of exactness requires the most exacting investigation and adjustment. These records show not only how Indians make music, they show music itself in the making. In his treatise on Zuñi melodies the author called them examples of a music without scale. "In this archaic stage of the art," he says, "scales are not formed, but forming." For this novel view he now has sought confirmation in the performances of Hopi singers, which, in his opinion, strengthen the belief that aboriginal American music "is a type apart, whose essential remoteness from the music of Europe and Asia may be symbolized, as it doubtless was conditioned, by the physical isolation of the Americas. . . . The hearer seems witness to a wholly strange method of musical thought and delivery."

Not only is this Indian music apparently without scale, but it is otherwise characterized by the freedom which the white race personifies in the Indian. No metes and bounds to invention manifest themselves; such exactness as the music possesses does not lie in the individual intervals, and the melodies may apparently be altered by every performer:

> The song is no fixed scheme in the singer's mind, but a composite memory of many free renditions, as a folk-tale in the mind of the narrator, minute exactness alternating with wide latitude in the recital.

Of particular interest is what Mr. Gilman has to say about "mutation" in this music; that is, a partial change in the pitch of repeated phrases. While having points of resemblance to both discord and modulation, mutation is a different means of musical effect from those upon which our music is largely based. There are several kinds of mutation (see pp. 17 and 217), and with their aid the Indian singer can produce changes of mood comparable to those we attain by passing from the gay major to the sad minor mode. One of the tunes recorded in this volume makes up "a dialogue of moods like Tennyson's 'Two Voices.'" Here is a new thought for our white composers of red music! But they had better make haste, or Debussy will hear of this and get ahead of them by writing an aboriginal American opera. It is just in his line.

When Verdi, at the age of eighty, launched a new opera, all the world marvelled at the feat. Musicians extolled the exquisite style of this "Falstaff," but after the first curiosity had been gratified the opera was neglected and all efforts to revive it and make it a regular part of the repertory have failed everywhere. In this city it was sung three times in 1894-5 and three times the following season. Then it was shelved till last Saturday, when it was revived at the Metropolitan under Mr. Toscanini and with an excellent cast. The attitude of the audience indicated that again it will not survive three performances. There is much in the score to interest musicians, but what the public wants in an opera is melody, and melody even Verdi was unable to create at the age of eighty.

Wassily Safonoff's successful activity at the head of the New York Philharmonic Society, extending over a period of six seasons, will come to an end with the concerts to be given on Friday afternoon and Saturday evening of this week at Carnegie Hall. Out of compliment to the nationality of the conductor, a programme consisting wholly of the music of Tchaikovsky has been arranged. The "Pathétique" Symphony, "Italian Caprice," "Elegy" on string orchestra from the Serenade in C major, and "Slavic March" are the selections. It was the "Pathétique" Symphony with which Mr. Safonoff, at his first appearance with the Philharmonic Society, at once established himself a favorite with the New York public, and it has ever since remained his strongest and most impressive interpretation.

Isaac van Vleck Flagler, organist and composer, died at Auburn, N. Y., March 16, at the age of sixty-one. Among the collections of pieces he composed and edited are: "Five New Collections of Organ Music," "Organists' Treasury," "New Collection of Choir Music," "New Era of Song," and "Songs of Praise and Devotion."

Frederick H. Pease, for many years director of the music department of the State Normal College at Ypsilanti, Mich., died March 22, at the age of sixty-nine. He was born in Farmington, O., and, after study in both America and Europe, he came to Ypsilanti as teacher in 1863. He was author of a number of music books, among them "Pease's Singing Book," "Choral Instruction Course," and "Choral Song Book." He also composed a number of pieces of church music.

Art.

A SHOW OF FAIR WOMEN.

LONDON, March 10.

The International Society, having hit upon a name for a show that draws the public and still admits of interesting work, seems unwilling to give it up, and again this winter, for the second exhibition at the new gallery, has arranged a collection of Fair Women. Place has been found not only for pictures of distinction and of use to the student, but for pictures of either hopeless commonplace or of no use to anybody except the lover of the sensational. Though many contemporary portraits might have been left out to the advantage of the exhibition as a whole, they at least help to emphasize the difference between the methods of the artist who thinks only of the quality of the portrait he is painting, and the methods of the painter who is preoccupied with the effect to be produced on the walls of a gallery. When you see the affectations and poses of the men who struggle for recognition to-day, you realize the dignity and reticence of the men who were looked upon as the independents of the older generation and who were condemned as eccentric.

In point of time, the collection goes back to the eighteenth century. Reynolds and Gainsborough may not rank with the greatest masters of all, but they were far more than manufacturers, and the two pictures by which each is now represented are among their most characteristic. Reynolds painted few portraits with greater life and charm than the well-known Georgiana Duchess of Devonshire and Child; Gainsborough painted few of more subtle truth and sympathy than his Mrs. Elliott. It is a pleasure to see these again, but in the present series they are of less immediate interest than work of a later date for the simple reason that they have had little influence on the art of to-day. An occasional modern painter in England may have gone back to the eighteenth century; but Courbet, Whistler, and Manet are the artists who, of all others, have had the most vital influence on modern art. By the time that Courbet had become a force in the Paris schools and studios, the Pre-Raphaelite movement in England was on the wane; but this movement was the English outcome of the same defiance of convention and academic ideals that made of Courbet a leader. The exhibition contains, however, little more than reminders of the Brotherhood: studies in pastel for his pictures by Ford Madox Brown; water color, pencil, pen-and-ink drawings by Rossetti; Venus's Mirror by Burne-Jones, a sad and dreary picture as one sees it now. Of the Pre-Raphaelite Millais, there is nothing ex-

cept his Eve of St. Agnes, though what it is doing in a collection of Fair Women, it is hard to say. His few portraits of a later period, though of no great importance, are painted with a knowledge and a freshness that make many near canvases look muddy and fumbling, while in one, the portrait of his daughter, there is a bunch of flowers so delicate and subtle in handling that, by comparison, the more ambitious details of other painters seem vulgar and crude. For Millais was accomplished technically, if he often fell away from his own high standard. Studies by Leighton, careful but uninspired, early portraits by Watts, of Lady Holland and Ellen Terry as a girl, complete the work of any note by British artists of their generation. It has so little in common with anything else in the gallery that you might think it was there solely to prove how slight was its effect upon the art of England or the art of the world.

It is another thing with the contemporaries of these men in France, who also believed in the return to nature which the Pre-Raphaelites preached, but did not know how to practise. Courbet stood in no need of Primitives, or of anybody, to show him the way to nature. He used his own eyes and would have been the last to content himself by substituting a new convention for an old. Only one of his pictures is exhibited, Jeunes Fille cueillant des fleures, but in it you have an example of pure realism, of nature studied for herself, and you find that robust quality which only this intimate, intelligent study of nature will give. The young girl is solidly and vigorously painted, but she stands to one side as if trying to efface herself, and not distract attention from the mass—the avalanche—of flowers filling the rest of the canvas, put down in all their delicacy and fragility of form, in all their vividness and tenderness of color, but with a breadth that shames the tedious little photographic details of the Pre-Raphaelites. This is really a study of nature, not an inventory; and though the picture is not so typical of Courbet as some of his more famous canvases, it explains what "going to nature" and "realism" meant to the school of which he was the prophet.

A Whistler hangs beside the Courbet, and a second fills a centre in the same gallery. This is the Symphony in White No. III, too often seen of recent years to need description. It has artistic interest, apart from its own beauty, as the first picture he exhibited as a Symphony, and marks, therefore, his complete emancipation from Courbet. The other Whistler is The Gold Girl, the portrait of Connie Gilchrist, who, with her skipping rope, was a music-hall celebrity. I have never thought it one of Whistler's finest compositions, and it was never quite finished. The difficulties for a painter, so dependent on his model, were great, for he wanted to show the dancer in the art of skipping, and succeeded really only in rendering arrested movement. But the lines of the lithe girlish figure are of the utmost grace, the folds of the curtain behind her carry out most wonderfully the curves of the rope, while the golds of this curtain and the girl's dress, just broken by the effective little touches of red in the handles of the rope, make as beautiful a harmony as he ever created. There is, however, a heaviness in the background, which, together with the failure to suggest action in the figure, just keeps it from being the masterpiece it ought to be. But both these pictures explain the aims and achievement of the painter who was destined to be a stronger influence during the last half-century even than Courbet.

There is only one Manet, the portrait of his mother, a half-length, not exhibited, I am told, since 1867. It is an extraordinary performance, a piece of realism if there ever was one. The mother, elderly but not yet old, is sitting, her hands in her lap. She wears black, her hair is black, and is arranged in tight puffs on either side of her face in the fashion for elderly ladies of her day, and over it is the black cap the Frenchwoman of her age and class is still so likely to wear. Her face is plain, the eyes prominent, the beginning of a black moustache on the upper lip. Thus she was seen in life, thus you see her on canvas, and by the sheer strength of the realism and the vigor of the painting, she is so alive, so abounding in vitality and character, that the near portraits fade into phantoms. She has the supreme beauty of ugliness that you find in some Rembrandts—not a Fair, but a Real, Woman, whom you would not exchange for a whole gallery full of modern attempts at prettiness or eccentricity.

I dwell upon these three men because there is no question to me that they have had more effect upon art than any artists of the last century.

In the Sculpture Hall, space has been made for a fine show of Alfred Gilbert's work. The collection is representative, including some of his most distinguished portrait busts, statuettes, part of the tomb for the Duke of Clarence, jewelry, and official badges, chains, and seals. In fact, an excellent opportunity is given for the study of the work of the most distinguished English sculptor. The effort has also been made to get together a characteristic collection of the work of Charles Conder, who died shortly before the show opened. Conder had a charming decorative sense within certain limits. He could decorate a fan delightfully, his silk panels were dainty, he painted shawls, even dresses with a graceful gaiety. But his charm was chiefly in his color and in the quality he got from the silk upon which so much of his work was done. But most of the pictures now exhibited are of figure subjects and reveal his weakness as a draughtsman, especially when he attempted to draw or paint the nude.

N. N.

The Ways and Means Committee would have found it hard to explain any smaller liberality than has been displayed in revising the art tariff. Against the present virtually prohibitive tax, every hand has been turned save only that of the Philistine who believes that every expensive thing is a luxury, and therefore ought to be discouraged. Travel and wider familiarity with the great public and private collections of our own country have taught Americans the use of beautiful things and broken the older backwoods philosophy of art, which fitted so neatly into the Republican scheme of protection. We may now hope to be enriched by the wonderful treasures of the eye which Mr. Morgan and other connoisseurs have stored up in Europe. But even if the greatest American collections abroad are not brought in, tourists will increase their purchases, and art dealers' imports will increase. Only in modern works will the inflowing current continue to flow shallow, unless Congress yet sees the absurdity of taxing contemporary foreign artists in the hope of aiding home talent.

Ralph Nevill's "French Prints of the Elghteenth Century" (The Macmillan Co.) is a good elementary handbook of the subject and something better; for it is agreeably written and contains much of anecdotal interest. A plea for the work of the *école galante* is really needed in English. Lady Dilke did much to reveal the essential seriousness of this apparently frivolous art, but the average Briton, or, for that matter, American, finds it hard to overcome certain racial misgivings. It is not that the Briton objects to the occasional naughtiness of the French designers (he gladly collects far naughtier prints made in England), but he is morally perturbed before a naughtiness that presents itself with such charm and taste. As a matter of fact, the austere collector may readily enough ignore that minority of salacious subjects, and find an enjoyment both keen and innocent in the delightful invention and workmanship of the rest. To depict the society of the waning *ancien régime* the engravers provided a peculiarly appropriate technique—an engraving first fully executed in etching, and always preserving the freshness and informality of the sketch. Then the color printers devised difficult methods to reproduce the gouaches of Lavreince and others. In comparison with the French color printing, that of England is puerile. Only that of Japan surpasses it. To all these matters Mr. Nevill is a cicerone, both competent and vivacious. He provides, beside a text of a very informatory sort, a select catalogue of the more important prints, including summary notices as to states, sale prices, etc. Fifty plates add to the usefulness of the book. We could wish that more attention had been paid to the book illustrators, Gravelot, Marillier, and others. From poor or imperfect copies of eighteenth century books, prints quite as meritorious as those

in Mr. Nevill's catalogue may be rescued. But perhaps he assumes that collectors of this thrifty sort need no advice of his. It is well perhaps that we remind ourselves of the secondary character of these charming prints, taking them only for what they are. When we wish to grasp the quintessential spirit of eighteenth century France —to feel the fantastic delicacy of its gallantry, the convinced audacity of its wantonness, the serenity of a domestic life persisting nevertheless—we must go beyond the prints to the painting of Watteau. Fragonard, and Chardin. As historical documents, true records of the semblance of the times, the prints are of unique importance. No race or period has left a more vivid picture of its walk and conversation.

Of the excellent collection of works of sacred art published by the Catholic house of J. J. Kösel of Munich and Kempten, under the general title Ars Sacra: Blätter heiliger Kunst, a second set has now appeared, called "Gleichnisse des Herrn" (the first series bears the title "Vom Erlöser"). The new collection brings twenty illustrations of Parables of Christ—reproductions, the earliest going back to the catacombs of Rome, but only five antedating the year 1800. German, Dutch, and English painters are represented.

According to the reports that are already coming in from various excavators, the exploring season in Egypt promises to be as successful as heretofore. At Karnak, M. Legrain is continuing his work of restoration on the great hypostyle hall of Rameses II. It is noteworthy that in effecting this work M. Legrain has employed the same methods as the original builders, the fallen pillars having been gradually raised to their positions by inclined planes of earth. He has also discovered to the north of the temple a prehistoric cemetery, from which interesting finds are expected. Theodore M. Davis is continuing his work at the Bibân el Moluk, or Valley of the Kings, where he has discovered another tomb, presumably of a king or other royal personage. At Abydos the work for the Egyptian Exploration Fund is going on; the excavators have paid a visit to a predynastic cemetery at Mahasna, and have unearthed there more than sixty untouched burials, which have yielded a rich harvest of predynastic ivories, pottery with painted and sculptured figures of animals, stone and ivory mace-heads, and an incised figure of a lion strongly resembling the prehistoric paintings found at Brassempouy, Mas d'Azil, and elsewhere. At Abydos excavations have also been begun on the Omm el-Gaab, or Tombs of the Kings of the first dynasty. They have already yielded some seals—which form additional proof for the identification of King Den with the so-called Marneit—and have laid bare two roads bordered with pottery. Near by, Prof. John Garstang of Liverpool University has opened, on the road leading past the village of El Arabat, a series of tombs which appear to belong to the fifth or sixth dynasty, and which exhibit an interesting mode of burial. The skeleton is found lying on its back with the legs crossed, in the remains of a wooden coffin, on the middle of the lid of which was placed a large inverted shallow pot or pan of red polished ware and of beautiful workmanship. The coffin also usually contained a copper mirror, pots, and alabaster vases, and in one instance a great quantity of small copper implements. The women seem to have been buried in the same way as the men. None of the bones show any signs of mummification. No inscribed objects have as yet been found. Professor Garstang has also obtained, in the so-called "Fort" at Shuneh, many jar-sealings of King Khasekhmui, a king of the second dynasty, and has discovered a tomb with an inscribed door frame and a table of offerings, the former dating from the twelfth dynasty.

At a meeting of the British School, held at Athens in February, Mr. Wace gave an account of the excavations undertaken on the prehistoric site on the hill of Zerella, near Almyros, in Thessaly. Remains have been found there of eight successive cities, of which the first seven belong to the stone age. A chronologically complete series of pottery could be traced among the remains. The most ancient layers yielded a plentiful supply of decorated red-on-white ware; the later strata are distinguished by the superior workmanship of the axe-heads and stone implements. From the thickness of the deposits and from other indications it seems probable that the stone age in northern Greece lasted until a comparatively late period, and that the bronze age came in at a much later date than it did in the Ægean.

At the second general meeting of the Hellenic Society, in London, P. N. Ure read a report on recent excavations in the ancient cemetery, at Rhitsona, in Boeotia, a site which has been identified with Mycalessus. A large number of graves have been examined which yielded a rich harvest of vases and figurines belonging mostly to the sixth century B. C. Though other wares, such as "Proto-Corinthian," Corinthian, and Geometric, were also represented, the large majority were in the Boeotian geometric style. Of special interest was the discovery of a Naucratite vase.

The second International Archæological Congress will be opened at Cairo on April 10. There will be six sections: (1) Preclassic: The Ægean and Mycenean civilizations; (2) Classic: Greek and Roman archæology and epigraphy; (3) Papyrology: Manuscripts of classical authors, etc.; (4) Religious archæology: Greek and Roman religion; (5) Byzantine archæology; (6) Numismatology and geography. Special attention will be paid throughout to the relations of Egypt with Greece and Rome.

After the fading of Sorolla's sunlight in the Hispanic Museum, any paintings shown there could not but appear pale; and this is the first inevitable impression made by the 38 pictures by Ignacio Zuloaga, who follows his fellow-Spaniard. His work is of an entirely different order, in both theme and technique, yet powerful in its way. Almost all these canvases are of the nature of portraits, and Zuloaga keeps to the grand artistic canons of Spain in seeking his subjects on every hand—gypsies, bullfighters, actors, dwarfs, hags, peasant women, and great ladies. Everybody is paintable to him. His leaning, however, seems to be to the eccentric, or the actually repulsive. Deformity, oddity, lined and weazened visages tempt him often. This makes it possible to produce his bold strokes and strong effects, as in the wrinkled old actor, Zambilli, or the extraordinarily vigorous Sorceresses of San Millán—a masterly, but depressing canvas—but it does not yield the surest proof of his being a really great portraitist. Even his young women usually have unpleasing features, and one is left wondering if he could paint a really beautiful woman, or the soft contours and delicate coloring of a child. The nearest answer which the exhibition gives is in the Mlle. Bréval as Carmen, in which the costume and light are brilliantly handled; yet all doubt is not solved. But these pictures leave no doubt that Zuloaga deserves his fame as a remarkable artist, the inheritor and continuer of the noble tradition of El Greco, Velázquez, and Goya. Neither so extensive nor so overwhelming as the "one-man show" of Sorolla, this second collection of contemporary Spanish paintings now brought to the notice of Americans by grace of Archer M. Huntington and the trustees of the Hispanic Museum, is one proof more how far Spain is from being, where Lord Salisbury incontinently put her, among "the dying nations."

Prints by Bohemian artists of to-day will be shown at the Lenox Library till March 31. Among the exhibitions at the dealers' galleries in this city are paintings and etchings by Augustus Koopman, at Cottier & Co.'s, March 31; figure subjects by American painters, Macbeth's, April 1; sketches and studies, Frank Fowler, Powell's, April 3; annual exhibition of the "Ten American Painters," Montross's, April 7.

A number of pictures of the James A. Garland collection were sold at auction at the American Art Galleries in this city March 20. The more important prices were the following: Millet, A Shepherdess, $11,300; T. Rousseau, La Ferme, $1,700; Daubigny, Morning on the Marne, $14,000; Diaz, L' Ile d'Amour, $5,200; J. Dupré, Cattle and Pool, $8,000; Corot, Le Pâtre, $15,900.

Alfred Cornelius Howland, who died at Pasadena, Cal., March 17, at the age of seventy-one, was a New York artist and member of the National Academy of Design. He was born in Walpole, N. H. After graduating from the academy at Walpole, he studied art in this country and abroad, at Düsseldorf and at Paris. He became an associate of the Academy in 1872 and a member in 1882.

Charles M. Kurtz, director of the Buffalo Fine Arts Academy, died in that city March 21, at the age of fifty-four. He had been a member of the staff of the New York *Tribune*, and for nine years editor of the *National Academy Notes*. He was a director of the art department of the Southern Exposition in Louisville, assistant chief of the department of fine arts of the World's Fair at Chicago, assistant director of fine arts for the United States Commission to the Paris Exposition in 1900, and assistant chief of the department of art, Louisiana Purchase Exposition.

Alfred-Nicolas Normand, the famous French architect, doyen of the Académie des Beaux-Arts, has died at the age of eighty-six. His most important works were the Hôtel Pompéien in the Avenue Montaigne (1865, now no longer in existence), the reconstruction of the Vendôme Column after the Commune, and the Hôpital de Saint-Germain-en-Laye.

The death is announced in his seventy-first year of the well-known contributor to the *Gazette des Beaux-Arts* and *L'Illustration,* Alfred de Lostalot de Bachoué. He also wrote a number of books, including "Les Arts au bois," "La Peinture française," and "Procédés de gravure."

Finance.

LONDON'S GOLD RESERVE.

On January 14, when money was especially easy on all the principal markets of the world, the Bank of England took the seemingly paradoxical step of raising its official discount rate from 2½ per cent., at which it had stood during the eight preceding months, to 3 per cent. The reason was not that demand for money had substantially increased at London, but that the bank was losing gold from its own reserve, in larger quantities than it liked. Most of this gold had gone to Paris. Though London had sent to the French market, during the full year 1906, only $6,000,000 more gold than it had received from Paris, and though the net shipment of 1907 had been only $10,000,000, the English market's loss on French account, in 1908, was no less than $112,000,000. Moreover, the outflow had been increasing with the opening of 1909. During the four months up to the middle of January, all of the $51,000,000 gold received by London from its Transvaal mines had been at once reshipped to Paris.

The causes of this persistent movement were complex. It has been variously ascribed to the large foreign indebtedness incurred by England during the Boer war of 1899-1902; to the unfavorable influence, on a great manufacturing state, of the high price of imported raw materials; and, by some London bankers, to the fact that reduction in the Bank of England rate to 2½ per cent. in 1908, when the Bank of France maintained its former 3 per cent. level, had placed London at a disadvantage. Whatever the cause or causes, the result had been that, while the three state banks of France, Germany, and Russia had added, all told, $300,000,000 to their gold reserves in the twelve months before the middle of last January—the Bank of France alone having gained $172,000,000—the Bank of England's gold reserve, on January 14, stood $20,000,000 below that of a year before. The Bank of France, the Bank of Germany, and most of the other great banking institutions of the world, including the New York Associated Banks, held at the time the largest stock of gold in their history; the Bank of England held $90,000,000 less than in 1896.

The effect of the Bank of England's higher rate was immediate. All gold arrivals from South Africa thenceforward went automatically into the English bank; and there followed moderate shipments of gold from Paris to London. During the two months after the bank rate advance of January 14, the Bank of England gold reserve increased $31,500,000. In the four past weeks, the French bank has lost $9,000,000 gold and the English bank has gained $10,000,000.

A week ago, gold exports began from New York to London; the interesting fact about that movement being that, except for a moderate $4,000,000 shipment early in 1907, our market had sent virtually no gold at all to London since 1900, although we had sent to France, in the same period, $232,000,000 and to Germany $47,000,000. We had imported gold heavily at intervals in the same period, but most of it—notably our enormous engagements in the panic months—came from London.

With the arrival of the first consignment of our gold at London came, last week, another turn in the situation. During the three or four years past, English bankers have been busy discussing whether the gold reserve underlying the credit structure of London ought not somehow to be increased. The discussions developed varied plans. Some bankers proposed that the government itself should accumulate a stock of gold; others, that the Bank of England should no longer be allowed, as at present, to have £18,450,000 notes outstanding against government securities, but should be required to substitute gold; still others, that the joint-stock banks, which at present keep their reserves in the Bank of England, should take measures to keep reserves in their own vaults. Three weeks ago, a committee of the London Chamber of Commerce reported on the question, but guardedly and vaguely. Last week, it was learned that a large joint-stock bank, the London City and Midland, had taken into its own vaults $1,500,000 gold arrived from New York city—the first recorded instance when any home institution but the Bank of England has taken imported gold for such purposes. More of our gold is expected to be transmitted to the same institution.

It may be asked why London is worrying over its gold reserve. Chiefly for the reason already shown; that, alone among all great banks, its stock in vault is actually less to-day, with all the increasing world's production, than it was in 1896; largely because of nervous irritation over such episodes as New York's "raid" on the London gold reserve in the panic of 1907, and the constant drain to France in 1908; partly because of doubt as to what would be done in case of war. People used to talk of the "war chests" in the Banks of France and Germany. An eminent English economist once said that, if England were involved in a serious international conflict, the Bank of England would stop gold payments, and the government take possession of its gold.

The curious part of the problem is, that nobody has suggested doubts as to the wisdom of the great joint-stock banks going virtually without a reserve in their own vaults. The 40 to 50 per cent. reserve in the Bank of England, where their reserves are kept, largely explains this view of things; the conservative methods of London banking afford another explanation. Possibly, however, the joint-stock banks themselves are now looking a little further forward.

Just issued in "The American Nature Series."

BIRDS OF THE WORLD

By FRANK H. KNOWLTON, of the U. S. National Museum, with chapter on the Anatomy of Birds by F. A. LUCAS, Chief Curator, Brooklyn Academy of Arts and Sciences, and edited by ROBERT RIDGWAY, Curator of Birds, U. S. National Museum. Large 8vo. With 16 colored plates and several hundred text cuts. $7.00 net. Carriage 40 cents.

A modern, popular account. The most comprehensive one-volume work on the subject. Following several preliminary chapters on the general appearance and structure of birds, their migrations, distribution, classification, etc., every known family, both fossil and living, has been passed in review and accorded approximately equal and even treatment. The treatment of the so-called game birds has purposely been made very full. Technical language has been avoided so far as possible, and the main attention given to birds as they appear in their homes, that is—their plumage, habits, songs, nests, eggs and food.

Prospectus of Series on request.

The Government of American Cities

A Study of Municipal Organization and of the Relation of the City to the State.

By Horace E. Deming

Chairman of the Executive Committee of the National Municipal League.

Crown 8vo. $1.50 net.

A compact and illuminating exposition of the fundamental principles upon which city government in the United States must be based if it is to be honest and efficient.

The book is the outcome of a study of municipal problems not only in the United States, but in England and on the Continent. The experiences of foreign cities are brought to bear upon America's problems of to-day.

MAGAZINES (Including THE NATION) bought by A. S. CLARK, Peekskill, N. Y.

OUR LIBRARY SERVICE

We have recently supplemented our service to Libraries, by procuring Out-of-Print and Scarce Books, and by importing English books.

Our Educational Catalogue contains a full list of Supplementary Reading, indicating the grade to which each title is adapted.

Our Clearance Catalogue contains overstock at special prices, and an alphabetical arrangement by authors of all cheap editions of Recent Popular Fiction and Standard Library 12mos in one list.

Our Library Catalogue of 3,500 approved titles, following A. L. A. lines, is of great convenience to small libraries.

Our Monthly Bulletin notices promptly every new book of importance.

These Catalogues are sent on request.

Three notable features of our service are: Promptness, thoroughness, and low prices.

THE BAKER & TAYLOR CO.

Wholesale Dealers in the Books of All Publishers

33 East 17th St., New York.

How much moral influence would a policeman drest in overalls exert?

His badge and uniform are the mediums thru which his power is recognized.

And so the vital truths of important messages abandoned to cheap paper are missed because of the poor first impression.

OLD HAMPSHIRE BOND

"Look for the Water Mark"

is the "uniform" of the messages from the better business houses and they don't reach the waste-basket.

Perhaps the importance of using good business stationery hasn't imprest you yet. To start, let us send you a specimen book of OLD HAMPSHIRE BOND.

Hampshire Paper Company

We are the only paper makers in the world making bond paper exclusively

South Hadley Falls, Massachusetts

TheMusiciansLibrary

Forty-five handsome volumes now ready—masterpieces of song and piano music.

Free booklet containing complete description and table of contents sent on request.

DITSON BUILDING, BOSTON, MASS.

BOOKS Not Readily Procurable in the Regular Way

generally supplied without difficulty and within a minimum length of time. Out catalog of publications and rarities on request. THE TORCH PRESS BOOK SHOP, Cedar Rapids, Iowa.

The Nation.

NEW YORK, THURSDAY, APRIL 1, 1909.

The Week.

President Taft, according to the reports from Washington, is opposed to tariff duties on the "necessaries of life"; and with good reason for the taxes on necessaries are what make tariff bills odious. But the question as to what are the necessaries is not easy to determine. Tea and coffee may fairly be classed under that head. The case for stockings and gloves is not quite so clear; indeed, the argument that high-priced stockings and gloves are luxuries is not without force. The members from the rural districts can dwell with much unction on the virtues of the simple, strong, and perhaps homely materials worn by the hard-working wife of the hard-working farmer. Why should the daughter of a Wall Street millionaire not pay a heavy tax if she insists on the finest glove instead of the far warmer and more substantial buckskin mitten? A number of members are urging that the internal revenue tax on beer shall be doubled. Within a year both England and Germany have undertaken to derive more revenue from this source, but have discovered a general feeling that beer is a necessary. In this country, we are confident, the tax on alcoholic drinks would meet with less opposition. Probably the people as a whole would not object to seeing the tax as heavy as the traffic will bear.

For a party so seemingly habituated to anarchy and dissension, the Democrats at Washington are taking their latest split rather bitterly. Regulars and insurgents, when they meet, snarl at each other. Several fist-fights have been narrowly averted. Old friendships have been broken. Irate Congressmen bid one another go to places where the tariff on wool is not an issue of primary interest. The gods that hate traitors, quitters, and mugwumps are being assiduously invoked. The question is, how much of this righteous indignation is sincere, how much is put on for the purpose of giving the people at home shattering proof of the indignant member's own regularity? There are diplomatic enmities, just as there are diplomatic friendships. Have there not been statesmen who have hewn and stabbed lustily and then written letters saying, "My dear Jones, when can you come up here to lunch with me?"

In Gov. Hughes's speech at Buffalo, explaining and urging his primary bill, the arguments are admirably marshalled and the presentation of details is lucid and cogent. The proposed law, like all such measures, is so long and complex that few voters will read through the draft of the act itself; but the Governor's six reasons for believing in direct nominations are statements of principles which every one may grasp:

First—Because the party voters constitute the party and are entitled to select its candidates.

Second—Because it makes much more difficult the selfish control of party machinery.

Third—Because in this way, the sentiment of the party is directly expressed and is not left to be interpreted by those who will ignore it, so far as they dare, in order to achieve their own personal ends.

Fourth—Because the candidate will owe his nomination directly to the party voters and will feel a corresponding responsibility and enjoy a corresponding independence.

Fifth—Because elected officers will have an opportunity to appeal directly to their constituents and will not be forced, as is too frequently the case, to go contrary to their conscience in order to save their political future.

Sixth—Because it will block up some of the avenues by which special interests find their way to administrative favor and governmental control.

Learning from the experience of other States, Gov. Hughes would have the regulations for registration so safeguarded that it will be impossible for the voters of one party to raid the primaries of another. The sections regarding the use of money and the filing of reports of expenditure are also stringent. The placing of the nominee of the party committee at the head of the ballot has provoked criticism. For ourselves, we should prefer an alphabetical arrangement of names. But that is a small matter. It is obviously desirable to make the party leaders more responsive to the wishes of their constituents, and we are willing to try any reasonable experiment that may bring about such an important result.

The bill establishing a State farm colony has been favorably reported to the Assembly, and is now under consideration by the Senate Committee on Codes. In its amended form, it is a measure of modest beginnings, but of considerable promise. It would attack the problem of dealing with vagrancy in a new way. Under the operation of such a law, tramps would not only be taken off the streets and roads, but set to work usefully, and in a fashion which might teach them an occupation. The sponsors of the bill have met various honest objections by freeing their plan of certain features which were too ambitious, for the present, or which seemed to come into collision with some other reformatory institutions. As now urged, it provides for the establishment of but a single labor farm for vagrants. We hope for speedy and favorable action by the Legislature.

The action by the United Mine Workers makes a strike in the anthracite region very improbable. The men are to keep at work after April 1, and whatever differences they have with the mine owners will be taken up locally by district boards. This is a practical retreat by the miners, but it was inevitable in the present state of business. If the men do not have to face a period of idleness made necessary by the slack demand for coal, and the large supplies on hand, they will be lucky. It is probable, in any case, that the usual shutdown of the mines will be longer this year than usual. These facts are so well known that it was impossible in the miners' convention at Scranton to work up any real sentiment in favor of a strike. The old leaven of politics showed itself in the resolution calling upon President Taft to appoint a commission to arbitrate the differences between the men and their employers. It is not to be supposed that the President will do anything of the kind. Conditions are radically different from those of 1902—and there is a different President.

The hysterical pursuit by a California mob of the young woman who desired to marry a Japanese is but another example of the extraordinary misapprehension on the Pacific Coast in regard to the subjects of the Mikado, and of our general intolerance in matters of

race. Californians of the baser sort naturally cannot get it into their heads that Japan, as Senator Root expressed it at the banquet in his honor on February 26, is a "great nation of gentlemen, of soldiers, of scholars and scientists, of statesmen, a nation worthy of challenging and receiving the respect, the honor, and the homage of mankind." This latest California outcry is but another illustration of the "bad manners, arrogant and provincial assertion of superiority," of which, as Mr. Root said, we have been far from guiltless. But assuming for the sake of argument that the Japanese in question is not a man of such high social standing as to meet the fastidious taste of the California mob, and that in any event the young woman might have done better by choosing a person of European descent, every American, man or woman, is entitled to life, liberty, and the pursuit of happiness. There is nothing immoral in the marriage of Japanese and other races. Many Japanese men have German and French wives, and Americans have Japanese wives. One of the leading Japanese statesmen has as his wife a member of the highest German aristocracy. The marriage of Chinese officers and scholars to European women excites no comment.

The news that in the German Reichstag the "bloc," comprising the Liberals, Conservatives, and Radicals, has apparently dissolved, cannot be said to come as a surprise. When the Reichstag was elected, after the government broke with the Clericals, it did not seem possible that the coalition formed by the Chancellor to give the government a majority could last as long as it has. The bait held out to the Liberals was some minor reforms; for this mess of pottage they were to become political bedfellows of their life-long enemies, the Agrarians, the Protectionists, and the most ardent defenders of the special privileges of the wealthy. This mistaken policy has cost the Radicals and Liberals dear, not only because they have been drawn into support of the obnoxious anti-Polish legislation, but because their following has rapidly split up. Had the Chancellor been a man of vigorous initiative and leadership, able to draw up a comprehensive programme of reform, and push it in a masterful manner, his coalition might have continued indefinitely. But his one idea has been to keep his "bloc" in hand by concessions and compromises. He had managed to steer safely even through the troubles created by the Kaiser's indiscreet utterances last autumn. But now the difficulty is irreconcilable differences of opinion regarding the reorganization of Germany's finances. The Conservatives have not been willing to place new burdens upon the rich by means of inheritance and property taxes, while the Liberals are determined that no further favors shall be shown to those classes which are already specially favored. As a result, one scheme after another has been proposed, only to fall flat; with the result that anything like a clear-cut, far-reaching scheme seems out of the question.

The Berlin *Tageblatt* bewails, too, the want of able leadership in the individual parties and the prominence of what it terms "district-club politicians" in the debates of a subject the importance of which to the nation Von Bülow has by no means exaggerated. There is, for instance, the Reichstag Committee on Rules. To it was entrusted the patriotic duty of advising the Reichstag how best to profit by the affair with the Kaiser, how to strengthen the constitutional guarantees of the independence of Ministry and Reichstag from the interference of the Crown in foreign affairs. The committee had a magnificent opportunity to increase the prestige of the Reichstag and to win for it the right to be consulted in the appointment of the leading Federal officials. The committee might even have begun the fight for a responsible Ministry. But after four months of discussion, the committee has brought forward not a single recommendation worthy of notice.

Writing in the *Deutsche Wirtschafts-Zeitung*, Dr. Theodor Barth urges an international alliance of free-traders to give aid and strength to all fighting for the cause. To help free the markets of all the world is the best way, he contends, of furthering free trade in one's own land. The free-trade movement, he rightly regards as one of the best means of promoting international peace. He also points out that the free trade arguments from one country's experiments ought to be readily available and better understood abroad. With all his suggestions we heartily concur. It has always been a puzzle why the defenders of free trade in Great Britain who now find themselves in so dangerous a position, have not drawn more upon the experience of the United States as a horrible example. The corruption of our political life, the dictation of our tariffs by selfish interests, the growth of the trusts, the offspring of protection—all these things afford a very arsenal of arguments for free-traders elsewhere. This Dr. Barth perceives, for he makes clever use of Andrew Carnegie's testimony before the Ways and Means Committee. He knows well how insatiable is the appetite of protectionists. In 1879, he fought, as a member of the Bundesrath, the proposal to put a tariff of 50 pfennigs (12½ cents) on rye, because it was a precedent. Bismarck sent word to him that he did not dream of increasing this tax; but it is now, thirty years later, 50 marks, or $12.50 a ton.

The final results of the Italian Parliamentary elections have been taken as heralding the approach of a Ministry composed of Radicals and Socialists. This view is exaggerated. The second ballotings, it is true, reduced the Government's apparent majority. From 350 Deputies in the last Parliament, the Giolitti "bloc" has declined to a little over 300; but that would still give the Government a clear majority of 100 in a Chamber of 508 members. All the small parties did well at the polls, including the Catholics, whose first showing was not at all indicative of their real strength. From seven Deputies, the Catholics have risen to 24. The Socialists have gone up from 26 to 42, the extreme Radicals from 32 to 42, and the Republicans from 19 to 24. The parties of the Extreme Left have thus risen from 77 to 108. The Moderate Liberals, or Constitutional Opposition, as they call themselves, have declined most. They now number between 60 and 70. Now, appreciable as the increase may be from 77 votes to 108 for the Extreme Left, that gain does not mean a sudden growth of Socialism, Republicanism, and Radicalism. In the Parliament that was dissolved in 1904 these three parties had 106 seats. In that year's

elections, they sank to 91, and gradual attrition during five years further reduced them to 77. Thus their 108 votes in the present Parliament places them just about where they were five years ago.

The resignation of William O'Brien, who has been one of the most prominent Irish members of Parliament during the last twenty-five years, is indicative of the firm hold which the Nationalist party under John Redmond continues to maintain on Irish affairs. As editor of *United Ireland* and as a founder of the United Irish League, O'Brien has a notably radical history to look back to. About 1903, however, he broke with Redmond and the militant Nationalists and put forward a policy of "conciliation" which, owing to his personal popularity in the southeastern part of the island, and especially in Cork, succeeded in winning over a handful of supporters in Parliament. The *Irish People*, which he founded in 1898, and stopped publishing in 1903, was re-established in 1905, now to be once more, and permanently, suspended. For some time conservative opinion in England was inclined to look upon O'Brien's policy of moderation as showing the way to a solution of the Irish question. Possibly, however, this was simply a way of playing off O'Brien's faction against the Nationalists.

MR. TAFT'S MOVE FOR ECONOMY.

Mr. Taft's establishment of a "budget committee" to supervise all department estimates before they are submitted to Congress may prove to be the beginning of a great reform. True, the new committee, of which the Secretary of the Treasury is to be the chairman, lacks the sanction of law, and, unless established by Congress, may be disbanded by any future President. But no President could, we think, object to so rational a plan of systematizing the crude methods by which our national funds are appropriated and expended. Moreover, in this country, as in England, some of the most important customs of government owe their origin to just such executive action; and by the lapse of years have become as fixed and unchangeable as though embodied in our fundamental law.

Whether this will be the case with the new budget committee, or not, there could be no better illustration of the quiet efficiency to be expected from Mr. Taft's administration. There has been no ringing of bells, no blowing of trumpets, no heralding of an important change. Mr. Taft's unusual experience as the head of the Philippine government and the War Department now stands him in good stead. In the Philippines he was compelled to cut his coat according to his cloth; there was no great surplus to fall back upon should expenditures exceed the estimates. Mr. Taft, too, is not impatient of detail; and he is aware that the financial problem is fundamental and underlies all the rest. To ignore it and devote one's energies to something more spectacular than studying the budget, is more exciting and often more profitable politically, but sooner or later somebody has to sit down to the reckoning and endeavor to make both ends meet.

This is precisely the hour for such an undertaking. The revision of the tariff, Mr. Taft's conception of it as a revenue measure, and the alarming deficit all suggest an attempt to bring appropriations and disbursements into some sort of coördination. Our folly of legislating without regard to probable income, has been the wonder of foreign ministers of finance, whose carefully worked out budgets, showing the sources from which the necessary funds may be drawn, must first run the gantlet of Parliamentary criticism. With us, a Cabinet head sends in his estimates without the slightest reference to what his brother Cabinet officer across the hall may be doing. The only unvarying principle is to ask for as much as you dare, on the theory that Congress is certain to cut the loaf down. Perhaps three-quarters of what is requested will be granted, perhaps even more than is requested. For, after the head of a department has made his plea, a member of a committee may suddenly insist, from purely personal reasons, that an appropriation be inserted or another increased.

No less an authority than Speaker Cannon has solemnly protested against this whole procedure. In a speech on March 4, 1897, he declared that the appropriations just made were in excess of all legitimate demands, not because of any party action, but because of "conditions accruing out of the rules of the House and out of the rules, practice, and so-called courtesies of the Senate, together with the irresponsible manner in which the Executive submits to Congress estimates to meet expenditures for the conduct of government." If, he asked, the appropriations were extravagant, how much more so must be the estimates, for in not a single instance in many years had Congress granted the amounts desired by the Executive. He continued:

> It is said . . . that ours is the only government in the civilized world, wherein the administrative branch apparently assumes no degree of responsibility to the taxpayers for its demands for the expenditure of public money, and that ours is the only government wherein the legislative branch alone exercises the function or duty of check upon public expenditures without any considerable degree of coöperation on the part of the executive.

But Mr. Cannon made no practical suggestions, save to recommend a reduction from fourteen to ten in the number of appropriation bills and to express the hope that "the incoming President, with his long experience as a distinguished member of the legislative branch of this government, will exact of his Cabinet councillors some degree of wholesome effort in the direction of intelligent recommendation of public expenditures, to the end that Congress may not have to strive unaided and alone toward bringing our public expenditures within the sum of our public revenue." But Mr. McKinley's plunge into war afforded no opportunity for any such undertaking, even had he been interested in it. It has remained for Mr. Taft, after twelve years, to point the way to reform.

Congress has shown that it is willing to coöperate by providing in the last sundry civil appropriation bill that if the estimates are in excess of the probable income, the Secretary of the Treasury shall report the results of his addition and subtraction to the President, who may advise Congress what appropriations to cut and what new taxes to levy or loans to make. The Senate, too, has created a standing committee on expenditures of executive departments. Since Mr. Taft is reported to be bent on economical administration, there is hope that his term will be rendered notable by the establishment of the principle that every dollar of government money shall bring its full return to the taxpayer. The new "budget committee" alone cannot, of course, accomplish this,

nor can the wasteful methods of a century be ended in four years. More radical changes will be needed to accomplish the result. But Mr. Taft will render great and lasting service to his country if he devotes himself to this task.

CANADA AND THE PAYNE BILL.

Two conditional offers to Canada in the Payne bill will cause the Laurier government much embarrassment. There was a time when Sir Wilfrid Laurier and Sir Richard Cartwright would eagerly have welcomed both the minimum schedules of the Payne bill and the offer of reciprocity in coal. It was such trade openings as these that Sir Richard Cartwright, the present Minister of Trade and Commerce, had in mind when he made his famous speech at the National Liberal Convention, at Ottawa, in 1893:

> It would be well that the people of Canada should bear in mind that Canada is by necessity of its position an integral part of this continent of North America, and that we have to all intents and purposes no other neighbor than the United States.

From the early seventies until 1896 this was the spirit in which Canadian Liberals regarded the United States. They realized that the currents of trade ran north and south, and must cross and recross the international line to the mutual advantage of both countries; and in those years it was ostensibly the aim of Canadian Liberals of the school of Laurier and Cartwright to bring about trade relations with the United States similar to those which prevailed from 1854 to 1866, when the Elgin-Marcy treaty was in operation. But this neighborly attitude was abandoned after the Liberals had adopted the policy of Sir John Macdonald in 1897; for with their going over to protection came their affiliation with the Canadian Manufacturers' Association and with the coal and iron interests of Nova Scotia. These will cause Laurier and Fielding trouble, now that Washington proposes minimum schedules for Canada and reciprocity in coal.

For nearly two years Canada has been negotiating with France for trade concessions. The Dominion is also weary of the miserable tariff war with Germany, which has been persisted in since 1903. France can have the intermediate tariff as soon as the French Senate will accept the commercial treaty that is now pending; and consumers in Canada will welcome the day when the intermediate tariff is also applied to textiles, hardware, and chemicals from Germany. But then the worries of the government in regard to the Payne bill will begin, for since the intermediate tariff was enacted in November, 1906, the Canadian Manufacturers' Association has been in a continual state of apprehension lest the intermediate rates, which are about 10 per cent. below the general tariff, should be applied to imports from the United States. Under the Payne tariff, if the Canadian intermediate tariff is conceded to either France or Germany, the same concession must be made to the United States, or the maximum rates of the Payne bill will go into operation against imports from Canada.

Politicians at Ottawa had expected that if any concessions were made to Canada, or if Washington made offers of reciprocity, they would be conditioned on granting to the United States the same tariff concessions as Canada makes to England. They have depended upon a demand like this as a ground for refusing any proposals of the kind. This ground is now cut from under them by the provision in the Payne bill that no British colony shall be denied the minimum rates, because of any preference it may make in its tariff to England or to any of its sister colonies. Thus the offer of minimum rates and also the offer of reciprocity in coal come in a shape never contemplated by Sir Wilfrid Laurier and the Ottawa politicians. The Laurier government will have to decide between the Canadian Manufacturers' Association and the coal operators of Cape Breton, on the one hand, and, on the other, the general body of consumers in Canada. There has long been an understanding between the manufacturers of Ontario and Quebec and the coal interests of Cape Breton for mutual protection and support. Before the Canadian Tariff Commission of 1905-6, manufacturers were asked concerning the duty of fifty-three cents a ton on coal. Almost invariably their answer was that they had nothing to say on this aspect of the protective tariff. Canadians have paid the duty since 1879 solely for the advantage of three or four mining companies, operating in Cape Breton or on the mainland of Nova Scotia.

Originally, the purpose of the duty was to force Cape Breton coal into use in all the vast territory that lies between the Atlantic and Lake Superior; and with this object in view, from 1879 to 1887, the duty was imposed on anthracite, as well as on bituminous coal. Failure overtook this plan. Nova Scotia coal never came into use far beyond Montreal, although Nova Scotia coal companies do now control the coal trade of the Maritime Provinces and of Quebec. It costs Ontario and Manitoba about three and a half million dollars a year to give the Nova Scotia companies this measure of control of the coal trade of the Dominion; and because the coal operators are convinced they would lose the trade of Quebec, the Nova Scotia members of the House of Commons are already pressing the Laurier government for a declaration that it will not accept the offer of reciprocity in coal made in the Payne bill. Both political parties at Ottawa since 1897 have been out-and-out protectionists—the Conservatives as a matter of policy and tradition; the Liberals as a matter of political tactics.

Judging from past experience, the Laurier government will allow no interference with the coal or the iron and steel industry of Cape Breton. These industries, through the tariff and through bounties, cost the Dominion seven or eight million dollars a year; and interests which have been sufficiently powerful at Ottawa to secure such favors are likely to be strong enough to compel the government to ignore the offer from Washington. A few Ontario and Manitoba supporters of the government may be inclined to protest. But there is not a corporal's guard of independent Liberal members in the House of Commons.

DEFENCES THAT DESTROY.

At this moment four of the leading nations—France, England, Germany, and the United States—are moving heaven and earth to lay new taxes. Germany must find $100,000,000 a year more, or make herself again the servant of the lender. The English Chancellor of the Exchequer is preparing a budget in which the taxing power is stretched to the utmost in order to make income level with outgo. Our own straits are reflected in the re-

ports from Washington of new schemes every day to raise the revenue. The protectionist tariff bill has to be converted, perforce, into one for revenue. In France, the new income tax, which has passed the Chamber and is now before the Senate, and which would levy a charge in some cases as high as 20 per cent. of the annual income, is striking evidence of the way in which mounting public expenditures have driven governments to their wits' end. It is a world-disease.

We are now so accustomed to the thought of burdensome taxes that we do not often stop to think what they really mean. They actually represent a sapping of the comfort and resources of every taxpayer. If we could visualize the government in its work of collecting taxes, we should be able better to understand the nature of the process. We should then see an official stepping into a middle-class home, and saying: "No, you shall not give your children the clothes or the schooling you intended, for I demand a part of the money which you had set apart for that purpose. Nor shall you be able to care for them in sickness as you would wish, for I cut down your surplus for emergencies. Your savings for old age must be transferred in part to me. I am the one who cripples you in your daily expenses and your yearly estimates." Indisputably, to exact a tax so comprehended is an act of the grossest tyranny and oppression unless the public necessity be imperative. Sums extracted under the *kurbash* or by torture could be no more cruelly wrung from the subject than are all taxes the justification for which is not as clear as noonday.

This, of course, is formally admitted by the tithing-men. They picture the crushing taxes which they are devising as a sacrifice which the individual citizen is called upon to make for the common weal. And as they are forced to confess that it is huge outlay for military purposes, in time of peace, that eats up most of the widow's portion, and cabins and confines the lives of workingmen, it is upon the supreme need of providing adequate national defence that they expend their main arguments. This is the story that is now being poured into the ears of agitated people in England. Their island empire is endangered, and they must take the last penny out of their purse, if necessary, in order to fill the seas with Dreadnoughts. It is a patriotic duty to lay oppressive taxes, and a patriotic duty also to pay them without a murmur. That is also the theme of Washington statesmen, with their appropriations for army and navy increasing two and three-fold, and no limit in sight. It is a fundamental question, they assert, of national defence.

In such extreme forms, however, that kind of defence destroys its professed object. It would deliver us from war, but lays upon us in peace burdens almost as great as those of war. Modern wars are soon over; but modern preparations to avert war impose their crushing demands upon the citizen continuously and increasingly through long years. Furthermore, the apprehension of war is only heightened by this kind of attempt to remove all fear of it. Consider the present plight of England. But a few years ago her navy lords were rejoicing in their latest triumph of construction—a battleship 50 per cent. bigger and more powerful than any before built. As England could launch Dreadnoughts faster than any other nation, her supremacy and safety were forever established, and war had been put out of the question by these terrible engines of war. Yet, in a short time, this jubilation was turned into panic. The very advance in English shipbuilding had made the rest of her great fleet antiquated. It was now a case of Dreadnoughts against Dreadnoughts, and Germany was able to put them into the water as fast as England. The result was that extraordinary debate in Parliament the other day, when Mr. Balfour vied with the Prime Minister in depicting the acutely critical situation which the country was facing. It appears now that both disputants were wrong about their facts. They had been misinformed about the German naval programme. That is now confessed, and the excitement is subsiding. But the incident shows how boasted national defences are all the while breaking down, our trust in the latest ships and guns shown to be misplaced, and the financial burdens bound upon the backs of the people made ever more and more grievous.

In these very excesses lies a practical hope. Armaments designed to overwhelm others are ruining ourselves. At the present rate, the money-pinch will soon make powerfully for international peace, and for some means of guaranteeing it less costly and less futile than armor plate and high explosives. The moral and Christian arguments for disarming are reinforced to-day as never before by economic reasons. Taxes may do what texts cannot. It will soon become impossible for a Finance Minister to propose new ways of taking the substance of the taxpayer, without having first sought earnestly to bring about an agreement among the nations to limit armaments. The German reply to Campbell-Bannerman's advances was that "no formula" for disarming could be found. Events are bringing a formula to view. Sir Edward Grey, speaking in Parliament for the Foreign Office on Monday, gave one phrasing of it:

> The vastness of the expenditure on armaments has become a satire and a reflection on the civilization of the world. If it goes on, it must sooner or later in Europe lead to national bankruptcy.

That is, whether expressed in pounds or marks or dollars, the limit to the power of the peoples to pay taxes compels the finding of a limit to great armaments.

PAUPERISM IN GREAT BRITAIN.

A Royal Commission, appointed in 1905 to study the working of the Poor Laws and other forms of public relief in Great Britain, has just presented its report. The commission finds that the system of poor-law administration is a failure. But more tragic than the bankruptcy of a system is the unchecked growth of the evil with which that system was intended to cope. Most of us know that poverty in England is chronic. Few of us know that poverty has steadily increased during a half-century that saw the total national wealth of England go up by leaps and bounds. There were 24,000 more paupers in the years 1896-1906 than in 1888-96, and 7,000 more than in 1880-88. If we compare the period 1896-1906 with 1871-80, we find a decrease of 3.9 per cent. in the total number of paupers. But that is because there has been a decrease of 18 per cent. in the number of dependent children, and 2 per cent. in the number of women. Adult male paupers have increased by no less than 18 per cent. In other words, the old charge that the almshouses were filled as a result of reckless breeding

among the very poor, has lost most of its force. The ranks of English destitution are now recruited from among the adults. The increase in pauperism, says our report, is greater during the working years of life than among the very old or very young. For the whole of England and Wales the number of able-bodied persons in receipt of relief in the period 1896-1906 showed an increase of probably more than 35 per cent. over 1871-80.

The English conscience, we take it, has grown habituated to pauperism. But the English conscience has not grown used as yet to the non-professional and non-hereditary pauper, to that class which sinks into pauperism not because it won't work, but because it can't. To the problem of the unemployed, the Royal Commission gave earnest consideration. We are no longer in the simple times of 1834, when a commission last wrestled with the Poor Laws:

> Whilst the moral causes contributing to pauperism and unemployment remain much the same as before, the material influences regulating unemployment and industry have changed both in their character and their scope. Forces have come into operation affecting employment, its regularity, its cessation, and expansion, which are quite beyond local control. There are modifications and developments in our industrial system which cannot be ignored; and their products and wreckage when either out of employment or in distress require a treatment more elastic and varied than the simple method which eighty years ago was sufficient to cope with able-bodied pauperism in agricultural districts.

Upon these modern complications we need merely touch. They are numerous and well-known. There is the evil of casual labor. The stress of machinery and competition calls for skilled men, and uses them up quickly. The workers who have not the necessary skill and those who have been squeezed dry by the modern industrial system constitute the "stagnant pools of casual labor which are getting larger and still more casual." It is the boast of modern industry that it has found the way to utilize the labor of the untrained man and the child. But it is the curse of the modern industrial system that it uses the untrained man and the child to their own ultimate disadvantage:

> In modern industry the middle-aged are senile, and the senile are not employed. Skilled men in their prime are at a premium, but many of our boys reach their prime unskilled, and others, degenerates, never reach any prime at all.

The man of forty-five who is too old to be kept profitably at the work he could once do well, and the boy who starts as a messenger boy or in some other "blind-alley" occupation, meet as recruits in the army of the casually employed. It is they who, in times of exceptional distress, swamp the relief works instituted for the men of steadier occupation. The casual laborer gets from 55 to 75 per cent. of all aid doled out on such occasions.

And the remedies? The commission recognizes how complicated is the problem. Yet it holds, not too optimistically, that much can be done. It suggests measures preventive rather than strictly remedial, designed "not so much for the distressed unemployed" as for the purpose of "preventing persons from becoming distressed unemployed." The commission urges technical and special education and a raising of the age of required attendance at school, in order to keep boys from being sent into the "blind alleys." It lays great stress on the usefulness of public labor exchanges, or employment bureaus, in increasing the mobility of labor; Germany, it is pointed out, has 700 such bureaus, and they find work for 150,000 persons every month. It urges upon employers the duty of regularizing their seasons of production so as to reduce to a minimum the large reserve of unemployed labor which modern industry seemingly demands. It discusses the possibilities of insurance against unemployment, of labor colonies, of emigration. We have here, in fact, what has been described as a series of economic essays on the entire subject of unemployment.

The problem is immensely difficult. But the question is whether England hitherto has tried to do what can be done towards a solution, what has been seriously attempted in other countries, even where the needs are not so pressing. Technical education—Germany is trying that. Labor exchanges—again Germany is the model. Insurance—they have been experimenting with that on a vast scale in the Kaiser's realm. Has it ever occurred to English statesmen that Germany is threatening British supremacy in other ways than by Dreadnought-building? In England elementary education is still chiefly concerned with the struggle between Nonconformist and Anglican ideals. In England the universities are only beginning to reach down to the strata below the "gentleman." But how long can a nation in the present age of democracy hold its own while clinging to a system involving vast human ignorance and human wastage? Can a growing list of battleships permanently make up for a growing multitude of paupers?

EDWARD FITZGERALD.

Over in the town of Woodbridge, where the sluggish waters of Suffolk crawl to the sea, they are celebrating this week the centenary of a poet and sage and lover of books. One hopes and believes that there will be nothing garish in the ceremony, that no boastful eulogium will be spoken over the rose-bush, brought from the far-away tomb of his Omar, that grows by his resting-place. Let him quiet consummation have. We feel a personal interest in his memory, and as time goes on he, who was once so loved of Tennyson and Carlyle and Thackeray as Old Fitz (always "old"), grows to be almost the dearest of the Victorian names. Not for what he accomplished, not for his "Rubáiyát," which, if truth be told, has been a little cheapened by overmuch quotation and imitation; but for his life and the record of that life in the inimitable letters. If the locked door of the past were opened for one moment, how many of us out of all the privileges of those years would choose an hour's walk with FitzGerald—in Regent Street on that early day, perhaps, when with Tennyson he stopped before two figures of Dante and Goethe, in a shop window, and asked the poet: "What is there in old Dante's face that is missing in Goethe's?" And Tennyson (whose profile then, according to FitzGerald, had a remarkable likeness to Dante's) said: "The Divine." If we had been there we should have heard FitzGerald's reply, which he omits in the letter written long afterwards to Professor Norton. Or perhaps we would choose rather one of those nights when, in indescribable attire and with his great plaid shawl wrapped about his head, he used to walk alone over the flat meadows about Woodbridge, muttering to himself who knows what strange fancies suggested by the opaque shadows of the moon and by the windmills that reminded him of his hero, Don Quixote.

It is for his odd ways and quaint in-

discretions largely that we love the man, but beneath this feeling lies an admiration no less real, if harder to analyze. Many critics have tried to reconcile the paucity of his achievements with his undoubted intellectual powers, and have given reasons for his long isolation from the world. They are wont to build their theories on some supposed weakness of the will or taint of modern indecision. They may be right, but for our part we prefer to regard him simply as a philosopher, and to place him in the great company of sages and saints who have deliberately turned their eyes away from what seemed to them the world's folly. It may be a wrong ideal, at least it is one which the world cannot afford to encourage; yet amid all our bustle and noise there is a certain wholesome check in the thought of such men as Newman in his Oratory, contemplating the mysteries of religion, or FitzGerald, shutting himself off from his famous friends to smile at their anxious ambitions.

These men, in one way or another, were caught in the net of the present, in the *Strom der Welt*—Carlyle thundering against its iniquities, Thackeray dallying with its conceits, Tennyson laboring to build in rhyme a meeting-place for the old faith and the new scientific inquisitiveness. What if they had seen and felt that a few passing years would sweep away all these things, merely to bring in other iniquities, and conceits, and compromises? Would not their hands have been palsied, and would not they have sunk into that philosophic silence which Carlyle so noisily proclaimed? Action, such a life as FitzGerald's seems to say, is based on the fallacy of the present:

> Death seems to rise like a Wall against one whichever way one looks. When I read Boswell and other Memoirs now, what presses on me most is—All these people who talked and acted so busily are gone. It is said that when Talma advanced upon the Stage, his Thought on facing the Audience was, that they were all soon to be Nothing.

The sense of the present as a fleeting point of time without meaning, rather than any failure of will, was what drove FitzGerald from the crowded activities of London and made him a solitary recluse. Such a philosophy carries with it, no doubt, its own penalty; and, fleeing from the world, he could not altogether escape the hounds of *ennui:*

> For all which idle ease I think I must be damned. I begin to have dreadful suspicions that this fruitless way of life is not looked upon with satisfaction by the open eyes above. One really ought to dip for a little misery; perhaps, however, all this ease is only intended to turn sour by-and-by.

But for all that, it is not fair to say that his life or his mind was morbid. Against such a view the wholesomeness of his reading alone is sufficient evidence. There yet remains to be written a thorough-going treatise on the likes and dislikes of one who pretended "to no genius but to taste." Why did he think "Pendennis" "very stupid"? Why did he set Richardson far above Fielding? Why could he find no interest in "Gil Blas"? These are questions not easy to answer in accord with his other tastes; but in general it is clear that he clung to the writers who give a broad, fluid picture of life; with Tennyson, he loved "those large, still books." It was a part of his abstinence from the present that he could not abide writing harassed with problems; and his distaste is well-known for the poems of Tennyson's own middle period, which dealt with questions of evolution and religion and social disease. It was his pleasure to have Montaigne "drop in to chat with and comfort" him. Scott he heartily enjoyed. He reads "The Pirate," and exclaims:

> With all its faults of detail, often mere carelessness, what a broad Shakespearean daylight over it all, with no effort . . . They won't beat Sir Walter in a hurry.

It was the *sprezzatura*, as Castiglione called it, that tickled him, the manner of a gentleman in letters who wrote for pleasure and disdained the tricks and toil of professionalism. And so "Don Quixote" was of all books his perennial delight, both for its ease and largeness, and for its philosophy of disillusion. Sophocles, too, he read much, especially when at sea with his great skipper, "Posh." Mme. de Sévigné never tired him, and the human realism of Crabbe appealed to him more than all the airy visions of a romantic like Shelley.

No, he was not morbid, and there was no taint in his will. Of all the great men of that age, he was distinctly the philosopher. And we, in our busy days, love him for his flight from business. We take his wisdom and his relish of disillusion, with no fear that his bankruptcy of idlness will be ours.

THE NEW ENGLISH REQUIREMENTS FOR COLLEGE.

The report of the National Conference on Uniform Entrance Requirements in English, which met in this city February 22, has now been published. The prescriptions for reading for the years 1913, 1914, and 1915 show a considerable improvement over those now in force; and, if we look back through a period of ten or fifteen years, the progress may even be called striking.

It is easy to criticise our whole scheme of the study of English as artificial and therefore ineffective. The true way to acquire the habit of reading good books is to begin very early in your father's large and well-chosen library. Your habits of speech should, obviously, be formed by imitation of your cultivated parents and schoolmates. In such a happy environment the art of clear writing is easily mastered; it may almost be said to come by nature. But these ideal conditions are exactly what do not exist in America. To-day teachers of English are engaged in a desperate struggle against what seems a rising tide of sheer illiteracy. Boys of all nationalities, from every stratum of society, handicapped by all kinds of disadvantages in home-training, are dumped on our schools and colleges. It is with the aim of imparting a faint tinge of literacy to this raw, unhomogeneous, and intractable material that our programmes in English are planned. Those who rail most bitterly at the folly of teaching English have yet to suggest any other practicable method of conveying to the children of alien—or, for that matter, native—parentage, a few hints as to the value and richness of their step-mother tongue. When we remember that, according to a recent investigation, only 45 per cent. of the pupils in the public high schools of New York city are of American parentage, and that in the grammar schools the proportion is probably smaller still, we may wonder, not that the results of the instruction in English are often grotesque, but that they are, on the whole, so satisfactory.

We are glad to see that the new requirement lays somewhat more stress on formal grammar: "English grammar should ordinarily be reviewed in the secondary school; and correct spelling and grammatical accuracy should be

rigorously exacted in connection with all written work." Further, the examination "may include . . . questions upon grammar." The extension of the kindergarten methods to the upper grades threatened at one time to drive formal grammar from the schools. That admirable discipline was condemned as too dry and unentertaining for high-spirited children who must be amused at all costs. That folly, however, we are apparently outgrowing. The National Conference also urges that the English teachers should not bear the whole burden of instruction in English, and that their work should not be, as it often is, undone by the other teachers:

> Special instruction in language and composition should be accompanied by concerted effort of teachers in all branches to cultivate in the student the habit of using good English in his recitations and various exercises, whether oral or written.

It is, however, in the list of books to be read with the notion of getting actual pleasure out of them that the greatest changes have been made. The chief narrative parts of the Old Testament appear for the first time, not as an absolute requirement, but as an alternative. This is one way of contending against the appalling ignorance of the Bible concerning which we hear such loud complaints. The conference shows, further, a praiseworthy tendency to abandon books which—however important their place in the history of literature, and however interesting, therefore, to professors of literature—bore the young. Such, for example, are Chaucer's "Prologue," Spenser's "Faerie Queene," and Pope's "Rape of the Lock." De Quincey's "Joan of Arc" and "English Mail Coach," Carlyle's "Heroes and Hero Worship," Emerson's "Essays," and Ruskin's "Sesame and Lilies"—all of them food only for the exceptionally intelligent child—also go. In their place we have Macaulay's "Clive" and "Hastings," Thackeray's "English Humorists," selections from Lincoln, Parkman's "Oregon Trail," Thoreau's "Walden," Huxley's "Autobiography" and selections from his "Lay Sermons," and Stevenson's "Inland Voyage" and "Travels with a Donkey." Two capital books are added to the roll of fiction, "Robinson Crusoe" and Stevenson's "Treasure Island." The problem of cultivating a taste for good reading is not, be it noted, so easy as it was even two decades ago. Now books must compete, not only with the yellow journals, but with the scores of yellow magazines that shriek their attractions from every news-stand. The conference is likewise to be commended for clinging to the sound notion that not all reading is to be for mere recreation. There is still a requirement for study, "intended as a natural and logical continuation of the student's earlier reading, with greater stress laid upon form and style, the exact meaning of words and phrases and the understanding of allusions. For this close reading are provided a play, a group of poems, an oration, and an essay." It may be a pity to make any piece of literature a *corpus vile* for dissection, but there seems no other way of accomplishing a result which seems most desirable.

And finally the conference urges the plan of writing compositions based on the student's "personal experience, general knowledge, and studies other than English." A few years ago the subjects for composition in the admission examinations were drawn almost wholly from the required reading. The themes thus produced were cut-and-dried, stilted, and generally vague bits of pseudo-criticism, which encourage pupils in the habit of slipshod thinking and hazy expression. The failure of that method has already forced the colleges to allow or require for entrance a composition, say, a description or a narrative, that shall show power of reporting direct observation. The preparatory schools will therefore spend less time and effort in futile little essays on "George Eliot's Skill in Characterization as Displayed in 'Silas Marner'"; we shall have fewer infant pedants and more boys who can give a plain statement of what they see, hear, or think.

OUR DEMOCRATIC AMERICAN COLLEGES.

When Edwin E. Slosson started on his tour of American universities, to collect material for the current series of articles in the *Independent*, he placed at the head of the list of questions that he purposed to ask, "Does the spirit of democracy prevail in this university?" He soon dropped the question as useless, because it was answered everywhere before he asked it, and always in the same way. The faculty, students, and alumni of each university agreed on the purity of its democracy. James Bryce recently praised this spirit of democracy, and referred to the United States as the nation having the largest proportion of its young men in colleges. That a nation devoted, at least theoretically, to democratic ideals and popular education should rejoice in all this is natural. It is equally natural that those whose main business in life reveals the shortcomings of the American college should ask whether this democratic spirit in higher education is altogether praiseworthy. Let us see what kind of institution we have built in devotion to democratic ideals. If we are not willing to accept, unchallenged, Prof. Barrett Wendell's conclusion that "college education is to-day chiefly notable for its ineffectiveness"; if we resent the sweeping arraignments by Clarence F. Birdseye and by Abraham Flexner, yet there are innumerable other critics whose charges we must meet. Condemnation of the college is the order of the day. Within two months the *Atlantic Monthly*, the *Educational Review*, the *Dial*, the *Independent*, the *New England Magazine*, the *Columbia University Quarterly*, the *University Magazine*, and *Science* have published articles which tend to the conclusion that "the college is the least satisfactory part of our educational system and has urgent need to justify itself."

I.

To what is due this "weakening of intellectual stamina observed among undergraduates"? Is it not in part our democratic indulgence toward incompetency which clears the track of annoying obstructions in the race for numbers and tuition fees? To what inconsistencies it leads our college faculties! "Such and such subjects *must* be presented for admission," or "fourteen of these points are *required* of all candidates," our current catalogues declare, withholding as a rule the information most eagerly sought by the prevailing type of preparatory schoolboy, namely, how many subjects or points a boy may fail to present and yet be admitted. These boys are ingenious; they are sure to find out how many of the "required" points are required; for their interest is not so much in the profession of the catalogue as in the performance of the college. Thus it happens that to a majority of candidates our colleges virtually say: "According to our professed standards, you are not prepared to undertake college work. Although the secondary school opportunities are greater than ever before, although the wider range of admission subjects makes failure every year less excusable, yet you have failed to present our minimum requirements. Nevertheless, we admit you, allow you to try to do college work in the same classes with those who are prepared, and, in addition, we require you to make up your deficiencies in secondary school work." This is substantially what Harvard Col-

lege said this year to 58 per cent. of the 607 freshmen. At Yale, 57 per cent. of the incoming class, and at Columbia about the same proportion, were admitted with less than the "required" points. Nineteen of the freshmen admitted to the college department of Columbia University were deficient in a full year of preparatory school work. At Princeton, 201 out of 360 were thus admitted with "conditions." And there is no reason to suppose that our strongest institutions are in this respect the greatest sinners among us. There is only too much concrete evidence to the contrary.

Furthermore, if this overlooking of inequalities is not sufficient to satisfy the most democratic of candidates, he always has left the opening for "special students." If he will step in through this back door, he will find himself in the same classes with those who enter by the front door. He will be called a "special student," or a "freshman on trial," or a "provisional candidate for a degree," or a "student on probation"; but he does not care He is confident that an institution so devoted to democratic ideals as to make his entrance easy will not make his continued residence difficult. Maturity and earnestness of purpose, it is true, should admit some candidates who, for good reasons, have not trod the beaten path to the college gates. But there is reason to believe that a majority of the 4,073 "special students," enrolled last year in the institutions included in the latest report of the Carnegie Foundation, slipped in through the back door merely because they were not qualified to enter the front door, and should have been barred out altogether.

As true Americans we are proud of the principle that the higher education should be open to every boy who is prepared for it, and who is ready to make the sacrifices it involves. But was it in devotion to this ideal that one New England college admitted this year, without examination, a boy whose school declined to certify him in a single subject? Was it in devotion to this ideal that another New England college admitted a star half-back with but half a school course to his credit? that another New England college employed on a famous football team three men who had failed in their academy course? that another New England college accepted two candidates in violation of its agreement with the Certificate Board? that another New England college welcomed, as captain of its baseball team, a boy under discipline by a rival college? that another New England college credited with advanced Latin a full-back who had failed in the second year Latin of his academy?

II.

Now the immediate effect on the schools of this democratic leniency toward the unfit, which, as President Pritchett of the Carnegie Foundation says, easily falls into indiscriminate charity, is to hamper the work of all those teachers who are honestly striving to promote genuine sustained intellectual effort; and, at the same time, such leniency makes it easier for lazy and weak-backed teachers to tolerate slip-shod work. The college is further hampered by the extra burdens placed on the unfit. Unless our devices for determining preparation for college are useless, those students most heavily "conditioned" must be, as a class, least fit for college work. Yet on precisely this class we lay the heaviest load. Then, when some students are allowed to take six courses, while many are taking only four, it stands to reason that the amount of work required in each course must be diminished, to the detriment of college standards, unless those students taking six courses are conspicuously fit to carry 50 per cent. more work than other students. Quite the contrary is often the case, since those who take extra courses do so to make up entrance conditions or deficiencies in college work. According to all logic, students should be allowed to take more than the required number of courses in one year, only on the evidence of extraordinary ability.

The authorities of some of our State universities, politicians as they are, or partly dependent on politicians, incline to the idea that has long clogged our public high schools—that a period of residence of any sober and faithful child of a taxpayer entitles him to graduation. Nor are the ideals of all our privately endowed colleges illumined by a much brighter light. Jealous of the rapid growth of State institutions (they have grown twice as rapidly as all others in the past twenty years), our private colleges incline toward the patently absurd theory that nearly every boy should go to college and stay there. Our public grammar schools, which are obliged to take and to keep all sorts of raw material, have some excuse for the pernicious lock-step, through which bright boys form vicious habits of idling, while dull boys in the same classes are being dragged along. But private endowed colleges, free from the most harassing drawbacks of public schools, have no excuse for allowing the mediocre to set the pace for the rest.

III.

If I were to define democracy in American college life, I would borrow a phrase from Dean Beutley—"our ill-advised belief in the universal efficacy of college education to make a good piece of furniture out of a poor stick of wood." Accepting this definition, we are safe in declaring that the present wide distribution of scholarships in American colleges—made with an eye to enrolment figures—is truly democratic. Certainly we are not using these trust funds, as best we may, to further Ruskin's aim of education, "to raise the fittest into positions of influence, and to give to every scale of intellect its natural sphere." Every secondary school teacher has been repeatedly surprised, I doubt not, to learn that boys whom he regarded as hardly fit for college have had no difficulty in securing scholarships. This must have been at the expense of those better fitted. The best youth the country affords are given half a chance in order that some of the weakest may have an equal chance. As long as scholarships are used as a means of attracting numbers, there will be insufficient aid for the few students of conspicuous worth. Then, to atone for this thin spreading of its funds, our democracy errs still further in favoring self-supporting students at the expense of intellectual standards. Many faculties, through sympathy for indigent men who are ambitious to secure a liberal education, allow them to remain in college under conditions which render a liberal education impossible. The rest of the students suffer, because the college work must be tempered to those well-intending, but not necessarily clever, boys who are obliged to spend a large part of their time and effort in extraneous occupations.

IV.

A good deal of nonsense is heard about the superiority of the small college over the large, and the superiority of the city college over the country college. Size and location are relatively insignificant matters, compared with the calibre of the faculty and the standard of work. Large colleges as a class are superior to small colleges as a class, partly because their administrators and faculties as a body are men of greater insight and courage. Yet it is easy to name a score of small colleges that surpass a score of large universities, and there is an ever-increasing number of parents who stake their sons and daughters on the belief that there are to-day small colleges superior to the best of university colleges. Such a belief seems to many as yet unwarranted. But the conviction is growing that a small college with the requisite insight and courage to become "a Johns Hopkins for undergraduates," the Balliol of America, would soon take first rank among us, and find its degree the most highly prized in America. Though it were located in the frontier forests of Aroostook County, there would be, every autumn, a beaten path to and from its gateway.

Nor need such a college suffer any loss in real democracy. Harvard and Princeton are regarded by some people as too aristocratic, but surely nobody ascribes this alleged defect to the fact

that Harvard has rejected hundreds of deficient candidates who have been promptly accepted by other colleges, or to the fact that Harvard this year records a loss of forty-eight "special students." Nor has any one condemned Princeton as too aristocratic because, within the past six years, Princeton has dropped 680 incompetent students. The fact that Harvard and Princeton, alone among the universities and colleges of the East, exhibit a "loss" in enrolment for the past six years may well be connected causally rather with their recognized gains in efficiency than with their supposed loss in democratic spirit. President Tucker of Dartmouth said, a few years ago, "I do not understand how a college under the natural laws of growth can be reduced, except in violation of some one of the principles of democracy." If this be the only way to reduce a college, let us then violate that principle of democracy—if such it may be called—that refuses to discriminate between the fit and the unfit. Let us then violate that principle of democracy which in practice often seems to declare that every man is born free to enter college and equal to its opportunities.

WILLIAM T. FOSTER.

Brunswick, Me.

FRENCH BOOKS ON HISTORY.

PARIS, March 12.

"Les Origines de la réforme," by Pierre Imbart de la Tour, professor at the University of Bordeaux, after a first volume on the political state of the time, treats, in this second volume, of the Church and the crisis of the renaissance (Hachette). The anarchy prevailing in the Church in France, with a secular spirit; the new ideas due to the revelation of classic and Christian antiquity; Leo X and the awakening under influences so equivocal as Lefèvre d'Étampes and Erasmus, form the matter of this volume. The author's technical training, shown in his early works on the elections of French bishops and on rural parishes, together with his Catholic faith, gives him serious advantages in dealing with an age whose ideas, as well as forms of speech, differ so strikingly from those of most historians of the present day. The book is not only new in matter, but well written in form.

"Villeroy," by J. Nouaillac, is a study of that hereditary Secretary of State to Charles IX, Henry III, and Henry IV, from his birth in 1543 to the death of the latter king in 1610 (Champion). During this time Villeroy negotiated the first peace with the Protestants; but, after abandoning the League, he still showed himself favorable to Spain. The restless activity of the man under Marie de Médicis is not included in this volume. "Trois Familiers du Grand Condé," by Jean Lemoine and André Lichtenberger, tells pleasantly how the warrior's last years, passed in royal disfavor, were amused and edified by a Jesuit, an Oratorian, and an abbé—all perfect *originaux* (Champion). "Les Assemblées du clergé et le Jansénisme," by Abbé J. Bourlon, is a Catholic account of official ecclesiastical proceedings, in which weakness of technical knowledge rendered Sainte-Beuve incompetent (Bloud).

"Mémoires de la cour de Louis XIV," by the Italian fortune-teller, Primi Visconti, who won and held the favor of the Grand Monarque in spite of diplomatic intrigues and the Affair of Poisons, is a distinct addition to historical literature (Calmann-Levy). It has been translated from the Italian manuscript and duly provided with introduction, appendix, and notes by Jean Lemoine, librarian of the War Office. It fully bears out what Saint-Simon led us to expect. We see the court through the eyes of one whose success in trade depended on seeing from the inside. "Crépuscule d'Ancien Régime," by the Vicomte de Guichen (Perrin), describes separately various activities of France under the monarchy tottering slowly to its fall, from the bombardment of Genoa and the Doge at Versailles (1684-5), Paris society manners and morals under the Regent (1715-1723), and the end of the Seven Years War, to the dawning of a troubled day with the advent of Franklin (1776). "Le Secret du Régent et la politique de l'abbé Dubois," by Émile Bourgeois, the well-known professor of diplomatic history, deals with the Triple and Quadruple Alliances (1716-1718)—the beginnings of the secret diplomacy of the eighteenth century (A. Colin). It seems to be the first of a series following up the same subject and made possible by the opening of state archives to investigation. "Mlle. Sallé (1707-1756)," by Émile Dacier, is the life-story of a *danseuse* of the Opéra under Louis XV, which is also not without importance to complete history, and is written from unpublished documents. The Collection historique illustrée (Louis Michaud) has for its new volume "La Vie aux galères," by A. Savine, from the archives and memoirs. After the Bastille, the galleys were the chief terror of the old régime.

"Lettres de Belle de Zuylen (Madame de Charrière) à Constant d'Hermanches (1760-1775)," edited by the Neuchâtel professor, Philippe Godet, brings us into the intimacy of a person whose sole, but sure, claim to mention in history is her persistent friendships with an important set of historical characters (Plon). They centre in the remarkable career of Benjamin Constant, the Swiss Protestant of English teaching, who did more than any other to indoctrinate the earliest French Liberals. "La Jeunesse de Benjamin Constant (1767-1794)," by Gustave Rudler, a doctor of letters who has specialized in the matter, handles from numerous unpublished documents this disciple of the eighteenth century, his utilitarianism and pessimism, and his relations with Madame Charrière, his first Egeria. The same author gives us an aid to historical research in a companion small volume, "Bibliographie critique des œuvres de Benjamin Constant," with many hitherto unpublished documents (A. Colin). As to Madame de Charrière, she is situated for the general reader in Henry Bordeaux's latest work, "Portraits de femmes et enfants"; among the other portraits are Mlle. de Lespinasse (original of "Lady Rose's Daughter" of Mrs. Humphry Ward), and the vivacious Comtesse de Boigne, who tells so many tales of Benjamin Constant's political time (Plon). As nothing is negligible where history becomes personal, the love letters of Benjamin Constant (chosen for their literary perfection in the *genre*) appear in "Les plus jolies Lettres d'amour," collected by Annie de Pène, along with those of Madame Récamier, to whose set he belonged for a time, of Chateaubriand, Diderot, Balzac, and Gambetta.

"Claude Fauchet (1744-1794)" is the carefully studied life, in two volumes, of the court preacher who led the attack on the Bastille, sabre in hand, who became a bishop under the civil constitution of the clergy, and then, when he had been elected a Deputy to the Convention, found he had a conscience forbidding him to go further in the way of revolution. Naturally, he was accused of favoring Charlotte Corday, and, like her, his head was chopped off. The same special publisher of historical works (Champion) has brought out from the same period "Lettres inèdites de J. S. Rovère," who was a member of the Conseil des Anciens. The letters were written to his brother, Siméon-Stylite, who was constitutional bishop of Vaucluse, but resigned, and became comfortably mad after the Terror, leaving these letters behind him at his death in 1820. Their writer, in spite of the assistance he gave in tumbling down Robespierre, was packed off to Guiana, where he died in 1798. Dr. Victorin Laval of Vaucluse adds an appropriate introduction, epilogue, and notes. "Un Séjour en France de 1792 à 1795" is a new edition of the translation made by Taine of letters of a witness of the Revolutionary Terror (Hachette). "Journal d'une femme de cinquante ans (1778-1815)" is the second volume of writings left by the Marquise de La Tour du Pin and now published by her great-grandson (Chapelot). Her father-in-law was the minister of Louis XVI, who returned from exile to testify in favor of his king and queen, for which

he was guillotined; and her husband was the companion of Lafayette in America, to which he returned during the Terror in France; but later he refused to follow his old leader in allegiance to the modified Revolution of Louis Philippe. "Deux Jurés du Tribunal Révolutionnaire," by Alphonse Dunoyer, tells the authentic story of Vilate "le petit-maître" and Trinchard "l'homme de la Nature"—two of the men who have left Revolutionary justice a hissing and an abomination to all future generations (Perrin). "La Juridiction consulaire de Paris pendant la Révolution," by Georges Leclerc, judge of the Tribunal de Commerce, which has taken the place of the old-time "juges-consuls," takes us into the business litigations which went on calmly and with multitudinous *dossiers* while the Terror was cutting off its heads outside.

"Napoléon Ier, Empereur des Français," by Louis Lumet, gives 348 reproductions of pictures and engravings of the time, with appropriate text (10 francs, Nillson). "Souvenirs du Chevalier de Cussy," published by Count Marc de Germiny, is a considerable first volume of notes left by a "garde du corps," diplomat and consul-général, from 1795 to 1866 (Plon). His life-work came after Napoleon. "Les Rostopchine" is a fairly sensational family chronicle by the present Countess Lydia of that name (Juven). "She fears not to lift the veil from the personages, characters, and intrigues of a famous family—her own. In particular, she reveals to us in her grandmother, the great Catherine Rostopchine, a woman of fatality whose influence extended over grave events in the history of Russia, such, for example, as the burning of Moscow, whose causes had remained somewhat mysterious!" The book is in direct contradiction to her grandfather's defence of himself; but it shows what the world was like during the Napoleonic *épopée*. Rostopchine himself wrote significantly (for the whole history of Russia), "I was like an Asiatic drunk with opium!" Stories of less heroic persons, and more deliberately selfish, may be found in "Marie Louise et la cour d'Autriche entre les deux abdications (1814-1815)" by Baron de Méneval (Plon). "Le Dernier Effort de la Vendée (1832)," by Vicomte A. de Courson, from unpublished documents, plunges us back into violent, useless heroism for the Duchesse de Berry, wild mother of that tame last heir of the Bourbons, the Comte de Chambord, whom his followers dreamed of as Henry V of France down to these late years.

The sixth and last volume of "Les Indiscrétions de l'histoire," by Docteur Cabanès, ranges all through this France, which the Republic and the automobile have left forever in the past, from Louis XI explained by medicine to such questions as—Rousseau, did he commit suicide? Napoleon, was he sick at Waterloo? and that subject of ineffable French laughter—Louis XVIII and women. Really valuable is the index to the six volumes (A. Michel). The collection of Énigmes de l'histoire, edited by M. Vitrac, of the Bibliothèque Nationale, tries to give the finish to two legends in its new volume "La Fin de deux légendes," by Gustave Bord. They are the Affaire Léonard (Marie Antoinette's coiffeur) and the Baron de Batz, dear to Dumas. Another book dipping into many centuries is Ernest Dimnet's "Figures de moines"—English Benedictine monks of Douai, where they stuck after the Reformation until the Third Republic expelled them with the rest this other year; monks of La Trappe, whose founder looked askance at admiring friends of Port-Royal and outlived them in spiritual progeny, since his rule has monasteries in the United States, though also barred from France; an abbey in the eighteenth century; Shakespeare's monks; and some real letters from real monks (Perrin).

The new order breathes strongly in "P. J. Proudhon (1809-1865)," by Édouard Droz, professor of the university faculty of Besançon (Pages Libres). This doctrinaire, who is slowly coming into his own as a world-moving philosopher, was the direct inspirer of the Revolution of 1848 (George Sand is the witness); and he has been adopted as the father of that anarchist movement, which is destined to blight every success of theoretical Socialism. In this, he was only like Herbert Spencer: both refused to see that their teachings tended whither lawless disciples have led the way. "Le Principe d'équilibre et le Concert Européen," by Prof. Charles Dupuis shows how the old order has progressed from the Peace of Westphalia to Algeciras. S. D.

NEWS FOR BIBLIOPHILES.

The third volume of Thomas Lindsley Bradford's "Bibliographers' Manual of American History," M to Q, 1,423 numbers, has just been published by Stan. V. Henkels & Co. of Philadelphia. Our notices of the two preceding volumes have not been very complimentary, and we are sorry not to be able to speak any more warmly of the third. It describes the historical works of Cotton and Increase Mather, and anonymous and general books relating to Massachusetts, New England, New Jersey, Pennsylvania, and other States. Some of the latter items will hardly be sought for under the headings where they are inserted; but the index which will form Vol. V will probably make them more accessible. The heading Missouri is particularly full, and the compiler and publisher make acknowledgements to William Clark Breckenridge for most of the Missouri titles. More recent auction records might have been supplied on some titles, for example the copy of the rare "Relation of Maryland" (1635), which brought £400 on March 15, 1907, is not entered; nor is the Earl of Sheffield's copy of "News from New England" (1676), which brought £118 on November 4, 1907. Some books are entered twice even in this volume. The last of the five tracts in folio on King Philip's war, "The War in New England visibly ended" (1677), is entered under "More, Caleb," and again under "New England." Beauchamp Plantagenet's "Description of New Albion" (1648) is entered under the author's name, but the reprint is entered under New England.

Part V of the Henry W. Poor library will be sold by the Anderson Auction Co. in this city on April 5, 6, and 7. The most remarkable section of this part is the collection of French books formed by Valentine A. Blacque, seventy-two titles, mostly in fine bindings and some with added water-color drawings by famous artists. After Mr. Poor purchased the collection, he printed a few copies of a catalogue of it. Perhaps the most remarkable book of the lot is the first edition of "Les Sauvages de l'Europe" (1760) by Le Suire and Louvel, presented by the latter to Mme. de Pompadour. Another notable item is the manuscript "Office de la Vierge Marie" by Nicholas Jarry, calligrapher of Louis XIII and Louis XIV. This manuscript was executed for Anne of Austria, Queen of Louis XIII. It is in a mosaic binding by Trautz-Bauzonnet, and signed three times by him. Another important book is a large paper copy of Dorat's "Les Baisers" (1770), with illustrations by Eisen and other artists, generally considered the masterpiece of French illustration of the eighteenth century. Among the early English books are "The Whole Works of Samuel Daniel" (1623), with the dedication, lacking in most copies of this edition; the first edition of John Cleveland's "Character of a London Diurnall" (1644); Gower's "Confessio Amantis" (1554), and Willymat's "Prince's Looking Glass" (1603). In the eighteenth century are first editions of Sheridan's "The Rivals" (1775), Goldsmith's "Vicar of Wakefield" (1776), and "The Deserted Village" (1770). There are also first editions of Edward FitzGerald's "Euphranor" (1851), "Six Dramas of Calderon" (1853), "Salâmân and Absâl" (1857), "Agamemnon" (1876); the first edition of Keats's "Endymion" (1818); a presentation copy of George Meredith's "Poems" (1851), first edition; Dante Gabriel Rossetti's "Sister Helen" (1857); Ruskin's "Poems (1850), of which fifty copies only were printed; the first edition of Shelley's "St. Irvyne" (1811), "Queen Mab" (1813), "The Cenci" (1819), "Rosalind and Helen" (1819), Prometheus Unbound" (1820), "Hellas" (1822), and "Posthumous Poems" (1824); Swinburne's first book "The Queen-Mother and Rosamond" (1860), with the earliest form of title-page; first editions of Tennyson, John Addington Symonds, Andrew Lang, Robert Louis Stevenson, and other nineteenth-century English authors; a practically complete set of the publications of the Hakluyt Society, 152 volumes; and 127 volumes in various languages on the rose, uniformly bound in half rose morocco. Among manuscripts is a document signed by Ferdinand and Isa-

bella of Spain, Madrid, 1495, and a collection of autographs of the signers of the Declaration of Independence, lacking only four, those of Gwinnett, Hewes, Middleton, and Taylor. As usual there are many book-club publications and books from special presses, some in handsome bindings.

On April 7 and 8, the Merwin-Clayton Sales Co. of this city will offer a collection chiefly remarkable for the long series (nearly 250 lots) on Ireland.

At a recent auction by C. G. Börner, in Leipzig, when a library said to have been collected in America was disposed of, the following prices were paid for first editions: Goethe's "Faust," 1,110 marks; "Götz," 705 marks; "Leiden des jungen Werthers," 445 marks; and "Die Räuber" (a soiled copy), 880 marks. A silhouette of Goethe as a youth, believed to be one of the earliest portraits extant, brought 385 marks; and a portrait of Schiller, by Romberg, showing the poet as a man, 445 marks.

Correspondence.

"THE HISTORY OF CARDENIO BY MR. FLETCHER AND SHAKESPEARE."

To the Editor of The Nation:

Sir: It seems to me that hardly enough attention has been paid to "Double Falsehood," the play which in 1727 Lewis Theobald produced both on the stage and in print, asserting that it was a revision of a manuscript play of Shakespeare. Some critics have treated the piece as pure forgery by Theobald. Others—the majority—have recognized an old Elizabethan foundation, but too much worked over to be attributed with certainty to any special author. "Double Falsehood" is a very close dramatization of the story of Cardenio in "Don Quixote." Now, in 1613 a play was acted by the King's men, entitled "Cardenno" or "Cardenna," and in 1653 there was entered in the Stationers' Register for Humphrey Moseley a play called "The History of Cardenio" by "Mr. Fletcher and Shakespeare." The question arises whether this play could have formed the basis of Theobald's revision.

External evidence is lacking, since Theobald's manuscripts have disappeared, possibly in the holocaust perpetrated by Warburton's cook. There are, however, some interesting points of internal evidence. In the first two acts of "Double Falsehood" and in Act iii, scenes 1 and 2, there are evident traces of an Elizabethan hand protruding through masses of Theobald; but what Elizabethan hand it is impossible to say. Beginning with iii, 3, however, there are many lines and passages, likewise half buried under Theobald, which no one intimately familiar with the Elizabethan drama should mistake; for they are clearly stamped with the peculiar, the most characteristic mannerisms of Fletcher. It is not merely the feminine ending, though that is conspicuously present. It is the feminine ending composed of two words, especially with a redundant "now," or "too," or "yet." It is the constantly recurring alliteration, the trick of repeating words, leaving them, and returning to them in a way hardly usual even with Fletcher's later imitators. Two passages, taken from many, will illustrate most of these points.

Violante—*How* his Eyes shake Fire,
And measure ev'ry Piece of Youth about me!
The Ewes want Water, Sir: Shall I go drive 'em
Down to the Cisterns? Shall I make haste, Sir?
Would I were five Miles from him—*How* he gripes me!
Master—Come, come, all this is not sufficient, Child,
To make a Fool of me.—This is *a fine Hand, A delicate fine Hand,*—Never change Colour;
You understand me,—and *a Woman's Hand.*—iv. 1.

Julio—Since she is not Leonora, she is heav'nly.
When she speaks next, listen as seriously,
As Women do that have their Loves at Sea,
What Wind blows ev'ry Morning.—
Violante—I cannot get this false Man's Memory
Out of my Mind. You Maidens, that shall live
To hear my mournful Tale, when I am Ashes,
Be wise; and to an Oath no more give Credit,
To Tears, to Vows, (false Both!) or any Thing
A Man shall promise, than to Clouds, that now
Bear such a pleasing Shape, and now are nothing.
For they will cozen, (if They may be cozen'd,)
The very Gods they worship.—iv, 2.

The cloud figure in the last passage is curiously similar to one in Ordella's fine speech in "Thierry and Theodoret" (iv, 1). And many other resemblances of diction between "Double Falsehood" and Fletcher's acknowledged plays could be pointed out.

Now these traces of Fletcher occur constantly in certain distinct portions of "Double Falsehood." In other portions they do not occur at all. If then it is urged that Theobald forged the play, it must be admitted that he did it with a knowledge of the tradition of the Shakespeare-Fletcher authorship and the definite intention of imitating Fletcher. But it is almost certain on external grounds that he could have had no knowledge of that tradition, and in his preface he expressly deprecates the suggestion of some critics that there were traces of Fletcher in the play. It seems probable, therefore, considering the subject and the presence of Fletcher, that the play on which "Double Falsehood" was founded was the old "History of Cardenio."

That Shakespeare had any hand in the original play can, of course, hardly be proved. Moseley's attribution to him in 1653 is not very reliable; nor is Theobald's story about his manuscripts. That "Cardenno" or "Cardenna" was originally produced by the King's men in 1613 brings it at least into the period when, if ever, Shakespeare and Fletcher would have been working together. Passages in the portion of the play not Fletcher's have to my ear a turn or resonance more resembling Shakespeare than either Beaumont or Massinger, the writers most likely to have collaborated with Fletcher.

You deal unkindly; mishecomingly,
I'm loth to say: For All that waits on you,
Is graced and graces.—i, 2;

Such a Villany
A Writer could not put down in his Scene,
Without Taxation of his Auditory
For Fiction most enormous.—iii, 1.

Finally, the action of "Double Falsehood" is much on the familiar lines of the Beaumont and Fletcher and Shakespeare romances. Especially noticeable is it that in the three plays of Shakespeare's last period and in "Pericles" the romantic theme of the restoration of lost children to their parents plays an important part, and in "Cymbeline" it forms the main element of the effective series of climaxes which closes the play. Now in "Double Falsehood," Act v, we have the same theme also elaborately worked up in telling climaxes and, curiously enough, almost the only extensive deviation from the Cervantic original is introduced to bring about this result.

I shall have, before long, a much fuller discussion of this matter in *Modern Language Notes,* and I hope later to reprint "Double Falsehood" in a way to make it more available for study than it is at present.

Gamaliel Bradford, Jr.

Wellesley Hills, Mass.

SOME PARALLELS.

To the Editor of The Nation:

Sir: Last month there issued from the press of an American publishing house a book entitled "The Rhetoric of Oratory." In his preface the author says (p. vii): "There is no modern text-book, so far as the author is aware, which covers the same ground as the present volume." Yet a comparison of the book with another entitled "Modern American Oratory," copyrighted some eleven years ago by another publisher, reveals a similarity rather alarming. There is submitted herewith a list—by no means exhaustive—of parallel passages from the two books. It would appear that the later writer has a standard of originality peculiarly his own. This conclusion seems further justified by a comparison of portions of a book by the same author, entitled "Extempore Speaking" (issued by Ginn & Co. last year), with a well-known little book by Prof. Brander Matthews, "Notes on Speech-Making."

Ernest M. Halliday.

Urbana, Ill., February 16.

"Modern American Oratory," by Ralph Curtis Ringwalt. Henry Holt & Co., 1898.	"The Rhetoric of Oratory," by Edwin Du Bois Shurter. The Macmillan Co., 1909.
. . . Aristotle says that oratory (or rhetoric, as the whole science of written and spoken discourse was denominated by the Greeks) is "the faculty of finding all the means of persuasion on any subject." Cicero, who is followed by Dr. Blair, defines it as the "art of persuasion"; while Quintilian and John Quincy Adams agree in calling it the "art of speaking well." . . . That of Aristotle, since it has to do with but one branch of the subject, what the rhetoricians called invention, . . . may be rejected at once.—P. 3.	. . . Aristotle says that oratory (rhetoric) is "the faculty of finding all the means of persuasion on any subject." Quintilian and John Quincy Adams define it as "the art of speaking well," while Cicero and Dr. Blair agree in calling it "the art of persuasion." But Aristotle's definition, since it relates primarily to a single branch of rhetoric, that of Invention, is to-day obviously inadequate.—P. 2.
. . . The much-quoted remark of Charles James Fox, when he was told that a speech read well, "Then it must have been a bad speech," is as far from the truth as the popular estimate which ranks Edmund Burke among the world's great orators.—P. 6.	. . . The importance of the manner of delivery gave rise to Fox's dictum that a good speech never reads well. There may be some truth in this, but the statement is no doubt too sweeping. True, there are some noted orators, such as Burke, whose speeches are more effective as literature than they were when first delivered.—P. 6.
. . . We can now advance a step, and turn to the broad divisions into which orations have been	The broad divisions into which oratory has been classified have been variously named by dif-

classified. Although variously named by different writers, these divisions—a single addition excepted—have always been intrinsically the same: they have been based on one of two points of view, either upon the attitude of an audience toward a speech, or upon the purpose of the speaker, and usually upon the former. For example, Aristotle . . . finds three attitudes in an audience, and upon these he bases his divisions of oratory. He says that audiences are either judges of things lying in the past, as are members of assemblies and deliberative bodies; or critics, as are those who estimate only the ability of a speaker or the power and charm of a speech. Then, from this analysis, he draws the conclusion that there can be but three kinds of speeches — judicial, deliberative, and epideictic, the oration of display. To this division, the birth of Christianity, and the part played in the spreading of its doctrine by spoken discourse, has added a new, a fourth type of oratory; but with this exception, Aristotle's classification is as valuable to-day as it was two thousand years ago. We may therefore adopt it, . . . changing a little, although somewhat arbitrarily, the nomenclature. . . . We shall then have four great divisions of oratory, as follows: (1) deliberative, the oratory of the assembly; (2) forensic, the oratory of the bar; (3) demonstrative (also called occasional), the oratory of display; and (4) pulpit, the oratory of the Christian Church.—P. 7, 8, 9.

Although deliberative oratory has been defined as the oratory of the assembly, the inference must not be drawn that it is restricted in scope to speeches before legislative assemblies; . . . Any speech before a number of people who listen as judges, where the object of the speaker is to induce his hearers to accept or reject a given policy for the future, may be called a deliberative speech. Thus to this class belong not only most congressional efforts, but speeches in conventions, those on the hustings, those in public meetings of many sorts, as well as those before synods and conferences.—P. 9.

. . . Sedulous inquirers point to the harangues in the Bible, and to the stormy councils which enliven many pages of Homer as the first examples of deliberative speech. . . . In our own country different writers since the days of Aristotle, yet these divisions (with one exception) are intrinsically the same; they have been based upon the viewpoint of either the audience or the speaker, and usually the former. Thus Aristotle bases his division upon three points of view an audience may have. He says that audiences are judges either of things lying in the future, as are members of deliberative bodies; or of thing (sic) lying in the past, as are members of judicial tribunals; or of things of the present, as are critics of the presentation of some topic of the moment. He then deduces this classification: (1) Deliberative, (2) Judicial, and (3) Epidictic oratory (to show forth, or display). —P. 15.

. . . Since the time of Aristotle the rise of Christianity has added another kind of oratory, that of the pulpit. . . . However, for the purpose of separate consideration, and changing—somewhat arbitrarily — Aristotle's nomenclature, we may classify oratory into the following four divisions: (1) Deliberative, the oratory of the assembly, (2) Forensic, the oratory of the bar, (3) Pulpit, the oratory of the Church, and (4) Demonstrative, the oratory of the special occasion.—P. 16.

While deliberative oratory is usually associated with speeches before legislative assemblies, its scope is not confined to such bodies. Any speech addressed to hearers with the object of inducing them to accept or reject a given policy for the future may be called a deliberative speech. Hence this kind of oratory includes not only congressional and parliamentary speeches, but also addresses before conventions, synods, conferences, and public meetings of various sorts.—P. 17.

. . . Some writers point to the harangues in the Old Testament and to the stormy councils described by Homer as the first examples of deliberative speech. . . . It lighted the fires which burned into the Reformation and the French Revolution. . . . And its history is inextricably interwoven with the history of our own country—the Revolution, the adoption of the Constitution, . . . and the great governmental and social problems of the last half century. —P. 17.

. . . Its preëminence arises from three causes: the comprehensiveness of its purpose, the subjects with which it deals, and the character of the audiences addressed. —P. 18.

. . . The great oration in the English Parliament or in the American Congress is now an unusual episode. . . . Further, some influence may be attributed to the character of the questions dealt with at present. These are, as a rule, no longer the larger problems of national policy, but details of administration, the currency, tariff schedules, . . . —questions that obviously do not lend themselves to emotional speaking.—P. 19, 20.

Arguments and appeals were employed which to-day would be regarded as extraneous and wholly irrelevant. . . . As some one has said, Cicero's argument was that "Archias was a Roman citizen because he was a Greek poet."—P. 23.

The general structure of a forensic oration, whether ancient or modern, whether delivered to the court or to the jury, consists of these three essential parts: (1) a statement of the facts of the case, (2) a statement, deduced from these facts, of the points at issue, and (3) the proof of these issues.—P. 27, 28.

It must be confessed that the term "demonstrative," when used to designate a division of oratory, conveys but little meaning.—P. 35.

. . . The subjects for eulogy, however, were not restricted to men, as they usually are to-day, but gods, cities, and even inanimate objects or abstract virtues might be made the themes of praise.—P. 37.

. . . A man may be a successful lawyer without being an advocate, or a statesman without being a deliberative orator, but he cannot well be a minister without being a preacher.—P. 28.

. . . Since the time of Aristotle the rise of Christianity has added another kind of oratory, that of the pulpit. . . . However, for the purpose of separate consideration, and changing—somewhat arbitrarily — Aristotle's nomenclature, we may classify oratory into the following four divisions: (1) Deliberative, the oratory of the assembly, (2) Forensic, the oratory of the bar, (3) Pulpit, the oratory of the Church, and (4) Demonstrative, the oratory of the special occasion.—P. 16.

While deliberative oratory is usually associated with speeches before legislative assemblies, its scope is not confined to such bodies. Any speech addressed to hearers with the object of inducing them to accept or reject a given policy for the future may be called a deliberative speech. Hence this kind of oratory includes not only congressional and parliamentary speeches, but also addresses before conventions, synods, conferences, and public meetings of various sorts.—P. 17.

. . . Some writers point to the harangues in the Old Testament and to the stormy councils described by Homer as the first examples of deliberative speech. . . . It lighted the fires which burned into the Reformation and the French Revolution. . . . And its history is inextricably interwoven with the history of our own country—the Revolution, the adoption of the Constitution, . . . and the great governmental and social problems of the last half century. —P. 17.

. . . Its preëminence arises from three causes: the comprehensiveness of its purpose, the subjects with which it deals, and the character of the audiences addressed. —P. 18.

. . . The great oration in the English Parliament or in the American Congress is now an unusual episode. . . . Further, some influence may be attributed to the character of the questions dealt with at present. These are, as a rule, no longer the larger problems of national policy, but details of administration, the currency, tariff schedules, . . . —questions that obviously do not lend themselves to emotional speaking.—P. 19, 20.

Arguments and appeals were employed which to-day would be regarded as extraneous and wholly irrelevant. . . . As some one has said, Cicero's argument was that "Archias was a Roman citizen because he was a Greek poet."—P. 23.

The general structure of all forensic speeches, whether they be ancient or modern, or intended for judge or jury, is the same; they consist of three essential parts: a statement of the facts on which the case rests; a statement, drawn from these facts, of the points at issue; and the proof of the issues.—P. 22.

The term demonstrative, it must be confessed, when applied to oratory conveys but very little meaning.—P. 24.

. . . The subjects of eulogy were not, however, so restricted then as they are now; gods and cities, as well as men, could appropriately be made the themes of praise.—P. 27.

. . . A man may become a statesman without being an orator, a lawyer without being an advocate; but he cannot well be a successful minister without being a preacher.—P. 45.

TO THE EDITOR OF THE NATION:

SIR: Mr. Halliday takes exception to the statement in the preface of my book, "The Rhetoric of Oratory," to the effect that "there is no modern text-book, so far as the author is aware, which covers the same ground as the present volume." But the statement is true—so far as the author is aware—and it was for this very reason that the preparation of the book was first undertaken, some ten years ago. Much would depend, it is true, upon what is meant by "covering the same ground." Every teacher of oratory is, of course, well aware of Mr. Ringwalt's excellent essay, "The Theory of Oratory," contained in his volume, "Modern American Oratory." But his book is not primarily a text on oratory, but a collection of orations for critical study. The sub-title is: "Seven Representative Orations, Edited with Notes, and an Essay on the Theory of Oratory." This essay, or text proper, is contained in 90 of the 329 pages of the whole book. "The Rhetoric of Oratory" is primarily a text-book, the text proper being 217 of the 305 pages; and approximately two-thirds of the latter book treats of topics not dealt with in the former. So, when it is said that the two books do not cover the same ground, this is meant in the sense that a man who goes 90 miles over a given course does not cover the same ground as one who goes 217 miles, or, in the sense that one who cultivates one acre of ground does not cover the same ground as he who cultivates three acres.

Another statement in the preface to "The Rhetoric of Oratory" answers, at least in part, the *prima facie* case presented in several of the foregoing parallelisms. The statement referred to reads:

> The author would not underrate his indebtedness to some of the modern treatises (cited in the text), but for the most part the present treatise simply aims to adapt ancient precepts to present-day conditions. . . .

No writer could seriously pretend to any originality as to the principles and theories relative to the science and art of oratory, so elaborately worked out by Aristotle and the other ancient writers, or as to the application of these theories to present-day conditions. The case before us, then, can raise questions only of form, not of matter; and it is impossible adequately to deal with questions of form without quoting in full what is given above as either a part of a sentence, or as a segregated sentence out of a paragraph, and this method neither time nor space will permit. But, if we take, for example, the first parallel passages above given, it would not appear to me alarming if, in mere statements of facts and theories, similarity in form of statement were to be found in several other modern books that might readily be cited. So of the second instance: the quotation of Fox's familiar remark, and the well-recognized estimate of Burke as to matter vs. delivery—these matters have been commented upon by numberless writers, with a similarity in form of statement not necessarily alarming. So of the third set of parallel passages, relative to the divisions of oratory; any one interested may find parallel passages in Dr. Blair's "Lectures on Rhetoric and Belles Lettres," John Quincy Adams's "Lectures on Rhetoric and Oratory," and in numerous later books—and all going back at last to Aristotle's analysis.

Now, I have no desire to beg the question. I owe much to Mr. Ringwalt's essay, and Mr. Halliday has succeeded in convincing me that I owe more to it than I probably realized when writing those chapters of my book which deal with topics treated of in both books. I am convinced, for example, that in the matter of the differentiation of oratory from other forms of

public speaking (parallel passages in the treatment of which, by the way, might well be added to Mr. Halliday's list), I am indebted very largely to, and have followed closely, Mr. Ringwalt's analysis. Although his book is cited in a foot-note reference (p. 25), doubtless more specific acknowledgment of the help derived from his essay should have been given. This omission I exceedingly regret, and shall at once take steps to correct. The oversight, however, may be explained by the fact that I used Mr. Ringwalt's book some three or four years with my classes; then, wishing to develop the subject along other lines, I used notes, including quotations and paraphrases from this and other works, ancient and modern, as the basis of informal lectures. These notes were the primary source for reference in the process of composition, while writing my book, and it is quite possible that segregated passages may be the result of unconscious memorizing, or of carelessness in transcribing what should have been either specifically acknowledged or given as quoted matter. The same remark applies to the other book mentioned by Mr. Halliday—although in the latter instance special acknowledgment is made in the preface of the help derived from Professor Matthews's little book.

But, all in all, if the two books in question be compared and judged *as a whole*—sentence by sentence, paragraph by paragraph, and chapter by chapter—on such a basis of judgment as this the author of "The Rhetoric of Oratory" is content to rest his case. EDWIN DUBOIS SHURTER.

University of Texas, February 28.

SENTIMENT VERSUS HISTORY IN NORTH CAROLINA.

TO THE EDITOR OF THE NATION:

SIR: Some occurrences during the recent session of the North Carolina Legislature throw an amusing side light on the power of sentiment and of family pride to perpetuate historical error when it has been once established, and show the powerlessness of historical truth when confronted by popular tradition.

As is well known, many North Carolinians have long claimed, because of the so-called Mecklenburg Declaration of Independence, a priority over the national Declaration of July 4, 1776. In 1819 the report was first published that on May 20, 1775, Mecklenburg County, N. C., declared absolute Independence of Great Britain. The claim was based on the statement of John McKnitt Alexander, who had been secretary of the meeting. His account of the proceedings on that day was written from memory twenty-five years after the event occurred, but was at that time believed to have been copied from the original records. The claim of Mecklenburg County was at once disputed, and in 1830 the State Legislature set gravely to work to establish by law the disputed facts. The survivors of the Mecklenburg meeting of May, 1775, were sought out; the statements of the secretary made from memory in 1800 were shown them, and they were asked if these statements accorded with their own memory of the events. Their answers, in the absence of more definite knowledge, tended to confirm the story of the secretary, and the whole was published with the sanction of the Legislature as the official version of the affair.

It is to be observed that there was then no particular question as to the date or the exact language of the document. But in 1847 Dr. Joseph Johnson found the full set of twenty resolutions since known as the Mecklenburg Resolves of May 31, 1775, which differ widely from the Declaration of May 20. From the discovery of the Resolves of May 31, which are undoubtedly genuine, until the present time, there has been war between the advocates of the Declaration of the 20th and the Resolves of the 31st. Students outside of North Carolina who are not influenced by local feeling have been uniformly against the Declaration of the 20th. In fact, so far as I recall, no recognized historical student of the present generation has undertaken their defence. They have looked for their defence to the descendants of the signers and to an aggressive and overbearing public sentiment in Mecklenburg, which has to an extent permeated the State and given tone to the work of local historians. These have either accepted the 20th with its contradictions, or have neatly straddled. Within the last week there has appeared in the leading newspaper of the State a communication from one of the descendants, which calls for a suppression of "heresy" in regard to the 20th, and an intimation that if the teachers in the State schools cannot support that date they should resign.

But the light of history is dawning, even in North Carolina. In his recent work on the history of North Carolina through the colonial and revolutionary periods, Capt. S. A. Ashe treats this subject in the course of his narrative. To satisfy local public sentiment he gives all the documents on which the advocates of the 20th rely for their defence. Then, after discussing the whole subject with much detail, he cuts loose from tradition, defies public sentiment, and arrives at the inevitable conclusion that there was but one public meeting in Charlotte in May, 1775, and that the Resolves of May 31 are the published expression of that meeting.

Now for the sequel. A bill was introduced at the recent session of the North Carolina Legislature to give the county boards of education authority to purchase this history of North Carolina by Capt. Ashe for the rural school libraries, if they saw fit. The bill, at best, was a mere enabling act. It passed the Senate. It was referred to the House Committee on Education. There, the Speaker of the House, who happens to be a Descendant, appeared against it, and was beaten. When it came up on its passage it was opposed by the Speaker, who left his gavel to lobby, and by the Representatives from Mecklenburg. The merits of the book were not discussed. The fitness of Capt. Ashe for his task was not considered. The need of a State history was not thought of. These things availed nothing when placed in the balance against his rejection of this hoary myth. The opponents of the bill did not think argument necessary. Their speeches were directed to showing what would follow in the wake of this bill: The date, May 20, is on the State flag and on the State seal; a monument has been erected in Charlotte to commemorate this event; the children have been taught this date, and, as one member put it, its authenticity "has been established by the Legislature already as thoroughly as the Legislature can establish anything." Then why not leave good enough alone without questioning its correctness? This impassioned appeal to sustain the 20th, regardless of the historical arguments against it, swept the members off their feet, and the bill was defeated by 56 to 39. Verily in the North Carolina historical world "the sun do move." STEPHEN B. WEEKS.

Greenboro, N. C., March 23.

THE PRONUNCIATION OF LATIN.

TO THE EDITOR OF THE NATION:

SIR: Prof. A. W. Anthony, in your issue of March 18, asks, "Why perpetuate longer the foreign method if it does not give the student acquaintance with a spoken language?" The anecdote which so interestingly describes the inability of Mr. Anthony and a German student to converse in Latin simply goes to prove the necessity of adopting a uniform standard throughout the world. If anecdotes be argument, I know a certain Harvard man who was able pleasantly to spend a long afternoon in an Italian train talking Latin with a native priest. They had no other language in common, and the vast disparity of their native dialects did not prevent the one from comprehending the other, thanks to the American's training in the Roman pronunciation.

Professor Anthony complains further that the Roman pronunciation increases the difficulty of learning the language. It would be otiose here to repeat all the arguments in favor of the Roman pronunciation; one is decisive—that on any other plan we cannot form the faintest idea of the melody and the power of Latin and Greek prose, of the beauty of the poetry of Homer, Sophocles, Catullus, Virgil. Why is it that so many forget that the letters of our alphabets, ancient or modern, do in all sincerity stand for sounds, are but symbols of the reality and not the reality itself, which is oral? It would be just as absurd for us to attempt to superimpose our sounds upon the symbols of Virgil as it would be for a German, untrained in English speech, to judge the music of Swinburne by his own mangled and guttural travesty of it. The increased ease that Mr. Anthony asserts would follow in the case of a return to the old "English" system would in reality be that ancient enemy of human progress, the ease consequent upon low ideals and still lower attainments.

But logic deserves our respect, wherever we find it, and I would be the last to deny that there are both logic and courage in Mr. Anthony's position, in spite of the fact that his premises and his conclusions are equally untenable. His logic and his courage are both proved by his writing such a delicious *reductio ad absurdum* of the methods which we employ for the ancient languages in the majority of our American schools. R. K. HACK.

Williams College, March 22.

TO THE EDITOR OF THE NATION:

SIR: I confess my surprise that your correspondent of March 9 speaks of the now

generally adopted pronunciation of Latin as "having naught but a worn-out theory to commend it." It has always seemed to me that our evidence upon this matter, descending from antiquity itself, is remarkably full and convincing, so much so that there is here comparatively little difference of opinion among scholars, which is more than can be said of their views on some other branches of classical philology.

I could tell your correspondent another story, as a counter-blast to his, of an acquaintance of mine, who was able successfully to communicate in spoken Latin with the authorities of the Vatican Library, thanks to his having been trained in the Roman method of pronunciation; but I wish to pass to something more important. Your correspondent appears to argue that, because a student pronounces "vidi" as "wee-dee," he will not be likely to recognize its connection with such a word as "evident." My observation, however, is this, that where the English method of pronunciation is nominally employed, no attempt is ever made to *read Latin* at all (as, indeed, why should there be?), and consequently a student's ideas of derivation come to him visually, not vocally. Now, if he employs the Roman method, he gets his derivation visually just as under the other system, and by reading aloud—a process upon which classical teachers are laying increasing stress—he gets at least a fair approximation to Latin as it sounded in its imperial days, gets some real impression of the sonorous Ciceronian eloquence as it rang in a Roman's ears, some idea of the "stateliest measure ever moulded by the lips of man." In short, he gets all that the student under the other system gets, and a great deal more. As one who was brought up under the English method and did not employ the Roman till in his twenties, I desire to record the fact that the classics never meant half as much to me when I merely *translated* them as they have since I have *read* them.

May I be permitted to call John Milton in his capacity as schoolmaster into court:

> For their Studies, First they should begin with the chief and necessary rules of some good Grammar, either that now us'd, or any better: and while this is doing, their speech is to be fashion'd to a distinct and clear pronuntiation, as near as may be to the *Italian*, especially in the Vowels. For we Englishmen, being far Northerly, do not open our mouths in the cold air, wide enough to grace a Southern Tongue; but are observ'd by all other Nations to speak exceeding close and inward: So that to smatter Latine with an English mouth, is as ill a hearing as Law-French.

WILLIAM HARDY ALEXANDER.

University of Alberta, Strathcona, Canada, March 25.

TO THE EDITOR OF THE NATION:

SIR: For one in the curious state of mind evinced by the writer of a communication in the *Nation* of March 18 ("The Pronunciation of the Classics") there may be food for reflection in an entertaining passage in Sir Walter Scott's novel, "The Fortunes of Nigel" (Chapter ix), where young Nigel is presented to King James I, who, after some conversation with him in Latin, addresses his courtiers as follows:

> Ye see, my lords, no bad specimen of our Scottish Latinity, with which language we would all our subjects of England were as well embued as this and other youths of honourable birth, in our auld kingdom; also, we keep the genuine and Roman pronunciation, like other learned nations on the continent, sae that we hold communing with any scholar in the universe, who can but speak the Latin tongue; whereas ye, our learned subjects of England, have introduced into your universities, otherwise most learned, a fashion of pronouncing like unto the "nippit foot and clippit foot" of the bride in the fairy tale, whilk manner of speech (take it not amiss that I be round with you) can be understood by no nation on earth saving yourselves; whereby Latin, *quoad Anglos*, ceaseth to be *communis lingua*, the general dragoman, or interpreter, between all the wise men of the earth.

It is needless to say that our English cousins, after these centuries of insular absurdity, are now engaged in the process of wholesale reform in the pronunciation of the classical languages and are fast conforming to the usage of the rest of the world.

H. H. YEAMES.

Hobart College, Geneva, N. Y., March 22.

TO THE EDITOR OF THE NATION:

SIR: May I be permitted, as a teacher of Latin to long-suffering youth, a word of protest against Prof. A. W. Anthony's new statement, in your issue of March 18, of what to many of us is an old heresy?

The thing seems plausible enough on the surface: Why teach the Latin pronunciaiton, or, for that matter, any pronunciation at all? Latin is a *dead* language (*absit omen!*); you can't converse in it; even if you could, few would be so lacking in means of entertainment as to listen. Latin cannot even make out as good a case for itself as Greek, which Professor Anthony admits is a spoken and *living* language, forgetting perhaps that modern Greek resembles more nearly the familiar conversation of the ladies of Abdul Hamid's seraglio than the honey-sweet words we so meticulously translate. But all this were as nothing, and little to our purpose, except for three of Professor Anthony's capital charges against the teaching of an approximately historical pronunciation, those, namely, of *Uselessness* in relation to any other study, *Etymological Hindrance*, and *Needless Difficulty*.

Let me employ a *hysteron proteron*, and do away with this last idea. In my own school days, I think it took us about two weeks to master with a certain completeness the chapter on pronunciation, and its application. I have this year in process of instruction boys from twelve to fifteen years of age, who have taken Latin since last September; I tested to-day the least capable pupils in the class, and although I found them something uncertain as to accentuation, they sounded every vowel admirably. Such a condition is not exceptional.

Any task, of course, is a difficulty; but a difficulty such as the present seems to me far from useless. Let us suppose we teach the Roman system of pronunciation. Now, if the boys we teach were French or Germans, the Latin syllable might indeed differ so slightly from its equivalent in the pupil's mother tongue as to call the wisdom of a whole new pronunciation scheme seriously into question. But English-speaking boys are accustomed to a far different sounding of letters, especially of vowels; the soft *a* is infrequent, the *e* as in *ego* does not exist at all, and the *i* as in *sine* occurs only in words of foreign derivation. Now what is more, these boys, if they are to learn any foreign language at all, must first have grasped these rudimentary differences of pronunciation; must find them thoroughly familiar. Why throw on the German class a burden the Latin class has always found so light?

Professor Anthony further insists that an historical pronunciation tends to obscure etymological derivatives and cognates. Admitted, to a certain extent. But how can we show the much more fundamental relation of certain words, as for instance, *vadum* and *wade*, if we pronounce the *v* with Anglo-Saxon insularity? And as for the funny sounds, the boys soon forget all that.

There remains, however, a stronger reason than any of Professor Anthony's for the English pronunciation, namely, the æsthetic. We all despise our new theories just a little, and we confess to a desire for the linguistic fleshpots of days gone by. I remember hearing Prof. Barrett Wendell read in Latin St. Matthew's account of the Nativity, commenting as he did so on the absurdity of reading one's Latin in any other way except "as Shakespeare read his." Need I point out that Shakespeare must have pronounced words in *-tion* much more nearly the classical way than the modern? And how are we to rhyme *heath* with *Macbeth*, unless we broaden it out to the Irishman's *hayth*, which is, by the way, a pronunciation historically more true, if less elegant, than our own?

C. H. DICKERMAN.

Fishkill-on-Hudson, March 19.

ANIMALS ON THE GALLOWS.

TO THE EDITOR OF THE NATION:

SIR: Referring to Dr. Furness's interesting letter (*Nation*, March 4, p. 217) concerning the English custom of hanging wolves on gallows, allow me to draw the attention of antiquarians to a most singular Greek bronze recently described and published by M. Staïs, "Marbres et bronzes du Musée d'Athènes," 1907, p. 266. It represents, according to M. Staïs, a fox hanged on the stem of a tree, somewhat in the attitude which Greek art gives to Marsyas hanged by order of Apollo. The *provenance*, stated with a query, is "Arcadie, au sanctuaire de Pan." Now, a wolf-god is well known to have been honored in Arcadia, and what M. Staïs calls a fox may—as far as we can judge from the paltry half-tone engraving—be a wolf. No folklorist need be surprised at finding the image of a slain wolf in the sanctuary of a wolf-god. But I will abstain from any hypothesis; the first thing to do, before even discussing the question, would be to procure a good and large photograph of that queer bronze. Fox or wolf, the animal represented is hanging on gallows, and may thus serve as an illustration to the passages adduced by Dr. Furness.

SALOMON REINACH.

Saint Germain, March 16.

THE WORK OF THE COUNTRY SCHOOL.

TO THE EDITOR OF THE NATION:

SIR: It would be difficult at this moment to specify all the causes that go to make up the present demand for better education in the country districts, to which

you refer in your editorial of March 18; but at least two causes stand forth in plain sight. One is the demand on the part of the farming community for better education, and the other is the larger supply of available candidates for the position of country teacher.

The growing complexity and specialization of modern life has reached even the farmer; he sees about him the beneficial results of intelligence, training, and industry applied scientifically to farming. Undoubtedly he has seen this for many years, but during the last decade or so he has become prosperous, and is now in a position to make effective such desires. He has subdued the wild forces of nature, he has erected his barns, he has stocked his place with valuable animals, he has bought improved machinery, and he is now studying the problem of better education for his children. Hence the widespread call for better country schools.

On the other hand, the old days have passed forever in this country when there were abundant opportunities lying open for any young man of energy, but without previous training, to make a comfortable fortune in a few years. The once abundant possibilities of rapid advancement from section hand to president, from errand boy to the head of the firm are now mere reminiscences. There has set in a sort of reaction, and occupations once scorned as slow and ill-paid are now carefully considered by young men starting in life. Schoolmastering, which fifty years ago was merely a stepping stone for the ambitious and courageous, is at the present time showing signs of being at least a respectable trade in which any physically healthy and mentally well-balanced man may gain a decent livelihood. But the teacher had to wait till the barns were all built, the Herefords and Percherons purchased, and the reaper and sulky plough installed. His turn for consideration has now come.

Probably the agricultural schools and experiment stations have contributed largely to this happy result. The farmer who held the plough or wielded the scythe in midsummer for more hours than the sun shone, begrudged every dollar paid to his hired man whose chief asset, after all, was brute strength and endurance; the less strength and endurance, the less valuable. This farmer was loath to pay money to any man who did not work with his two hands in the fields. Naturally religious, he starved the preacher; naturally fond of his children, he sought the cheapest teacher possible; a physically incapacitated man or an immature girl would do. But along came the graduate of the agricultural college or the expert from the experiment station, and showed the farmer how to make a field, which he was unable to utilize, blossom with profitable crops; how to get cream from a good Brown Swiss cow, or what prices a good Clydesdale horse would fetch. Half a mile down the road was a young fellow who had been to school and had been trained for agricultural business. The land was of the same quality, but acre for acre, cow for cow, hog for hog, sheep for sheep, the young fellow, trained in the schools, secured bigger prices; lived in better style, and stood higher in the community. All this was the result of training and education. The farmer began to respect the man that taught his successful competitor; the profession of school teaching began to look up.

It remains to be seen what direction this new movement will take; it may prove a curse and it may turn out a blessing. If the aim of every good school is to fit the young for life work, the country school should devote its energies chiefly towards natural, scientific, and agricultural subjects. Up to the present, the chief fault of the American schools has been that they have turned out young men and women who instinctively, as the result of such training, sought clerical jobs in large cities. It would be a great blessing if country children were systematically taught to despise such occupations; and it would be money well spent if the State would pay the expenses of a committee of mothers from every farming community who should visit large cities and see how young women exist who hold jobs in department and similar stores, and have to live on perhaps three dollars a week.

E. L. C. Morse.

Chicago, March 28.

THE SOUTH AND THE NEGRO.

To the Editor of The Nation:

Sir: We do not study the South enough by leisurely visits off the beaten track, away from the "Florida Special" and the tourist routes, from which nothing of much value can ever be learned. Our war prejudices, the old distortion and blindness, are still overwhelming us, although we boast sometimes that we have shaken them off. Of what avail is it to have conquered the South if we enter not into possession of that charming people and their beautiful country?

I say this to myself every winter as, returning from the quail and snipe regions, I add new experiences of appreciation. I stopped over this time at Union Springs in Alabama, merely a cotton town far removed from tourist lines. It is situated, with wide, well-shaded streets, on a good-sized hill, or ridge, with extensive views over a very curious region, a sort of mottled country of pine forests and red-soiled cotton fields—a paradise for sportsmen and followers of the cunning quail, with high-bred dogs wandering about the streets. I sat on the steps of the courthouse with my own dog, and talked with one of the judges.

The field sports and their broadening genial influence are perhaps the best equipment for the serious task of these Southern judges, the most serious task that perhaps has ever been given to their race. Union Springs is in the midst of the black belt, and the negroes outnumber the whites ten to one. The white men seemed to me like a band of brothers, united, disciplined, trained through generations, like jovial soldiers, to hold down the black race. Their Southern qualities, that extreme and ready sociability, that frank directness, seemed the more intensified because they were so desperately united to protect Anglo-Saxon decency and order from being overwhelmed by Africa.

The blacks, judging from those I saw, may have been descended from the last slaves imported just before the trade was stopped. They seemed very close to Africa. One of the young men I went to see is a college graduate, and a magistrate, who seems to spend a large part of his time trying negroes for all sorts of misdemeanors. I watched another young man in an office adjoining the court house, with negro after negro, male and female, coming before him; they were waiting in groups before the door, and he seemed to be lecturing and explaining to them much of the time. These negroes are not the selected ones that we know, but the great mass of the 10,000,000; the 9,900,000 of the 10,000,000. It will take a long time to lecture and explain Anglo-Saxon ideas into the black mass. It will never be done in any time that can be estimated; and yet the Southerner goes on with it day after day, with the greatest patience and good temper; he has been going on with it in that way for generations, and he will go on with it to the end of time, while we theorize and talk about it in the North.

I wonder where it will all end. Will the Southerner continue to hold down with one delicately moulded, but iron hand, while he explains and explains and shows great kindness with the other hand; and meantime the years and decades pass, and in fifty years the present ten millions of negroes have grown to twenty millions, and in another fifty years to forty millions, and so on until at last there is a small white population, a desperately united, high-strung band of brothers, holding down an enormous black mass just as in India about one hundred thousand Englishmen hold down three hundred millions of brown Asiatics. If that day ever comes I feel as if there should be painted somewhere in the universe the scene I saw in the court house; the slim young Southerner of race-horse build, all nerve and sensation, the Anglo-Saxon type of the Southern sun, explaining to black man after black man; and he kept on explaining and explaining through the ages until the black man overwhelmed him with numbers.

Sydney G. Fisher.

Philadelphia, March 10.

LINCOLN AND THE NEGRO.

To the Editor of The Nation:

Sir: A correspondent in your issue of March 18 thinks that I have done "both Lincoln and the *Nation*" an injustice in my comments on Lincoln's attitude toward the negro. Now as to your correspondent's assumption that Lincoln's views might "have undergone a change" in the light of subsequent developments, it may be replied that in 1862, four years later than the time when he expressed the opinion of my former quotation, Lincoln in an address to a deputation of colored men, said:

> Even when you cease to be slaves, you are yet far removed from being placed on an equality with the white race. . . . The aspiration of men is to enjoy equality with the best when free, but on this broad continent not a single man of your race is made the equal of a single man of ours. Go where you are treated the best, and the ban is still upon you. I do not propose to discuss this, but to present it as a fact with which we have to deal.

If, in the four intervening years, Lincoln's views had materially changed, could he have had a more fitting opportunity to say so than this? On the contrary, he refuses to discuss the question.

The "notion of negro citizenship" had dawned upon Lincoln in 1864 when he wrote to Governor Hahn:

Now you are about to have a convention, which, among other things, will probably define the elective franchise. I barely suggest for your private consideration, whether some of the colored people may not be let in—as, for instance, the very intelligent, and especially those who have fought gallantly in our ranks.

If Lincoln had lived through the years of Reconstruction, not as he would have made it, but as it really was, can we suppose that that pitiful spectacle would have led him to bestow the franchise, not, as he says, on the "very intelligent" negroes, but, as the extremists would almost seem to require, on every colored man because of his color and despite his unfitness?

The negro problem is not as your correspondent would have it:

Shall a man physically, intellectually, and morally the equal of other men be denied equal treatment because his skin is black, or because his ancestors had been oppressed?

On the contrary, Lincoln's expressed opinion, and the opinion which seems constantly gaining adherents through all parts of our country, is that the man whose skin is black—as a race—is not physically, intellectually, or morally the equal of the man whose skin is white.

L. M. Passano.

Boston, March 20.

THE CONCENTRATED ESSENCE OF PROTECTION.

To the Editor of The Nation:

Sir: I draw your attention to the fine of $200 imposed upon Mrs. E. J. Lord of Honolulu by the Federal government, for the unthinkable misdemeanor of having travelled from Honolulu to San Francisco on a foreign steamer, the Tenyo Maru, arriving in port February 16, 1909. The trivial explanation offered by the culprit for this misdeed was that the foreign steamer was better than the government-protected American boat, sailing on the same day. The attention of American citizens everywhere should be called to this last crowning triumph of that narrow-minded, tariff-protected, graft-infected, political régime, under which the American consumer has groaned these last twelve years.

E. J. Roberts.

Burlingame, Cal., March 14.

WHO WAS CARDELIUS?

To the Editor of The Nation:

Sir: In a New York office hangs an excellent bit of printing, which reads as follows:

THIS OUR NOBLE ART.

And this our noble art of Printing is the very Foster Mother of all Learning; for though the few had Books before Gutenberg gave us our Art, not until Printing came could Learning, yes and Wisdom also, knock at every man's door.

From the Latin of Cardelius, 1546.

Who was Cardelius? B.

Summit, N. J., March 30.

Notes.

Under the title "Morals in Modern Business," the Yale University Press has about ready a collection of six papers written by Edward D. Page, George W. Alger, Henry Holt, A. Barton Hepburn, Edward W. Bemis, and James McKeen. The aim of the book is to inquire candidly into the conduct of modern business on what may be termed the moral side. In it, many of the questions of right and wrong, which have arisen as a result of the great changes in the commercial world, are considered and answered by men of experience.

The "Memoirs of Mademoiselle George," edited by Paul Cheramy, are to be published in this country next month by the John McBride Co. Mlle. George, who was born in 1787, writes piquantly of Napoleon and the other notables of her day. From the same house is to come "The Revelation to the Monk of Evesham Abbey," rendered into modern English, by Valerian Paget. Its quaint picture of purgatory and paradise has hitherto remained in the obsolete English of 700 years ago.

Gen. Kuropatkin's "Military Memoirs," translated by Capt. A. B. Lindsay, will be brought out almost immediately by E. P. Dutton & Co.

"A Vindication of Warren Hastings," by G. W. Hastings, is to be published by Henry Frowde. The author's object is to prove that "Warren Hastings, the man who made our Indian Empire and preserved it for the Crown, was wholly innocent of the crimes so often and so grievously laid to his charge."

The Clarendon Press is about to issue the first volume of "Scripta Minoa: the Written Documents of Minoan Crete," by Arthur J. Evans. This volume deals specially with the earlier pictographic and hieroglyphic script, but with an introduction giving a general view of the progress of the discoveries, the successive types of script and their relation to one another.

T. N. Foulis of Edinburgh, announces a complete and authorized translation of Nietzsche's works in eighteen volumes under the editorial supervision of Dr. Oscar Levy. "Thoughts Out of Season," "The Birth of Tragedy," "Thus Spake Zarathustra," "Beyond Good and Evil," and "The Future of Our Educational Institutions" will be ready this spring.

In the new series of the Publications of the Modern Language Association No. 1 of Vol. XVII, just issued, contains six contributions. J. P. Wickersham Crawford presents the text of a Spanish farce of the sixteenth century from a manuscript of the Biblioteca Nacional of Madrid; Alfred E. Richards discusses "The English Wagner Book of 1594"; William Guild Howard, "Ut Pictura Poesis," noticed in the *Nation* of March 25; Robert K. Root, "Chaucer's Legend of Medea"; John W. Cunliffe, "Browning and the Marathon Race"; and Percy W. Long, "The Purport of Lyly's 'Endimion'." Mr. Long concludes that the idea of a personal allegory in "Endimion" is "an assumption made without evidence."

Part 1 of Volume II of *Orkney and Shetland Miscellany*, January, 1909, offers among other things a study in the "Township and Surnames" of the isles by J. Storer Clouston. Mr. Clouston finds that, while many township names have given rise to family names, a larger number of family names have not thus originated, and that few of the large townships are associated with names. On the other hand, the small townships, being little more than single farms, frequently gave surnames to men who were merely tenants. Thus, John Ismond's son, who became a tenant at Winksetter in Harray, adopted the name John Winksetter in the following century. The author suggests the problem: whether the origin of the townships is as Norse as their names, or whether they were once Pictish settlements. It may be noted that there are in this country five Orkney and Shetland societies, one in Boston, one in Buffalo, two in Chicago, and one in Portland, Ore.

"Naval Warfare," by Baron Curt von Maltzahn, retired vice-admiral in the German Navy, is a well printed translation from the original German (Longmans, Green & Co.). The author was for some years professor of strategy and tactics at the Naval Academy in Kiel, and later became its head. He is therefore especially competent to treat naval warfare from the German point of view, and what he says is of interest, in presenting the case of those who urge a great navy as necessary to a nation which is largely engaged in commerce. As might have been expected, he attributes England's industrial supremacy to her sea power, and urges that Germany should aim at equality, if not preponderance, upon the ocean:

The economic dependence of the Continent on England which existed at the beginning of the last century exists no longer today; it has become transformed into a military dependency. This is because the Continental States are more vulnerable than they were, since they have more to fear from naval warfare, which is the chief weapon in England's hands. As England's rivals, therefore, they must provide themselves with such a fleet equipment as will correspond with their share in maritime commerce.

The motives underlying our Navy Bill characterize such a defensive fleet in these words: "Germany must have a war fleet of such strength that any war in which she were to be engaged would be so dangerous to her adversary—even were that adversary the strongest of all at sea—that his position as a great Power would be called in question."

We can only regard this universal battleship mania as a disease which bids fair to wreck more than one people before it shall have run its course. For the individual who is a prey to hallucinations the trained expert is at hand to minister, but nations in the grip of these terrors are without a much needed international mental alienist, and are deaf to all who strive to calm their fears. When these war scares and bugaboos become recognized as figments of the imagination and treated as maladies, this little book will find its true place, for it is a symptom rather than a treatise.

"New Light on Ancient Egypt" (D. Appleton & Co.) is the title of a translation of a series of essays by Gaston Maspero, director-general of the Service des Antiquités and director of the Museum in Cairo. The essays are the result of some fifteen years of work in popularizing the

results of Egyptological studies hy the author and others. The arrangement of the material seems to he rather haphazard, and no plan of sequence is discernihle. Each new chapter takes the reader into a new field, quite without reference to that which precedes or follows. Some of the essays are comparatively recent, while others were penned as much as ten years ago, possihly earlier. In the interval the progress of excavation has changed the appearance of things, hut corresponding changes have not heen made in the descriptive text. One would never know, for instance, that the temple of Denderah had heen dug out and much improved for the purposes of the tourist. There is also another point upon which criticism may be offered, in spite of the note which the author has prepared on the suhject—the method of transliterating native names. The usage of English scholars is too well fixed to he superseded hy the French, particularly when there is so great a difference in the value of the symhols in the two alphahets. In an English translation it would seem wiser to abandon the French and adhere to the English forms, particularly when the French presents such monstrosities as Hatshopsouitou, Maiherpiriou, Montouhikhopshouf, Ouaouaitou, and Toutanonkhamanou. Ahout the value of the hook for the fuller appreciation and comprehension of many phases of Egyptian archæology, history, art, literature, religion, and magic, there cannot he two opinions. If there is a more capahle or versatile writer on these suhjects it would be hard to name him. The richness of the contents cannot he catalogued here: the interested reader must he referred to the hook itself. The translation from the French hy Elizaheth Lee has been made exceedingly well, and one is scarcely conscious of reading a version from another language except in the case of words unnecessarily near to the original: "hypogeum" is no hetter than "tomh"; "syringe" is mistakenly used for "syrinx"; "timbrel" for "sistrum"; "tar" for "bitumen"; "pharmacy" for "pharmacopœia," "kohol" for "kohl." But these are slight defects which do not really detract seriously from the value of a hook that deserves a place on the shelves of those who are interested in things Egyptian and who desire to extend the field and content of their knowledge.

H. Stuart Jones's brief volume, "The Roman Empire," in the Story of the Nations Series (G. P. Putnam's Sons), is a sound and sensible summary of Imperial history from Augustus to Romulus Augustulus. Hitherto, those who have wanted a single volume on this period have heen obliged to content themselves with the mediocre and antiquated manual of Dean Merivale, and the contrast hetween the two hooks makes plain the progress of historical scholarship in the course of a generation. Instead of the traditional paraphrase of the ancient historians, essentially external in character, and dealing mainly with military exploits and palace intrigues, we now have an account which looks at the empire as a whole, and seeks to understand it in the light of the new evidence derived from inscriptions and papyri, and a broader knowledge of ancient literature and art. Matters dynastic and military still occupy a good deal of space, prohably more than they will retain a generation hence, hut emphasis is placed rather upon such topics as the development of the Imperial hureaucracy, the growth of cosmopolitanism, and the rise and spread of new religions. The conventional characterizations of the Emperors are also revised. The "only man of genius" among them was Hadrian; the administration of Marcus Aurelius "shows little positive achievement"; and the Claudian Cæsars, in accordance with the tendency of recent historians, are viewed more favorably than in the pages of Tacitus, whom Mr. Jones rightly regards as "a great artist and a great psychologist," hut "not amongst the greatest of historians." The volume has a numher of excellent illustrations, mostly from photographs of monuments.

Paul Maria Baumgarten's inquiry into the method and merit of "Henry Charles Lea's Historical Writings" (New York: J. F. Wagner) will prove a disappointment to those who would welcome a comprehensive and dispassionate criticism of Mr. Lea's books from a competent Catholic scholar. Monsignor Baumgarten has estahlished his standing as an historical investigator by important studies in ecclesiastical institutions, and is ahle to print unpuhlished documents from the Vatican archives in support of certain of his statements, hut he lacks the judicial spirit and has not the enormous and varied learning necessary to one who would meet the American historian on his own ground. It is true that he recognizes his opponent's industry, "endurance, and undisputed results"; and a Catholic is entirely within his rights in attacking the point of view from which Mr. Lea approaches the mediæval Church, but one who possesses Monsignor Baumgarten's familiarity with the fiscal methods of the Popes of the fourteenth and fifteenth centuries should he the last to sneer at "Lea's hahit, due to long commercial occupation, to regard everything in the light of dollars and cents." It is entirely proper to point out errors of fact and interpretation and to use the new materials hrought to light by such Catholic scholars as Finke and Göller, hut no one is justified in making charges of falsification without giving full and specific evidence. Like most apologists for the Spanish Inquisition, Monsignor Baumgarten seeks to make the issue one of race rather than of religion, and he tries to strengthen his case by some hitter pages on racial discrimination and lynch law in the United States. An impartial critic of Mr. Lea as an historian would also have tested his work in the less controversial field of his "Superstition and Force," instead of dismissing that remarkable hook in a single sentence as "loosely connected gleanings." Monsignor Baumgarten's brochure was put together from a series of badly composed articles in the *Theologische Revue;* and the translator's imperfect knowledge of English makes the English version harder reading than the original.

The Rev. J. C. Morrice's "Manual of Welsh Literature" (Bangor, Great Britain: Jarvis & Foster) is intended to meet the wants of those who desire acquaintance with the subject, but lack time and opportunity to study it in detail. In the space of some two hundred pages he discusses the chief bards and prose writers of Wales from the sixth to the eighteenth century. It is fair to say that in some respects he does not satisfy us. His treatment of the early period is sketchy, even in a work of this size, and the bards of the twelfth century, a particularly interesting group, might well have received more notice. We should have expected him to write of, *e. g.,* the poems of Llywarch Hên in a more critical spirit, and he would certainly have done hetter to omit such derivations as that of Aneurin from Honorinus. Even so we have no hesitation in recommending his hook. It contains much valuahle information, and its style is picturesque enough to hold the attention of its readers, and to stimulate them to further research.

A new quarterly devoted to German literature, *Deutsches Schrifttum,* has been hegun hy Prof. Adolph Bartels of Weimar.

The *Germanisch-romanische Monatsschrift,* a philological monthly, recently hegun under the editorship of Dr. Heinrich Schröder of Kiel, in conjunction with Profs. F. Holthausen, W. Meyer-Lübke, V. Michels, and W. Streitherg (Heidelberg: C. Winters Buchhandlung), is intended to meet the wants of advanced students of Germanics, English, and the Romance languages and literatures. Not so much detail of research as critical and instructive discussion of linguistics, poetry, metre, phonetics, dialects, drama, art, ethnology, palæography, etc., is to be presented hy the leading scholars in the field.

A new series, Neue Märchenbücher (Berlin: Wedekind & Co.), begins auspiciously with the "Märchenfäden" of Hildegard Neuffer-Slavenhagen, an interesting collection, written by a mother for her children. The work is finely illustrated by Oskar Herrfurth.

The "Literarischer Ratgeher 1909," edlted hy Ferdinand Avenarius, attempts to pass on the latest products of the literary market, entirely independently of the interests of the book trade. It is the joint product of some fifty specialists, all coöperating under the auspices of the Dürerbund, an association representing ahout one hundred and fifty societies, with a total membership of more than two hundred thousand (Munich: G. D. W. Callwey).

"Reise eines jungen Deutschen in Frankreich und England im Jahre 1815" (Leipzig: Georg Wigand), edited hy Georg Brand, is a description of the journey of a young Saxon representing the textile interests of his country, which had attained to a remarkahly flourishing condition in consequence of the exclusion of British goods from the Continent by Napoleon. The journey is made to the manufacturing districts of southern France, and after the return of Napoleon from Elba, to England. The traveller, August Brückner, a young man of eighteen from Mylau, is a keen observer and business man, whose vivid account treats more of the industrial matters of his times than of the political.

The sketch of Theodor Mommsen published shortly after his death hy his pupil and close friend, Ludo Moritz Hartmann, appears now as a complete hiography (Gotha: F. A. Perthes). The original outline sketch came out in "Bettelheims Biographisches Jahrbuch." Hartmann depicts Mommsen not only as a scholar, hut also as a prominent figure in the public affairs of Germany. The volume includes, among other

things, a number of Mommsen's political essays.

Critical appreciations of Annette von Droste-Hülshoff, acknowledged the greatest woman poet of Germany, never fail to refer to her indebtedness to English poetry, and especially to Byron. The gifted woman has been made the subject of a new study by Dr. Bertha Badt, entitled "Annette von Droste-Hülshoff: Ihre dichterische Entwicklung und ihr Verhältniss zur englischen Literatur." It forms the seventh volume in the new series of the Breslauer Beiträge zur Literaturgeschichte, edited by Prof. Dr. Max Koch and Gregor Sarrazin (Leipzig: Quelle & Meyer).

J. C. B. Mohr of Tübingen announces as forthcoming a "Handbuch der Kirchengeschichte" in two volumes, edited by Prof. Gustav Krüger of the University of Giessen. The purpose is chiefly to furnish students a thoroughly modern and up-to-date work of reference. The editor will himself write the general introduction and the chronological and statistical tables; Dr. Edwin Preuschen, in conjunction with Professor Krüger, treats the early period; Prof. Gerhard Ficker of Kiel, the middle ages; Dr. Heinrich Hermelink of Leipzig, the Reformation and Counter-Reformation; and Dr. Horst Stephan of Marburg, the modern period. The first volume is promised for the current year.

The fourth part of the "Quellen und Darstellungen aus der Geschichte der Reformation," edited by Dr. Georg Berbig (Leipzig: Heinsius Nachfolger), has appeared with the special title "Leben und Wirken des Tendenzdramatikers der Reformationszeit Thomas Naogeorgus," by Dr. Leonard Theobald. This work deals only with the second part of the career of this strange genius; the first, in shorter form, appeared as a doctoral dissertation some months ago. This learned humanist and neo-Latin tragedy writer, whose original name was Kirchmeyer, is best known through his polemical "Regnum Papisticum" of 1553.

Leading critical problems in connection with the last days of Jesus are made the subject of a close investigation by Johannes Frey, in "Die Probleme der Leidensgeschichte Jesu: Beiträge zur Kritik der Evangelien," Teil I (Leipzig: Deichert Nachfolger). This part deals with the concluding chapter of Mark, the decree of the Sanhedrin to put Jesus to death, the readings of the Slavic text of Josephus, the betrayal by Judas, and the anointing in Bethany. The Slavic Josephus text contains unique readings on the Pilate story. The author is objective, and nowhere shows any prejudice in favor of gospel harmony or apologetics. He openly recognizes difficulties and contradictions wherever they are found.

It is no exaggeration to say that Dr. Valfrid Palmgren's "Bibliotek och folkuppfostran" (Stockholm: Norstedt & Söner) is the most complete account of the work of the public libraries of America that exists to-day. The author, who is assistant in the Royal Library in Stockholm, and the only woman in the library service of Sweden, was sent to this country by the Swedish government to study and report on the American public libraries. After a general introduction, and an account of library buildings, in which she touches on the most salient points in library development, the author turns to what is the main purpose of the book, a detailed description of the activities of public libraries. The regulations for lending, catalogues, and open shelves, children's departments, coöperation between the library and the schools, home and travelling libraries, State commissions, and library training, are described in a lively, lucid style, with due emphasis always on the important things.

Several valuable contributions to the study of the foreign factor in the American population have recently appeared. In the February, 1909, issue of *Nordmands forbundet* (Federation of Norsemen), the Rev. O. Olafsen of Ullensvang, Norway, traces the emigration to America from the province of Hardanger, Norway, from the beginning of the movement there in 1836, when eighteen persons left, down to the present time. From the records of three parishes he gives the total number for each year, and for the earlier period the names, ages, and destinations in America of the immigrants. The article forms a significant chapter in our pioneer history. Similar investigations for other provinces in the Scandinavian North and for other European countries would be of historical value. A contribution to the study of the Norwegian element in the State of Wisconsin has recently been issued by H. L. Skavlem of Janesville, Wis., under the title: "Scandinavians in the Early Days of Rock County." It gives an account of the settling of that county by Norweglans in 1838-1840, with biographical sketches of the earliest settlers.

Vol. XIX of the *Revista delle Biblioteche* (Guido Biagi of the Laurentian Library, Florence, editor) contains the first of a series of bibliographical bulletins intended as guides in the selection of new books for the Italian sections of foreign libraries. This list consists of 123 entries of titles of books of fiction and of reading books for children, each followed by a short note in English on its character and contents.

The Conference for Education in the South will be held at Atlanta April 14-16.

In Chicago on February 10 a joint session was held of the Department of Universities and Colleges, Department of Theological Seminaries, and Department of Churches and Pastors of the Religious Education Association, with the Interdenominational Conference of Church and Guild Workers in State Universities. The following resolution was adopted:

That a Commission of Twelve be appointed, representing endowed institutions of advanced education as well as State universities, for the purpose of formulating an ideal or suggestive course of collegiate study preparatory to a course in a theological seminary.

The commission, which was appointed last week, is constituted as follows: Dean Shailer Mathews, University of Chicago, chairman; Prof. George A. Coe, Northwestern; President Ozora Davis, Chicago Theological Seminary; President R. A. Falconer, University of Toronto; President W. H. P. Faunce, Brown; President Emory W. Hunt, Denison; President Edmund J. James, University of Illinois; Prof. Francis W. Kelsey, University of Michigan; President Henry C. King, Oberlin; President William Douglas Mackenzie, Hartford Theological Seminary; President George B. Stewart, Auburn Theological Seminary; Chancellor Frank Strong, University of Kansas. It is also announced that the papers presented at Chicago will be published.

Prof. Bliss Perry, editor of the *Atlantic Monthly*, has been appointed Hyde lecturer at the University of Paris for the academic year 1909-10. Professor Perry will discuss American institutions, but the exact nature of his subject is not yet announced.

James Hulme Canfield, librarian of Columbia University, died in this city March 29, at the age of sixty-two. He was born in Delaware, Ohio, was graduated from Williams, and after practising law for a few years, became professor of history in the State University of Kansas. He was then successively chancellor of the University of Nebraska, president of Ohio State University, and (since 1899) librarian of Columbia. He had also been president of the Kansas State Teachers' Association, the Nebraska State Teachers' Association, and the National Educational Association. His books are "Taxation" (1883), "A History of Kansas" (1884), "Local Government in Kansas" (1889), and "The College Student and His Problems" (1902).

Charles Burlingame Waite, territorial judge in Utah during the turbulent times with the Mormons, and an author and linguist, died in Chicago March 26, at the age of eighty-five. He was the author of "A History of the Christian Religion to the Year A. D. 200," which has been translated into French, German, and Norwegian. Among other books written by him are "A Conspiracy Against the Republic," "Herbert Spencer and His Critics," and "The Comparative Study of Ten Languages."

The Rev. James Eleazer Gilbert, a Methodist Episcopal minister and secretary of the American Society for Religious Education, died at Washington March 26, at the age of sixty-nine. He had been on the staff of the Buffalo *Christian Advocate* and the *Sunday School Standard*, and he edited the *Journal of Religious Education*. His books are: "Biblical Interpretation," "Bihlical History," "Life of Christ," "Sacred Pedagogy," "Man's Spiritual Nature," "Methods of Bible Study," "Preparation for Church Membership," "Religious Experience," "The Spiritual Life," "Biblical Doctrine," and "American Methodism."

The Rev. John Crowell died at East Orange, N. J., March 29, in his ninety-fifth year. He was born in Philadelphia, was graduated from Princeton in the class of 1834, studied at Princeton Theological Seminary, and for nearly fifty years was active in the ministry. He contributed about four hundred articles to the predecessor of the present "International Encyclopædia," and published also "Republics—Popular Government an Appointment of God" (1871), and "Christ in All the Scriptures."

The death of Gustaf af Geijerstam at the comparatively early age of fifty-one removes a figure conspicuous in Swedish letters for more than a quarter of a century. During the eighties he was one of the leaders of the realistic movement, and wrote some works that have retained their hold on the reading public ever since, notably two or three volumes treating of the life of farmers, fishermen, and city laborers. About the middle of the nineties he turned

to more psychological problems, and produced two books of a decidedly mystical character. In the years preceding his death he turned to the family novel, which he handled with much success. He was also a dramatic writer of no mean capacity.

LIGHT ON AMERICAN HISTORY.

Wisconsin: The Americanization of a French Settlement. By Reuben Gold Thwaites. [American Commonwealth Series.] Boston: Houghton, Mifflin Co. $1.25 net.

When Sir Charles Lyell took back, bit by bit, in successive editions of his "Principles of Geology," statements he had originally made, until his latest work was in sharp contrast with his first, he was commended for his courage and candor. To Dr. Thwaites may be given like praise, in the field of history: he admits that some of his earlier conclusions in regard to the European occupation of the West were not well-based, and careless of a reputation for consistency, tears down what he once laboriously built. Whether he retains or rejects, Dr. Thwaites is likely in his field to go unchallenged; for he is a veteran quite too practical and well-equipped to be lightly encountered.

Dr. Thwaites takes for his second title "The Americanization of a French Settlement." The hold of the French upon Wisconsin was long-continued. Beginning in the last third of the seventeenth century, it endured nearly until the beginning of the nineteenth, for our author esteems as negligible the influence of the British during the brief time they were nominally dominant. The French made the region solely a hunting-ground. Scattered in handfuls along the valleys of the Fox and Wisconsin from Green Bay to Prairie du Chien, the great waterway from the St. Lawrence Valley to the Mississippi, they drove the fur trade, neglecting agriculture; indeed, they looked askance upon the farmer, for this vast wilderness they wished to preserve and not reclaim. Our author notes the injury done through this policy to the Indians. Whereas they were to some extent cultivators, skilful in basketry, weaving, pottery, and other simple arts, they found it easier to buy from the white traders what they had once manufactured, and thus became exclusively hunters—a step backward from civilization. Our author's tenderness for the Indian is shown in his picture of Black Hawk, who, in 1832, made the last stand for his tribe. Eleazer Williams, the once famous hero of the romance "Have We a Bourbon among us?" is regarded by Dr. Thwaites as a self-seeking impostor. Perhaps this is the last word, but we incline to a kinder judgment. The stately quarter-breed, with his fine Bourbon profile, made a deep impression upon the writer of this notice when a boy in his father's house. Recalling this, we surmise that to a large extent Williams was under an illusion, and not altogether dishonest in the belief that in his veins was the blood of the kings of France. Dr. Thwaites omits to mention that Eleazer was probably a descendant of the Rev. John Williams of Deerfield, Mass., "The Redeemed Captive," carried to Canada in 1704, with his family; his child, or grandchild, married an Indian and was the adventurer's parent.

The French having passed, the Anglo-Saxon came, destined, however, to exercise only a transient and restrained influence; for Americanization meant for Wisconsin not so much a coming in of New Yorkers and New Englanders, as immigrants from beyond sea, German and Scandinavian. Coeval with the establishment of statehood in Wisconsin was the revolution of 1848 and its sequels, during which unrest north and central Europe poured out most abundantly their discontented children. For some years Wisconsin was their goal, its area so filling that at one time no other State contained so large or so varied a foreign element, an influx in no way detrimental. During the civil war the service rendered by Wisconsin soldiers was prompt, constant, and brilliant, an efficiency due in part to the many officers and men who were trained in European fields. Dr. Thwaites quotes Sherman as saying that a Wisconsin regiment was as good as a brigade of other troops. The excellence of the population is conspicuous in the field of education. A particular interest is felt in public libraries; schools, primary and secondary, are well-organized and sustained; while the university, which crowns the system, is a beacon-light throughout the country. In general, among our commonwealths perhaps we can find nowhere better than in Wisconsin the assimilation of widely varying stocks into a noble composite under beneficent, overruling American conditions.

Calendar of the Papers of Benjamin Franklin in the Library of the American Philosophical Society. Edited by I. Minis Hays. 5 vols. Philadelphia: Printed for the Society.

These handsome volumes, issued in connection with the celebration of the two hundredth anniversary of the birth of Franklin, constitute a very fit and notable memorial. They open to the student a unique collection of manuscripts. No American of that day had so long a residence in Europe in such responsible positions. Franklin knew Paris and London almost as well as he knew Philadelphia; and his business and official relations on both sides of the water made him conversant with the true centres of action in Colonial Assembly, the French court, and in the British Parliament. His own writings gave one phase of these affairs, and we have now a full and adequate summary of his written sources of information. Dr. Hays has wisely included the Franklin papers in the Library of the University of Pennsylvania; the Library of Congress has issued a calendar of Stevens's Franklin manuscripts. It is hardly possible that any further matter of importance will be found, so that the record is now fairly complete.

Less than one-third of the first volume of the calendar is occupied with the letters of an earlier date than the American Revolution. It is known that the papers of Franklin left in Philadelphia at the beginning of the war were scattered and largely destroyed; what remains was but a small part of the original mass. Yet for some reasons these few relics are of the greatest significance, for they mark the wide reputation of the man and the high connections he had formed. His catholic sympathies brought him into touch with all kinds of persons, from the widow anxious to place her son well in America, to princes wishing to know him and witness his experiments. At home his correspondence ranged from Boston to Savannah, and even to the West Indies; in Europe hardly a country was unrepresented.

His correspondence in the Revolution treats of other matters. It is doubtful if there is any type of adventurer that is not represented many times. What pertained to the legitimate business of his mission, or to the personal and official relations formed in Paris, constituted but a small part of his task. Inventions of all descriptions, war-like and other, were offered, from a diving apparatus, a recipe for making gunpowder explosive or non-explosive at will, to a rapid-firing arm or a system of tactics. Many men were willing to enter the Continental service, but their demands for rank and pay were extravagant. Priests, bakers, farmers, and writers were only too anxious to have their passage paid and to receive a gift of land, while guardians wished to unload their wards. Emigrants of a good quality, officers of a bad, spies seeking access to the American Minister, and released prisoners who deserved some recompense for sufferings endured, all appeared. Every conceivable manufacture, from Bibles to stockings, was tendered. Amid all these appeals and demands, Franklin remained calm and judicious, offering assurance that he was the very man for meeting such an emergency.

After the Revolution he resumed many of his English connections, and remained the centre of attraction for those seeking fortunes in America or asking endorsement for their writings or inventions. His health and his habits of indolence prevented his contin-

uing such experiments as had gained him reputation, but his interest in science remained, and it is difficult to decide whether in these later years he is more of a politician than a scientist. If he replied to every letter received—and he has often sketched a reply on the letter itself—much of his best correspondence has been lost.

In so extensive a catalogue of unusual names it would be too much to look for perfection; but the compiler has erred in the name of Francis Dana, making it F. M. Dana, and in Derford, which he prints Perford. Some minor slips occur, but none misleading. Dr. Hays is to be congratulated upon the completion of this important work, which is made still more useful by a full index.

CURRENT FICTION.

Araminta. By J. C. Snaith. New York: Moffat, Yard & Co.

The change from the gloom of "Broke of Covenden" to the cream-bun simplicity of this idyllic bit of fooling suggests that the severest of Olympians must occasionally unbend his brows and don the motley, even as Mr. Hichens did in "The Londoners." Mr. Snaith's predilection for the large family of daughters as a reservoir of romantic possibility is once more evidenced by the Rev. Aloysius Perry's well-filled quiver. The eldest shaft, a six-foot human reproduction of a Gainsborough portrait, is discharged in majestic beauty at London society, and goes to its heart with her first introduction of herself: "My name is Araminta, but they call me Goose because I am *rather* a Sil-lay." Her suitors are three—George, Duke of Brancaster, Lord Cheriton, and Jim Lascelles, an impecunious painter, who has known her from infancy and who scruples not to bribe her with pastry to give him sittings, and to enforce silence in regard to the matter before her guardian by a timely kick on the shin. These elemental methods are as successful as they always are—in fiction—and Araminta's simple and loyal heart passes wholly into the keeping of Jim. After many serio-comic vicissitudes, the heart is followed by the young lady's beautiful but substantial person; and we leave them happy in the Red House at Widdiford, with a comfortable conviction that after she has reared a dozen daughters on strawberries and cream, Goose will still be rather a silly, and at heart the most childish of them all.

The Spell. By William Dana Orcutt. New York: Harper & Bros.

It is unfortunate that the theme of this well-written story is so limited in its appeal. The potent fascination of the history and literature of the Italian renaissance can hardly move those who have not themselves felt the Spell. The story is of a young scholar deeply interested in the art of the humanists, who goes to Florence with his beautiful bride, and there is dominated by the touch of the Past. His companion in research is the intimate friend of his wife, a woman sharing his intellectual interests and as sensitive as himself to the peculiar spell that gives the book its title. The wife, a healthy and normal being, not unnaturally fails to comprehend the entirely mental character of the bond between her husband and her friend, and feels constrained to leave him that her place may be filled by the one with whom he has so much in common. The husband has most salutary difficulty in convincing her that, although Inez is very well as a fellow-worker, he wants no other wife than herself; finally, however, he succeeds, and we leave him humbled in spirit and content to adore the humanities in Helen's very charming person. The descriptions, especially of the Laurentian Library, are redolent of actuality, but the psychology of the principal characters is at times tangled to the point of tedium.

The Kiss of Helen. By Charles Marriott. New York: John Lane Co.

At a crisis in the concerns of Mr. Marriott's hero, Paul Trecarell, he becomes "aware of a subtle change in the atmosphere of public affairs," in London:

> It was not merely that certain old questions—such as female suffrage and municipal enterprise—had suddenly become acute, but there was the curious feeling that the race was entering upon a new stage of consciousness. It was a feeling difficult to express in words, and it seemed to indicate not so much new movements as a larger synthesis of people and ideas—as if the term "animal kingdom" had been widened to include unicorns and hippogriffs. The unlikeliest people were to be found hobnobbing together, and it was beginning to be admitted by quite sober calculators that two and two sometimes made five. . . . These signs, infinitesimal in themselves, pointed in the mass to a readjustment of values; . . . as if it were at last recognized that men and women were more important than institutions.

A feeling not unlike Paul's takes possession of the reader of this clever, inordinately clever, novel. A new envisagement of some of the most serious relations of life is proclaimed, the relation, more particularly, of woman to man and to the world. In the view of Evan Rees, artist, the "genius of womanhood" was something rarer than wifehood or motherhood:

> Protestantism tried to capture it in the idea of marriage, but the genius of womanhood escapes marriage altogether, or dies—you "kill the thing you love" so to speak.

Colonel Pixell's view was a foil to this. With him "hearth and home" formed the only thinkable expression of the idea of woman—an idea which the artist found "too useful." But, curiously enough, one opinion is shared by all the characters in the book, by hero, artist, colonel, affianced bride, elderly spinster. One and all, they agreed in taking the lightest possible view of what they call "an episode" in the life of Joan, the heroine. This episode consisted in her having lived for three years with a man whose wife was in a lunatic asylum. By those others, it was regarded severally as "a blunder that she had come through," something "that no rational person would think twice about," "a dreadful mistake" that "nobody with a spark of feeling would bring up against her now." The lady herself, when it is a question of marrying the hero, whom she professes to love, angrily exclaims "Haven't you any use for us but to marry us or tread us into the gutter?" And marry him she will not. But not, one may be sure, from any scruples as to episodes.

A shining feature of the book is the exceeding freshness and lustre of the conversations. In them, as in narration and in comment, banality has no tiniest part. The writing is a marvel of easy compactness, no tightness, no squandering, not a line that does not carry the tale forward. The characterization is brightly vivid. The figures that do but cross the stage are as strong in personality as the chief players—all of an absolute individuality, most of them, moreover, very humanly likable.

Aline of the Grand Woods. By Nevil G. Henshaw. New York: Outing Publishing Co.

This book is written with a gentle naïveté that would perhaps charm in a short story, but palls during the course of 491 pages that contain nothing either startling or impressive except the glossary's translation of *Comment ça va?* by "How are you going?" The old devices of melodrama are used to galvanize the stock characters into activity, even to the outbreak of yellow fever, without which no orthodox portrayal of Louisiana life is complete; and so careful of the type the author seems that we hardly need the publisher's thoughtful attention of describing the leading characters on the cover with Shavian comprehensiveness and yet a fine delicacy and restraint that is content thus to indicate the villain: "General trouble-maker. He has strong predilections for alcohol and wild life." The writer in his last sentence has very happily voiced the feelings of the reader who has persevered so far—"Come, let us go back to the woods, you and I." One is indeed left wondering why one should waste spring days on pages like these

when the literature of the running brooks is to be obtained so easily.

The Web of the Golden Spider. By Frederick Orin Bartlett. Boston: Small, Maynard & Co.

This book gives the reader a lively hour; from the time when the penniless hero and heroine take refuge together from the combined severity of the elements and the police, they lead the strenuous life without respite till they are left embracing on the last page, with their emotions, consistently enough, setting "the world about them in a mad riot." The story—a combination of Richard Harding Davis and Rider Haggard, somewhat inferior in style to the originals, dealing with revolution and treasure-seeking in a chimerical South American country—will probably find a welcome with readers of mercurial taste whose ultimatum in book-buying is the newness of the imprint.

The Cambridge History of English Literature. Edited by A. W. Ward and A. R. Waller. Vol. III: Renascence and Reformation. New York: G. P. Putnam's Sons. $2.50 net.

The third volume of this work shows an even greater improvement on the second than the second showed on the first. The frequent repetitions and contradictions which disfigured the first volume especially have entirely disappeared and the general execution now promises to fulfil the very high expectations which were raised when the plan was first announced. The present volume begins with the English humanists, Linacre and Grocyn, in the closing years of the fifteenth century, and ends with Hooker's "Ecclesiastical Polity," the first books of which appeared in 1594. It does not include, however, the plays which fall within the limits of these dates, since the whole subject of the English drama, from its beginnings down to the closing of the theatres in 1642, is reserved for continuous treatment in the fourth and fifth volumes. The major part of the century which the volume thus covers is distinguished by the names of few great writers; but as a period of preparation for the Elizabethan age, and indeed for all modern English literature, even the earlier part of the sixteenth century has, of course, high importance, and is consequently by no means deficient in interest.

It is, moreover, an advantage of the coöperative method that each contributor brings to his particular task a freshness and energy which it would be difficult, to say the least, for a single author to preserve throughout. This is, of course, more noticeable in the treatment of those branches of literature which are least attractive in themselves—for example, in the present volume, the jest-books, pamphlets, and theological writings of the time, which receive scant attention in the ordinary histories of literature. Indeed, it is a remarkable proof of the virtue of style that no chapters in this volume are superior in interest to two which deal with subjects of a most unpromising kind—namely, Charles Whibley's on the Elizabethan Chroniclers and Antiquaries and J. Dover Wilson's on the Marprelate Controversy. The former is, perhaps, the best-written chapter in the whole volume. Admirable also, in point of style, as in other respects, is the chapter on the Reformation and Renascence in Scotland by P. Hume Brown, who has, however, the advantage of a great subject. Worthy of especial mention, still further, are the chapters on the "Mirror for Magistrates," by Prof. J. W. Cunliffe of Wisconsin, who summarizes clearly the intricate subject of the various editions of that work; on the Elizabethan Sonnet, by Sidney Lee; and on the Elizabethan Prose Fiction, by Prof. J. W. H. Atkins of Aberystwyth, who here, as in his earlier contributions to this work, exhibits a thorough familiarity with the critical literature of his subject. The whole volume, however, maintains a high level of excellence. With regard to W. J. Courthope's discussion of Spenser, one may remark that there is no use of beating about the bush as to why the "Faerie Queene" is harder reading than the "Orlando Furioso." Apart from his brilliant imagination Ariosto had gifts of humor, suppleness, and vivacity which enabled him to leave "our sage and serious Spenser" far behind in the matter of narrative interest. In his finest passages of description the English poet easily "overgoes," as he hoped he would, the Italian, but it is safe to say that no narrative poet of the very highest order would ever have chosen the Spenserian stanza as his metrical vehicle. As regards the facts of Spenser's life, Mr. Courthope does not seem acquainted with the recent discovery that in 1578 Spenser was in the service of Dr. Young, Bishop of Rochester, who had been the head of his college at Cambridge.

This volume, like the previous ones, contains a full and excellent bibliography. We note some *lacunæ* in the section devoted to Spenser—for example, the articles of J. B. Fletcher and J. R. MacArthur on the relations of the "Faerie Queene" to "Huon of Burdeux." Such publications as R. E. N. Dodge's edition of the "Poetical Works" (Cambridge Poets)—the best that has appeared—and L. E. Kastner's discussion in the *Modern Language Review* of Spenser's debt in his "Amoretti" to Desportes may have come out too late to be recorded in the bibliographical list.

Letters to Cassite Kings from the Temple Archives of Nippur. Edited by Hugo Radau. [Babylonian Expedition of the University of Pennsylvania. Series A. Cuneiform Texts, edited by H. V. Hilprecht, Vol. XVII, Part 1.] 4to, 154 pages, 68 plates, and 12 photographic reproductions. Philadelphia; University of Pennsylvania.

Dr. Radau's volume, which, although bearing the serial number XVII, is acually the ninth of the series, contains 103 letters—mostly fragmentary—of the Cassite period (about 1750 to 1210 B. C.), dealing with the business and other official affairs of the chief temple at Nippur. This collection forms a supplement to the two volumes, also on the business affairs of the Nippur temple during the Cassite period, which have been so admirably published by Professor Clay of the University of Pennsylvania. The copies are carefully executed, although Dr. Radau unnecessarily complicates the task of the student by frequent overshading and by the superfluous endeavor to reproduce every scribal peculiarity, instead of contenting himself, as do the editors of the British Museum series, with adopting as a basis the forms characteristic of each period. To these copies Dr. Radau has added a valuable concordance of proper names, including those of deities, places, rivers, gates, etc. In an elaborate introduction of over 150 pages he discusses such problems as the time of the letters and their general contents; he touches incidentally upon the chronological problems and furnishes also specimen translations with detailed comments.

Dr. Radau's style is discursive and there are numerous repetitions—one text being discussed in no less than three places—so that the whole introduction might with some care have been considerably compressed. Moreover, large portions might have been omitted without serious loss, such as the long notes about the supposed "trinitarianism" in the Babylonian religion, and the attempt to find an analogy between these letters and the official correspondence in the royal library unearthed by Layard and Rassam at Nineveh. Inasmuch as in another publication, "Bel, the Christ of Ancient Times" (1908), Dr. Radau has in detail set forth his various hypotheses regarding the theological speculations of the ancient Babylonian priests, it was hardly necessary to bring them forward again. It is, however, perhaps worth while to notice that, while in his monograph it is Bel-Marduk whom he regards as the precursor of the founder of Christianity, in the introduction of the work before us it is Ninib, the son of Enlil, who is thought to be the "Saviour" and the prototype of "Christ in the Christian Trinity." Needless to say that such speculations rest upon very insecure supports—

doubtful interpretations of obscure passages in half-understood texts. Nor is he any happier in what he has to say about the "Lushtamar" tablet which played a prominent part in the recent "Nippur Controversy" (*requiescat in pace!*). The evidence is so overwhelming that the tablet was bought by Mr. Noorian (now of New York), together with sixteen others, on the date appearing on the label attached to it, that it is a waste of time to discuss the matter. Equally conclusive is the evidence that the tablet was written at Sippar, and that, being unopened, it never left the place in which it was written, but was kept there probably as a copy.

In the introduction, Dr. Radau also attempts to show that these letters form a parallel to those in the "Nineveh library." The letters found at Nineveh are concerned with the administration of the country, with the personal affairs of the kings, and in some cases also with religious affairs. They have nothing in common with the letters in Radau's volume which (properly characterized in the title as "from the Temple Archives") relate exclusively to the business affairs of a temple, and a particular temple at that. For this reason, alone, it is a priori improbable that they are addressed to Cassite kings, as Dr. Radau would have us believe. No less than thirty pages of the introduction are devoted to prove this thesis, and although not a single Cassite king is mentioned as the recipient, Dr. Radau expends much ingenuity in the endeavor to show that the title "bêli" (my lord), which appears in fifty of the letters, refers to the king. Since, however, the letters treat of temple affairs and not of political matters, the title is evidently that of a high temple official—probably the highest, the importance of whose post would justify the writers in using such a title. The usage is in accord with other evidence. Moreover, in one of the letters, a "king" is referred to, and in a manner clearly to distinguish him from the "bêli."

Altogether the introduction, though giving evidence of much study and showing the ingenuity and learning of the author, is marked by hazardous hypotheses that will not endure a critical test; and it would have been far better if Dr. Radau had confined himself to a summary of the actual data to be gleaned from these letters.

From Ruwenzori to the Congo: A Naturalist's journey across Africa. By A. F. R. Wollaston. Pp. xxv+315, illustrations, maps. New York: E. P. Dutton & Co. $5 net.

This is the entertaining account of a journey across Africa by a member of the British Museum expedition sent out in 1905 to make collections of the peculiarly rich fauna and flora of the Ruwenzori region. The book has not a scientific aim, however, but is simply a record of the impressions made by Africa's hot and hilly roads, winding waterways and cloud-girt mountain-sides. There are no thrilling adventures, and much is narrated that is trivial and uninteresting, yet there are many descriptions of scenes of enchanting beauty and graphic accounts of the natives and occasionally of the big game of the forests. The most interesting part is the account of the uncommonly successful work of the naturalists on the eastern slopes of the range. Of the fauna alone, they collected 6,000 specimens, of which 110 proved to be new species. Their success was apparently largely due to the natives:

> Hyraxes, gigantic rats, bats, mice, worms, beetles, chameleons, and snakes came pouring into Bihunga, when once it was found that there were people mad enough to pay for such follies. The care with which they secured the captive beasts, and the air of mystery and importance with which they produced them, were always a source of amusement.

An attempt to make collections on the western slopes in the Free State territory, completely failed from the hostility of the natives to their white rulers. The Belgian in command of the district compelled the party against their wishes to take an armed escort, and several instances are given of unprovoked and inexcusable maltreatment of the natives which sufficiently account for the conditions.

On reaching British territory, three of the expedition returned home by the Congo; and it is a striking illustration of the progress in Africa in recent years that a journey from ocean to ocean can now be made in less than eighty days. Mr. Wollaston's home route was through the almost unknown region lying directly to the South of Ruwenzori in which are the Mfumbiro volcanoes. The year before, an eruption had taken place which had continued at intervals for several months, causing frightful desolation; immense streams of lava covered the plains. At Lake Tanganyika, he turned west and on reaching navigable waters in the Congo Basin, made the remainder of the journey by canoe and steamboat to the mouth of the river. The impression left by the narrative of his experiences as far as Stanley Falls is of a country being impoverished through misgovernment. As an illustration, he says that the men building a railway from the river to the lake, through a region of extraordinary natural richness, are fed "on preserved beef from America and dried fish from Norway!" In the closing chapter, the author indicates briefly the character of the problems which the Belgians have to solve in ruling an immense population in the lowest stages of barbarism. That much good has already been accomplished must be recognized by all unprejudiced observers.

Several appendices contain among other things notes on the sleeping sickness and hints for African travellers. Two excellent maps enable the reader to follow Mr. Wollaston in his wanderings, and there are fifty-nine remarkably beautiful pictures, mostly of scenery.

The Characters of Theophrastus: An English translation accompanying a revised text, with introduction and notes by R. C. Jebb, 1870; a new edition, edited by J. E. Sandys. Pp. xvi +229. New York: The Macmillan Co.

This new edition, with Greek and English on opposite pages and notes below, is especially welcome both because the original edition is out of print and because Dr. Sandys has added valuable new material. His feeling of *pietas*, however, has perhaps caused him to follow Jebb too closely. For example, many scholars would feel that, in a book intended for adults, fidelity to the author demands that any expurgations should be indicated and the Greek printed either in the text (as is the case in No. xxi) or below. Jebb's original contention that the Greek text is only incidental is hardly in place in an elaborate edition like the present, which, from the reputation of both of its editors, is assured of a place in all libraries. References in the old edition should have been verified; *e. g.*, on p. 91, notes: "Lucian's *Symp*, c. 2, *Hermot*, c. 2," should be in each case *c.* 11. (Incidentally, a further reference to Lucian *Symp*, c. 38, would materially modify Jebb's statement.) There is a misprint on p. 62, note 6: for "brought back slaves" read "brought *black* slaves."

Dr. Sandys has added many references to works made accessible since 1870. Considering the close connection of Theophrastus and Menander, the fragments, old and new, of the latter might have been cited even more frequently, *e. g.*, on pp. 48 and 49, line 5, a reference to the new "Epitrepontes" seems called for, and on p. 43, notes col. 2, the account of "private arbitrators" might have been expanded (or modified) by a reference to the same play. Again, p. 113, note 18, on women "who answer the hall-door themselves" or who run out into the streets and act like shameless dogs, cf. Menander *Fragm*, 238 (Meineke):

> You're over-stepping, wife, a married woman's bounds,
> The front door passing; for to ladies of good birth
> The house-door is the limit by convention set.
> This chasing and this running out into the street
> Your billingsgate still snapping, Rhode, is for dogs!

The new indices are a great addition.

The English index, however, might have been even fuller to include other names and matters of interest in the notes.

Although Jebb's name still stands alone upon the cover, Dr. Sandys has again, in addition to his previous contributions to classical scholarship, performed a real service in making accessible in such a worthy way an author who is one of the most valuable interpreters of Greek life and thought.

Science.

THE SOUTH POLAR RECORD.

Lieut. E. H. Shackleton's extraordinary success in approaching to within 111 miles of the South Pole, in spite of great hardships and suffering, will take a prominent place in the history of polar exploration. This, not only because he has been farthest south, but because he seems to have added substantially to the world's knowledge of the *terra incognita* in which he has spent so arduous a year. The journey across the ice of 1,708 miles, occupying 126 days, without any accident or fatality, is in itself a remarkable exploit. It was not a march over level, if broken, ice-fields such as Peary has repeatedly made in his dashes toward the North Pole, but it involved the ascent of a glacier forty miles wide and rising to an Alpine height of 10,500 feet. To the perils of polar exploration were thus added those of mountain-climbing. The rarefied air, combined with a temperature of 72 degrees of frost, made it almost a miracle that the party could progress at all. Yet with this cruel experience behind them, the men were compelled to turn back with an apparently unbroken and inviting plain stretching to the southward as far as they could see. The perfect health of the ship's company speaks volumes for the experience gained by Lieut. Shackleton, who suffered tortures from scurvy on his first Antarctic trip with Capt. Scott in the Discovery. Curiously enough, his vessel, the Nimrod, carried practically no vegetables, although these have heretofore been deemed necessary as an anti-scorbutic. Instead, the greatest care was taken in packing the meats in cans of triple thickness and doubly painted. Lieut. Shackleton stated before sailing that the food question had been "worked out to the final analysis," and the result has justified his confidence. Indeed, the extraordinarily rich outcome of the whole venture argues strongly not only for the courage of its leader, but for his foresight and the care with which the programme was elaborated in advance.

Part of the credit may also be ascribed to the Siberian ponies, which were useful both as a means of locomotion and as sustenance. To the general public, indeed, the experiment with the ponies and the motor-sledge is of particular interest. That the motor would be of slight value was to be foreseen. On flat ice-surfaces it was of use in establishing depots of provisions; elsewhere it had to be discarded. Four of the ponies died before the sledge expeditions were undertaken; the others seem to have done remarkably well, despite the necessity of carrying fodder. But, just as in so many previous cases where dependence has been placed on dogs, the explorers returned dragging heavy weights themselves. Man, somehow or other, outlasts his beasts of burden in the Arctic even when they are not used for food.

As to the scientific results, in which Lieut. Shackleton has from the first been more interested than in the mere recording of a farthest south, this intrepid explorer brings back a valuable geological collection, including limestone with traces of coal, and a complete meteorological record. Eight distinct mountain ranges and more than a hundred mountains were discovered, and many glaciers surveyed and photographed. In addition, the magnetic pole was located, Mount Erebus was ascended, the active crater measured and the old one explored, while important observations of microscopic life and atmospheric electricity will interest scientists for years to come. This is as it should be; a mere venturesome dash toward a pole has little or nothing to commend it. It makes excellent newspaper copy and reads well when described in a book, but has nothing of lasting value to compensate for the risks taken and the money expended. Of course, some time will be needed to "work up" the results of the Shackleton expedition. The construction of an accurate map, alone, must be done slowly and with infinite care. It is only by an elaborate comparison of new records with the old that it is possible to comprehend exactly the climatic conditions and the movements of sea currents.

The news from Lieut. Shackleton will quicken interest in the reports to come from Dr. Charcot, the French explorer, who started from Punta Arenas on December 17 last, with provisions for two years. Whereas Lieut. Shackleton left his vessel at Erebus Island, where Capt. Scott landed in 1902, Dr. Charcot's objective is Alexander Island, directly south of Terra del Fuego. He thus approaches the pole from another and less known side, with a considerably longer sledge-journey before him. This is Dr. Charcot's second voyage to the Antarctic, his first having occupied the years 1903-05, of which he spent the winter of 1904 on the ice. Indeed, Antarctic expeditions have followed thick and fast upon one another's heels since the opening of the twentieth century. There was a long period when the search for the South Pole enlisted few recruits. Under the leadership of Capt. James Cook human beings first crossed the Antarctic Circle on January 17, 1773. For the next twelve decades only three expeditions were set on foot. But in the last ten years Borchegrevink, Scott, Drygalski,, Nordenskjold, Bruce, and Charcot have carried forward the work, practically without cessation. There has not, however, been a uniform plan of action. H. R. Mill, author of the "Siege of the South Pole," urges with much force a "consultative international committee," which should raise funds, divide the field, and keep in service the vessels now in use, instead of securing a new ship with new equipment for each expedition. Several wintering parties could thus be maintained. "The price of one battleship would conquer all the secrets of the south," says Mr. Mill. There can be no doubt that it would add much to the sum of human knowledge.

Details of the new Krupp antidotes for airships and aeroplanes have now been published. Of course, airships are supposed to be the best defences against other airships, but next to them artillery is relied upon to bring a flying-machine crashing to earth before its occupants are near enough to any large body of troops to drop dynamite upon them. The problem before the Krupps was to devise mobile and immobile guns which can shoot straight up into the air, and which can be shifted readily from side to side for sighting. This they have done with remarkable skill. The gun devised for use in heavy automobiles or on trains is a marvellous improvement upon the old-fashioned mortar. It can be elevated to any extent desired, sighted by means of mirrors, and swung on an axis permitting a complete revolution, while the recoil is well cared for. Even more interesting is an adaptation of the present field gun of the German army, which can be raised on a spring, so as to be in the position of a mortar. The whole invention is so simple that the wonder is that it was not long ago brought out for high-angle firing ashore and afloat. Curiously enough, the anti-balloon gun carries with it a return to smoking powder. As an aid to the artillerist, it is intended to fire shells which shall leave a light trail of smoke as they ascend, so that their course may be clearly seen and the next shot directed thereby. On the other hand, his own shots, on their return to earth, may kill his own comrades or innocent bystanders. The return of the shell has caused an animated professional discussion as to the kind of projectile to be used, whether an exploding shell or a solid shot. Small projectiles, it is agreed, are all that are necessary, and shrapnel has been most effective against captive balloons. But beyond this the experts are at sea for lack of experiments. Balloons are too costly to be shot at, whether captive or free.

An abundance of new material on popular cures and superstitions in the medical creeds of the world is being made accessible in the new "Vergleichende Volksmedizin," of which the first *Lieferung* has just

appeared, by O. von Hovorka and A. Kronfeld (Stuttgart: Strecker & Schröder). At least two dozen more parts, accompanied by more than 500 illustrations, will follow. The special character of the work is indicated by the sub-title, "Eine Darstellung volksmedizinischer Gebräuche, Anschauungen und Heilsfaktoren des Aberglaubens und der Zaubermedizin." Medicine, anthropology, ethnology, philology, are all enriched by this collection of details and data. As far as possible only first-class sources are employed, and the illustrations are particularly well selected.

A mass of scientific data regarding earthquakes in Italy, and especially regarding Messina, is intelligently presented in Dr. Albert Zacher's "Im Lande des Erdbebens" (Stuttgart: Julius Hoffmann). Dr. Zacher has made several tours through Italy on foot, a-wheel, and by automobile, since 1905, always giving his attention to volcanic and other disturbances. He now presents vivid accounts of the disasters in Calabria, 1905, the eruption of Vesuvius in 1906, and the recent earthquakes at Messina and Reggio.

Drama.

A new comedy, "Sham," by Geraldine Bonner and Elmer Harris, which was produced in Wallack's Theatre, the other evening, is brightly written in spots; has some point, if not much originality, as a social satire; is sound in moral and wholesome in atmosphere; but so weak and slovenly in construction that it assuredly would have collapsed if a less accomplished and vivacious actress than Miss Henrietta Crosman had been entrusted with the leading character, Katherine Van Riper. All the other personages and most of the incidents are conventional, but this young woman is vital. Reared in extravagant habits and overtaken by poverty, she continues to live luxuriously, largely by means of her wits and the ill-placed confidence of her tradesmen. Desperately in debt, her one hope of salvation lies in a rich, but loveless, marriage, which she has almost effected when she meets with a breezy Westerner, who captures her heart and opens her eyes to the essential dishonesty of the life she has been leading. Finally, after proving the sincerity of her conversion to a healthier state of mind, she deserts the false fashionable world for love in a cottage and true happiness. The tale, not being well told, would excite but little interest if it were not for the captivating picture drawn by Miss Crosman of the high-spirited, reckless, spendthrift girl. By her brilliant interpretation of the complex emotions of the third act, in which she had the stage largely to herself, she converted what threatened to be a failure into something like a triumph. Hovering constantly on the border line between laughter and tears, in which little touches of semi-humorous pathos were emphasized by occasional explosions of comic wrath, she kept the audience in high glee and dismissed them in a mood of smiling content. The embodiment was a notable bit of good comic acting—buoyant, spontaneous, varied, and natural—admirable alike in its ideal and the vigor and neatness of its technical finish. Miss Crosman is a veritable actress. Beside her the light of most other feminine stars shows very dimly.

E. H. Sothern is so industrious and conscientious an actor, and is possessed by so worthy an ambition, that each new step in his career compels a certain respectful interest. Moreover, he is the only comparatively young actor of any promise on this side of the Atlantic who is devoting himself to the literary, poetic, and romantic drama. But it is impossible to be very enthusiastic over his impersonation of Richelieu, which was seen for the first time here in Daly's Theatre on Monday evening. Modelled closely upon traditional lines, and fairly accurate in its recognition of familiar points, it was an absolutely uninspired performance, rarely rising above the level of mediocrity. Imitative and artificial, it exhibited understanding without power of execution. It lacked imagination, subtlety, intellect, and authority, and, although by no means lacking in vigor, but rather overabundant in sound and fury, failed to stir the pulses or create illusion. From a purely theatrical point of view it was not ineffective, but it was essentially tricky in its abrupt contrasts, its studied humor, and its all too conscious pathos. In utterance it was monotonous and dreary, the actor's declamation often assuming the character of a chant. The formal phrasing of the piece was a stumbling block, indeed, to all the actors with the exception of the De Mauprat of Frederick Lewis, and the general representation was sadly deficient in almost all the needful romantic attributes of graceful and spirited action, eloquent speech, and picturesque color. "Richelieu," with all its faults, is so good an acting play that even the poorest actors can scarcely fail in it completely, but its actual theatrical possibilities were but dimly suggested on the present occasion.

George Bernard Shaw has written for the London Afternoon Theatre what he describes as "a short dramatic sermon of an exclusively theological character."

The City Council of Vienna, which holds in trust all the literary remains of Grillparzer, has decided to issue a complete and thoroughly critical edition of his works, diaries, and letters. Prof. August Sauer of Prague has been selected to edit the twenty-five volumes, which will make up this set.

Johann Wiegand, one of the younger German dramatists, whose work is free from the repulsive features of much that is called "modern" in German letters, has been known to a small circle of New York playgoers by his one-act play, "The Last Trip"; his drama, "The Victor," in which Catherine of Russia is the central figure; and that powerful plea for universal peace, "The Wages of War," in which he collaborated with Wilhelm Scharrelmann. Wiegand's latest work, "Thalea Bronkema" (imported by G. E. Stechert & Co.), is a tragedy with a semi-historical background, the scene being Friesland at the time when the body of Henry IV was awaiting its burial. The book was enthusiastically received by Ernst Heilborn, former editor of the defunct Berlin *Nation*, and the initial performance of the play in Strassburg was decidedly successful.

Music.

THE NEW PHILHARMONIC ORCHESTRA.

The concert at Carnegie Hall on Saturday night marked the end of the last regular season of the Philharmonic Society as it has been known for sixty-seven years. When this society was formed, there were not many orchestral players in New York, and the demand for them was not keen. Their concerts were given on a coöperative basis, the profits—if any—being shared by the players. Since the death of Anton Seidl, under whose régime the receipts reached high-water mark, other factors have come into the reckoning. For several years the society imported famous European conductors, and finally engaged for three years Wassily Safonoff, who had attracted the largest audiences. He demanded, however, a salary six times as great as that paid to Theodore Thomas and Anton Seidl. The expense of the orchestra was further increased by the competition of the opera. As long as there was only one opera house, and the season short, it was possible for some of the players, and for Mr. Seidl, too, to serve both the Philharmonic and the Metropolitan. But when an orchestra was engaged for the Manhattan, and then the Metropolitan secured two orchestras, in order to play in two cities on the same evening, first-class players were tempted away from the Philharmonic. Their places were filled as well as possible, and good results have been achieved with the new material.

But many music-lovers have long desired that New York should have an association equal in proficiency to the Boston Symphony Orchestra, under one of the greatest European conductors; and the present crisis has seemed an opportune time to secure it. With the exception of the recitals of a few favorite singers and players, all concerts in this city have suffered grievously since the two opera houses began to bid for popular support, and apparently the venerable Philharmonic can be saved only by becoming a permanent organization of first-class players, giving such carefully rehearsed and finished concerts that even the opera would fail to lure patrons away. Such an orchestra costs money until it has been put on a paying basis—a single horn-player asked $5,000 for his services!—but, fortunately, the funds have been provided, and the New Philharmonic will be launched next autumn—a band of about one hundred carefully selected musicians, who will play under only one man. This man, Gustav Mahler, is one of the most inspiring orchestral leaders of our generation. Heretofore Americans have had hardly any opportunity to estimate his powers except as an operatic leader.

His interpretations of Wagner have aroused warm enthusiasm, and his readings of Mozart, Beethoven, Weber, and Smetana are acknowledged on two continents to be the most finished on record. In Vienna, where he presided for ten years over the Imperial Opera, his activity as conductor of the Philharmonic concerts was quite as successful as his labors at the opera. He is also one of the leading composers of the time. The Philharmonic will for the first time have a conductor of whom this can be said.

Fortunately, it is not New York alone which will benefit by this new arrangement. The subscribers to the Philharmonic will have their regular groups of eight afternoon and eight evening concerts; but in addition to these there will be Sunday afternoon concerts, historic and Beethoven cycles, and virtuoso concerts. Brooklyn and other neighboring cities will be visited, and occasionally a longer flight will be attempted.

Mme. Nordica will sing with the Dresden Philharmonic Orchestra when it makes its American début at Carnegie Hall Saturday evening, April 10. The other soloists are Mme. Langendorff, mezzo-soprano; David Bispham, baritone; Albert Spalding, violinist; and Germaine Schnitzer, pianist.

Art.

A Short History of Engraving and Etchings. By A. M. Hind. Pp. 473; 111 illustrations. Boston: Houghton Mifflin Co. $5 net.

This useful handbook by a junior curator of the British Museum differs from its many predecessors in the abundance of its illustrations and extent of its encyclopædic features. Besides the usual technical introduction, there is a running history of the art, a list of engravers and etchers classified chronologically by nations and schools, and an alphabetical index of names, comprising dates, which includes more than twenty-five hundred entries. Bibliographical notes accompany the text, and there is as well a very full bibliography at the end. Naturally, a manual of this compass cannot give all the material information that the collector will need when he comes upon an unfamiliar print; but it will enable him to find promptly whatever has been written on the subject. Furthermore, Mr. Hind has contrived to write interestingly what is often perforce an enumeration of names and titles, so that the book will not fail to appeal to intelligent readers who are neither collectors nor professed students. Only prolonged use can test the accuracy of such a work. It endures very well the casual control of dates that your reviewer has been able to give.

For his caution in statement and impartiality of judgment Mr. Hind deserves all praise. Every writer of a manual is under temptation, the stronger, the more scholarly he is, to play the umpire on disputed points. It is so much more pleasant to settle them than to state frankly the difficulty. To this pernicious tendency Mr. Hind never yields. The reader is not robbed of the mystery that affects many of the greatest names of etching and engraving. Possibly, the space given to British artists is out of proportion to the general scale, but this, considering the public to which the manual is primarily addressed, was inevitable. Of insular prejudices Mr. Hind is refreshingly free. It is a pleasure to find the over-popular mezzotinters classed merely as capable artisans. A similar catholicity and fineness of judgment pervade the book. The author adores none of the ruling idols of the marketplace.

Here and there a critical reader will differ from Mr. Hind's rapidly sketched positions. Whether Goya is one of the greatest "virtuosi" of aquatint (p. 253) is fairly open to question. Many will feel with Hamerton that in this medium Goya suffers from a heavy-handedness which we never find in his painting. Such critics will dwell rather on the inventive than on the technical merits of the master. It seems to us also that Daubigny, as etcher, is treated too cavalierly. His too few fine plates surely stand above those of Jacque and beside those of Rousseau as normative in etched landscape. The American section and lists are inadequate. The late William Sartain was best known as a stipple engraver; Frank Duveneck had a "startling power of assimilation" (p. 332), not of Whistler's manner, but of Venetian subjects. As a matter of fact, Duveneck's vigorous plates, which were on one occasion very stupidly fathered upon Whistler, were completed before the famous Venetian Set of Whistler was begun. The merits of C. A. Platt's few prints—he has forsaken etching for a more rewarding art—should have given him a place in the historical text. In the lists might well have appeared the amateur, the late LeRoy Yale, George Senseney for his delicate work in color, and the names at least of Lewis, Sloan, White, Roth, and Washburne—young etchers who are productive and of much promise. These, of course, are trifling blemishes in a work that is readable, orderly, and packed with information. We have seen nothing quite so useful for the average person who is concerned with prints.

We can notice only in brief Ludwig Justi's elaborate study of Giorgione (Berlin: Julius Bard). It consists of two large and handsomely printed volumes—one of text, the other of documents and plates. The author differs from his many predecessors in entertaining a greater respect for traditional attributions, and in scrutinizing more closely the surface of the extant pictures. Opposite each cut in the second volume is a complete account of restorations and damage—an obvious convenience, though in the present state of our knowledge such observations are often merely subjective impressions. In general, Herr Justi takes the latitudinarian view of Herbert Cook, believing that Giorgione was a prolific and uneven artist. The Justi list of authentic pictures passes forty. He admits all works of the type of the Glasgow Adulteress and the Beaumont Nativity, here agreeing with Mr. Cook. On such a matter who shall dogmatically play the umpire? Yet as a suggestion it is so difficult to place the great dramatic pictures apart from Giorgione—they surpass the capacity of Cariani or Sebastiano del Piombo—that acceptance will seem to many the easier alternative. Herr Justi's theory that these works were begun by Giorgione, but mostly executed by Sebastiano, has much to commend it. Considerable additions are made to the already long list of Giorgionesque pictures. The most interesting of his finds is the original (or a copy?) of the picture from which Hollar engraved the self portrait of Giorgione in Armor. The canvas, in a ruined state, is now in the Brunswick Gallery. On the subject of the Pitti Concert, Herr Justi is a traditionalist. It seems to us that he hardly does justice to the reasoning of those who see in this masterpiece a highly Giorgionesque Titian. The actual painting is, in the central head at least, quite un-Giorgionesque. We should be inclined to seek a compromise by assuming an invention of Giorgione, finished—as we know the Dresden Venus was—by Titian. For a penetrating analysis of the æsthetic qualities of Giorgione Herr Justi deserves gratitude, even from those who, like the present writer, dissent from many of his conclusions. The collection of documents and plates is most useful, and more complete than anything that has previously appeared. Especially welcome are cuts of Zanetti's engravings after the crumbling frescoes of the Fondaca de' Tedeschi. Herr Justi has overlooked the Rubens sketch, represented only by a contemporary etching, of a sleeping Venus ascribed to Giorgione. The print is exhibited in the Antwerp Museum, and the reference to it may be found in Max Rooses's Rubens.

The first volume of "Aus dem Frankfurter Goethemuseum," edited by O. Heuer (Frankfurt-am-M.: Kunstverlag Hermann Knoekel), consists of a collection of fourteen sheets in imperial folio, containing ten portraits, three pictures, and two sketches by Goethe. It is the purpose of the publisher to reproduce the best things in the Goethe Museum.

The *Giornale d'Italia* prints a report by Dr. Duncan MacKenzie, read before the British School of Archæology at Rome, which gives the results of his latest explorations in Sardinia. He was accompanied by the director of the school, Dr. Thomas Ashby. Among the more important discoveries were several dolmens; one similar to that at Birori, hitherto regarded as the only well-preserved dolmen in Sardinia; another near the village of Austis, with a peculiar prolongation at the back, forming a transition

between the true dolmen and the "tomb of the giants"; and two other more highly developed types, one covered with a slab measuring more than thirteen by seventeen feet, and the other partly cut in a cliff and partly built of stone, yet having the horizontal stone slab characteristic of the dolmen. New types of the "tomb of the giants," also, were found, shorter than the ordinary form, and having a curving front, built of several orders of stone blocks. In some cases, the cell was hollowed in a cliff and the characteristic great frontal stone and the front of the tomb itself were cut in the vertical face of the cliff.

The rearrangement and enlargement of the Vatican picture gallery has now been completed. For this purpose a corridor was chosen, formerly a carriage storehouse, on the ground floor of the west part of the Vatican, under the library. The galleries are lighted by windows opening on the Court of the Belvedere, so that only one wall is available for pictures—a convenience to the observer. The hanging is a uniform dark sage green stuff, of a slightly watered texture, excellent for the Primitives with their gold backgrounds and bright enamels, but rather too cold for the Raphaels and the later eclectics. The four halls contain respectively Primitive Tuscan painting, fifteenth century painting of Tuscany and the Marches, Primitive painting of Umbria and the Marches, and masterpieces of Perugino, Raphael, and the School. This adherence to logical association brings out the qualities of each group in a way that could scarcely be guessed from the old arrangement; and the collection has been much strengthened by adding to it the pictures hitherto half hidden in the Christian Museum of the Lateran as well as the Primitive panels, shown to great disadvantage under glass cases in the Vatican Library. The gallery is now one of the most attractive in Europe.

Among the exhibitions at the dealers' galleries in this city are paintings by Emil Carlsen, at Bauer-Folsom's, till April 10; old naval prints, K. O'Brien & Co.'s April 24.

News of the death of Prof. August Mau on March 6 has just been received here by friends of the scientist. Born at Kiel, Germany, in 1840, Dr. Mau spent most of his life in Italy, where, as member of the German Archæological Institute in Rome, he was able to carry on important work in connection with the restoration of Pompeii and other ancient cities. On the occasion of his sixtieth birthday, a number of his friends on this side of the Atlantic sent him a gift of several thousand dollars. Professor Mau used the money for defraying the expense of having copies made of paintings found on the walls of Pompeian ruins, and these copies were sent to American universities and other institutions. Among his best-known contributions to archæology are "Geschichte der decorativen Wandmalerei in Pompeii," "Pompeii in Leben und Kunst," "Führer durch Pompeii," and "Pompeianische Beiträge." He also compiled the catalogue of the German Archæological Institute; at the time of his death he was at work on the third volume.

From Munich, comes the report of the death, in his seventy-first year, of Dr. Alwin Schultz, at one time professor of the history of art in the University of Prague. He wrote largely on his subject, publishing among other books the following: "Höfisches Leben zur Zeit der Minnesänger," "Kunst und Kunstgeschichte," "Allgemeine Geschichte der bildenden Künste," "Häusliches Leben im Mittelalter bis in die zweite Hälfte des 18ten Jahrhunderts."

The death is announced of Prof. Alfred Messel, a distinguished architect of Berlin. He was born in Darmstadt in 1853, and studied his art under Strack at the Berliner Bauakademie. In 1883 he made the first of the trips to foreign countries which so strongly influenced him. Later he became a specialist in the style of the German early Renaissance and the Italian Renaissance. A volume has been printed describing thirty-six of his Berlin edifices.

Finance.

The Book of Wheat. By Peter Tracy Dondlinger. New York: Orange Judd Co. $2 net.

Mr. Dondlinger describes his book as "an economic history and practical manual of the wheat industry," and the scope of treatment warrants the comprehensive title. Nearly two-thirds of the work is occupied with practical questions such as the nature and chemistry of wheat cultivation; the different varieties of the grain in different countries, and their relative economy, from producer's and consumer's point of view; the cost of production, in this country and elsewhere; the manner and possibility of improvement through fertilization, irrigation, and crop rotation, and the diseases and insect pests to which the plant is exposed. These are by no means questions in which the farmer alone is interested. They concern the great financial and commercial markets vitally, as may be seen from the constant discussions, even on the Stock Exchange, of the progress and prospects of a crop. There are times when Wall Street will be more keenly concerned over rumors of "black rust in the Red River Valley" than over a demonstration by Servia against Austria. Such discussions are likely to be conducted with rather dense ignorance of the underlying principles. Like the cotton speculator who "went long" on news that the boll weevil had attacked the plantations, and then button-holed all his friends to ascertain whether the boll weevil was a disease or an animal, the grain market frequently judges of such matters at second hand. It would not be the worse off for the information which Mr. Dondlinger's book contains—information which is clearly and accurately put, and strikingly devoid of confusing technicalities.

The last third of the book treats of the production, marketing, and distribution of wheat crops the world over, and of the history of wheat harvests and wheat prices. It need not be said that these are topics full of interest, not only to men of affairs whose plans are affected by agricultural prosperity or adversity, but to students of economics. Few people who have not given special study to the subject are aware how essential a part these problems of harvests and prices have played, even in the great events of history. Taine has clearly shown the important influence of the agricultural blight in France of 1789, in precipitating the French Revolution in the particular form which it assumed. It was English and Irish crop failure which made free trade inevitable for Great Britain; Professor Thorold Rogers has hinted at crop failure in the British Islands as one influence which brought to a head the uprising of 1642. That a "bumper" wheat crop in the United States, along with European harvest failure, was an essential factor in achieving the success of specie resumption in 1879, was admitted even by John Sherman.

What part the similar conditions of 1897 had, in starting the ball of American prosperity rolling after the long depression, is within the memory of every one. It may indeed be said that the problems of agriculture are at the present moment among the foremost economic and financial considerations of the day. It was certainly this country's agricultural prosperity which averted the worst consequences of the panic of 1907, and saved our Wall Street promoters and manipulators from the full penalty which their excesses had invited. The election of 1908 was the first in our history in which the administration party won in the vote next succeeding a great financial crisis. Had the country's agricultural fortunes turned out in 1908 as they did in 1894 or 1881, it is possible that the result might have been different from what it was.

The thirty-three pages devoted by Mr. Dondlinger to the bibliography of wheat deserve special notice; for the inquiring reader; they provide access to a rich and extremely interesting branch of literature.

The deep cut in the price of steel structural material which has accompanied the "open market," called forth, last month, the largest volume of orders ever known in that branch of the trade. This is a perfectly logical result of the policy of low prices, adopted by the great steel corporations after a year of unnecessary and unwise delay. It is also conclusive refutation of the singular theory of economics set forth by Judge Gary last April, and his statement that the fact that the demand is less than the supply does not furnish an argument for lowering the price, and that neither through such lowering nor through an ad-

vance in price when demand exceeds supply, "would the quantity bought and sold be more or less." The obvious fact, after the panic of 1907, in the steel trade as in other industries, was that capacity to consume was impaired, that credit was restricted, and that the usual buyers not only were able to postpone such orders as they may have planned, but were bound as a matter of common sense to do so, as long as concessions in price were refused. The whole history of modern trade goes to prove that, at junctures of the sort, the wise producer will find his market again by such immediate and radical revision of prices as will overcome doubt and hesitation on the part of the consumer. The dry goods trade, one of the few that is not dominated by a Trust, acted promptly on such lines a year ago; it took more time to teach the new industrial Trusts that they, too, were subject to the old laws. That they have apparently learned the lesson is a happy augury for both producer and consumer. It ought to be possible, now, for these great aggregations of capital to perform their normal economic function of preventing such extreme and prolonged fluctuation of prices, whether up or down, as would demoralize trade. That the United States Steel Corporation in great measure fulfilled this useful requirement, by preventing, in the boom of 1906, such extortionate prices as prevailed in the similar periods of 1882 and 1899, is admitted by every one. It should have used its influence a year ago in favor of a normal cut in prices, instead of foolishly obstructing reasonable readjustment.

BOOKS OF THE WEEK.

Allison, Young E. The Delicious Vice. Cleveland: Burrows Bros. Co.

Annals of the Astronomical Observatory of Harvard College. Vol. LXI, Part ii; Vol. LXVIII, Parts i and iii. Cambridge. Published by the Observatory.

Arnold, Matthew. Selected Poems. Henry Frowde.

NEW YORK, THURSDAY, APRIL 8, 1909.

The Week.

Amid the rather dreary round of tariff oratory in the House last week, one speech stands out with a kind of pathetic distinction. It is the protest made by the resident commissioner of the Philippines, Mr. De Leon, against those features of the Payne bill which deal with Philippine trade. The restrictions upon the right of free entry in this country, proposed in the case of Philippine sugar and tobacco, are a marked falling off from the terms which Mr. Taft long insisted upon. To have assented to so much in the way of a compromise must have been exceedingly distasteful to the President; and now he has the further mortification of hearing the official representative of the Filipinos in this country declare the whole plan unjust, and point out that it is unanimously opposed by the people of the islands. Mr. De Leon spoke with great restraint and dignity, yet made it clear that he and his countrymen regard the action of the United States in fixing tariffs for the Philippines without consulting the interests and sentiments of the people as sheer exploitation and oppression. And he closed his speech with that same plea for independence which always comes out in the end of any discussion of the Philippines, no matter from what premises one starts.

French exporters are badly frightened by Mr. Payne's revised schedules. France is preëminently the country that supplies the rest of the world with its luxuries. Increase your tax on frills, flounces, and furbelows, and there's sure to be a tremendous fluttering in the dove-cotes of Paris. Gloves, feathers, perfumery, and fine plate-glass are already menaced, and as the outcry continues against taxing our necessary coffee, tea, beer, and cigarettes, who knows but Mr. Payne will lay a heavy hand on French champagnes? The Parisians, therefore, are quite right in being anxious. But they are wrong when, relying on the statement of Hugues Le Roux, they attribute our heavy tariff on French products to any particular feeling of hostility for France. M. Le Roux has recently been in this country and carried away a vast stock of misinformation on which the French customs authorities would have been wise in clapping a prohibitory duty, specific and not ad valorem. In the first place, the millions of Irish and Germans among us are not, as M. Le Roux believes, responsible for our dislike of the French people, for the simple reason that we do not dislike France; far from it. And, in the second place, even if we did dislike the French, our protection philosophy is not swayed by sentimental likes and dislikes. The protection Minotaur knows neither friend nor foe. The proof is that he feeds less on the foreigner than on his fellow-citizen. First and always, the standpatter is for himself, first in war, first in peace, and first in the pockets of his countrymen.

Representative Murdock's resolution, that Congress call on the several States to return the $28,000,000 "deposited" with them by the national government in 1837, is not likely to result in anything save a dip into political history by inquiring readers. It is quite true that the money was not an outright gift. When the Congress of 1836, confronted with the unmanageable surplus revenue of "boom times," and willing to play a popular card, decided on such distribution of the accumulated surplus in excess of $5,000,000, it described the operation as a "temporary deposit"—subject, therefore, to recall at the will of Congress. But nobody entertained any illusions about the nature of the transaction. The words "temporary" and "deposit" were inserted to allay the scruples of that strict constructionist, President Jackson, and induce him to sign the bill. Most of the States which received this Federal largess—$28,000,000, as it happened, distributed in the ratio of representation of the several beneficiaries in Congress—proceeded at once to spend it; and even in the face of the collapsing Federal revenue and heavy Federal indebtedness, which came with the panic of the ensuing year, Congress passed a resolution intimating that, while it could not pay over the fourth and last instalment of the "distribution," it would not trouble the States for what they had got already. In other words, the episode was closed something more than seventy years ago, and will scarcely be reopened at this time.

But the incident is part of a chapter of events which, taken as a whole, has some bearing on present-day affairs. The period 1835-1836 closely resembled the period 1905-1906. It was an era of expansion, of reckless speculation, when everybody was making money on paper and nobody believed that the "boom" would ever end. The national Treasury shared in this delusion. Between 1834 and 1836, under the influence of the increasing home consumption and import of foreign goods, annual customs revenue expanded nearly 50 per cent., and public land sales, in response to the wild speculation in the Western States, rose from $4,800,000 to $24,000,000. As a consequence, appropriations committees unloosed the purse-strings. The moderate public debt having been by 1836 extinguished, ordinary expenditures were increased from $17,500,000 in 1835 to $37,200,000 in 1837; the "distribution to the States" was voted, and just then the panic of 1837 swept over the country. In 1836 the surplus revenue was $20,000,000; in 1837, customs revenue was cut to the lowest figure in twenty years, public land sales almost stopped, but appropriation bills continued to run, with the result of a $12,000,000 deficit and a $15,000,000 public debt at the end of the year. We wish we might hope for the reproduction, in the present instance, of the further sequel of seventy years ago—which was such reduction in annual public expenditure that it was ten years before the figure of 1837 was again approached.

We took the liberty to question, in our issue of March 25, the rather cocksure statement from Washington in respect to one feature of the Declaration of London regarding the laws of maritime war. It was confidently asserted that England had retreated from the ground she took when she demanded the surrender of Mason and Slidell. The implication was that the search of a neutral vessel, and the forcible removal of civilian commissioners, such as Mason and Slidell, were hereafter to be recognized by the laws of naval warfare.

But examination of the text of the Declaration, now at hand, shows that this, as we suspected, is an entire misapprehension. Article 47 provides, indeed, that individuals may be made prisoners of war when found on a neutral merchant vessel, even when there is no ground for capture of the ship, but such individuals must be "embodied in the armed forces of the enemy." Mason and Slidell were not. Thus the myth that the British had abandoned ground which they maintained against us in the civil war, and which our best international lawyers at the time and since admitted to be soundly taken, should at once be withdrawn from circulation.

A decision by Justice O'Gorman in the State Supreme Court, upholds the constitutionality of the law restricting to $150,000,000 life insurance written by any company in any one year. The law had been contested on the ground of arbitrary and unequal application of the restrictive provision—chiefly because "industrial" insurance was excepted from it. The court ruled that the Legislature had the right to classify insurance and to make different provision for such different classes, always assuming the classification to be reasonable. That the separation of industrial insurance from ordinary life policies was reasonable, Justice O'Gorman decides; the two businesses he describes as "quite distinct," and accordingly refuses to set aside the law. To insurance men and the general public alike, it will appear that the case was really based and decided on a technicality. To both the exception of industrial insurance is a matter of relative indifference, save as a ground for taking exception to the law's constitutionality. The real objective point of the suit was to overthrow the $150,000,000 limitation in itself, of which the large companies have complained ever since the new insurance law of 1906 went upon the statute-books.

When the legislative committee was framing its bill, it was confronted by the fact that such limitless accumulation of capital, under the hands of a single group of men, was itself a serious problem. The committee reported that the business of certain companies had "grown beyond reasonable limits," and that, "notwithstanding they have long since passed the point where further enlargement can benefit their policyholders, they have resorted to every effort to obtain new business, regardless of the expense which is reflected in diminishing dividends." That this was regarded as an evil by the companies themselves had been shown by a tentative resolution of the Mutual Life trustees, as long ago as 1892, to limit annual new business to $100,000,000. President McCall of the New York Life thus testified before the Armstrong committee:

> Q. Is there no time when an insurance company should say it is better, all things considered, to call a halt? A. I think there is a limit to human capacity.
>
> Q. And to capacity of human supervision? A. Yes.
>
> Q. And to capacity to handle such gigantic accumulations? A. Undoubtedly.
>
> Q. Have you thought about it enough to reach in your mind as to what that limit should be? A. No. I think it is a very serious question. I think this committee could do a great deal of very good work in that respect, Mr. Hughes.

The elections in Michigan on Monday exhibited the Anti-Saloon League's strength, but no less clearly the foolish tactics of its opponents. Only a wonderfully organized and well-supported campaign could drive the saloon out of nineteen or twenty counties where, but a few years ago, scarcely any sentiment against liquor was visible. Yet not even shrewdness and money could have accomplished so much, if the enemy had been moderately clever. Nothing could be more puerile, though, than the liquor dealers' campaign tricks. They choose as their prize stump-speaker the author of "Peck's Bad Boy," who gave humorous talks. Then, too, the State was flooded with huge postal cards explaining that the Anti-Saloon League is controlled by Rockefeller, who hopes to use it as a cat's paw to seize the Federal Government. Such wild tales insult the voter's intelligence and make him believe that the saloonkeeper has not a leg to stand on.

The regular semi-annual crisis in our relations with Central America seems to be coming to a head. It follows on the regular bi-monthly internal crisis in Central America. This time the quarrel is with Nicaragua, and, of course, on the immemorial subject of an American citizen's property vs. government confiscation. Concerning our rights in the matter there can scarcely be any question. The Emery claim is not a claim at all, in the sense that it waits for adjudication. Nicaragua agreed to arbitrate our government's demands, and, displeased by the outcome, insists that the arbitration be rearbitrated. The ordinary rules of political consistency or logic scarcely run in Central America, and this country would be at fault if it forgot that infinite patience is necessary in dealing with these weak-willed peoples of the tropics. Yet there is a point where compliance must stop. It is bad for the Central Americans themselves. Zelaya, having defied the United States successfully, finds it quite natural to start playing the little Napoleon within Central America. Fortunately, this country is now in a position where it may speak out firmly without giving those restless republics ground for serious recrimination. Our understanding with Mexico wards off the charge of selfish motives. To our good offices and Mexico's the Central Americans have appealed before this.

Admiral Cervera will long remain in naval history as a striking example of devotion to duty on the part of a man in chief command, without a single illusion about the possibility of success. From the moment he sailed from Spain till the final catastrophe at Santiago, there was no time when Cervera did not look forward to fated defeat. His letters and dispatches to the Spanish government made it clear all along that he understood perfectly the deficiencies of his ships, and the certainty that he would be crushed by superior forces. In fact, so cogent was his exposition of the matter that the dilatory officials at Madrid were finally impressed to the point of cabling to him at Martinique that he might return to Spain, if he thought it wise; and only the failure to deliver this message left Cervera to go on his way under his original instructions. For a man thus feeling himself dedicated to disaster, he displayed a serenity and greatness of soul which even his enemies could not but admire. It must have been harder for him to endure captivity in this country, than it had been to go through the blaze and roar of his hopeless naval battle; but here, too, he bore himself with exquisite nobility. His was truly a rare character, formed in large moulds.

The Socialists in the Belgian Parliament are conducting an energetic campaign against evil conditions in the Congo. M. Vandervelde's speech of last week, in condemnation of the system of forced labor, continues the attack begun some time ago against the government's action in the case of the Upper Congo and Great Lakes Railway Company. This company was organized in 1902 and received a concession of some 4,000,000 hectares of land and forest for ninety-nine years. The government shares in the profits were derived from exploitation of the land concession. On that ground, a royal order was issued last January, declaring that the railway was a public utility which justified the "recruitment" of 2,575 men during the current year. The negroes are recruited by raiding expeditions which destroy the villages and bring the men back in chains. In that condition they are set to work on the railway, finding probable solace for their sufferings in the thought that the government speaks of them as *travailleurs salariés*, "salaried laborers." Their "contracts" run for five years. The nominal pay is 21 centimes (four cents) a day. The Socialists have maintained that the railway is not a "public utility" in the sense that it should be made to justify a system of practical slavery. M. Vandervelde asked what had become of a number of natives sent to work in certain mines in 1905. "They are not all dead," said the Colonial Minister. The situation is deplorable. Yet there is this important gain: that Congo misrule is no longer hidden from the world by Leopold's agents, but is criticised openly in the Parliament of a civilized people.

Paris now has a scare of its own. It may not be so big as England's naval scare, or the general Balkan panic recently deceased, but domestic insurrection is bad enough. That France is in such imminent danger of a proletarian insurrection as part of the Parisian press would have it, is open to strong doubt. From mere expediency, the workers are bound to keep the peace. The recent vote in the Chambers showed an enormous majority in support of the government's refusal to grant state employees the right to strike. The leaders of the proletariat are not fools. They must recognize how united the country would be in the face of any move against domestic order. The leaders of the workingmen are not even exceptionally hot-headed. Hot-tongued they are, in part, but not much more so than the conservative press, which has fallen into the habit of describing every petty strike, a waiters' strike or the strike of five hundred electricians, as the prelude to social revolution. If it be true that the state employees are affiliating themselves with the General Confederation of Labor, the situation may be serious. But we have yet to learn whether that report is true. Until very recently these two elements stood in no friendly relations. It seems very doubtful whether the state's employees will rise against the bourgeois, for the simple reason that they are themselves, in great part, bourgeois.

THE TARIFF'S FIRST STAGE.

It now seems certain that the Payne bill will pass the House this week. Under the special rule adopted on Monday there is opportunity for amendments which the Ways and Means Committee may offer, and separate votes on a few schedules are to be permitted; the rest of the bill is to be put through, as all tariff bills are put through the House, under closure. Thus the first step will have been taken, although, in tariffs, it is not usually the first step that costs. The next and more costly step will be taken by the Senate; then will come the struggle in conference between the two houses. After that, the President may have something to say. The final verdict will lie with the people.

When Lord North saw the India Bill of his day, he described it as "a good receipt to knock up an Administration." In the Payne bill as it stands to-day, there are several vicious features which ought to be enough to knock up the party or the Administration that would father or deliberately retain them. All tariffs have their pet abominations. The McKinley bill outrages were numerous, and we know what a political revolt they provoked. There would probably have been as marked a revolt against the Dingley bill, had not Bryan been there to prevent any Democratic movement in opposition to any Republican policy from being effective. Of the Payne bill, two schedules have been singled out for special reprobation. These are the duties on gloves and on stockings. Other items in the bill may be as bad, or worse. We ourselves think the woollen schedules far more pernicious. But the women of the country, particularly in the West, have risen in protest against greatly increased taxes that are threatened upon articles of which they are the main consumers. In Chicago, over 300,000 women have signed a forcible remonstrance against the higher duties on gloves and hosiery. The movement is spreading from city to city, and invading the rural districts as well. It will be noted that the Iowa Republicans in the House refused to assent to the rule, on the express ground that it did not permit a separate vote on the glove and hosiery schedules. These country Representatives, far from the influence or terrorism of importers, evidently fear that political vengeance will be taken on them unless they come to the relief of the aroused women.

That these particular taxes, as they now stand in the Payne bill, are wholly indefensible, we think that no one who looks disinterestedly into the facts can question. In these two cases, the Ways and Means Committee apparently fell into the hapless old fashion of allowing manufacturers to make their own unstifted statements about the conditions of the trade, and write their own clauses in the tariff bill. For example, the National Association of Hosiery and Underwear Manufacturers appeared at the tariff hearings with a request for increased duties. Several affidavits were submitted on the subject of labor cost. all of them asserting that "there is no material difference between the wages paid for the same kind of work in the different sections of the United States." How much this is worth may be guessed when we find two manufacturers from the same city swearing, one that he pays 65 cents as labor cost of a dozen pairs of stockings, and the other $1.02 for the same article. Yet with such discrepancies and improbabilities glaring at them, the members of the Committee allowed these affiants to make solemn oath regarding the labor cost of stockings in Germany, giving figures which have since been officially declared to be false and misleading. And the increase in duties was credulously granted: on the lowest grade, from 68 per cent. to 89; on the second, from 58 to 76; on the next, from 51 to 66; and on the highest

grade, from 59 to 70. This in a revision which was to be "downwards"!

The question of increased duties on women's gloves is ably discussed in a letter by Senator Culberson in the Washington *Post*. He shows how the Ways and Means Committee almost literally complied with every demand made by ex-Congressman Littauer. Littauer was the interested party, yet all his statements were taken as gospel truth, wide of the fact though many of them are easily shown to be. Senator Culberson demonstrates from census bulletins that the assertions of Littauer respecting wages paid were grossly inaccurate. Yet this manufacturer and influential politician was practically allowed to write the glove schedules to put money into his own pocket, the duties being advanced on the average not far from 100 per cent. And the dispatches report Mr. Littauer as being uncommonly active last Monday in the Speaker's room and elsewhere, to prevent a separate vote in the House on his precious gloves.

No one supposes that the President, representing the national interest, can be satisfied to see these most offensive remains of protection in the Payne bill. Doubtless he hopes that they will be stricken out, either in the Senate or in conference. But Mr. Taft should have it distinctly in mind that it may be necessary for him to speak out against the extreme forms of selfishness and shamelessness in the Payne bill, if he really desires to see those curses removed.

OFFICE-HOLDERS IN POLITICS.

The report of a special committee of the National Civil Service Reform League, on the activity of Federal office-holders in politics, has been taken by some as a whitewashing of the last administration. It is not that, in either intention or effect. The committee, it is true, paid a good deal of attention to the use of government employees in the last Presidential campaign, and it is also the fact that it exonerates President Roosevelt from the charge of having technically violated the civil-service rules. These relate, formally, to the political activities of men in the classified service. It was, however, the unclassified officials—the men holding the higher Federal offices, postmasters, collectors, marshals, and the like—about whose pernicious activity in politics there was scandal last year. On that particular question, the committee has gathered precise evidence bearing out common knowledge; and the chief aim of its report is to show both how great the mischief is and the urgent need of its removal.

A comparison of the roll of the Chicago Convention with the government Blue Book, establishes the fact that at least one delegate in ten was a Federal office-holder. In the Southern delegations, the proportion was much higher: every third man was a government employee. Out of the 22 delegates from Alabama, 16 were office-holders; of the 10 from Florida, 7 were on the Federal salary list. It is easy to say that all this is no novelty; that the Republican party in the South being what it has been for many years, such a lining up of the animals at the crib, to vote at the orders of the master of the crib, is inevitable. Whatever the explanation, the thing is an outrage and a danger. The committee is well within bounds in saying:

> Any one made familiar with these facts cannot fail to see the menace to free elections and popular nominations in this great office-holding machine, controlling under ordinary circumstances the balance of power in a national convention and subject to possible dictation by the President as the chief executive. Not to so use it implies strength of will to resist great temptation.

The abuse goes much deeper than this, however, and the committee of the Civil Service Reform League follows the evil further. It is not simply with a partisan offence that we are dealing, but an attack upon the efficiency of government. The unchecked activity in politics of the higher officials robs the people of the services for which they are paid. An official who has to spend so much of his time in looking after the party organization, and in rounding up voters for primaries and "getting the delegates" at any cost, cannot give himself intelligently to the work of administration. In fact, the majority do not. It is the deliberate assertion of this committee, after due inquiry:

> Except in the departments at Washington and a few other places, the larger offices in the unclassified service might be left vacant, and the service would be as efficiently performed as now.

That is, the real work is done by the classified subordinates. Take that collector of internal revenue in Kentucky who has been holding his commission for four years, but during three of those years has been away from his office—though faithfully drawing his salary—and it is plain that not he but somebody else is seeing to it that the revenue laws are enforced. So it is with the average Presidential postmaster, the surveyors, collectors, and marshals: they habitually neglect their government work to attend to their political jobs. To employ them and pay them out of public money is, therefore, a gross case of waste and extravagance. The viciousness of the procedure could be no more evident if an old suggestion of ours were adopted, and two men appointed to every Federal office—one to attend strictly to its business, and the other to have the party glory and to do the party dirty work.

Remedies urged by the committee require both legislation and executive action. The law of 1883 ought so to be amended that the offices which can be filled only with "the advice and consent" of the Senate, may also be placed in the classified service, in which political activity is forbidden. Of course, a resolute President could make such officers keep their hands off the machine, even as it is. Mr. Roosevelt did so in theory; in practice, the results are what the committee sets forth—Federal officers running the party, in many States, and swarming in conventions. It is natural, then, that the committee should call for "a clearer definition and strengthening of the provision of the executive order governing political activity in the unclassified service." It ought to be made, instead of a dead letter, a living determination. In addition, the committee demands better methods of appointment, especially by promotion from within the service, instead of putting at the head of important offices protégés of Representatives and Senators, entirely unfamiliar with the duties of the position, and often wholly unfitted for their discharge.

It may not have occurred to the members of this committee that they are furnishing a powerful argument for direct primaries. Yet no one can glance at their picture of the way in which conventions are run, stuffed with dummy delegates dishonestly elected, without seeing how great a gain would come from legally guarded primaries, in which the voters could declare directly

for the men and measures of their choice. If such a system were established and put honestly into operation, much of the political occupation of our office-holding Othellos would be gone. Primary reform would thus supplement and aid civil-service reform.

THE PRAISE OF ECONOMY.

The air is filled just now with talk of economy—strictly theoretical. Every man is willing that every other man should economize. Government officials are setting their faces against extravagance, and railroad men like Mr. Harriman are calling for as great an economy in the administration of public affairs as is insisted upon by railway managers. The story goes that the new Secretary of the Treasury is appalled at the evidences of lavish and needless expense which confront him in Washington, and has said: "It ought to be possible to run one respectable government on what is wasted here." Whether this be true or not, the era of praise of economy has plainly set in. The nation's sentiments on that subject are correct and laudable, whatever its practice may be. No Congressional orator gets more applause to-day than the man who denounces a governmental spendthrift policy, and calls for rigid economy. Yet he does this, knowing in his heart that what the old parliamentarian said is true: "If you want to get a cheer in the House of Commons, make a speech in praise of economy; if you want to rouse opposition and encounter certain defeat, move to effect any particular economy."

Chairman Tawney, of the House Committee on Appropriations, admits the alarming increase in public expenditure, but asserts with much truth that "the two primary causes have been, first, the popular and executive demands; and, second, the abnormal and unnecessary war expenditures in time of peace." The first cause is as much a national obsession as the last. It is undoubtedly true that a mighty appeal comes up to Congress from the people every year to spend more money. Take the mere matter of pensions. The nation is paying about $160,000,000 a year for that purpose, yet for every worthy veteran who dies, two suspicious or fraudulent claimants solicit Congressmen to get them on the roll. Look at the rising flood of private pension bills, and the method of passing them by wholesale, which has been devised. These measures are all for the benefit of men and women who are not pensionable under the general laws, and whose cases are, therefore, likely to be without desert, when not tainted by fraud. Here would seem to be a splendid place for messieurs the economizers to begin. But nothing of the kind is seen. These wasteful drains on the Treasury are popular. Able-bodied men in the backwoods of Maine will speak complacently of the amount they "draw" from Washington. "Abner, he draws $17 a month, and they dew say that Senator Hale has promised to shove him up to $23." With this spirit abroad in the land, one sees how much real popular backing there is for public economy. It is praised in the abstract, but in the concrete nobody wants it.

The unhappy significance of the phrase, "forced to economize," is proof enough of the unpopularity of the process. Gay young squanderers may alternate miserliness with high living, and regard it, with Thackeray's Philip, as a kind of joke to live for a time on a few sous a day. But for the father of a family, a man of affairs, to be compelled to cut down expenses is always irksome. He hides the fact, if he can, as he is ashamed to let it be known that he has been living beyond his means. That spirit of the citizens is bound to make itself felt in the government. The bigger the panic, the bigger the appropriations: such appears to have been the motto of Congress. And President Roosevelt hit off perfectly the general taste and standards when he said in his last annual message that the country had, during his Administration, never had to deny itself anything that it wanted. There is about that a smack of contentment with wealth which is very general. As a nation, we feel that we have much goods laid up for many years, and have need of nothing—of economy, least of all.

We speak of this public tendency in order to show how great are the difficulties in the way of frugal national finance. The statesman who sets out to establish such a policy goes against the tide, and too often will have to say with the poet that for a long time he strove against the stream, but strove in vain. Success is not possible unless it be remembered that it is policy which makes expenditure. Minor savings can be effected here and there in routine matters of administration: useless offices can be abolished, and idle clerks cumbering the departments can be weeded out: but no great and satisfactory reductions can be made in governmental outlay except by a change in governmental policy. If we were, for example, to alter our military policy, we could easily save $100,000,000 a year. If any one will assure us that such an altered policy is probable, we will tell him whether economies are probable.

One other change in the posture of government may make for economy. We mean a divided party control. The historic example is the Democratic House, in 1875-79, with a Republican Senate and President. Under the lead of Samuel J. Randall, the House put the knife so deep into the budget that savings of from $50,000,000 to $80,000,000 a year were made. The total of the appropriations actually sank, instead of showing that steady and ominous rise with which we are painfully familiar. A political motive entered, no doubt, into this economizing. Democrats wanted to prove the truth of their charge that the Republicans were spendthrifts. But political motives always affect political expenditures. If we were to have a Democratic House after next year, there can be no doubt that it would set about cutting down the appropriations. The object would be partly to show that the Democrats were more economical than their opponents, and partly to keep Republicans in the government service from having so much money to spend. This shows us the reverse side of party responsibility. We are accustomed to say that it is well to have one party in charge of all branches of the government, and then demand an accounting of its stewardship. But while that may make for a consistent policy, it does not make for economy. Under undisputed Republican supremacy for the past twelve years, public expenditure has gone up much more rapidly than would have been the case had we seen an occasional Democratic House to hold the purse-strings.

END OF THE BALKAN TROUBLE.

Austria has declared herself satisfied with Servia's note of humble submission. The final balance has been struck in a complicated account which began when the Sultan's power went down

before the Young Turks last summer. The critical period may be reckoned from the beginning of last October, when almost simultaneously Bulgaria proclaimed her independence and Austria announced the annexation of Bosnia and Herzegovina. During these six months Europe has been almost weekly on the verge either of a great war or peaceful solution. But the remarkable feature has been that the most serious danger arose from a phase of the matter which, at the beginning, would have been pronounced the least threatening of all. If hostilities had broken out between Turkey and Bulgaria over the question of suzerainty or indemnity, the reason would apparently have been valid. If Turkey had fallen afoul even of Austria, the same reason would have held, namely, that the new régime in Turkey could better afford to wage an unsuccessful war than to meet the charge that it was sanctioning the dismemberment of the Ottoman Empire. Yet Turkey's quarrels with Bulgaria and with Austria were settled, involving though they did the surrender of legal rights. After all, Austria had held Bosnia for thirty years, and it was pretty well understood that she was to keep it permanently. That she would surrender the province to any one but Turkey was absurd. The real menace, it turned out, consisted in what the outsider would regard as Servia's rather vague national aspirations.

The danger came because the quarrel between Austria and Servia tended to take on a far broader character. For Austria read Austria and Germany. For Servia read Russia, with her old ally, France, and her new friend, Great Britain. The supposedly historic conflict between Teuton and Slav for the open road to Constantinople was regarded as entering on a new stage. When Servia threatened war, was she really bent on a heroic feat of hara-kiri, or was she counting on the sure assistance of Russia? When Austria made preparations for mobilizing a half-million troops, was she really panic-stricken by the chance of an attack from Servia, or was she making ready against Russia? While winter made campaigning impossible, diplomacy had a free field. Then Servia might be aggressive, Russia might be warm in support of her, and France and England might play the anxious intermediaries. The alternations of hope and despair were just the thing to make three or four months pass. Insults and provocations might be exchanged without great danger. But when spring came, a season that seems to have an exceptionally stirring effect on the Balkan fighting blood, Austria had it in her power to bring the matter to a sharp conclusion. Having a good deal to gain by persistence, and all her prestige to lose by backing down, she might speak war and mean it. Then it would be for the anti-Austrian Powers, and especially for Russia, to decide whether Servia's claims were worth the risk of war. Report has it that the question was put sharply to Russia, and that St. Petersburg decided no.

The outcome has been a victory for Austrian and German influence, and a diplomatic defeat for the Western Powers and Russia. France and Great Britain were undoubtedly sincere in working for peace in the Balkans. Yet great Powers do not work without the hope of ultimate advantage to themselves. To check Austrian aspirations, if even in part, would be to add another victory to those Great Britain and France have been winning recently over German diplomacy. But the Western Powers found Russia but a reed to lean upon. France especially must be discomfited to have her ally won away from her. This is the second time the French have vainly counted on the Russian alliance. In 1905 Russia was so helplessly crippled that the Kaiser might with impunity dictate terms to France in the matter of Delcassé and Morocco. In 1909, Russia is still too weak to be useful if it came to extremes. Frenchmen must now be asking themselves what this Russian alliance to which they have been clinging as a rock of safety is really worth. André Tardieu, in his recent lectures in this country (collected in a volume entitled "France and the Alliances"), tried to show how vital to France's safety was her understanding with Russia. He argues that the security which the Republic has enjoyed for the last fifteen years is based on that chiefly. But the value of an alliance that breaks down in crises may be questioned. The only fact that cannot be questioned is that Russia has profited by the alliance to the extent, Mr. Tardieu estimates, of $2,500,000,000 in French money.

When the conference to revise the Treaty of Berlin meets, if it does meet, it will find little else to do but to ratify what the Powers have settled upon by direct negotiation. Yet it would be an error to adopt the cynical view that the Balkan crisis has proved that treaties and peace have their only sanction in armies and battleships. It must be repeated that Austria's title to Bosnia-Herzegovina was far better than Servia's, and good as territorial titles go. England rules Egypt under no better claim. That the matter should have been settled without recourse to arms is an unmistakable tribute to the world's growing dread of war.

THE BIBLE AS LITERARY MODEL.

An English periodical, *Sunday at Home*, recently sought the opinion of leading scholars and writers concerning "the most magnificent passage in the Bible." Naturally, the prophets, especially Isaiah, ranked highest in the lists. The 40th chapter of Isaiah was a favorite with many: Canon Driver coupled it with the 38th and 39th chapters of Job. William Watson, too, voted for Isaiah, though he thought David's lament for Jonathan "the most perfect elegy in all literature," and the song of Deborah and Barak "the most superb expression of the intoxication of triumph." Indeed, Mr. Watson is a strong admirer of the Bible on its literary side, going so far as to say that "every kind of literary magnificence is supremely exemplified in the Bible." Such tributes to the Bible as literature have long been common. Macaulay's praise of the passage in Romans, beginning, "Who shall separate us from the love of Christ?" is typical. It may be difficult for the critic to clear his judgment of inbred or remembered emotion, in passing upon the style of the Bible. How much of the response which he finds himself making to the appeal of certain Biblical passages is due to a calm estimate, and how much to the awe and mystery which were associated with the sacred words in childhood, and still cling to them indissolubly? But making every allowance, there can be no question of the sincerity of those expert in English —authors and teachers and amateurs— who are enthusiastic over the literary glories of the English Bible. Yet these may be admitted and held to the heart without conceding all that is often urg-

ed, even by college teachers, in behalf of the Bible as a model of style.

For winged words, for verbal felicity, for phrases that have passed into the life-blood of English literature, we must, of course, go on sending our youth to the Bible. It is doubtless a great quickener of the imagination. As an introducer of young minds to majesty of thought and expression, to the sense of mystery, to grandeur of soul, all that is asserted for it by enthusiastic teachers may be readily granted. But when we talk of literary models, we do not mean only those for poets and prophets. We do not expect all our young men and women to learn to write in the grand style. It is the simpler qualities of good composition of which they are most in need, and for those it is a mistake to commend the Bible so highly and universally as some college authorities do. If, for example, we were asked in what kinds of writing it is most desirable that the generation now coming upon the stage should acquire skill, we should say in orderly exposition of complex matters, in close and sound reasoning, in accurate description. Yet in none of these things does the Bible excel.

It is to put no slight upon the genius of the Hebrews who wrote the Bible to say that their talents did not lie in the directions we have just mentioned. Their work was other and higher, but not that. Yet what can be more important, to-day, than for a young lawyer or newspaper man, to be able to take a vast and intricate subject, having to do with public business, and tear the heart out of it? What other form of mastery is more necessary than that of condensed and clear explanation of tangled masses of fact? One has but to recall Gov. Hughes's extraordinary powers of that sort in order to see what they signify. Yet the man who took the Bible alone for his literary guide, would get little aid in meeting this most indispensable need of a modern writer. That kind of thing simply is not to be encountered in the Scriptures. To find examples of this ability to marshal facts and compel figures to yield up their meaning, we must go to one of the Indian orations of Burke, or a budget-speech by Gladstone, or the legal argument of a man like the new Secretary of War, Mr. Dickinson, before the Alaska arbitration court.

We spoke above of convincing argumentation, and minutely correct description, as objects which the instructor in writing should constantly have in mind. Here, too, but small help will come to him from the hills of the Bible. Its forte is not powerful reasoning of the kind that appeals to the modern intellect. The Epistle to the Romans has been said to be logic set on fire with emotion, but, to judge by the number and variety of commentaries, the fire burned up many of the links of the logic. Nor is close observation and accurate picturing of either man or nature congenial to the spirit of the Biblical writers. They are vague, suggestive, leaving dim outlines to be filled up; they do not have that intense gaze at the fact, and that photographic fidelity in reproducing it in language, which add so much to the best writing to-day.

The case is still clearer if we press on to questions of literary structure. There are, of course, splendid passages in the Bible, built up with something better than fine artistry; but, in general, the style—we are not speaking of the words or the thought—is the unskilled writing of untrained men. The message may be all-important but its outward form is not carefully wrought—not a style, in a word, which anybody should be set to imitate. This is perfectly natural, and as it should be. It is really no more startling than the fact, so long a scandal to some good souls, that the Greek of the New Testament is not up to Attic standards. The translation of the language of fishermen and artisans, into however glorious an English verbal dress, could not be, if faithful to the original structure, distinguished for literary workmanship. Consider what long tracts in the New Testament consist of verse after verse, and sentence after sentence, beginning with "and." It is a style perfectly fitting the simple men who first used it; it is not a style which any man seeking literary distinction would dream of sedulously aping. In many such respects, we think, they are on the wrong track who prescribe the Bible as a complete literary model.

GREAT ART AND SMALL SUBJECTS.

Italy's recent catastrophe has thus far failed to inspire the poet or the painter. A solitary sonnet in one of the magazines is all the literary tribute America has brought to one of the most tremendous events in history; and in that sonnet the element of inspiration is not conspicuous. When San Francisco was destroyed three years ago, it seemed that California's poets, many in number and in spirit aspiring, had the subject and the stimulus for the production of an ambitious piece of imaginative art. But San Francisco has been left to the newspaper man and the magazine writer; and her young poets, instead of attempting epics of destruction and rebirth, have emigrated to New York, where they write about the traditional birds, flowers, love, and human brotherhood. We are, to be sure, too near the event. Art, for all its pretensions to reality, is dwarfed when it comes too close to the reality it would commemorate or portray. We should wait a half-century at least after San Francisco and Messina, before we pronounce them barren of artistic result. Yet the chances are against us, even after fifty years. Lisbon earthquake has left us only a poem by Voltaire, which is remembered chiefly as a poem that would have been forgotten but for its subject. Pliny's account of Vesuvius is, after all, only an account of Vesuvius. Review earth's great catastrophes—earthquake, fire, flood, invasion, and plague—and see what comparatively slight impress these convulsions have left upon literature and art.

We turn to the opposite case. An undistinguished young gentleman named Edward King dies, and the fruit of his death is "Lycidas." Another young Englishman named Arthur Hallam dies, and the result is "In Memoriam." The dead Duke of Wellington is the subject of a fine ode, but a young and unappreciated poet named Keats is the subject of a much greater poem. Not the battle of Hastings, or Marston Moor, or Trafalgar, has wakened the poet's fancy as the obscure fight between two bands of border ruffians at Chevy Chase. Westminster Abbey has evoked no such permanent tribute as the neglected tombstones of Gray's old country churchyard. Men have faced death and gone away uninspired, but a journeyman tinker is thrown into a commonplace jail and he writes the "Pilgrim's Progress." What is regarded as the greatest of biographies was composed by Boswell, about a highly distinguished literary figure but by no means one of the world's greatest men. Two of the world's nature classics were written neither on

the wrath of the Atlantic storm nor on the glory of the Himalayas, but in a small English garden at Selborne and by an enthusiastic fisherman named Izaak Walton.

Let us suppose that, two or three hundred years from now, a European poet sets himself to writing a series of tragedies drawn from the history of the nineteenth and early twentieth centuries. Would he choose the fall of Napoleon? Or the crimes and vicissitudes of the Court of St. Petersburg? Or the misfortunes of the Hapsburgs? If he is a mediocre poet, the chances are that he will; for the mediocre poets at all times have been fond of imposing topics. But if he is a poet who feels within him the power to give greatness to things of comparatively small importance, he might go to none of Europe's ancient imperial houses, but to insignificant and little-known Servia. The struggle that has been going on in that tiny kingdom for nearly a hundred years between the rival houses of Obrenovitch and Karageorgevitch, the long succession of royal crownings and depositions, of intrigue, and treachery and murder, would supply him with the elements of a tragedy that it would depend only on his own power to raise to the height of universal art. There is a strong likeness between modern Belgrade and ancient Mycenæ. The sanguinary struggle between the descendants of Kara George and of Milosh, the swineherd, has scarcely less inherent dignity than the blood-guilt and madness that raged in the house of Pelops. Yet what a golden literature has gathered about the history of Agamemnon and his children, a small chieftain and his family in an obscure corner of the world, at a time when great empires flourished on the Euphrates, on the Nile, and in the Mediterranean.

Scarcely more important than Agamemnon was the Scandinavian monarch who ruled at Elsinore. Scarcely more important was the Scottish chieftain who was not content to be thane of Glamis and Cawdor. Surely, these two, Hamlet's kingdom and Macbeth's, were far below the empire that Julius Cæsar ruled. Yet the respective prominence of these three royal persons scarcely measures the respective merit of Shakespeare's three tragedies.

A MODERN RADICAL.

I.

The recent publication of G. Lowes Dickinson's "Justice and Liberty"* confirms the opinion of those who have read his earlier works that here is a radical thinker to be reckoned with—a man of penetrating mind and a style that is wonderfully flexible, persuasive, and at times eloquent.

He is son of the artist, Lowes Dickinson, who died last year at an advanced age. His education was obtained at Charterhouse and King's College, Cambridge, from which he received the bachelor's degree in 1884. The list of his books is still short: "From King to King: The Tragedy of the Puritan Revolution" (1891), "Revolution and Reaction in Modern France" (1892), "The Development of Parliament During the Nineteenth Century" (1895), "The Greek View of Life" (1896), "The Meaning of Good: A Dialogue" (1901), "Letters from a Chinese Official: Being an Eastern View of Western Civilization" (1901), "Religion: A Criticism and a Forecast" (1905), "A Modern Symposium" (1905), and "Justice and Liberty." "Is Immortality Desirable," announced for this spring, is presumably in substance the Ingersoll Lecture which he delivers at Harvard this month.

I need not discuss at length Mr. Dickinson as a stylist, for the qualities of his writing, show sufficiently in the citations to be made later. His first book, it may be worth noting, is partly in blank verse. Here Mr. Dickinson exhibits his powers no less than his boldness in putting into the mouth of Milton nearly two pages which must be judged as a not unsuccessful effort to shoot with the bow of Ulysses. Quite as daring is the form of three of Mr. Dickinson's books, "The Meaning of Good," "A Modern Symposium," and "Justice and Liberty," which are nothing less than Platonic dialogues. There have been countless attempts in all modern European languages to cast discussion into this difficult mould, but the successes may almost be numbered on one's fingers. In this small list of those who have steered through this strait of Scylla and Charybdis we must place—for present-day readers at least—Mr. Dickinson.

The Platonic dialogue seems a peculiarly happy medium for Mr. Dickinson; for his themes, as the titles of these books indicate, are those which engaged Plato. Indeed, Mr. Dickinson has given us not merely "A Modern Symposium," but "A Modern Republic." In current terms and under twentieth-century conventions, he analyzes the age-old problems that are fundamental to the conduct of individuals and of states. The conceptions involved in the word "good," the relations of man to man, religion, the church, marriage, the rights of property, castes and classes, aristocracy and democracy—these are the subjects of his searching criticism. Nor is it by accident that so keen a thinker has been so interested in the Greek view of life and has drawn his inspiration so largely from Greece. In this place and hour of the triumph of utilitarian studies, we are prone to reckon only that knowledge as fruitful which may quickly be translated into bread and butter. We talk glibly of discarding classical culture because it is of no help in running our foundries and building aeroplanes. But then comes a writer like Mr. Dickinson to remind us that man shall not live by foundries alone; that in spite of the visible bulk and apparent efficiency of our machinery the force that drives the human race forward is not steam or electricity, but ideas; and that to get ideas we must go back to one of the great perennial fountains.

In his mental attitude, as well as in the topics which he discusses, Mr. Dickinson may also be called a Platonist; that is, he aims at what Matthew Arnold terms "a free play of the mind" on our stock notions and prejudices. He is not afraid to be called a destructive critic; for he perceives that the distinction between destructive and constructive criticism is not real, but verbal; that the first step toward erecting a firm structure on the desired site is to raze the flimsy one. "A sound intellectual foundation," he tells us, cannot be reached "except through criticism, and all criticism implies and engenders doubt":

> A man who has never experienced, nay, I will say who is not constantly reiterating, the process of criticism, is a man who has no right to his enthusiasm. For he has won it at the cost of drugging his mind with passion; and that I maintain is a bad and wrong thing. I maintain it to be bad and wrong in itself, and quite apart from any consequences it may produce; for it is a primary duty to seek what is true and eschew what is false ("A Modern Symposium," p. 63).

One need not accept all of Mr. Dickinson's doctrines; but, accepted or not, they set one to thinking. They help one to see some of the mal-adjustments and inequalities in this best possible of worlds. They reveal glimpses of profound principles of government. It is, in short, with the fine spirit of the philosopher that Mr. Dickinson approaches his inquiry as to the welfare of the state—the philosopher whom Plato describes as "a believer in the idea" and "a lover of the vision of truth."

II.

Mr. Dickinson's religious theories may be found in *obiter dicta* here and there, but summed up most clearly in the little volume "Religion." In his

**Justice and Liberty*: A Political Dialogue. New York: Doubleday, Page & Co. 1908.

early work, "The Greek View of Life," he drops one or two pregnant phrases which bring us close to the core of his doctrine: "that passion to transcend the limitations of human existence which is at the bottom of the mystic element in all religions" (p. 31); and "this fundamental dualism . . . is the perpetual tragedy of man's existence— . . . the conception of life as a struggle between two opposing principles, and the promise of an ultimate redemption by the help of the divine power" (pp. 31, 32).

Mr. Dickinson's formal discussion is divided into four chapters: "Ecclesiasticism," "Revelation," "Religion," and "Faith." By ecclesiasticism he means "religion as embodied in a church"; and by a church, "an organization which claims to be the depository of a truth otherwise inaccessible to the human reason." An ecclesiastical religion is the kind "that people commonly intend when they assert that religion is essential to society." But the "fatal flaw" of ecclesiasticism is this:

> Just so far as it is calculated to support an existing order, just so far is it compelled to perpetuate abuses; for every conviction that repudiates reason repudiates also criticism, and therefore reformation (pp. 12-15).

That is, ecclesiasticism prevents that free play of the mind, which in Mr. Dickinson's view is the one vital thing.

Since ecclesiasticism rests on revelation, the question arises, "What kind of truth it is that is supposed to be communicable by revelation and not communicable by other methods?" Taking first what appear to be historical facts, Mr. Dickinson asks whether there is "a short-cut to those particular pieces of information, such as would certainly be repudiated in the case of any other historical events." Intelligent men, he answers, hold that "the truth of the story of the life and death of Christ must stand or fall by the ordinary criteria of evidence, then that the whole question is removed from the sphere of revelation to that of history." But when questions of historical fact are handed over to science, there remain still "the most important truths of religion: the existence and nature of God and His relation to the world." Here the difficulty arises that there have been many revealed religions, and many persons have enjoyed what they are convinced are revelations. "So far as the element of subjective certainty is concerned, a religious revelation cannot be distinguished from what would be admitted to be the hallucinations of disease"; and we must therefore "find our criterion of truth and falsehood somewhere else than in subjective certainty." Furthermore:

> Once it is admitted that religious truth is attainable, if at all, only by the method of science, it must be conceded also that the notion of a church with a revelation of divine truth is as absurd as the notion of a mathematical society with a revelation of mathematical truth. Truth, of whatever kind it be, may originate anywhere and be communicable anywhere (p. viii).

But still Mr. Dickinson believes that there is a place and work for religion—"a reaction of the highest imagination of the best men upon life and the world." There are several attitudes which Mr. Dickinson would characterize as religious. For example, a person may "pursue, wherever it flees, the perishing image of Good, imprisoning it in a rule or a policy, impressing it on a fugitive act, . . . always from the consciousness of frustration drawing new vigor for the chase, snatching defiance from the sense of defeat, . . . from the very indifference of the universe gathering the inspiration to contend with it, and, though at last he be broken, perishing unsubdued." Again:

> Religion is an attitude of the imagination and the will, not of the intellect. But from the intellect it receives its light; and its discipline will be the more arduous, its insight the more profound, the more candidly it accepts all that the intellect can communicate (p. 57).

The phrase "imagination and the will" brings us to Mr. Dickinson's conception of faith. As to the ultimate meaning and purpose of the world and "the place of our ideals in the structure of the universe . . . the intellect has as yet been unable with certainty to determine anything." But Mr. Dickinson maintains that "in the midst of ignorance" we may legitimately lay hold "of a possibility that may be true," and direct "our feelings and our conduct in accordance with it." Thus "faith involves a volitional assumption that things, whatever appearances may suggest, are really 'worth while.'" If we had positive knowledge there would be no room for faith. On the other hand, we must never allow this faith, this volitional assumption, to pervert the pursuit of truth by "a predetermination that certain beliefs shall not be assailed":

> Faith, in a word, can only be legitimate so long as it occupies a region not yet conquered by knowledge, and so long as it holds itself ready in a moment to yield its place so soon as knowledge arrives. Faith should stand always with the dagger of science pointed at its breast (p. 82).

It is because there is the unknown that there is faith:

> For the impulse to pursue truth is itself a form of faith. We hope that truth is obtainable; we desire and will to attain it; we dream its attainment as we go in quest of it. And, but for that dream and that hope and that will we should never start at all. Faith is the sense and call of the open horizon. . . . The frailest thing we know, it is also the least perishable, for it is a tongue of the central fire that burns at the heart of the world (p. 84).

III.

The religious man, in a passage quoted above, is said to pursue "the perishing image of Good." It is to the elucidation of this ethical ideal that Mr. Dickinson devotes his volume "The Meaning of Good." His aim is rather "to set forth the various points of view than finally to repudiate or endorse them"; and his conclusions are stated, not as a demonstration, but as the hypothesis which he thinks the most tenable. The argument is "that men who reflect do, whatever may be their theoretical opinion, imply, in their actual conduct, a belief in their ideas about Good; but that there seems to be no certainty that such ideas are true." The speakers then debate the propositions that "the criterion of Good is a simple infallible instinct"; that "the criterion is the course of Nature," "the end to which Nature is tending"; that the criterion is current convention; and finally that it is pleasure. It is unnecessary to summarize here the more or less familiar answers to these several contentions and the steps by which the idea is developed that "experience is, or may be made, a progressive discovery of Good." The speakers next examine the various activities of life from the point of view of Good. They attempt to analyze the Good we seek in art and in knowledge. The final suggestion is "that in our relation to other persons, where the relation takes the form of love [not, of course, in any narrow, physical sense] we may perhaps find something that comes nearer than any other of our experiences to being absolutely good"; that is, "the best love we know comes nearer than anything else to what we might conceive to be absolutely good."

But since love, so conceived, seems rarely, perhaps never, attainable in this life, this conception of Good, if it is to be realized, involves the idea of personal immortality:

> The last judgment of age, for those who believe that death is the end, will be a doubt, and perhaps more than a doubt, even in the case of those most favored by fortune, whether after all a life has been worth the trouble of living which has unfolded such infinite promise only to bury it fruitless in the grave (p. 201).

And here comes again, though in less fully developed form than in "Religion," Mr. Dickinson's appeal to faith. The speaker who represents science rules out immortality as "illegitimate," but the reply to this is that, though there is no scientific proof of immortality, there is also no proof that it is impossible; and one may accept it as a "postulate of the will." The book closes, like Plato's Republic, with an apologue of the life that lies beyond these earth-

ly senses. And the lesson of the Vision of Eternity is this:

> It is in this intricate commerce of souls that we come nearest to apprehending what perhaps we shall never wholly apprehend, but the quest of which alone, as I believe, gives any significance to life, and makes it a thing which a wise and brave man will be able to persuade himself it is right to endure (p. 224).

IV.

"This intricate commerce of souls," a phrase which occurs on the last page of "The Meaning of Good," may be taken as a sort of clue to Mr. Dickinson's discussion of political and social questions. It is in that commerce that we may seek the Good, which lends significance and value to life. Thus it is that when he sees our political and social relationships a source not of affection, but of dissension and hatred, he casts about for such reorganization of society as shall

> render law
> A mere superfluous form, and poverty
> An idle hieroglyph whose sense is perished.

But just as in his criticism of our religion and our ethical standards he finds it easier to detect flaws than to form a coherent scheme of reconstruction, so in this field also he is more successful in attacking the existing order than in presenting a convincing outline for a new heaven and a new earth.

"The Greek View of Life" contains the germs of many of the ideas which are worked out in detail in "Letters from a Chinese Official," "A Modern Symposium," and "Justice and Liberty." He saw in Greece, as he sees in our states to-day, "an ordered inequality, political as well as social." Again:

> It was the underlying question of property that infused so strong a rancor into the party struggles of Greece. From the very earliest period, in fact, we find it to have been the case that political revolution was prompted by economic causes (p. 87).
>
> Such conditions . . . must have irresistibly suggested the criticism, which always dogs the idea of the state, and against which its only defence is in a perpetual perfection of itself—the criticism that law after all is only the rule of the strong, and justice the name under which they gloze their usurpation (p. 118).
>
> To provide for the excellence of a privileged class at the expense of the rest of the community is becoming to us increasingly impossible in fact and intolerable in idea (p. 185).

The perfection toward which the state must perpetually struggle is to be attained by adjusting the rights of property, by making law an embodiment of equity, justice a reality instead of a name, by abolishing privilege, and thus allaying that rancor which has made history "one long and lamentable tale of antagonism, tumult, carnage, and confusion," and which forbids the attainment of Good.

In "A Modern Symposium" and "Justice and Liberty" one cannot always tell which views are Mr. Dickinson's own. But from the way in which the conservative dogs get the worst of it, we may infer that in both books Henry Martin, the professor, "a perplexed inquirer socialistically inclined," fairly represents him. To his first point all intelligent men will assent—that no one can believe in the finality of the present order. "The history of man has been nothing but a process of transformation." Even "property and the family" cannot be regarded as "sacred and ultimate facts." The present laws of property are comparatively recent; they are altering before our very eyes. Nor are the regulations as to marriage fixed; they are constantly being amended. Mr. Dickinson would press for such changes in all our institutions as would shatter the power of the oligarchy of wealth which, he maintains, now rules the civilized world.

His picture of modern society, however true to conditions in England, is too highly colored for America, though the substratum of fact, even for the United States, is firmer than most of our glowing optimists will admit:

> Modern Society, as I see it, from top to bottom, is a descending hierarchy of oligarchic groups, each with its own peculiar privileges, for which it fights and in and by which it lives. Imagine society as a pyramid, . . . on each step, crowded together, a fighting, trampling mob of desperate men, bent, every one, above all, on enlarging his own space and making room for his children ("Justice and Liberty," pp. 29, 30).

Starting from this view of competition, the next conclusion is short and easy: "The law of inheritance and bequest, in the way in which it practically operates, is the great and indeed the only source of our permanent inequalities." Mr. Dickinson also attacks rent as "wealth not earned by the man who receives it"; and he would alter our whole theory of wages:

> As things are now, all the occupations that are most interesting, stimulating, and delightful, that employ the highest faculties, and are the most worth doing for their own sake, are, broadly speaking, the best paid; while those that are sordid, dreary, mechanical, dehumanising, hardly receive a living wage. . . . But in a society regulated by our principle, is it not clear that exactly the opposite will be the case? (p. 116).
>
> And with an equalization of the standards of life would go an equalization of manners. Anybody, whatever his occupation, would associate with anybody according to propinquity or personal attraction or whatever it might be. The dock-laborer would come home, put on dress clothes, and sit down to dinner to discuss the latest play or novel with the financier's wife (p. 187).

On the steps by which this ideal is to be reached I need not dwell; in essentials they are the same as those presented by other advocates of the collectivist state. It is, however, only fair to Mr. Dickinson to say that he does not attempt to convince the reader by elaborating, in the manner of Bellamy's "Looking Backward," a programme of impossible details. He relies on the compelling attractiveness of his general ideal to persuade men to embrace it and slowly to realize it in a reorganized society; and he points to the progress of the past as prophecy of what may come. At first man was not "industrious, peaceful, intelligent, kindly, helpful," but "a hairy, biped brute, ignorant, cruel, superstitious, split into a thousand tribes and hordes, instinctively at feud." And yet this animal, within whom "the tiger and the wolf" still work so fiercely that "the nations heave and crack in the tension of the class conflict," is also "the child of a celestial father," sown into the womb of Nature "a spiritual seed":

> And history, on one side the record of man's entanglement in matter, on the other is the epic of his self-deliverance. All the facts, the dreadful facts, at which we have timidly hinted . . . are true. . . . But true also is the contest of which they are the symbol; . . . real of all things reallest, the ideal! Do not conceive it as an idea in somebody's head. No; ideas are traces it leaves, shadows, images, words; itself is the light, the fire, the tongue of which these are creatures. Poetry, philosophy, art, religion, what you will, are but its expressions; they are not It. Thought is a key to unlock its prison, words are a vessel to carry its seed. But it is Reality of Realities, fact of facts, force of forces. It refutes demonstration; it unsettles finality; it defies experience. While all men are crying "impossible," it has sped and done. Even in those who deny it, it lies a latent spark; let them beware the conflagration when the wind of the spirit blows (pp. 226, 227).

V.

"Justice and Liberty," then, and "A Modern Symposium" are a plea for the ideals of the spirit, and as such they are welcome, whether one believes in Socialism or not. Nothing can be more wholesome than to startle the dulled consciences of those who are much at ease in the Zion of this world. The most unbridled optimists must confess that the machinery of society "works roughly":

> It jerks and jams and sticks, it breaks threads and tears material; and every shock, every rupture, every retardation or acceleration operates in the substance of human lives. The groans and screams of that engine, as it jars on its ruthless course, come from the tortured lips of men and women (p. 164).

It is the agony of the disinherited to which Mr. Dickinson would open our minds—the wounds of those who are defeated in this long and bloody strife which we call the march of civilization. For gross and palpable as the fallacies of Socialism may appear to us, we must

admit that, as Mr. Dickinson presents it, it is a spiritual movement, an appeal for the ending of this long warfare, for the establishment of brotherhood between nations, of brotherhood between classes, of brotherhood between men. The Socialists strike our cool rationalists as impracticable dreamers, but, at least, they dream of heaven.

The pity of it is that their splendid aspirations seem always to dash into fragments upon the ineradicable individuality of men. The argument against Mr. Dickinson's plan is as old as Aristotle's comment on Plato's Republic. I would not say that society has not made long advances and that the future has not even larger good in store. The overthrow of so venerable and stoutly defended an institution as slavery affords ground of faith for almost any reform that earnest and able men may unite in urging. We may look, indeed, for an era of experimentation in politics and for the growth of a public sentiment (expressed in a code of laws) which shall steadily tend to equalize opportunity. Nevertheless, within any period that our minds can grasp, we may still stop far short of the collectivist state. And if we ever attain it, it will not be the paradise that is fondly pictured. The French Revolution, despite all the glowing predictions of the radicals of that day, did not usher in the millennium. The rapid introduction of machinery in the last century, and the free competition and free trade which Cobden preached have not brought it. We are now in the very chill of reaction from those high and delirious fevers. We begin to understand that ingenious mechanical contrivances do not liberate the intellect and purify the heart. Under any system or organization of society, some men will be mean, sordid, grovelling, and essentially slaves, while others will burst their own shackles and assume the rights of leadership. Laws and customs, however, beneficent, will still fail to touch the profoundest springs of our action; it "is not in our stars, but in ourselves, that we are underlings." And so I cannot but regard as illusory the beautiful hope that new laws for the production and distribution of wealth, the abolition of rent and interest, and a new wage-scale will pluck out by the roots the evils that afflict mankind. The eloquence of the prophets of the new dispensation and the efforts of humanitarians may do much to alleviate in general the lot of the race, but the wheels of society will continue to break and tear the fragile material, and the groans and screams of a wretched humanity will beat upon our ears; for wisdom and folly, virtue and vice, with their inescapable effects—all the contending forces of good and ill, now triumphant and now defeated, will, as ever, find their arena in the individual soul. L.

FRENCH BOOKS ON RELIGION

Paris, March 25.

"Orpheus"—a single volume on the "general history of religions" from totems to Modernism, by Salomon Reinach (A. Picard)—has not escaped criticism in France, in spite of, perhaps because of, the author's erudition. It tabulates successive religions as so many natural phenomena. In temper it is distinctly Israelite, but without the lofty resentment of Christian persecution shown by James Darmesteter; and it is wanting in the philosophical learning which, with Munk, Adolphe Franck, Isidore Weil, and their school, lent so much lustre to Jewish letters in France. The book, particularly in its disproportionate Modernist part, seems intended to meet a narrowly specialized tendency of passing French thought. The treatment of St. Francis of Assisi, who, until proof of the contrary, should be considered a Roman Catholic, vacillates between that of Voltaire and that of the Protestant clergyman Paul Sabatier. In the present century Monseigneur d'Hulst, local administrator of a theological school, and the Abbé de Broglie, a popular expositor of religion, should not be taken as authorities, scarcely even as signs, of universal Catholic thought, to which they were little known. To confound religious practice in general with mysticism leads to error by neglecting the classic, well-defined, and logical distinctions: natural ethics; the ordinary Christian life, in which the will obeys teaching deliberately assented to by the intellect as revealed—*auctoritate Dei revelantis*—and ascetics, or the further active "exercise of Christian perfection"; whereas mystics pursue extraordinary and supernatural ways strange to ordinary Christians, in which they are supposed to be passive under the Divine .illapse—*patiuntur divina.* The bibliography and index are valuable, but they answer to the point of view of a volume which begins with a dedication "to the memory of all the martyrs" and concludes with the ex-Abbé Loisy.

"La Méthode comparative dans l'histoire des religions" (A. Picard) is a small book by Georges Foucart, the unsuccessful competitor of M. Loisy for the professorship at the Collège de France. M. Foucart's personal defeat has nothing to do with the grievance of Catholics in the matter. The professorship itself was founded for Albert Réville, a Protestant clergyman who taught comparative religion after the methods of twenty-five years since; he was followed by his son, Jean Réville, whose death opened the chair to the recent election. Two candidates had already been debarred as Catholics from similar professorships: Brunetière in favor of the Protestant Abel Lefranc, who is now going to Harvard; and the Dominican Assyriologist Scheil for an unknown pupil. In each case Berthelot, although he had had his refutation of Brunetière's "bankruptcy of science," published from the Freemason Grand Orient, protested in the interests of science against this religious and political discrimination in the choice of professors for a national and historic institution of higher learning.

"Les Modernistes," by the Dominican Père Maumus, should be read with the Protestant Paul Sabatier's work criticising Pius X for refusing to allow Modernist changes in the faith by which Roman Catholics have so far lived and died. The friar has a reputation for liberalism, earned perhaps by Waldeck-Rousseau's late friendship; he treats the fundamental differences between Modernism and the Church in the compass of 276 pages (Beauchesne). Another Roman Catholic book of handy use is the first volume of the "Traité de philosophie scholastique," by E. Blanc, of the Catholic Faculty of Lyons (Vitte). It contains a much-needed vocabulary of scholastic and contemporary philosophy; the rest of the volume (logic and metaphysics) may be compared with the Stonyhurst series. Georges Michelet, professor at the Institut Catholique of Toulouse, publishes a considerable volume on "Dieu et l'agnosticisme contemporain" (Bibliothèque théologique). M. Jugie, an Assumptionist priest, in 150 pages explains a little-known subject—"Histoire du canon de l'Ancien Testament dans l'Église Grecque et l'Église Russe" (Beauchesne). "Histoire du dogme de la Papauté des origines à la fin du IVe siècle," by Abbé Joseph Turmel, appears in the Bibliothèque d'histoire religieuse (Picard et Fils).

From a purely legal point of view, Pierre Galichet, in a thesis for the doctorate of laws, treats "L'Église Anglicane et l'état" (Giard); it is an advantage that the subject should be handled by methods foreign to English thought and lined up with French legislative principles concerning the relations of the state and churches, before and after separation.

The Vicomtesse d'Adhémar, in "Une Religieuse réformatrice (1895-1901)," narrates the life and work of the late Mère Marie du Sacré Cœur, who tried in vain to develop the convent education of girls in France in the direction of the social needs of the day (Bloud). The suppression of French convent schools has since then turned aside the question to Catholic schools in general; the book has value at a time when the remedy of past defects is likely to involve the disappearance of the excellencies of the past.

"Traditionalisme et démocratie," by D. Parodi, judges the more or less Catholic movements which are agitating deeply the younger intellects of France: traditionalism and morality, with Brune-

tière; and positivism (more properly Taine-ism), with Paul Bourget; and individualism (regionalism and nationalism), with Maurice Barrès (A. Colin).

S. D.

NEWS FOR BIBLIOPHILES.

The second volume of Thomas J. Wise's admirable "Bibliography of the Writings of Alfred, Lord Tennyson," printed for private circulation, one hundred copies only, has just been issued, including Parts iii, iv, v, and vi. The first item described in Part iii, pirated or unauthorized issues, is that curious volume, "Poems MDCCCXXX-MDCCCXXXIII," 1862; and extracts are given by Mr. Wise from Tennyson's bill of complaint, filed in Chancery to restrain John Camden Hotten from selling any copies. It has been a disputed question where this book was printed. Hotten's original statement, in a catalogue in which he offered a copy for sale, was that the poems had been "collected with considerable care and labour by a gentleman of great literary taste in western Canada," and that the book was printed "at the Backwoods' Press." In his bill of complaint Tennyson or his attorneys said:

The book so sold by the Defendant has no printer's name upon it. It was, no doubt, printed in this country, and not, as suggested in the Defendant's catalogue, at the Backwoods' Press, or in Canada.

Mr. Wise has previously stated that the little volume was "compiled, edited, and privately printed, by the late Mr. J. Dykes Campbell, then resident in the Island of Mauritius." He has, however, now returned to the older opinion, and in his "Bibliography" says:

This interesting little volume was compiled and edited by the late Mr. J. Dykes Campbell. From April, 1860, to the summer of 1862, Mr. Campbell resided in Canada as the representative of Messrs. Cochrane & Co., of Glasgow. During his stay in Toronto he caused the book to be privately printed at his own cost.

Of the eleven other pirated editions described, all but two are little pamphlets which were issued from 1867 to 1876 by the late Richard Herne Shepherd. Aside from Dykes Campbell's collection, Mr. Wise makes no account of American or foreign editions, but notices only English printed books. Part iv is devoted to collective editions printed in England from 1870 to 1908; Part v describes one hundred and eleven complete volumes of biography and criticism; Part vi is an alphabetical list of all Tennyson's published and privately printed poems, showing in each case its first appearance, (a) in print, (b) in a volume of Tennyson's poems, (c) in a collective edition. As frontispiece the volume contains a portrait of Tennyson (nearly full length, seated), reproduced from a hitherto unpublished photograph taken in April, 1861.

On April 12 and 13, the Anderson Auction Co. will sell the library of Dr. G. H. Wynkoop of New York city. Among the important lots are first editions of several of Dickens's novels in parts; the first edition of Charlotte Brontë's "Villette" (1853); a presentation copy from Hawthorne of "Transformation" (London, 1860), under which title "The Marble Faun" was issued in England; and several of William Loring Andrews's books. In the same sale are 56 lots relating to Christian Science, including several early editions of Mrs. Eddy's "Science and Health." On the evening of April 13, the same firm will offer a collection including several publications of the Bibliophile Society, among them André's "Journal"; a copy of Dickens's "Master Humphrey's Clock" (1840-41), in the 88 weekly parts; and an imperfect Fourth Folio Shakespeare (1685). On April 14 and 15, the same firm will sell a collection of duplicates from the New York Public Library. Jonathan Mitchell's "Nehemiah on the Wall in Troublesome Times," an election sermon printed in Cambridge, Mass., 1671, is the rarest book in the collection. Other important titles are: "Historiæ Canadiensis" (Paris, 1664), by Franciscus Creuxius; "Joyfull Newes out of the Newfound World" (London, 1580), by Dr. Monardes; "A True and Impartial State of the Province of Pennsylvania" (Philadelphia, 1759); Robert Rogers's "A Concise Account of North America" (1765), and "Journals" (1765); and an uncut copy of Poe's "The Raven and Other Poems" (1845). A copy of Smith's "Generall Historie of Virginia, New-England, and the Summer Isles," with the first issue title, dated 1624, lacking one map, is described as "pp. 97 to 104 missing." These pages, however, are lacking in all copies.

On April 13 and 14, the Merwin-Clayton Sales Co. of this city will offer the library of Mrs. A. S. Apgar. Included are the first New York edition of Burns's Poems (1788), first editions of Longfellow, Hawthorne, and Thoreau, books relating to Pennsylvania, New York, Massachusetts, and several early American Masonic items.

A correspondent of the *Athenæum* writes that James Boswell's early work, "Dorando: a Spanish Tale," long sought by bookhunters, has been found in the Sir William Hamilton Collection in the University Library, Glasgow, bound with other pamphlets in a duodecimo volume entitled "Morality." The story is a skit on the famous Douglas Cause.

Correspondence.

HAWTHORNE, CILLEY, AND "FANCY'S SHOW-BOX."

To the Editor of The Nation:

Sir: In February, 1838, Nathaniel Hawthorne's classmate, Jonathan Cilley, who, to use his own words, had in those old days been to him "almost as an elder brother," and who at that very time was working to secure him a government position, was challenged to a duel by a fellow Congressman, Mr. Graves of Kentucky. According to Julian Hawthorne, in his "Nathaniel Hawthorne and His Wife":

He hesitated some time before accepting this challenge, the subject in dispute being unimportant, and his position with regard to it being such that the "code of honor" did not necessitate a meeting. At length, however, some one said, "If Hawthorne was so ready to fight a duel without stopping to ask questions, you certainly need not hesitate"; for Hawthorne was uniformly quoted by his friends as the trustworthy model of all that becomes a man in matters of honorable and manly behavior. This argument, at all events, put an end to Cilley's doubts; he accepted the challenge, the antagonists met, and Cilley was killed.

Naturally, under these circumstances,

When Hawthorne was told of this, he felt as if he were almost as much responsible for his friend's death as was the man who shot him. He said little, but the remorse that came upon him was heavy, and did not pass away. . . . "Had I not aimed at my friend's life," was the burden of his meditation, "this other friend might have been still alive." . . . He had touched hands with crime; and all the rest was but a question of degrees.

Julian Hawthorne continues with these paragraphs:

In the first volume of "Twice-Told Tales" there is a short story, or "morality," as the author styles it, which, if read in the light of the foregoing narrative, will be found to have a peculiar interest. In it the question is discussed, whether the soul may contract the stains of guilt, in all their depth and flagrancy, from deeds which may have been plotted and resolved upon, but which physically have never had an existence. The conclusion is reached that "it is not until the crime is accomplished, that guilt clinches its gripe upon the guilty heart and claims it for its own. . . . There is no such thing, in man's nature, as a settled and full resolve, either for good or evil, except at the very moment of execution." Nevertheless, "man must not disclaim his brotherhood with the guiltiest, since, though his hand be clean, his heart has surely been polluted by the fleeting phantoms of iniquity. He must feel that, when he shall knock at the gate of Heaven, no semblance of an unspotted life can entitle him to entrance there. Penitence must kneel, and Mercy come from the footstool of the throne, or that golden gate will never open!"

Those who wish to obtain more than a superficial glimpse into Hawthorne's heart cannot do better than to ponder every part of this little story, which is comprised within scarcely more than a half-dozen pages. It was written about the time of Cilley's unhappy death, and contains more than its due proportion of "sad and awful truths."

A careful reading of this will show that it does not directly state that it was meditation over his connection with his friend's death that led Hawthorne to consider the whole general subject of man's relation to crimes conceived and intended, but not committed, and to embody the results of his consideration in a short story; but that certainly is the implication, and that is what this passage has usually been taken to mean. Elsewhere, in "Hawthorne and his Circle," the son writes:

I am wedded to dates and cannot be divorced from them. It must be set down precisely when the events took place. . . . I can no more dispense with dates than I can talk without consonants.

Unfortunately, in this passage he certainly *is* divorced from dates. Had he desired in this instance to be thus commendably accurate, he should have introduced the two paragraphs quoted with some such sentence as the following: "In the first volume of 'Twice-Told Tales,' which appeared in March, 1837, there is a short story, 'Fancy's Show-box: A Morality,' reprinted from the volume of 'The Token' that appeared in September, 1836, which, if read in the light of the foregoing narrative, will be found to have a peculiar interest, as a remarkable anticipation of what Hawthorne's feelings must have been after the death of Cilley over a year and a half later, *i. e.*, on February 24, 1838." Instead, Julian Hawthorne leaves the reader to get the date of the publication of "Twice-Told Tales" from references to it in letters by Goodrich, Russell, and Bridge,

printed twenty-five pages earlier in his narrative; fails to give the name of the story to which he refers; omits it entirely from the "list of most of Hawthorne's contributions to various periodicals from 1832 to 1838; inclusive," that immediately follows his comments on it; and says that it was written "about the time" that Cilley was killed.

Naturally, those who have accepted his assumption of accuracy at its face value have been misled by Julian Hawthorne's statements and their implication. Mrs. Fields, for instance, writes in her "Nathaniel Hawthorne":

Hawthorne was crushed by the idea that his bad example had misled his friend; and, in the brief tale called "Fancy's Showbox: A Morality," he embodies something of the suffering that was really his.

M. Dhaleine, in his "N. Hawthorne, sa vie et son œuvre," says:

Hawthorne se reprocha longtemps d'avoir été, bien qu'indirectement, cause de la mort de son ami, et de l'avoir encouragé, sans le savoir, à ce duel fatal, par sa démarche imprudente. C'est à ces remords, qui le torturèrent longtemps, qu'il faut attribuer certains passages caractéristiques.

Then follows, as an example, an extract from "Fancy's Show-box"; and then M. Dhaleine, using the clue Julian Hawthorne had given him, finds in "The Christmas Banquet," which was first published in 1844, an indication that "la pensée de la mort de Cilley semble avoir encore préoccupé Hawthorne." But there is no likeness between the case of Hawthorne, assuming his son's statement of his relation to Cilley's determination to accept a challenge to be correct, and that of the "man of nice conscience, who bore a blood-stain in his heart," because he had killed a fellow-creature, "with such a peculiarity of circumstances that he could not absolutely determine whether his will had entered into the deed or not." Hawthorne was tortured by no such doubt.

Moncure D. Conway goes even further astray. In his "Life of Hawthorne," he states:

Hawthorne was not like Goethe, whose mother said that he could get rid of any grief by putting it into a poem. When he had embodied his mournful memories in such pieces as "The Haunted Mind," and "Fancy's Show-box," they all the more took up their abode with him. There is a great pain in some of his casual sentences, as where he exclaims: "Would that I had a folio to write, instead of an article of a dozen pages! Then might I exemplify how an influence, beyond our control, lays its strong hand on every deed which we do, and weaves its consequences into an iron tissue of necessity."

When Hawthorne wrote the words just quoted (from "Wakefield"), the ghost of Cilley seemed finally laid, so far as his life was concerned, however it might still haunt his mind.

As both the additional stories he cites were published some three years before Cilley's death ("Wakefield" in the *New England Magazine* for May, 1835, and "The Haunted Mind" in "The Token" for the same year), Mr. Conway adds to the original error two blunders of his own.

The remark that Julian Hawthorne makes anent his father's relation to the Cilley-Graves duel, "How small a part of the consequences of a man's deeds can be monopolized by the man himself," is thus seen to be as true in literature as in life.

But as no corroborative evidence is given to show that Cilley had ever heard that Nathaniel Hawthorne had challenged a friend, the statement that it was the citing of Hawthorne's example that led him to engage in a duel is at present a mere *obiter dictum* by Julian Hawthorne. And as he has been shown to be at least careless and inaccurate in the very next paragraphs, it may fairly be doubted whether the only error in his statement is his attributing to Mr. Wise of Virginia the sending of the challenge to Cilley; a blunder from which he would have been saved by a careful reading of his father's account of the affair.

Intimate though Hawthorne and Cilley were in college, they did not keep up their friendship after graduation. A letter that the latter wrote on November 17, 1836, shows that he had heard little or nothing from or of the former during the eleven years that had elapsed since they parted. The following summer Hawthorne spent a few weeks in Maine, and on July 28, 1837, he met his old classmate for the first time since 1825. That he found much to criticise in his "former friend" is shown by the character-sketch of him in the "American Note-Books." Cilley was shot less than seven months later, and nothing has been published to show that he and Hawthorne met in the interval or to any extent renewed their intimacy. Under these circumstances, it is difficult to see when or from whom Cilley could have learned a story so little to Hawthorne's credit as that he had been tricked into sending to an unoffending friend a challenge to mortal combat "without pausing to make proper investigations." Hawthorne, whose *amour propre* was deeply wounded on finding that he had been the duped tool of a heartless, mischief-making coquette, would naturally have used every effort to confine the knowledge of his misplaced confidence and rash act to "the few of his friends who knew anything about it"; and of these Cilley was not in a position to be one. Horatio Bridge, who seems to have been Hawthorne's most, if not his only, confidential friend in 1836-1838, who brought about the correspondence between Cilley and Hawthorne in 1836, and whom Hawthorne went to Maine to visit when he met Cilley in 1837, comes to mind as the one person who might have told Cilley of Hawthorne's melodramatic experience. But he is precisely the one survivor from those early days who, after the publication of "Nathaniel Hawthorne and His Wife," in 1885, denied that the citing of Hawthorne's example led Cilley to accept Graves's challenge. As Prof. G. E. Woodberry says, "he should have known."

Be that as it may, neither in the sketch of Cilley's life that he contributed to the *Democratic Review* for September, 1838, nor anywhere else in his published works, is there one word to show that Nathaniel Hawthorne felt any personal responsibility for his friend's death. The question that he asks towards the end of his sketch, "Why, as he was true to the Northern character in all things else, did he swerve from his Northern principles in this final scene?" seems to have found no answer in his own heart; and the sketch closes:

So like destiny did it appear that he should achieve everything at which he aimed, that even now my fancy will not dwell upon his grave, but pictures him still amid the struggles and triumphs of the present and the future.

JOHN COTTON AND SIR HENRY VANE.

To the Editor of The Nation:

Sir: In the inscription prepared for the recumbent marble statue of John Cotton in the First Church in Boston, he is described as the "Preceptor and Friend of Vane." Edwin D. Mead, in a paper read before the Massachusetts Historical Society, at its June meeting in 1907, and published in "Proceedings, 1907, 1908," referring to one of Cotton's publications ("Way of the Churches of Christ in New England"), speaks of the "influence of its cardinal views upon Vane, who during his stay in Boston lived for a time under Cotton's roof." It should be stated that Dr. Charles Borgeaud, to whose "Rise of Modern Democracy in England and New England" Mr. Mead refers for authority for this statement, makes no allusion whatever to any influence, real or supposed, which Cotton had on Vane.

We know Vane and his views of religious liberty at the time when he was Cotton's guest, which not only led him to befriend and plead for the rights of Mrs. Hutchinson, but found expression in his dispute with Gov. Winthrop, and his earnest protests against all laws of exclusion or persecution because of religious differences, as well as in his whole subsequent career; and we know Cotton and his views, which found expression in his numerous publications, as well as in his well-known conduct. Though Cotton was twenty-seven years older than his guest, Vane far outstripped his host in his clearly defined principles of the rights of conscience, and was able to give lessons to the teacher of the Boston Church. This he undoubtedly did, though the Puritan teacher was unwilling or too old to learn them.

It was Cotton who boldly affirmed that "toleration made the world anti-Christian," and should therefore be religiously avoided and prohibited, who approved the banishment of Roger Williams, saying afterwards with a heartless facetiousness that "it was not banishment, but enlargement"; who carried on the famous published controversy with Williams, in which he showed that he had never learned the alphabet of religious liberty, much less been a preceptor in that branch of knowledge; and who inhumanly justified the persecution of the Rhode Island worthies, Clarke and Holmes, in the famous reply which he and Wilson sent to Saltonstall. Moreover, his conception of democracy appears in the following language:

Democracy I do not conceyve that ever God did ordeyne as a fitt government eyther for church or commonwealth. . . . As for monarchy and aristocracy, they are both of them clearly approved, and directed in Scripture, yet so as God referreth the sovereigntie to himself, and setteth up Theocracy in both, as the best form of government.

It should be added that after Vane returned to England, Cotton, who had stood with him in the defence of Mrs. Hutchinson, went back on himself, publicly professed his penitence with many tears, declared that he had been made "her stalking horse," and not only abandoned the poor woman to

her enemies, but zealously engaged in confuting her "heresies," and himself delivered the verdict of the church, and "pronounced the sentence of admonition with great solemnity, and with much zeal and detestation of her errors and pride of spirit." John S. Barry ("History of Massachusetts. First Period," p. 259) says:

This was the unkindest cut of all! This blow staggered her! And the unhappy woman, baited and worried by her clerical tormentors, "pumped and sifted to get something against her," stigmatized as "the American Jezebel," cast out of the church, spit upon, and defied as it were, scarce knew what she said; and failing to give satisfaction to those whom nothing probably would now have made lenient, was excommunicated in due form.

Brooks Adams, commenting on this distressing affair ("The Emancipation of Massachusetts," p. 60), says:

Vane sailed early in August, and his departure cleared the last barrier from the way of vengeance. . . . Cotton hastened to make his peace by a submission, which Rev. Mr. Hubbard of Ipswich describes with unconscious cynicism: "If he were not convinced, yet he was persuaded to an amicable compliance with the other ministers; . . . . for although it was thought he did still retain his own sense and enjoy his own apprehension in all or most of the things then controverted (as is manifest by some expressions of his since that time published) yet by that means did that reverend and worthy minister of the gospel recover his former splendour throughout New England."

It looks very much as if Cotton's momentary liberalism in joining hands with Vane in the defence of Mrs. Hutchinson was the effect of the young Governor's presence and influence upon him, and that after Vane had departed he fell back in a most humiliating manner, and with ostentatious penitence, which must be regretted by every one, into his former narrowness and an intenser opposition to the principle of religious liberty. The facts do not appear to justify the claim that Cotton was in any sense the preceptor of Vane. In those days, and in that community, the younger man, who was of noble family and was generally welcomed with enthusiasm by the Massachusetts colonists on his arrival, and in a few short months was elected Governor of the colony, who heid advanced views, and possessed withal a striking personality, would inevitably be listened to with respect, and would easily be exaited, in spite of difference in age, to the preceptor's chair.

IDEALS OF STUDY.

TO THE EDITOR OF THE NATION:

SIR: It has occurred to me to add a few suggestions to the admirable letter from "X" entitled "Maintaining Ideals of Study," in the *Nation* for March 25. A residence of well-nigh twenty years somewhat within the atmosphere of a great university has given me material for thought in regard to ways and means by which the excellent work which is done there might be strengthened and increased. There are two crying evils of the present system which "X" has failed to note. One of these is the fact that the man who has enough money to pay for tutoring can neglect his work, cut a very large proportion of his courses, and yet, at the finals, outrank another man who has attended the courses faithfully and taken copious notes. By a certain diabolic legerdemain the accomplished tutor (who is a mind reader as well as a "crammer") usually succeeds in forecasting the matter of the examination so far that he can guarantee with a few hours of tutoring to produce effects in the examination which could be obtained in the ordinary way only by months of hard work. Every effort is often used to get hold of syllabuses and digests intended only for the use of the instructors, and thus give the student a short cut to the desired passmark. It is really difficult to overstate the astonishing results of skilled tutoring brought to bear on a moderately intelligent man in preparation for a small number of examinations. But the invariable testimony of instructors and students alike is to the effect that knowledge crammed under high pressure disappears with alarming rapidity as soon as the examinations are over. It does not seem to leave even the path of low resistance for further knowledge of the same kind that is left by attainments reached in a leisurely manner, even if they become apparently forgotten during the lapse of months and years. Apparently the only means of obviating the evil of tutoring as a "cram" consists in setting a high value, in the adjustment of the student's standing, on his daily work and on hour examinations of which no notice is given beforehand.

The other difficulty which I have in mind is far more deeply rooted and serious. It depends upon the fact that students of all grades, from the grammar school to the graduate school of the university, are allowed by the instructor to think of the subjects studied mainly as so many stepping-stones, first, to the examination and then to graduation. The inherent value of the subjects, in and of themselves, is often not insisted upon by the teacher or professor and therefore not recognized by the student. The obnoxious course system which "X" so effectively denounces bas aggravated this evil and with the introduction of free election of studies, now rapidly descending through the high schools and toward the grammar schools, it has become an important part of the occupation of every pupil to figure out the easiest path that may lead to a diploma. It is increasingly difficult to meet this condition of mind, and to eradicate it in higher institutions of learning, but something can be done in and below the high school by vigorous attacks on the practice of making the examination, and not that for which the examination stands, the real goal of the student. I have known of an instructor who always counted it a misdemeanor for a student to inquire in class whether such and such kinds of problems would be likely to be set in the final examination, and this refusal to recognize the legitimacy of questions of the sort, if carried through all grades of instruction, would do something to destroy the spirit which leads to the asking of such questions. Incidentally, something can also be done to encourage study for the sake of the subject itself by allowing it to be understood that all indications of a desire to reach out beyond the absolute reading or laboratory requirements in the given subject will, as far as possible, be weighed by the instructor in estimating the year's work. It is not impossible in literary courses on the one hand, and biological or physical science courses on the other, to credit the student with work done somewhat under his own direction and wholly at his own initiative.

Cambridge, Mass., April 1.

"THE NEW HOPE IN INDIA."

TO THE EDITOR OF THE NATION:

SIR: My attention has been called to an article which appears in your issue of March 4 under the above heading, and in which you quote certain astonishing statements made by the Society for the Advancement of India, and, I quite admit, controvert a good many of them. It is a hopeless task to follow up every misleading statement made about the Indian administration, and I will not take up your space with more than one which seems to me to be particularly glaring, viz., the complaint of "crushing taxes and insufficient irrigation works." Now, what are the facts? The actual area cropped in British India in 1906-07 was 214,026,319 acres, of which 32,391,158 acres carried more than one crop, so that it is not unfair to say that 246,417.477 acres represent actually the area under one crop, and of this 36,654,558 acres were artificially irrigated. That is, nearly one-fifth of the total area cultivated, whereas when the late Queen took over the government of the country the area under irrigation was about two and a half million acres. Now, the land revenue of the whole of India at the same time was something under twenty millions sterling, so that the average assessment on each acre of crop actually cultivated is something under 1s. 8d., and it is quite impossible, I think, to estimate the gross produce of the country at less than £1 an acre, so that the "crushing land tax" cannot be more than one-twelfth of the produce, or 8½ per cent.

THE COMFORTING POWER OF NATURE.

TO THE EDITOR OF THE NATION:

SIR: I trust the writer of the article on Thomas Traherne (see the *Nation*, Feb. 18) will permit an interested and not ungrateful reader to demur to his conclusion. Surely it is "when the tedium of life rolls in upon us, when the ambition for which we have striven fails, and we are taught the deceitfulness of hope, or is achieved and we find to our dismay that we have no more capacity of enjoyment than before," it is then that "the restorative beauty of Nature" is most precious in its healing effects. Nay, even "when a great loss by death or evil alienation"—I have a case in mind—"darkens our ways," Nature does not wholly lose her power to calm and soothe.

I am far from saying that the mysticism of Vaughan and Traherne and Wordsworth affords a complete philosophy of human life; "the still sad music of humanity" cannot be ignored; but I would venture to affirm that it does contribute to such a philosophy an element at once necessary, vital, and permanent—most truly a *doctrina cœlestis*. For if we do not find God in Nature, where are we to seek Him? Is Nature alien to God, or independent of Him? To say that He (or It) is *not there* is atheism. And it is

not a question of the reality of the external world, but of its value and significance in relation to our mental experience. In the words of Herbert Spencer, "The Power manifested throughout the universe distinguished as material, is the same power which in ourselves wells up under the form of consciousness." What "greater realities" are there than these? To many serious thinkers it is not "the fabric of the world," but the fabricated systems of the theologians, which may be compared to the sand castles of children, even now being swept away by the universal tides. G. H. T.

Naples, Italy, March 20.

Notes.

The Forest Press of this city announces for immediate publication "A Book of Hours," by the late Miss Ellen Thompson of Boston. The volume includes "Edward FitzGerald and His Friends in East Anglia," and other literary papers.

The centenary of the birth of Horatius Bonar (December 19, 1908) has been celebrated by the issue of an inexpensive little volume of his hymns, selected and arranged by his son, H. N. Bonar (Henry Frowde). There is a portrait of Dr. Bonar, a sketch of his life, and a brief account of some of the hymns. With the exception of two or three minor alterations, this edition is a reprint of that issued in 1904.

To the series known as the Cambridge English Classics (G. P. Putnam's Sons) there has been added "The Authorised Version of the English Bible, 1611," in five volumes, edited by William Aldis Wright. The first volume contains as a frontispiece a facsimile of the original title-page. Mr. Wright adds a table of seventeen pages showing the variations between the two issues of 1611. The pages are not in the double-column form which makes most Bibles so offensive to the eye, but with the lines running entirely across, as in ordinary books. For the benefit of scholars and others who may wish to get the Authorised Version in *puris naturalibus*, the old spelling is retained. Of course, there are already on the market plenty of copies in modernized orthography.

The American Unitarian Association of Boston is engaged in the preparation of a Centenary Edition of the works of Theodore Parker. The series will comprise fifteen volumes, all of which will be published before the Parker Centenary in 1910. Three volumes have already been noted in these columns. These are now supplemented by three others, "Sermons of Religion," "The Transient and Permanent in Christianity," and "Historic Americans." The latter volume includes Parker's lectures on Franklin, Washington, John Adams, Jefferson, John Quincy Adams, and Webster. These addresses exhibit Parker at his best as an orator, and at his worst as a partisan. The lecture on Webster, delivered while Boston was still in mourning for the great statesman, is one of the most striking examples of prejudice in the judgment of a contemporary. The liberal notes at the end of the volume point out Parker's errors in a scholarly and unbiassed manner. On the other hand the "Sermons of Religion" are full of elevated utterance on spiritual themes, adapted to helpful ministry to aspiring souls of all ages. The references to pages in the notes in "Transient and Permanent in Christianity" contain many errors. The volumes are clearly and serviceably printed and reasonable in price. They will help to worthy appreciation of Parker on the centenary of his birth.

Two more volumes have been issued in the New York Edition (Charles Scribner's Sons) of "The Novels and Tales" of Henry James. Vol. XV contains "The Lesson of the Master," "The Death of the Lion," "The Next Time," "The Figure in the Carpet," and "The Coxon Fund"; Vol. XVI, "The Author of Beltraffio," "The Middle Years," "Greville Fane," "Broken Wings," "The Tree of Knowledge," "The Abasement of the Northmores," "The Great Good Place," "Four Meetings," "Paste," "Europe," "Miss Gunton of Poughkeepsie," and "Fordham Castle." The prefaces to these volumes, in Mr. James's most prolix and cryptic style, seem rather pumped. Taking himself with great seriousness, he tells the sources of these various tales—where he got the idea from which the story grew. "The Death of the Lion" was written for the *Yellow Book:*

> I was invited, and all urgently, to contribute to the first number, and was regaled with the golden truth that my composition might absolutely assume, might shamelessly parade in, its own organic form. It was disclosed to me, wonderfully, that—so golden the air pervading the enterprise—any projected contribution might conform, not only unchallenged, but by this circumstance itself the more esteemed, to its true intelligible nature. For any idea I might wish to express I might have space, in other words, elegantly to express it—an offered license that, on the spot, opened up the millennium to the "short story."

The pieces in Vol. XV "have this in common, that they deal all with the literary life, gathering their motive, in each case, from some noted adventure, some felt embarrassment, some extreme predicament, of the artist enamoured of perfection, ridden by the idea on paying for his sincerity." In "The Coxon Fund" he treats of "the S. T. Coleridge type." In Vol. XVI "Paste" is a transposition of the terms of Guy de Maupassant's "La Parure," the story of the young woman who borrows a pearl necklace and loses it. Supposing it to be genuine, she and her husband ruin their lives in endeavoring to earn money to replace it. Mr. James makes it "a matter not of a false treasure supposed to be true and precious, but of a real treasure supposed to be false and hollow."

"The Book of the Duke of True Lovers," now first translated into English from the Middle French of Christine de Pisan, is an interesting addition to the New Medieval Library (Duffield & Co.). The narrative verse of the original is rendered into prose by Alice Kemp-Welch; the interspersed ballads are happily translated into the original metres by Laurence Binyon and Eric R. D. Maclagan. The translator's preface gives some account of the author, and the history of the manuscripts, but neglects to mention that the French text is readily accessible in the works of Christine de Pisan, edited by Maurice Roy for the Société des Anciens Textes. Composed at about the end of the century in which Dante's book of love was written, this narrative of romantic passion is told, like the "Vita Nuova," in the first person, and appears to be an unusually intimate record of a heart-searching experience. But to the young French prince earthly love was not, as it was to the Florentine poet, the mystical means of union with *L'Amor che muove il sole e l'altre stelle.* It was rather an exigent yet joyous discipline preparing the lover for all the fair and brave uses of the world. Abiding in a relationship always perilously near the illicit, it demanded sleepless vigilance, swift obedience, secrecy, and unfaltering self-restraint. Recognized as the crowning reward of knightly conduct, it inspired the courtly and soldierly virtues—gay and easy demeanor, spirited bearing, excellence in manly sports, and dauntless valor in war. "And for that I heard it maintained," begins the Duke of True Lovers, "that a lover is courteous above other folk, and better esteemed amongst men, I desired to be one." To the theory that the story is a genuine human document and not primarily a work of art color is lent by the fact that it has come down to us in only two manuscripts long preserved in the private collections of the French nobility, that it ends inartistically with the issues still unsettled, and that Christine de Pisan represents herself, in her brief introduction, as merely the literary secretary, for the time being, of some nobleman, not to be divulged, who wishes his memoirs written.

"The Chatelaine of Vergi," now published in the New Mediæval Library (Duffield & Co.) has flitted down through the ages like the old lover's ghost with whom John Donne longed to talk. Written toward the close of the thirteenth century, this story of the unhappy loves of the Lady of Vergi and her faithful Burgundian knight, perhaps embodying some half-forgotten passion of real life, has been preserved from generation to generation by the piety of the faithful, and has exercised a considerable influence in romantic art and literature. That interesting connoisseur of the profane and sacred loves, Marguerite of Navarre, translated it into prose; Bandello rendered her version into Italian; thence it returned to France in the "Histoires tragiques" of Belleforest, a plunder house of the Elizabethan dramatists; in the eighteenth century it quickened French fiction again; now it appears in a form which will appeal to bibliophiles, translated into English prose by Alice Kemp-Welch, presented also in the original old French from Raynaud's edition, and supplied with a brief introduction by Dr. Brandin. The impression produced by the archaic and almost dreamy English rendering is very different from that produced by the quick canter of the light French verse; but the keynote of the style will seem right to those who know the romance material mainly through the great redaction of Malory. The charm of the volume is much enhanced by the quaint, crude illustrations of the story, taken from an ivory casket of the fourteenth century, now in the British Museum. And, however one may feel in general about the modern-antique, it is a crusty stickler who will not cry bravo to these brown pigskin covers with their delicate stamped designs and their brass clasps already delightfully green!

Prof. William Cleaver Wilkinson's "Some New Literary Valuations" (Funk & Wag-

nalls Co.) exhibits a keen perception of the obvious, a stringent regard for exact and literal expression, a belief in orthodox Christianity, and an almost overmastering passion for grammar. Himself a son of the Muses, as he is at some pains to keep us reminded—indeed, a writer of epics—he sits in the seat of judgment as a poet-critic of the Malherbe family, jealously guarding his own. Of the six writers whom he passes in review only the writers of prose fiction, Howells and Tolstoy, get off with any semblance of whole coats; the poets and critics, Arnold, Stedman, Tennyson, and Morley depart in tatters. Howells, of course, has no fine ear for verse, and he certainly was not born a critic; for does he not admit in "My Literary Passions" that as a boy he passed through a "paroxysm of Alexander Smith"? No born critic would, even as a boy, have passed through a paroxysm of Smith; if the reader has any doubt, let him turn to the appendix, where he will find a critique on the aforesaid Alexander Smith written by Professor Wilkinson in *his* youthful days. Still, though Mr. Howells's diction is not always flawless, he has humor so rare and so abundant that his critic knows of nothing superior "in the world of literature, ancient or modern, domestic or foreign." It may be said, merely in passing, that Professor Wilkinson confesses an "incurable congenital incapacity for enjoying anything literary that is cast in the dramatic form," and that he has never "read any play, not even one of Shakespeare's, with pleasure." To Matthew Arnold two papers are devoted: one proves that he is an entirely peevish and whimsical critic and a vicious model in prose; the other shows that his poetry is full of nonsensical figures and of grammatical solecisms that would disgrace a schoolboy. As an example of the exigent temper of this critical Rhadamanthus consider the following: Arnold says, "It is impossible to put down a book like the history of the French Academy . . . without being led to reflect. . . ." Professor Wilkinson comments thus. "Just why the 'putting down' of a book should exert such a compelling influence is not immediately clear. 'Being led' has no subject," etc. Stedman as a critic generally lacked precision and austerity; as a poet he was rather so-so. The professor confronts a specimen of Stedman's early verse with a specimen of his own verse and exclaims with delicious oracular ambiguity: "The difference between them!" Lord Morley is an atheist and his books on Voltaire and Diderot are no more than special pleading for atheists, and in very wretched style at that. Tennyson was the greatest artist in lyric verse in the world; but he had a serious tendency toward "violence" in his use of the language. For instance, he wrote of the "chalice of the grapes of God" where a man of sense would certainly have written "wine." Perhaps Professor Wilkinson is at his happiest where he is tearing to shreds a first rough draft of one of the laureate's poems which by some mischance has got into the hands of the public; if not there, then in the two pages in which he takes Lowell to task for expressing in private his admiration of Dante by an ejaculated "damn," and Howells to task for countenancing and enjoying that expression.

With the best intention in the world one cannot find much in R. S. Craig's "Making of Carlyle" (John Lane Co.) to justify the spinning of this account of his early years through 500 pages. The repetition is incessant, and the moralizing often flat, even at its first appearance. By far the best part of the book is that which dilates on the strength of the clannish spirit among the Carlyles, and shows how much of the style and ideas of the writer came to him with his Calvinistic inheritance. This is a matter which has never, we believe, been fully exploited, nor does Mr. Craig do more than deal with it in general terms. The chief aim of the book is to defend Carlyle in his matrimonial tragedy (if such it was) at the expense of his wife. It is quite true that many deductions must be made from the story of that marriage as derived by Froude and his followers from Mrs. Carlyle's letters and conversations, but the insistence of Mr. Craig on Mrs. Carlyle's social ambitions is altogether overdone, and in the end wearisome. And, after all, to rewrite the life of Carlyle with this point of his marriage perpetually in view is to mistake lamentably what the real admirers of the sage want to hear. We must account Mr. Craig's volume as among the *haud desiderata.*

"My Cranford," by Arthur Gilman (Houghton Mifflin Co.), is a slender, dainty volume of ruminations, chiefly upon the present and past of an old-fashioned New England village. It is pleasant to think that there remains even one little town unprofaned by railroad or factory, yet still enjoying a comfortable degree of prosperity, as well as a numerous progeny, a public library *not* given by Mr. Carnegie, and, most wonderful of all, a single, universal church. If tragedy, or sin, or even vulgarity, ever invades this Arcadia, Mr. Gilman does not see them; his picture is all of pleasantness and peace.

Under the title "Psyche's Task" Prof. J. G. Frazer has published (The Macmillan Co.) an expanded version of an evening discourse delivered by him at the Royal Institution. His theme is the soul of good in things superstitious and he declares that the folk-lorist, like Psyche, has to separate the nourishing grain out of the rubbish heaps of savage custom. He accordingly shows how the divinity that doth hedge a king in primitive culture has helped to bring about stable government, how the taboo surrounding property left by the owner has given rise to the concept of private property, how the ban on sexual intercourse between certain classes and at certain times has led on to the modern idea of marriage, and how the fear of ghosts has caused men to acquire a respect for human life. These theses are illustrated with that wealth of example with which Dr. Frazer's readers are familiar; and the whole essay is as interesting reading as it is instructive and consolatory doctrine.

The Carnegie Institution, under the direction of Prof. J. Franklin Jameson, employed Prof. Charles M. Andrews and Miss Frances G. Davenport to prepare a list of manuscripts in English depositories bearing upon the history of America before 1783. One part of this list now appears in a portly volume, and includes all collections of importance outside of the Public Records Office. Not only are the British Museum and Bodleian Library covered, but such institutions as the Guild Hall, House of Lords, Lambeth and Fulham Palaces, the Royal Society, and the archives of important religious bodies. For the first time this wealth of historical material is opened and the means of obtaining access to it displayed. The compilers note in many cases where the manuscript has been printed (this portion of the undertaking is necessarily imperfect), and have even noted corrections to be made in the printed text, as in a Clarendon manuscript, where "presented" is corrected to "presum'd." As an illustration of painstaking accuracy this instance is interesting, and it may be added that a careful examination of titles shows remarkable freedom from errors in date or name. The list was extended to include material on the West Indies, but the practice of the two compilers in this particular was not uniform. As it is, the volume is an invaluable aid to the investigator, and full proof of the utility of the series planned by Mr. Jameson and entrusted to such capable experts. The volumes on the Public Record Office will be published at some future time, being held for the new numbering of the manuscripts in London. The Library of Congress is systematically obtaining transcripts of this American material, and the list of what is already accessible in Washington, printed in this volume, shows that good advance has already been made. The use of expert service in the Carnegie Institution to point out what the library should obtain offers a happy illustration of economy and efficiency.

In "The District in the XVIIIth Century," A. J. Morrison of Middletown, Va., reprints the descriptions of the proposed Federal district by four English and one French visitor, prior to the actual removal of the government. To create a city of magnificent proportions, out of a country region having little to recommend it, was no small task, and these travellers speak of the plans and not of the accomplishment. Apart from the two or three public buildings, a hotel was the first need. Weld saw the nearly finished building in 1795, and thought it "anything but beautiful." Private houses were largely built on speculation, and the city was composed of avenues leading through deep woods. Nearby was the "handsome" town of Georgetown, and at some distance were seen the "towering steeples" of Alexandria. While the visiting Englishmen dwell upon the possible commercial future of the city, central in location, and on a waterway capable of such improvement as to tap the Western trade, the Frenchman, La Rochefoucauld-Liancourt, was more impressed by the speculations of Morris, Law, and Greenleaf in city lots, the jealousies of the different sections, and the prospects of gaining wealth. He, too, thought Alexandria among the finest towns in the United States. The extract from Davis includes, without correction, his absurd account of the first inauguration of Jefferson. In a second pamphlet Mr. Morrison gives Parkinson's visit to this country to see the Mount Vernon estate. Though the editor questions the judgment of the trained English farmer on the quality of the land, this judgment was not different from that of Washington—not to speak of

the hopelessness of obtaining a profitable employment of slave labor by English farm methods.

Jesse Lynch Williams's "Mr. Cleveland, a Personal Impression," is published by Dodd, Mead & Co., in a small, attractive volume. It gives a pleasant and intimate portrait of the ex-President in his Princeton retirement.

Sir Arthur Clay has done a good work well in abridging and translating Paul Leroy Beaulieu's "Collectivism" (E. P. Dutton & Co.). That book has been regarded as the acutest and most searching analysis of the various communistic and socialistic schemes, and in particular, while allowing the waste inevitable under any exaggerated system of competition, it shows with remorseless logic the inability of collectivism to meet the laws of supply and demand in domestic exchange, and still more emphatically in foreign trade. Most Socialists, we take it, are such, not because they have any clear understanding of the economic questions at issue, but because they are led by personal envy or humanitarian revolt against the world's injustice to attach themselves to the party that avows discontent and professes a constructive remedy. To those who talk loosely of Socialism as at least a tendency in the right direction and as the necessary step of progress or evolution, the clear thinking and wide knowledge of Leroy Beaulieu's treatise may be strongly recommended. Such doubting minds will here meet with facts.

Victor Hugo comes to us in two forms, very different in bulk and purpose. One is a single volume in the charming green and gold Classiques français published by G. P. Putnam's Sons. It contains a selection of the lyrical poems in the original, with a critical introduction by L. Aguettant. The other is eight volumes ("Napoleon the Little," "The History of a Crime," "Poems," "Dramatic Works"), completing the Handy Library edition of the works of Victor Hugo, published by Little, Brown & Co., in twenty-two volumes. The translations are by different hands and naturally vary in merit. But the books are excellent in typography and form, and the price, $1 a volume, brings at least a selection of the more important novels within easy reach.

W. J. Rolfe's "Satchel Guide to Europe" has come from Houghton Mifflin Co. in its revised form for 1909. It is an excellently practical little book, as the travellers of many successive years have found.

"A British Officer in the Balkans: The Account of a Journey Through Dalmatia, Montenegro, Turkey in Austria, Magyarland, Bosnia, and Herzegovina," by Major Percy E. Henderson (J. B. Lippincott Co.), is the careful story of a long trip. At this time, when so many newspaper readers are wondering what is summed up in those two odd names, Bosnia and Herzegovina, the narrative of these wanderings in the region of quaint Austro-Turkish towns and ancient Italian republics, has peculiar interest. Major Henderson made it his business to see everything there was to be seen, and he has set everything down with an accuracy that is sometimes almost painful. He has missed no smallest detail; the pattern of a woman's dress, the way the workers in the Austrian government tobacco factories roll cigarettes, the relative values of hotels—all these items are marshalled for the information of the reader. It is a sort of revision of Baedeker, indispensable for any one contemplating a trip to the picturesque country which has been the storm-centre of Europe during the past winter. Starting at Fiume, the author progressed down the beautiful Dalmatian coast, stopping at the former free city of Ragusa and at Spalato, where Diocletian built his fairy palace. Then he paid a flying visit to Montenegro, by way of the "Montenegrin Ladder," which zig-zags up the mountain-flank above Cattaro. One cannot resist a feeling of resentment that Major Henderson should have dismissed the historic mountain principality and its interesting people and masses of legendary lore, with a bare chapter. The remainder of the volume is devoted to travels in the annexed provinces of Bosnia and Herzegovina and a brief excursion into Hungary. There are numerous illustrations from photographs depicting both life and scenery.

G. C. Sansoni of Florence is publishing a little book of the "Rime Disperse di Francesco Petrarca," including all the poems not included in the "Canzoniere," but attributed to Petrarch by some manuscript or rare publication. The laborious task of collecting and editing was undertaken by Prof. Angelo Solerti, but after his death was completed by Vittorio Cian. The proceeds from the sale of the book will go to the family of Professor Solerti.

A list of 1,000 Italian books, published in cheap editions and intended as a model for people's libraries in small Italian towns, has been compiled by Prof. Ettore Fabietti and A. Locatelli of Milan, and issued as an appendix to Fabietti's "Manuale per le Biblioteche Popolari" (published by the Consorzio delle Biblioteche Popolari, Milan). A selection of 300 volumes adapted to small rural communities is indicated by asterisks. This list is divided into four sections: books for adults; for young people; books on science, agriculture, industry, and art; and reference books for library use. As the entries include the size, date, publisher, and net cost and an occasional bibliographical note, this model catalogue, like the list of the *Revista delle Biblioteche* (see the *Nation,* April 1, p. 335), would be suggestive to American librarians in supplying the needs of Italian readers.

Hermann Essweln, one of the earliest and warmest adherents of August Strindberg, whose sixtieth birthday has given rise to a number of retrospective articles, is the author of a comprehensive study of the life and the work of this most interesting though not always sympathetic Swede. "August Strindberg im Lichte seines Lebens und seiner Werke" is a volume of 212 pages, with 27 illustrations. The publisher is Georg Müller, Munich, who also issues the complete works of Strindberg translated into German by Emil Schering.

"Gründe und Abgründe: Präludien zu einer Philosophie des Lebens," by Oscar Ewald (Berlin: Ernst Hofmann & Co.), consists of two solid volumes of ethics, based on empirical psychology. The first of Volume I treats of "Das Wesen des Willens" and "Erotik und Geschlechtlichkeit"; Volume II, "Aus dem Leben des Glaubens," "Künstler und Denker," and "Individuum und Universum." The work aims to discuss all the leading psychological and ethical problems now in the forefront of debate.

"Emanuel Geibels Jugendbriefe" (Berlin: Karl Curtius) adds considerably to our knowledge of this gifted poet and amiable friend of Freiligrath and Chamisso, especially since none of these letters has been published before. They cover his life from the time when he was a student at Bonn, 1835, to his return from Greece, in 1840. They are full of autobiographical interest. With but one or two exceptions all these letters are addressed to Geibel's mother, and this recalls Geibel's characterization of his father as "rich in the matter of friendship, but no writer of letters." Very interesting are the references to Freiligrath, just then becoming known. Two portraits of the poet are given, made in 1834 and 1838.

Theodor Kappstein, as editor, has begun the publication of a series, Die deutschen Hochschulen: Illustrierte Monographien (Berlin: Wedekind & Co.), of which two volumes have appeared, each of about two hundred pages. The first is by Fritz Baumgarten, "Freiburg im Breisgau"; and the second by Adolf Stier, "Jena." The history of the different universities will be given largely in the form of biographies of their great teachers. Thus the book of Stier supplements from the personal side such excellent volumes as that of Borkowsky, brought out on the occasion of the recent centennial anniversary of Jena.

The reforms of Joseph the Second of Austria possess never-ending interest for the investigator of modern church history; and the recent work of a Catholic scholar, Hermann Franz, "Studien zur kirchlichen Reform Josephs II" (Freiburg-im-B.: Herder), has made accessible new data from archives, and has contributed materially to an objective presentation of the subject.

Another interesting contribution to the four hundredth anniversary of the birth of Calvin, which falls on July 10, is Dr. Peter Paulssen's "Johannes Calvin: Ein Lebens- und Zeitbild aus dem Reformationsjahrhundert" (Stuttgart: Belser). The author has aimed to draw from primary sources, to use these in accordance with the recognized canons of modern historiography, and to depict Calvin in the light of the complete historical background of his activity. The book is one of the most scholarly productions called forth by the anniversary.

The Deutsche Texte des Mittelalters (Berlin: Weidmann), published under the auspices of the Royal Prussian Academy of Sciences, has now reached its tenth volume, containing a characteristic collection of sermons, entitled "Der sogenannte St. Georgener Prediger," so-called because the oldest manuscript of these anonymous discourses, written about 1300 A. D., is found in the St. George Convent, in the Black Forest. In its day this collection was exceedingly popular, being used for many decades in the Benedictine, Dominican, and Carthusian cloisters, as model discourses. The present edition is based also on a Carlsruhe and a Freiburg manuscript.

Th. H. Pantenius, a native of the German provinces of Russia, and author of a number of works of fiction that treat of Russian life, has recently published a popular "Geschichte Russlands von der Ent-

stehung des russischen Reiches bis zur Gegenwart" (Leipzig: Voightländer). The volume (less than five hundred pages), while not evincing special scholarship or research, is based largely on native sources. Unfortunately, only eighty-six pages are devoted to the nineteenth century.

The third volume of Alfred Jensen's "Rysk kulturhistoria" (Stockholm: Aktiebolaget Ljus) covers the nineteenth century; Pushkin, Gogol, Turgenev, Dostojevski, Tolstoy, Gorki, Mereshkovski, and others are passed in review, with emphasis on their significance for the social and political development of the Russian people. The various literary movements are discussed. Most interesting are perhaps the studies of Dostojevski and Tolstoy.

Lovers of Tegnér will be interested in Prof. Evert Wrangel's volume, entitled "Den blåögda (Stockholm: Wahlström & Widstrand), in which he gives an account of the poet's friendship with Hilda Wijk, wife of a prominent merchant and member of the Diet for Gothenburg. The friendship for this noble woman seemed to have helped the already aged poet to conquer another, more earthly passion that darkened his later life. The volume contains many hitherto unpublished letters of Tegnér, for the most part of a purely personal character.

At the twelfth annual conference for education in the South, to be held at Atlanta April 14 to 16, the programme will include the following speakers: Gov. Hoke Smith of Georgia; Robert C. Ogden, New York, president of the conference; Gifford Pinchot of the Forest Service, Washington, D. C.; Clarence Ousley, editor of the Fort Worth *Record*; Charles L. Coon, superintendent of schools, Wilson, N. C.; Dr. Elmer Ellsworth Brown, United States Commissioner of Education; Mrs. B. B. Munford, Richmond, Va.; Dr. John Lee Coulter, University of Minnesota; Dr. Lillian W. Johnson, Memphis, Tenn.; Dean Lida Shaw King, Woman's College, Brown University; Dr. A. Caswell Ellis, University of Texas; C. S. Barrett, president of the Farmers' Union, Union City, Ga.; President Edwin A. Alderman, University of Virginia; and President Charles R. Van Hise, University of Wisconsin. Among the special meetings will be conferences of State superintendents of education for the Southern States, of supervisors of the school improvement work in the Southern States, and of the Southern Association of College Women.

Two new members have been elected to the Académie Française: in place of François Coppée enters Jean Aicard, poet and novelist, and in place of Gaston Boissier the well-known critic of the *Revue des Deux Mondes* René Doumic.

William Henry Edwards a naturalist, died at Coalburg, W. Va., April 3. He was born at Hunter, N. Y., in 1822, and twenty years later was graduated from Williams College. Although he was admitted to the bar, he became more interested in the study of butterflies than of law, and in 1846 made a trip up the Amazon. His books are: "Voyage Up the Amazon" (1847), "The Butterflies of North America" (three series, 1879, 1884, 1897). He has also contributed 160 separate papers on lepidoptera to the *Canadian Entomologist*, and entomological papers to various other journals.

From Manila has come the news of the murder of Dr. William Jones by the Ilongots at Dumbato, Dr. Jones had been sent out to the Philippines two years ago by the Field Museum of Chicago, and was prosecuting his anthropological studies at the time of the reported murder. He was one-quarter Indian blood, and had been born among the Sauk and Fox Indians in Oklahoma some thirty years ago. He was educated at Hampton, Va., Andover, Mass., and Harvard. He had already accomplished valuable work for the Field Museum.

A veteran in philosophy, Dr. James Hutchinson Stirling of Edinburgh, has died at the age of eighty-eight. Among the long list of his books two have been specially popular, his "Secret of Hegel" (1865) and his translation of Schwegler's "History of Philosophy," the latter of which reached its twelfth edition in 1893. More literary in character are his "Jerrold, Tennyson, Macaulay, with Other Critical Essays" (1868), "Burns in Drama" (1878), "Philosophy in the Poets" (1885), and "Thomas Carlyle's Counsels" (1886).

The death is announced, in his seventy-sixth year, of Dr. Herbert Mortimer Luckock, Dean of Lichfield, a biblical scholar of Anglican-Catholic beliefs. He wrote a number of religious books, among them: "After Death, State of the Faithful Dead," "Studies in the History of the Prayer Book," "The Bishops in the Tower," "The Intermediate State," "History of the Church of Scotland," and "The History of Marriage."

Another biblical scholar who has died is Dr. Charles Henry Hamilton Wright, born at Dublin in 1836. His specialty was Hebrew, and at different times he was examiner in that subject at Oxford, University of London, and elsewhere. He published a number of books on the Hebrew Testament, as well as on such themes as "The Intermediate State and Prayers for the Dead," and "General Writings of St. Patrick."

Report comes of the death of Dr. Richard Mahrenholtz, who was born in Etgersleben in 1849. He wrote chiefly on French topics, and among his books are "Geschichte der französeschen Revolution," "Rousseau," "Jeanne d'Arc," "Fénelon," etc.

Dr. Rudolf Gottschall, a prolific and popular writer of verse, fiction, and history, has died at Leipzig, in his eighty-sixth year. His first book of verse, "Lieder der Gegenwart," was published before he was twenty, and, for its liberal tendencies, led to his expulsion from the University of Breslau. He completed his studies at Berlin and Königsberg, and then devoted himself to literature.

Another German author whose death must be recorded is Frieda, Baroness von Bülow, at Jena, in her fifty-second year. She had travelled much in the East and in Africa, and was the first German writer to exploit colonial life in fiction. Her novels include: "Margarete und Ludwig," "Tropenkoler," "Im Lande der Verheissung," "Allein ich will," "Einsame Frauen," and "Wir von heute."

FLORIO'S MONTAIGNE.

The Essayes of Michael Lord of Montaigne. Done into English by John Florio; with an Introduction by Thomas Seccombe. 3 vols. New York: E. P. Dutton & Co. $10 net.

Whatever may be said of Florio's occasional inaccuracies, his translation of Montaigne has two undeniable merits. It was accepted at once (the first edition is dated 1603) as an integral part of English literature, preparing the way for a succession of essayists, from Bacon to Lamb, who have no parallel in any other country; and it succeeded admirably in preserving the spirit of the original. The very form of the sentences and the quaintness of the vocabulary seem to be Montaigne writing in English. Except for those who have a complete mastery of old French, Florio is the book. We could wish that this new and handsomely printed edition had been more generously, or at least differently, planned. It is hard to see any profit in retaining the spelling and, more especially, the eccentric punctuation of the original edition. Montaigne might be speaking for his translator also when he said he meddled neither with orthography nor with curious pointing. "Where they altogether break the sense," he says, "I little trouble myself therewith; for at least they discharge me. But where they will wrest-in and substitute a false sense (as often they do) and wire-draw me to their conceits, then they spoil me." Certain it is that the punctuation of Florio, as he was printed, too often wrests-in and obscures the meaning. Montaigne, we take it, is an author to be read; the flavor of the old speech, whether French or English, should be preserved, but, to quote Florio's turning of a quotation:

> A pedant knowledge, I
> Detest out of all cry.

Some notes also should have been provided, no elaborate apparatus, but an indication here and there of the right translation where Florio has gone too far astray, and a little help now and then for the more difficult allusions. However, the main thing is that this great book is again made accessible at a price not unreasonable for the excellence of the paper and presswork.

The publication is opportune. With the *édition municipale* of Montaigne appearing at Bordeaux under the able supervision of F. Strowski, and with Pierre Villey's learned treatise on the library of Montaigne and the epochs of his thought (see the *Nation*, July 2, 1908, p. 14), France is making almost a rediscovery of the man whom Sainte-Beuve admired as "le français le plus sage qui ait jamais existé"; and no doubt we shall catch some echo of all this stirring in our barbarous lands beyond the sea. Those who desire to read the latest presentation of the matter

will find a thoroughly sensible discussion of "Les Époques de la pensée de Montaigne," by Victor Giraud, in the *Revue des Deux Mondes* of February 1.

Perhaps some emphasis should be laid on the word "sensible," for in this search after the learned and the new certain other scholars have not entirely escaped the danger of forgetting the evident and the right. Thus, M. Strowski, led astray, it has seemed to us, by his research into the Stoic revival of the sixteenth century, went altogether too far, in his recent work on "Pascal," in throwing into relief the stoical elements of Montaigne's philosophy. Pascal was right in treating him as a thoroughgoing Epicurean in his attitude toward life; and Sainte-Beuve was right by the same token. M. Strowski seems to have been misled by the same industry when he called the "Apologie de Raymond Sebond" "l'expression complète d'une âme vraiment religieuse et sincère." Again, Pascal was right in taking that essay as the very quintessence of skepticism, and by the same token Sainte-Beuve.

Brunetière, with his exaggerated faith in evolutionary methods, looked to these studies of dates to bring about wonderful changes in our view of Montaigne. The plain fact is, that, with all respect for the heart-breaking toil of these scholars, we cannot see that they have advanced us much in real comprehension of his genius. Knowledge, as Montaigne says, "must be enfeoffed in us and made our own"; it is too often the case that those "whose sufficiency is placed in their sumptuous libraries" miss the learning that springs from an understanding of human nature. Sainte-Beuve's chapter in the "Port-Royal" is still the truest characterization. And, indeed, the essential chronology of Montaigne needs no documentary research. By comparing the earlier essays with those of the third book added to the edition of 1588, the direction of his development is made perfectly clear. Read the typical chapters of the first book, for example, "That to Philosophie is to Learn How to Die" and "Of the Inequality that is Between Us"; the inspiration and purpose of the writer will be quite evident. The model was given by such books as the "Adagia" and the "Apophthegmata" of Erasmus. From 1531 to 1573 the second of these works went through no less than eighty-three editions, forty-nine of which were printed at Paris and Lyons, not to mention French translations. Some such concentration of the wisdom of the ancient world Montaigne had in his mind; and his earlier essays are often merely a collection of quotations out of Horace, Lucretius, and a few other Latin writers, with illustrations from history and a running commentary in the vernacular. Of Montaigne himself there is comparatively little. The success of his first publication and the greater assurance of practice led him to fill the later essays with his own reflections on life and with garrulous confessions of his tastes. It is in the third book we get such a chapter as that "Upon Some Verses of Virgil," which is really a disquisition on the art of love, with extraordinarily frank professions of the writer's own practice. "I believe," he avows, "that which Plato says to be true, that man was made by the gods for them to toy and play withal"; and, further: "Our life consisteth partly in folly and partly in wisdom." And, if any definite theory can be got from the essay, it is that which runs all through the book: Indulge in folly, but do not forget wisdom; and let both folly and wisdom contribute to the pleasure of life. Certainly that is the lesson also of the last essay, "Of Experience," which seems to have been meant as a summing up of what Montaigne himself had learnt from the world's school, wherein, as he says, human ignorance is the surest part.

There is no change of sentiment here from the essays of the earlier period, but merely change of method. What was first presented as the commonplace of the past, is now recast as the writer's own lesson of experience. Horace and Lucretius were his favorite authors—M. Villey estimates that he quotes each of them about one hundred and fifty times—and evidently contained for him the final wisdom of antiquity. The impression of the essays, as a whole, cannot be conveyed better than by calling them the Epistles of Horace translated into modern modes and writ large. A good deal is lost in the transfusion, especially that feeling of finality which goes with brevity, with the saying a thing and stopping; something is added also in exaggerating the fluctuant and epicurean side of Horace; but to those who cannot read the original Latin with ease, and who need to have their pleasure diluted, these essays are to modern civilization what the Epistles of Horace were to Paganism as concentrated and consummated in Rome—the pure wisdom of the man of the world that scarcely changes with the passing of the centuries.

In shameless self-exhibition, they no doubt go far beyond their model. Readers will differ in their appetite for the kind of personal details that fill the later essays. "Il faisait trop d'histoires, parlait trop de soi," says Pascal, and exclaims against "le sot projet qu'il a de se peindre." "Their egotism in no wise disgusts me," says Thackeray, speaking of Montaigne and Howell; "they talk about themselves forever, and don't weary me." But even if one sides with Pascal and thinks it scarcely worth while that an author should send his "dearest friends to a stationer's shop" to learn that he eats so greedily as sometimes to bite his finger ends, yet it must not be forgotten that the indiscretions of Montaigne are still of the pagan and Horatian type and not of the romantic and Rousselian. With the latter sort of egotist, the one aim is to make himself out different from the rest of mankind, a being set apart in morbid isolation. Montaigne, on the contrary, shows rather the universal human nature in himself the individual. "I am," he says, "but a man of the common stamp."

CURRENT FICTION.

The Chippendales. By Robert Grant. New York: Charles Scribner's Sons.

Judge Grant has here produced another of his careful, somewhat laborious studies of American life. He has no brilliancy or adroitness of style. His effectiveness is due rather to the working of a quiet and steady intelligence. He knows what he is driving at, and arrives, as it were, by force of sheer assiduity. There is hardly a dramatic or quotable passage in the six hundred pages of "The Chippendales"; nor is the leisurely course of the story enlivened by such humorous diversions as Mr. De Morgan beguiles us with. The writer's manner is awkward and prolix; it has no speaking quality, no natural flow of idiom. In choosing to celebrate here the Boston of the eighties and nineties, he has arrived, it may seem, the day after the fair—or rather between fairs. The period is hardly remote enough to stand in picturesque perspective, hardly near enough to supply the best material for the social satirist. It was a time of marked change in the social and moral aspects of the city—whether of decadence or of transition, seems to be the question which chiefly interests Judge Grant.

It is edifying to find Boston taken so seriously, chronicled with such elaboration in this day when many Bostonians, even, are apologetic or silent in general company. There is a fine ardor in this celebrant's minute fidelity to the topographical fact. When we read that "Sumner proceeded along Dartmouth Street, and, crossing Huntington Avenue and Boylston Streets, hastened toward his home," or that Mr. Chippendale "started to walk down-town, by way of Commonwealth Avenue, the Public Garden, and Beacon Street," we are left in no doubt of our bearings. The Common is the fetish of the Chippendales: the fertility of its English sparrows, the obsolescence of its gray squirrels, the incursion of the subway, are all burning questions to that Brahmin race. It is in his demure insistence upon these foibles of place that Judge Grant's humor chiefly makes itself felt. The Chippendales live either upon the water-side of Beacon Street or upon the sunny side of Commonwealth Avenue—the latter element being regarded rather as backsliders. Against the Chippen-

dales' solid front of principle and prejudice, their "New England conscience," their sense of caste, have long dashed in vain the forces of vulgar progress. Yet insensibly the conditions of Boston life change. Great fortunes begin to be made, bringing with them new standards of material welfare. The Chippendales find their prestige less and less important in the life of the city. The arch-adversary comes, in the late eighties, to be one Hugh Blaisdell, a person who, borne in Maine and educated in a "fresh-water college," arrives in Boston in perfect ignorance of and indifference to the traditions which rule in the shadow of the State House, and the aura of Harvard. In New York, he would have found himself merely one of many cheerful, clever, unscrupulous apostles of progress as embodied in dollars and cents. He is not without his theories, or rather, perhaps, his patter. He proposes himself as one of the generals of a new industrial army, and we leave him still in the act of swallowing, after having taken into his maw the Chippendales among other minor reptiles. One invincible champion they have, however, in Henry Chippendale Sumner. Financially inconsiderable, he stands for all that is best and much that is most absurd in Boston Brahminism. It is he who secures the expulsion of the Bacchante from the courtyard of the Public Library—by no means on fanatical grounds. He stands for whatever is sound in taste or morals according to his somewhat austere code. In the end he wins the woman whom the victorious Blaisdell would have married. Perhaps the most amusing incident in the course of the narrative is the visit of Henry and his mother to the Art Museum to see a new Rembrandt (presented by Blaisdell). They gaze for some time in silence at the "full-faced Dutch burgher" in question. At last: "Artistically it is satisfying," says Mrs. Sumner, "but ethically I feel a lack. Compare a face like that with Emerson's, for instance. It is deficient in soul. I ask the question—I admit that it is debatable—can any work of art be considered great—satisfying in the highest sense—into which the spiritual quality does not enter?" "Ah, mother, mother, I was trying to stifle the same thought!"

One or two contradictions of detail may be noted. On page 81 it is said that Harrison Chippendale "had no office," while on page 155 we find: "He still maintained a small office where he employed a single clerk." Hugh Blaisdell is said on page 1 to have been born in Maine, but on page 261: "He was certainly a person to be reckoned with in his native city"—meaning Boston.

One Immortality. By H. Fielding Hall. New York: The Macmillan Co.

Sententious is the word for this book. The author, with little distinctly in mind to say, invents a few named figures and a situation as excuse for the multitudinous and, alas! often platitudinous apothegms which for some hundreds of pages flow from his pen. The oracular method—or manner—is always effective with a certain audience. The last generation, with its rather brutal sense of humor, has had comparatively little ear for this kind of thing, in fiction at least. But Mr. Hichens and one or two others have done something lately toward restoring it to favor. Mr. Hall makes good play with it. The mere obviousness of a remark has no effect upon his readiness to shoulder responsibility for it. He says, for example, "There are things to say, and there are things to feel and never say"; and this truth reminds him of another, "There are times to speak, times to be silent." The persons of his tale have an equal gift of prophecy—which does not mean, of course, that they have opinions. "To ourselves," says Holt, the hero (p. 65), "we are quite simple"—a saying so graciously received by his fair hearer that he is encouraged (p. 69) to pronounce, to her equal satisfaction, "No one ever understood himself." Of such an interlocutor we are not surprised to hear on occasion that "he wondered why he talked." After all, something in the way of a story may still be fairly expected of a novelist, an account of things that intelligibly happen to human bodies or minds or souls. Else why does he talk?

With the Night Mail: A Story of 2000 A. D., together with Extracts from the Contemporary Magazine in Which It Appeared. By Rudyard Kipling; illustrated in color by Frank X. Leyendecker and H. Reuterdahl. New York: Doubleday, Page & Co. $1.

This is the short story which *McClure's Magazine* published in 1905. It is now issued in large type, heavily leaded, and printed on one side of a leaf in order to make a little book. The volume is further padded out with several pages of articles and advertisements, of which the following is a fair example:

> MAN WANTED—DIG DRIVER for Southern Alps with Saharan summer trips. High levels, high speed, high wages.
> Apply M. SIDNEY,
> Hotel San Stefano, Monte Carlo.

The story is a good enough one of its kind, a tale of the trip from London to Quebec by dirigible balloon. It is filled with a strange technical jargon, relieved by some remarkably vivid passages of description. Kipling has a wonderful power of visualization. It is a pity that he is so destitute of ideas that in the interval of two years and a half since "Puck of Pook's Hill" he has been able to prepare no better apology for a book.

Walt Whitman. By George Rice Carpenter. [English Men of Letters.] New York: The Macmillan Co. 75 cents net.

In no spirit of unkindness, it may be said that Professor Carpenter has been hampered—consciously hampered, no doubt—by the fact that his ground has just been well covered, with enthusiasm by H. B. Binns, and with more sober judgment by Bliss Perry (see the *Nation*, October 11, 1906, p. 306). How he has felt these difficulties can be seen in the section dealing with the subject of Whitman's rhythmical form, which Mr. Perry had treated at considerable length and with great acumen. Without naming his predecessor, Professor Carpenter goes rapidly over the list of writers who had there been given as forerunners of Whitman, rejecting their influence peremptorily—Blake's, for instance, because Whitman was not directly familiar with his experiments, missing the part of Blake in bringing about the movement of which Whitman was only one manifestation. The most striking paragraph in Mr. Perry's analysis is that in which he quotes Samuel Warren's Lyrical Soliloquy in commemoration of the Crystal Palace exhibition as a probable influence in determining Whitman's form. Now that poem, called "The Lily and the Bee," was promptly reprinted in America by Harpers, and was reviewed in *Harper's Monthly* in November, 1851. Whitman at that time was revolving in his mind the scheme which resulted in the "Leaves of Grass" of 1855; he was consciously going over the traditional methods of expression and casting about for a new form; he was a reader of the magazines; and it is a fair conjecture that Warren's free rhythms—there are also curious resemblances to the "cataloguing" manner—should have encouraged him in his natural bent. To discredit this derivation, Professor Carpenter quotes, from a lecture delivered by Whitman in March of 1851, a score of characteristic verses which afterwards found a place in one of the longer poems. His comment is that "Whitman's verse-method grew out of impassioned speech." As a matter of fact, Whitman did very little speaking, and these verses are far closer to Emerson, whose influence on Whitman is incontestable, than to "The Lily and the Bee" or the developed style of the "Leaves of Grass." The decisive influence is not yet felt in them. We cannot but believe that Professor Carpenter's rejection of literary sources (despite his protests, Whitman was in some respects always a bookish man) for a vague theory of "impassioned speech," based on a rather fine-spun psychology of language, is due in part

to the necessity imposed on the later biographer of being different.

But it is possible we are bearing too heavily on this inevitable difficulty. As a whole, Professor Carpenter's work is well-proportioned and pleasantly written. He has been especially successful in fusing together criticism and narrative, in showing, that is, how Whitman's rhapsodies are a reflection of his life, and in telling his life by means of comment on his rhapsodies. To this end he has rather avoided discursions of a purely literary sort. His chief emphasis lies on the mystical aspect of Whitman's character and message; his most original contribution to the understanding of the "Leaves of Grass" is the attempt to connect the cataloguing habit, over which most critics stumble helplessly, with the process of mystic hypnosis or ecstasy:

> The habit of muscular repose, the complete motor quiescence which was so characteristic of him from his boyhood up, afforded the physical basis. In this state of rapt contemplation the mind, rather drawn out of itself than concentrated within itself, dwelt in rapid succession upon a multitude of outward objects, until, under this swift and dionysiac sequence of parallel, unrelated percepts, there followed the mystic experience, the illusion or the verity, of knowledge of the Whole. The most marked characteristic of Whitman's poetic method, that by which he catalogues or inventories objects, without close subordination or orderly classification, is perhaps but the same process on a smaller scale. The reader's attention reels under the weight of unrelated particulars until, just as the mind refuses to go further in the hopeless task of coördination, it is suddenly suffused, as it were, with a glow of comprehension, and there is born an impression of totality.

In regard to the poet's final place in fame, Professor Carpenter is wisely noncommittal. Analogues for Whitman's power he finds, not so much in purely literary types, as in the great personalities, the religious teachers, who, mainly through their lives and only incidentally through their writings, represent a new attitude toward life and give a new impulse to society.

Some vital questions Professor Carpenter leaves unanswered, as have all his predecessors. For example, we should like to see Whitman's denial of all distinction, his equal acceptance of all men as right (the glutton, the slobberer, the vile, the saint), his rejection of standards:

> What blurt is this about virtue and about vice?——

this way of viewing nature, as Professor Carpenter thinks, *sub specie æternitatis*—we should like to see this reconciled with the vein of physical puritanism expressed at times in his personal vows:

> I have this day, this hour, resolved to inaugurate for myself a pure, perfect, sweet, clean-blooded, robust body, by ignoring all drinks but water and milk, and all fat meats, late suppers—a great body, a purged, cleansed, spiritualized, invigorated body.

The inconsistency here—which strikes at the very heart of Whitman's philosophy of life—may perhaps be explained away, but until it is so explained much of the "Leaves of Grass" must remain wild hurtling words.

Documents Relating to the Seigniorial Tenure in Canada, 1598-1854. Edited with a historical introduction and explanatory notes, by William Bennett Munro. Toronto: The Champlain Society.

This volume of documentary material supplements Professor Munro's "Seigniorial System in Canada." The two books contain all that the most exacting student can ask for, on this interesting and significant phase of the history of Canada. The earlier volume offered a clear and scholarly discussion of the establishment, history, and effect of the seigniorial system in Canada; the present book provides the documentary material upon which the other was based. It would, however, give a very inadequate idea of the scope and value of this volume to say merely that it contains reprints of documents. The essential documents are here, but they are enriched with an elaborate series of explanatory notes, as well as an historical introductiou of 116 pages. This equipment transforms what would otherwise have been a dry, and often uuintelligible, collection, into a clear, comprehensive, and thoroughly interesting history of feudalism in Canada.

Not the least valuable feature of Professor Munro's work is its effective disposition of a number of popular but mistaken ideas as to the origin and influence of the system. Parkman, and other writers following his lead, have taken it for granted that Richelieu first planted the feudal system in Canada, as part of his policy of settling the colony with the landless aristocracy of France. Professor Munro makes it clear that the charter granted to the Marquis de la Roche, more than a quarter-century before Richelieu became Minister of State, gave specific authority not alone for the granting of seigniories in the New World, but for the establishment of the obligation of military service as an incident of land tenure. As a matter of fact, three seigniories were granted: two to colonial laymen, and the third to the Jesuit order, previous to the chartering of the Compauy of New France—or the Company of One Hundred Associates, as it is more generally called—in 1627. A more serious error that Professor Munro has exploded is the idea that the seigniorial system in Canada was an absurd and vicious survival of the Middle Ages, without a redeeming feature; that the century and a half during which France entrenched herself in the valley of the St. Lawrence afforded, in the annals of the New World, "an example of the methods by which a misguided monarchy unsuccessfully sought to superimpose upon a luckless colony that senile and decadent seigniorialism which characterized the social organization of the motherland in the two centuries preceding the Revolution." One cannot read Professor Munro's masterly introduction without being convinced that, while the evils of paternalism undoubtedly entered into the public and private life of New France, there was another side to the question. The fact has generally been lost sight of that the seigniorial system in Canada was by no means the same thing as the seigniorial system, at the same period, in France. In the mother-country, the system had gathered about it a host of intolerable abuses, leading inevitably to "that terrible retribution which the masses of the French people exacted from the governing classes iu the outgoing years of the eighteenth century." In New France, on the other hand, the system "went back to the plane which it had occupied in the earlier centuries before the curse of absenteeism had sapped its vigor, and before its simple annual dues and its vague services of an honorary nature had been turned into agencies of extortion and oppression." In Canada, the seignior dwelt among his people, their leader in war and their patron in peace. The ancient personal bond between lord and liegeman was revived. Many of the prerogatives of the seigniors, the oppressiveness of which has so often been dwelt upon, were sometimes claimed, but seldom asserted. In fact, as Professor Munro says:

> If one surveys the seigniorial system of Canada as a whole, and in a fair-minded spirit, one cannot escape from the conclusion that its pressure upon the masses of the people was never really onerous. The obligations of the habitant to his seignior were light, they were fixed with some degree of definiteness, and they were never exacted in a manner which could properly be deemed harsh or cruel. . . . There is, indeed, no error more persistent, and at the same time less excusable, than that which regards the Norman habitant of the New World, as having occupied, in the closing decades of the old régime, a position analogous to that of the French *censitaire*.

The documents which take up the larger part of this book are printed in their original form, without translation; that is to say, those belonging to the old régime are in French, those subsequent to the capitulation of Quebec in English. The French documents include extracts from the charters of the Company of New France and the Company of the West Indies, various royal decrees and *arrêts*, dispatches and memoranda of the colonial governors and intendants, and special reports, such

as those of the Intendant Raudot, Gédéon de Catalogne, and Hocquart. The English documents embrace extracts from the Articles of Capitulation of Montreal, Murray's Report on the State of Canada under French Administration, various dispatches, reports, and proclamations, and the elaborate report of the commissioners appointed, in 1843, to inquire into the operation of the seigniorial tenure in Lower Canada. The whole is made conveniently accessible by means of a full index.

My African Journey. By the Right Hon. Winston Spencer Churchill; with 61 illustrations from photographs and three maps. Pp. xiii+226. New York: George H. Doran Co.

In writing this book, Mr. Churchill had two distinct ends in view, to tell of his exploits as a hunter of big game, and to awaken the interest of his countrymen "in the wonderful estates they have recently acquired" in northeastern Africa.

The purely narrative part fully bears out his assertion that it was "a very delightful and inspiring journey." The railway trip from the Indian Ocean to the Victoria Nyanza was over what is now very familiar ground; but when by rickshaw, bicycle, and canoe, Mr. Churchill went through Uganda to the navigable waters of the Nile, he found, though he had been an extensive traveller in tropic lands, that all previous impressions were effaced by the indescribable magnificence of the forests, in "variety of form and color," and in "profusion of brilliant life—plant, bird, insect, reptile, beast." At one spot, he watched from the top of an ant-bear hill "the stately and awe-inspiring procession of eleven elephants. . . . On the back of every elephant sat at least one beautiful white egret, and sometimes three or four, about two feet high." When scrambling along the brink of the Nile just below the Murchison Falls, he shot at a crocodile on a rock in mid-stream. The opposite bank appeared to be a long line of mud, but at the sound of the shot, it "sprang into hideous life, and my companions and I saw hundreds and hundreds of crocodiles, of all sorts and sizes, rushing madly into the Nile, whose waters along the line of the shore were lashed into a white foam, exactly as if a heavy wave had broken. It could be no exaggeration to say that at least a thousand of these saurians had been disturbed at a single shot." The one important event in his career as a sportsman was the killing a white rhinoceros, a species now almost extinct.

But hunting was not the principal object of this journey of the Under Secretary of State for the Colonies. This was to study at first hand the administrative problems of the East Africa and Uganda Protectorates. Much of his time was spent in visiting stations, receiving deputations of natives, and conferring with the British officials. Among the results of these investigations was his strong conviction that the highlands of East Africa—the region proposed for the Jewish colony—is not a white man's country. The attempts of Europeans to colonize it have failed, mainly for climatic reasons. On the other hand, he believes it to be an ideal home for the surplus millions of India by whose industry, if all hindrances to their coming were removed, immense tracts of practically uninhabited wilderness would speedily become cotton fields and sugar plantations. But in Uganda, there is no question of bringing in colonists—the great needs are capital and railway communication with the markets of the world. Its marvellously rich soil, with inexhaustible water supplies, is especially adapted to the cultivation of cotton, rubber, coffee, sugar, in fact all tropic products. "American upland cotton grown in Uganda actually commands a higher price in the Manchester market than when it is grown in the United States." His advice to his countrymen is to "concentrate upon Uganda!" and his closing chapter is an urgent plea for the building of "the Victoria and Albert Railway" to connect the two great lakes and to be eventually extended to the head of navigation on the Nile.

The Government of American Cities. By Horace E. Deming. New York: G. P. Putnam's Sons. $1.50 net.

Ten years have passed since the National Municipal League adopted a programme of city government which was to become a model for all lovers of home rule and democracy. It was an ambitious scheme—some called it "idealistic"; it separated city elections from all others, pushed civil service reform to the extreme, forbade special legislation, limited the term of every franchise, declared public property inalienable, prescribed uniform accounting, and —greatest of all—empowered large cities to write their own charters and administrative codes. In the succeeding decade much has happened to burn the brand of "idealism" more deeply. After Philadelphia, Pittsburgh, Chicago, and San Francisco had dimmed the lustre of Tweed and Croker, many persons began to say that city government was irreparable because of the indifference of its citizens. Democracy had been tried, they said, and found wanting; so a municipal programme making for complete home rule and more democracy was a pretty bubble. In Boston and New York, where more modern charters are being sought just now, this pessimism is urged with fresh energy. For these great communities, therefore, Mr. Deming appears at a crucial moment to strip the fundamental principles of home rule of every confusion. His volume is a defence of the National Municipal League's programme; and, in defending, it becomes virtually a history of recent municipal affairs.

The author traces, through many a modern instance, the profound change which is swiftly coming over popular conceptions of city government. He shows how, since 1880, the line between politics and administration has been drawn more sharply. He devotes still more attention to the strengthening of the conviction that municipalities must be freed from State control and extraneous politics. Even a student of civic reforms might pardonably be surprised at Mr. Deming's list of towns which have won partial or complete liberty in recent years. Missouri has allowed home-made charters since 1875, California since 1880, Washington since 1889, Minnesota since 1896, Colorado since 1902, Oregon since 1906, Oklahoma since 1907, and Michigan since last November. But such records are less welcome than the sharp return to essentials. Debates over charter revision would be greatly simplified, were Mr. Deming's nine "Pre-Requisites to Self-Government" —a simple summary of the principles enumerated above—posted in the street-cars. His chapter on the dual relation of the city to the State is even more helpful; and, for New York, at least, a word is spoken in season when he shows that city government is government, and not merely bookkeeping, or municipal research or a trusteeship.

One can find fault only with Mr. Deming's attempt to turn his book into a proof that cities can prosper solely through democracy—a rather vague term at best. His comparisons of European with American local governments, which are intended to cap the proof, seem to rest upon a confusion of home rule with popular government. Many of the English and Continental cities whose success the writer vaunts enjoy home rule, to be sure, and in full measure; but their suffrage systems must deny to them the name of democracies. We would not say that the writer's theory as to democracy may not be sound, but these instances are not convincing.

Drama.

The Blue Bird: A Fairy Play in Five Acts. By Maurice Maeterlinck. New York: Dodd, Mead & Co.

The poet, the philosopher, and the naturalist all bear their part in "The Blue Bird," the delightful dream-play which is one of the latest productions of the rich and delicate fancy of Maurice Maeterlinck, and which has been put into excellent and at times exceedingly

felicitous English by Alexander Teixeira de Mattos. Written with charming simplicity, and telling a story admirably suited to childish interests and understanding, it makes an equally strong appeal to adults by its imaginative symbolism, its freshness of humor and observation, and the inventive spirit which animates its parable. It deals with the dream adventures of Tyltil and Mytil, the children of a wood-cutter, who are commissioned by the fairy Bérylune (the very counterpart of an old neighbor, Madame Berlingot) to go in quest of the Blue Bird, whose possession will enable man to discover the hidden souls of animals and things, and so deprive them of their last vestige of independence. The fairy endows the children with a magic diamond, which, on being turned, converts all familiar objects, animate and inanimate, into human personalities. Armed with this talisman, they set out on their quest, under the guidance of Light, with the dog, the cat, bread, sugar, fire, water, and milk as an attendant bodyguard.

The cat—obsequious, insinuating, selfish, and treacherous—is the villain of the piece, ever trying to defeat his young master, while feigning great affection. He is rewarded with frequent caresses, while the dog, Tyltil's devoted slave and indomitable ally, is the constant victim of misapprehension and rebuff. With these companions the children pass through strange experiences. First, they visit their little dead brothers and sisters, whom they find with their grandparents, all unchanged, in the land of memory. They learn that the dead sleep peacefully except when the living think of them; then they exist once again, as of old, in the memories of the survivors. Next the children invade the palace of Night, who, forewarned by the cat, does her best to hinder their search, but is compelled to open all her dark places at the behest of Light. Tyltil finds that the ghosts have been much discouraged since men refused to take them seriously, and that the diseases have been greatly dispirited and enfeebled by the discovery of microbes. Her vast silence, Night declares, is now her most potent terror. In one enchanting chamber are enclosed the perfumes of night, the stars and will-o'-the-wisps, fire-flies, nightingales' songs and golden dews. There, too, are the dream gardens of the blue birds, who make the place a paradise, but who, alas! perish in the light of day. Among them is the one Blue Bird of their search, but he escapes on a moon-beam.

They hear of the bird next in the forest, where, at the instigation of the cat, the trees and various wild and domestic animals, hold a parliament, and resolve to do away with the children, who are rescued only by the desperate valor of the dog. Then they seek the Blue Bird in a graveyard—a scene full of the old weird Maeterlinckian mystery—where Tyltil makes the astonishing discovery that there are no dead beneath the gravestones, but that all have been transmuted into new, glorious, and luxuriant life.

The last and greatest adventure is in the kingdom of the future, a series of vast halls, peopled by the souls who are awaiting their turn to be born. These are in charge of sovereign and lovely figures like unto angels, and Time is the appointed minister who takes them to earth. It is in these later scenes that the poetical imagination and descriptive power of the dramatist are most strikingly displayed. The dialogue between the living and the unborn children is full of exquisite touches. Tyltil learns that no child soul can go to earth until it has its special mission: a great invention, a new happiness, or, perchance, a great crime. One unborn soul has the secret of prolonging life, another knows the treasures of the moon, others have new processes of cultivation; the destiny of one is to banish injustice, and of another to conquer death. The whole conception is a brilliant bit of invention, full of inspiring and poetic thought, but expressed, with wonderful art, in the simplest terms of childhood. In the last scene of all the children, still in their beds in the paternal cottage, awake to believe, for some time at least, in the reality of their adventures, to recognize in their neighbor, Madame Berlingot, the fairy of their dreams, and to see in their own pet turtle-dove, the Blue Bird of their hunt, although he is not quite so blue as imagination had painted him. Herein lies one great moral of the fable.

It is possible that some of the original charm of this fascinating vision may have been lost in the translation, but enough remains to prove it a masterpiece of its kind. Only genius could charge a nursery tale with so much significance without robbing it of its childlike character. Whether it will ever reach the stage here is doubtful. Only the grosser part of it could survive such an experiment. But it seems a pity that such admirable pantomimic opportunities as it offers—especially in the cat and dog, which are vital studies—should be wholly wasted.

With three plays, "Measure for Measure," "The Merry Wives of Windsor," and "All's Well," the excellent First Folio Shakespeare of Messrs. Crowell is half completed. We have so often commended the labors of the editors, Miss Charlotte Porter and Miss Helen A. Clark, that we have nothing new to say in regard to the present volumes. By this time the edition must have made a place for itself in every Shakespearean library. In many respects it is the most convenient reading edition on the market. Occasionally, it is true, one balks at the rather lyrical tone of the introductions, and in the issue of "All's Well," a humorist might even find some amusement in the characterization of Helena as a maiden likely to "excite that peculiar disdain felt by the crude young male for the rare, schooled, and refined strength instinctively recognized by him as out of his line, and not 'like a man' . . . It is much the same attitude as that borne by the average man." But then if our humorist smiled, he would be that average man who has no business to meddle with criticism.

August Strindberg's "Swanwhite," which has been translated by F. J. Ziegler (Philadelphia: Brown Brothers), is a play to see on the stage, rather than to read. It is "a fairy drama," containing bits from many tales, the Wicked Stepmother and Cinderella being most conspicuous. The Strindberg we meet here is he of the later period and at his best; there is mysticism, but not mistiness, and the play is altogether beautiful—in Swedish. The translation is not particularly happy; to translate "betrakta," for instance, with "contemplate," does not betray that close familiarity with both languages which a translator must possess.

"Bibliographie der deutschen Bühnen seit 1830" is a valuable collection of data by Robert F. Arnold, author of "Das moderne Drama" (Strassburg: Trübner).

A meeting of the general committee of the Shakespeare Memorial, held in London, has practically adopted the report of an executive committee planning what will probably be called the National Shakespeare Theatre. The following are salient points of this report:

The objects of a National Shakespeare Theatre, as conceived by your committee, are: To keep the plays of Shakespeare in its repertory; to revive whatever else is vital in English classical drama; to prevent recent plays of great merit from falling into the oblivion to which the present theatrical system is apt to consign them; to produce new plays and to further the development of the modern drama; to produce translations of representative works of foreign drama, ancient and modern; to stimulate the art of acting through the varied opportunities which it will offer to the members of its company. To accomplish these purposes the theatre must be organized upon a true repertory system. It must produce a great variety of plays, and the productions, while simple, must be efficient and beautiful.

They are of opinion that the sum required to build, equip, and endow a National Theatre would be about £500,000, and that this amount should be roughly allotted in the following manner: Site, £100,000; building, £100,000; stage and equipment, £50,000; endowment, £250,000.

The controlling authority is to be a board of governors, representing the crown, various universities and municipalities, and including the Ambassador of the United States, and representatives of the more important British colonies. It was announced that $350,000 had been promised to the scheme by an anonymous contributor.

London is soon to have another new theatre, to be built by Edward Holles, and devoted to the modern and romantic drama. Mr. Holles has a number of dramas, including one entitled, "The Queen of Sheba," by Arthur Shirley and Ben Landeck, another by George R. Sims and Mr. Shirley, and a third by Mr. Sims alone. Further, he has a piece named "Father Anthony," by the late Robert Buchanan, and one dealing

with the career of Garibaldi, by Sutton Vane and Arthur Shirley.

Isaac Henderson, who died in Rome April 1, was born in Brooklyn in 1850, and was graduated from Williams College. Immediately after leaving college, Mr. Henderson came to New York as assistant publisher of the New York *Evening Post* under his father; he also did some writing, chiefly musical criticism. In 1888 he went abroad, and in the course of the next few years he wrote several books and plays. One of his novels, "The Prelate," had considerable success, and a play, "Agatha," was produced by Charles Wyndham in London in May, 1892, and repeated there and in New York under the title "The Silent Battle." Another of his plays was "The Mummy and the Humming-Bird."

Report has reached us of the death, March 10, of the distinguished Shakespearean scholar, Frederick Gard Fleay. He was a graduate of King's College, London (1849), and of Trinity College, Cambridge (1853). In 1856 he was ordained, but held no curacy, devoting himself instead to educational work. In the study of the Elizabethan drama he obtained valuable results in metrical criticism, stage history, and other fields. His "Life of Shakespeare," his "Chronicle of the English Stage," and his "Biographical Chronicle of the English Drama" are monuments of learning and courage. Among his numerous other publications are the following: "Almond Blossoms" (verse, 1857), "Elements of English Grammar" (1859), "Shakespeare Manual" (1876), "Guide to Chaucer and Spenser" (1877), "The Logical English Grammar" (1884), besides editions of various plays. Of recent years he had lived in retirement.

Earl Stirling, who was a member of the company that played at Ford's Theatre the night Abraham Lincoln was assassinated, died in Chicago April 4. He had been stage manager for Augustin Daly and for Daniel Frohman's old Lyceum Theatre in this city. He also was leading juvenile with William J. Florence, Edwin Booth, and Edward Keene.

John Millington Synge, the dramatic writer, has died in Dublin at the age of thirty-seven. His publications are: "Riders to the Sea," "In the Shadow of the Glen," "The Well of the Saints," "The Play Boy of the Western World," and "The Aran Islands."

Adolf Ritter von Sonnenthal, whose death is announced from Prague, was one of the greatest actors of modern times, one of the few players endowed with unmistakable genius. He owed nothing to heredity, still less to education. His father, a Hebrew tradesman in Pesth, was ruined in the troubles of 1848, and Adolf, who was born in 1834, was compelled to seek a livelihood in a tailor's shop. After three years he went to Vienna, where he visited the Burg Theatre, and at once fell a victim to the fascination of the stage. He appeared first as a voluntary supernumerary, and thus studied the leading players behind the scenes. Soon afterwards he managed to find regular employment, and his first triumphs—they were very modest, indeed—were experienced at Temesvar. When, later, Laube, the director at Vienna, gave him a chance, Sonnenthal—chiefly on account of his Hebrew parentage—was hissed off the boards. Next morning Laube, who seems to have been gifted with rare powers of perception, engaged him for three years. Upon his next appearance the public stayed away from the theatre, and for three or four following nights strong antagonism toward him was exhibited in every part of the house. But Laube persevered, and young Sonnenthal gradually won his way into public favor, until he had established himself as Vienna's favorite actor. In 1854 he played Hamlet for the first time, winning an emphatic triumph, and from that time his advance in fame and popularity was rapid. He became a regular member of the Hofburg Theatre in 1856, and in 1881 he celebrated his twenty-fifth anniversary there amid extraordinary popular demonstrations. The Emperor conferred upon him the order of the Iron Crown, a mark of distinction to which no actor had ever before attained. It was in 1885 that he made his first visit to the United States, appearing first in the Irving Place Theatre in this city, where he created a profound impression by the simplicity and veracity of his methods, the vividness of his interpretations, and his striking versatility. He paid brief professional visits to us again in 1899 and 1902.

Adalbert Matkowsky, one of the best known of modern German actors, died recently at Charlottenburg, at the age of fifty. After a few years of preparation he began, at the Court Theatre in Dresden, a long and successful career, which was continued at Hamburg, and, since 1890, at the Royal Theatre in Berlin. He was particularly successful in the great characters of Schiller and Shakespeare.

Music.

While the number of American singers who are admired for their beautiful voices is fast increasing, both at home and abroad, the American speaking-voice is still the subject of severe criticism by W. D. Howells, Henry James, and many other less prominent writers. Can the hardness and shrillness of this voice be remedied? In the opinion of Katherine Jewell Everts it can. She has written a book entitled "The Speaking Voice" (Harper & Bros.), in which she explains the principles of correct training. She looks upon the ordinary American voice as being like a piano that is out of tune. She begins by advising the reader to take off ill-fitting corsets. Children should be taught to take a deep breath when under the influence of excitement: "This breath will cause the throat to open instead of shut, and the tone to grow full, deep, and round, instead of high and harsh." After thus teaching how the tone may be freed and reënforced, the author devotes chapters to changes in pitch, inflection, and tone-color, and finally to the vocal interpretation of different forms of literature. The volume has its uses for singers, too, for, as an old German writer observed, we must learn to speak before we can sing, just as we must learn to walk before we can dance.

"The common fault of Americans, namely, disagreeable speaking voice and slovenly pronunciation," is also one of the themes of "Twelve Lessons in the Fundamentals of Voice Production," by Arthur L. Manchester (Oliver Ditson Co.), which, however, is written more especially for singers. The author has come to the conclusion that teachers make too much use of certain expressions like "open," "covered," "dark," "white," "head tone," "forward," "back," "placing the tone," "nasal," before the students know what they mean. His aim is to present the essentials of voice production in such a way that the difficulties which discourage so many earnest voice students may be minimized. The attention of pupils may be called particularly to his eleventh lesson, in which he comments on the prevailing idea that a voice to be good must be loud. Many students expect a teacher to make their voices louder from the start; but a teacher who does that is a charlatan. A good teacher strives to develop first the quality of a voice, leaving its "bigness" to be settled later. About one-half of Mr. Manchester's volume is devoted to the control of breathing, which is half the battle in learning how to sing without fatiguing the voice.

The letters exchanged by Liszt and Carl Alexander, Grand Duke of Saxony, have been issued in a volume edited by "La Mara" and published by Breitkopf & Härtel. They are in French. The two men were friends from 1844 to 1886, the year of Liszt's death.

The history of Swedish music has been enriched by an unpretentious volume, "Svenska tonsättare under nittonde århundradet," written by Lina Lagerbjelke. It brings together conveniently the data about some of the men who played a part in what is by no means the smallest of Sweden's achievements during the past century. The sketches are concisely and interestingly written, and are accompanied by lists of the compositions; it is significant to notice that by far the greatest number of these are of a lyrical character. (Stockholm: Wahlström & Widstrand.)

Lillian Nordica, Germaine Schnitzer, Mme. Langendorff, Albert Spalding, and David Bispham, will be the soloists at the American début of the Dresden Philharmonic Orchestra, at Carnegie Hall, Saturday evening.

Boston has lost one of her most prominent musicians by the death of Benjamin Johnson Lang, April 4, at the age of seventy-one. He was about equally famed as conductor, pianist, teacher, and organist, and he was one of the few surviving genuine pupils of Liszt. In 1858 he made his first Boston appearance as a pianist. The following year he was appointed organist of Boston's leading choral society, the Handel and Haydn, in which capacity he served until 1895; he was then conductor of the society for two years. He also conducted the Apollo Club from 1871 to 1901, and presided some years over the Caecilia Club. He composed an oratorio, "David," besides symphonies, overtures, and other works, but these are unimportant.

William Castle, for nearly twenty years director of the Chicago Musical College, died in that city April 1, at the age of seventy-two. He was born in England, and made his début in New York as concert singer in 1861.

Art.

A Glance at the Grimani Breviary. 5 color plates; 110 in half-tone. Venice: Ferd. Ongania. 20 lire.

We come tardily to this handsome and useful publication, but the whole matter needs reconsideration in view of the discovery of a fine work by the "Grimani masters" in the library of J. P. Morgan and of recent research into the illuminator's art generally. The well-known publisher and color-printer Signor Ongania, has done well to make the pictures of this remarkable Breviary accessible at a moderate price, and possibly the editor does well in his brief introduction to give merely the external history and the tradition of Cardinal Grimani's chief treasure. The problems and uncertainties are so many that no summary treatment of them is possible. Here we can indicate only two or three issues of capital interest. From that invaluable note-taker called the Anonimo of Morelli, we learn that early in the sixteenth century this Breviary was treasured by the Venetian Cardinal, Domenico Grimani, who bought it from "Antonio Siciliano." Naturally, it has been assumed that this is the great painter, Antonello da Messina. On the strength of his ownership a few of the miniatures have been attributed to his hand. But we shall see that there were other Sicilian Anthonies, at least four contemporary painters of that name, one of whom, Antonello da Saliba, was pretty certainly in Venice towards the end of the century when Cardinal Grimani, born 1461, is likely to have bought the book. Certain of the miniatures suggest an eclectic Italian like this obscurer Antonello. None are of a quality to be by his greater namesake. Besides, Antonello da Messina died when Domenico Grimani was only eighteen years old, and presumably not yet a wealthy collector.

Since the Breviary follows exactly the Franciscan exemplar of Sixtus IV, published in 1477, it has been assumed that he commissioned the book. Evidently, the inference is hazardous. We are justified in asserting nothing more than a *terminus a quo*. The Anonimo declares that the artists were Memling, Gerard of Ghent, and Livinus of Antwerp. The tradition is only a generation later than the work, and therefore worthy of respect. But no student of Memling's Shrine of St. Ursula will, we think, admit a touch of his hand in this volume. Livinus is merely a name. There is a fourth miniaturist, whom we feel may possibly be Antonello da Saliba. Gerard van der Meire of Ghent is the only tangible figure. An examination of the pictures themselves shows, however, that these attributions really matter very little. No great artist worked on the Grimani Breviary. We have to do with a composite work by several accomplished journeyman illuminators, who presumably kept a shop together at Bruges. Several other products of this firm exist. The most notable is a Book of Hours in the Morgan library. Dr. Vladimir G. Simkhovitch, who discussed it about two years ago in the *Burlington Magazine*, attempted to show, unconvincingly to us, that the Morgan copy is the earlier, and afforded models for the Grimani Breviary. In any case, we have to do with an established business, and not with a group of masters especially recruited by a Mæcenas like Pope Sixtus. The Grimani Masters drew from many sources, inventing very few of the figure compositions. The finest miniatures, those traditionally ascribed to Memling, are based in great part on the magnificent compositions of the Limbourgs and on the painting of Gerard David. His influence, indeed, is strong throughout the Breviary. One need only compare the Madonna and Saints (pl. 91) and the Nativity (pl. 27) with well-known panels by David at Rouen and Vienna. So constant is this leading that one must suppose either that Gerard David designed for this shop, or that its chief was one of his immediate followers. Still, the Grimani Masters cast a wide net. The portion of the work assigned to Livinus has a Dutch suggestion; the Adam and Eve (pl. 45) is based on a picture by Hugo van der Goes, now at Vienna; everywhere there is borrowing.

What light does such a work cast upon the illuminator's art in general? The Grimani Breviary was painted nearly a generation after the invention of printing. It represents the decline of a charming art. But it does seem to bear out the theory that the miniature painter of the Middle Ages was primarily a mere executant, working upon the designs of some more famous artist, or borrowing them wherever he might. His originality, then, would lie not in the pictorial but in the purely ornamental part of the work. Now, there is abundant evidence that painters of the Middle Ages did occasionally supply designs for artisan illuminators. Moreover there is only a handful of storied manuscripts which suggest the personal touch of any great artist. It appears that the painter proper who drew or painted on vellum did so very rarely, and only at the bidding of a princely patron. Botticelli, it will be recalled, at precisely the period of the Grimani Breviary, executed a Dante for Lorenzo di Pierfrancesco de' Medici. For, regarding miniature painting as in the main a copyist art, we have the analogies of ivory carving and early enamelling. Here, too, the interest lies not in invention, but in a delicate and difficult process. Evidently, we must revise in a favorable sense our estimate of the painting of the Middle Ages, if miniature painting is to be regarded, not as an art complete in itself, but mainly as a mere workshop echo of a finer art of painting that has otherwise vanished.

It may seem that we have played the devil's advocate for the famous Breviary in St. Mark's Library. We have no such intention. There are many finer illuminations, but few manuscripts on the whole more interesting. The ornamental borders, whether pictorial or decorative, are of great variety and beauty. In their profusion of flowers, architectural forms, utensils, beasts, birds, men and women at their occupations, they afford a vivacious compendium of life as it appeared to the late Flemish painters. The pictures, too, are a true repertory of the painting of the fifteenth century in the Low Countries. From these illustrations, we might, were all the rest lost, divine, if not the exquisiteness, at least the vitality and comprehensiveness of the art that began with the Limbourgs to end with Mabuse. When Cardinal Grimani left this volume to his nephew in trust for the Venetian Republic, the lucky heir begged to be allowed to retain possession of it for his lifetime. And when, in 1593, it was delivered solemnly to Doge Pasquale Cicogna, in full Senate, the republic ordered that the famous sculptor Alessandro Vittoria should do the commemorative metal work for the velvet binding. No one who examines the Grimani Breviary, either in its glass case, or more advisedly in Signor Ongania's volume, will find that these enthusiasms were misplaced.

Charles H. Sherrill has prepared a companion volume to his "Stained Glass Tours in France." England furnishes the title to the new book, which will be published by John Lane.

Students of Leonardo da Vinci are periodically stirred by rumors of a nude Mona Lisa, allied to the drawing at Chantilly and the painting at St. Petersburg. This time the missing masterpiece has turned up in Lombardy. It shows the familiar composition of the Chantilly cartoon, and has a background of flowers. In the *Ressegna d'Arte* for March, F. Malaguzzi Valeri writes upon this and several other versions of the subject, arriving at the conclusion that all are imitations, and possibly due in the first instance to Bernardino Luini. Other articles of interest are "On Some Drawings in the Louvre," by Count Carlo Gamba, who deals chiefly with unidentified drawings by Pordenone; and on Antonazo Romano, by Giorgio Bernardini.

"Florentine Sculptors of the Renaissance," by William Bode (Charles Scribner's Sons), is a beautifully printed quarto with more than ninety well-executed plates. It is a translation of Dr. Bode's well-known studies published six years ago, with the addition of two brief essays, on Leonardo da Vinci, Sculptor, and on the Medallist Niccolò Fiorentino. Otherwise there are virtually no changes from the German original, ex-

cept a swarm of loose and occasionally false renderings by the translator. For the new public an intimation that this is not a comprehensive work, but a collection of essays of varying importance, would have been useful. Again the illustrations, though finely engraved, seem casually chosen. The point of a whole essay, "On Some Youthful Works by Michelangelo," is blunted for want of a print of the Apollo and Marsyas. The book would be all the better for the omission of certain vivacities and polemics, amusing enough when the articles were written, but now irrelevant. Nobody can blame Dr. Bode for wanting to give hard knocks; he certainly has received them in full measure himself. But one tires of his constant attentions to so easy a victim as Marcel Reymond. When all is said this is a most stimulating book for a student. Few connoisseurs contrive to present their investigations in so readable a vein, and with so ripe an erudition. Almost everything about Donatello is admirable. The treatment of Luca della Robbia is in a manner classic. Short comprehensive essays like those on boy portraits and *putti* are delightfully suggestive. In short, few books of essays touch the history and criticism of the Florentine renaissance at so many vital points. Professional students know how to use Dr. Bode's writings. Others should be warned perhaps that many of his conclusions are of a tentative and most disputable sort. What he believes, for example, about the sculpture of Leonardo, finds few advocates of weight. The three bas-reliefs of the Discordia type have been ascribed by Schubring to Francesco di Giorgio, and by Venturi to Bertoldo, which seems nearer the mark. But is not the ascription of any sculpture to Leonardo merely a subjective affirmation? Where there is no accredited work we lack a critical point of departure. In what Dr. Bode writes about the early work of Michael Angelo and the medals of Niccolò few critics fully concur. Still no art historian of recent times has wider knowledge and a more coördinating mind. His reconstructions have always been valuable even when unconvincing. No one, particularly no novice, will read him without profit. We trust that Dr. Bode and his publishers will combine to give this book, in a second edition, definitive and worthy form.

"Vermeer de Delft," by Gustave Vanzype (Brussels: G. van Oest & Co.), is an unpretentious study of the most exquisite of the Dutch masters, but it is long since we have read any bit of art criticism which seems so orderly, sensitive, and comprehensive. We recommend it cordially to all lovers of the enchanting Vermeer. M. Vanzype has discovered in the Van Gelder collection near Brussels what appears to be a large sketch for the famous View of Delft at The Hague. Otherwise, the little book follows established lines, but with rare discretion and enthusiasm. There are numerous good cuts, and a catalogue raisonné, and the price is only that of a French novel. It makes for modesty to recall that as fine a critic as Fromentin scoured both Netherlands without finding a word to say on Jan Vermeer. With him the Homeric right of nodding cannot have come to an end.

"La Sculpture espagnole," by Paul Lafond (Paris: Alcide Picard), is a welcome addition to the brief popular manuals issued under the patronage of the Ministry of Fine Arts. M. Lafond writes with authority on all matters Spanish, and, if the present volume is at times rather hard reading, it is because it is if anything overfilled with information. Since there is little material available on the subject this cannot be reckoned a defect. An index of the chief monuments by places, occupying some twenty-five pages, makes this book a valuable supplement to the ordinary guides. No great sculpture was possible in Spain. Our author admits that at the outset. During the Gothic period, on the whole the best, the sense of nationality was lacking. Later the tyranny of the church kept alive the suspicion of the human body and contempt of life, that made any idealistic treatment of the human form impossible. What was left was realism and asceticism. The great sculpture of what we misleadingly call renaissance and modern Spain is to really great sculpture as the painting of Ribera and Zurburan is to really great painting. But within her limitations Spain produced much that was poignant and individual. For religious ecstasy, for the authentic ferocity of faith expressed in clay, wood, and marble we must turn to the land of Teresa of Avila. What is lacking is not sincerity (that Spain kept through the histrionic years of the Baroque), but a certain nobility, which though plainly in the Spanish character, never was permitted free expression in any but the literary art. This scholarly book opening up a new field may well supply jaded palates with a fresh sensation, akin to the Greco craze. Sober readers will also find their account in it. For either class, the numerous cuts are too small and badly executed to be of much service.

"Aus Kunst und Leben" is the title of a collection of essays, mostly on art, by Dr. P. W. von Keppler (Freiburg-im-B. and St. Louis, Mo.: Herder). Among the varied contents of the volume, the essays on Venice and Venetian art, on Siena, and on the lately discovered mediæval mural paintings at Burgfelden are perhaps the most interesting. The author, an ardent Catholic, takes the ecclesiastical side of art into special consideration. His style is picturesque and agreeable. The book is profusely illustrated.

The rebuilding of the Hohkönigsburg, instigated by Emperor William II, has lately caused a great deal of discussion. Bodo Ebhardt, the architect commissioned to carry on the work of restoration, now publishes his report, together with the history of this splendid example of mediæval architecture, "Die Hohkönigsburg im Elsass: Baugeschichtliche Untersuchung und Bericht über die Wiederherstellung," an issue in the series Deutsche Burgen (Berlin: Wasmuth Co.). The book contains much material about mediæval construction, especially interesting to architects.

The New York Society of Keramic Arts is holding this week its annual exhibition at the National Arts Club. Among the exhibitions at the dealers' galleries in this city are water colors, studies, and portraits, by F. Janin, at Knoedler's, till April 10; old engravings, Ederheimer's; etchings and lithographs by Whistler, Wunderlich's.

Walter Florian, who died in New York April 1, was born in this city and entered the Art Students' League, where he later took charge of the men's life class. He also studied in Paris and won the gold medal at "Julian's." Later, he studied sculpture under Saint-Gaudens. Among his well-known portraits are those of the French sculptor Rodin, Gen. Joseph Wheeler, Carl Schurz, Gen. Cronje, and the grandchildren of Chief Justice Fuller.

George Herbert McCord, a landscape and marine artist, died in this city April 6, at the age of sixty. He was born here, and after studying under American teachers went abroad. He had received medals at the New Orleans Exposition and the St. Louis Exposition. He was member of several societies of artists and an associate of the National Academy.

Francis H. Schell, whose sketches of civil war brought him fame, died at Germantown, Pa., April 1, at the age of seventy-nine. At the beginning of the civil war Mr. Schell was sent to the front by *Frank Leslie's Magazine*, and later became chief of the staff of artists for that periodical in the field. He was supposed to have been the first artist to make use of the balloon to draw pictures of the enemy's encampments. After the war he entered into a partnership with Thomas Hogan, and for thirty years these artists worked together. Mr. Schell was also one of the first illustrators to draw for photographic processes.

From Berlin comes the news of the death of the sculptor Prof. Ferdinand Lepcke at the age of forty-three. He is best known for his Sintflut at Bromberg, and for Der Bildhauer and Wiedersehen in the Berlin National Gallery.

The death is announced, at the age of seventy-four, of Madame Sientje Mesdag (*née* Van Houten), the wife of the sea-painter, H. W. Mesdag. She was herself a painter of some note, and a number of her pictures are to be seen at the Mesdag Museum, at The Hague.

Finance.

THE BANK OF ENGLAND AND THE MONEY MARKET.

Reduction of the Bank of England's official discount rate, last Thursday, to 2½ per cent. as against the 3 per cent. at which it had stood during the eleven preceding weeks, was immediately a result of the decline in open market discount rates throughout the world. When the 3 per cent. rate was established, in January, money was lending at 2¾ per cent. on the Paris market; last week it brought only 1⅛ per cent., and had been as low as 1. Outside the Bank of England, lenders of money in London, who charged 2⅝ per cent. for short loans in January, were last week putting out their funds at less than 1¾; this week, they have asked only 1½. All this was evidence of the world-wide inactivity of trade and consequent lack of employment for floating capital. With private banks and banking houses offering money almost as low as 1½ per

cent., the Bank of England, maintaining 3 per cent. as its own minimum rate, was practically out of the market. The bank has certain functions and responsibilities, in regulating the foreign exchanges and protecting its own reserve, which it fully recognizes; but it is also a joint-stock institution, and must pay at least some regard to the earning of dividends for its shareholders.

The reduction in its rate is, therefore, first a witness to the continuance in Europe of the industrial reaction which began with the panic of 1907. But it is something more than this. It is not even a mere passing incident in finance. It is the ending, for the time at any rate, of an extremely interesting financial experiment. In the middle of last January, the Bank's stock of gold, as was noted in the *Nation* of March 25, was $20,000,000 less than a year before. Not only so, but London, whose net export of gold to Paris had been only $10,000,000 in 1907, and $6,000,000 in 1906, had sent $112,000,000 to that market during 1908. Paris had captured, in the four months prior to the middle of last January, all of the $51,000,000 gold shipped to England from its Transvaal mines, and the rate of exchange between London and Paris apparently insured continuance of the movement.

One reason was, that London's open market discount rates had been ruling at 2¼ per cent., while Paris was bidding 2¾; even the Bank of France holding rates at 3 per cent., while the Bank of England fixed only 2½. The London bank resolved on its traditional *coup* of raising its own rate of discount; this was done on January 14. The first result was a rise of London private discount rates to 2¾ per cent.; the next, a rapid movement of French exchange in London's favor, until, from 25 francs 10½ centimes to the pound sterling, the Paris gold-import point, it got up on March 4 to 25.24½, or within ½ centime of the rate under which London's last previous import of gold from Paris had been made.

Next came a rush of gold into the Bank of England's reserve. Since the bank rate rose in January, the Bank of England has taken in $26,000,000 gold arrived from the Transvaal, $5,000,000 from Egypt, about $10,000,000 from New York, $2,000,000 from Germany, and about $1,000,000 from Paris. Between January 14 and last week Thursday, its total gold reserve had thus increased, as compared with the increase in the similar period of other years:

1909	$50,000,000	1905	$33,000,000
1908	20,000,000	1904	13,000,000
1907	10,000,000	1903	20,000,000
1906	35,000,000	1902	1,000,000

If the parallel is carried back further than 1902, it will be found that not in more than a quarter of a century has there been such an increase as this year's in the Bank of England's stock of gold, between the middle of January and the end of March.

Several inferences suggest themselves. One is, that the English bank is getting all at once its long-withheld share in the great supply of gold set free by the world's very large production of the period, and the meagre requirements of trade. Another is, that the historic recourse of "raising the bank rate to control the exchanges" has by no means lost its power. For further deductions, we must wait to see what happens, now that the bank rate has come down again. It is noteworthy that, when the bank reduced its rate last week, shipment of gold from New York to London ceased at once, and that, since the reduction, Paris exchange on London has fallen to 25 francs 17½ centimes. That is to say, the movement of French exchange in London's favor has retraced exactly one-half of the distance traversed since January. Furthermore, whereas the Bank of England has, since January, taken into its vaults practically all of the weekly gold arrivals from South Africa, this week the whole consignment from the Transvaal was reshipped from London to Vienna. It is therefore still a question whether the forces which operated to deplete the bank's reserve, before it advanced its discount rate in January, will not now come into play once more.

Just Issued

The Fate of Iciodorum

By DAVID STARR JORDAN, President of Stanford University. 90c. net.

This biting allegory of protectionism, first published in the "Popular Science Monthly," is now reissued in a timely little book, with a preface, some amendments in the text, and notes illustrative of "the fulfilment of prophecy" as made in the first edition. The penetration and humor of the work seem to have made it classic.

When Railroads Were New

By C. F. CARTER. 16 full-page illustrations, 8vo, $2.00 net; by mail, $2.16.

"Full of interest. Besides the general chapter on the beginnings, it gives the early history of the Erie, the Pennsylvania, and the Baltimore and Ohio, of the Vanderbilt lines, the first Pacific railroad, and of the Canadian Pacific. Very readable."—*N. Y. Sun.*

Kellogg's Darwinism To-day

"Its value cannot be overestimated."—*Pres't D. S. Jordan in The Dial.*

($2.00 net.)

Locy's Biology and Its Makers

"This summary will be an inspiration."—*Nation.*

(Illustrated. $2.75 net.)

Just Issued

IN THE AMERICAN NATURE SERIES

Prospectus on Request.

Knowlton's Birds of the World

By F. H. KNOWLTON, of the U. S. National Museum, with chapter on the Anatomy of Birds, by F. A. LUCAS, Chief Curator, Brooklyn Academy of Arts and Sciences, and edited by ROBERT RIDGWAY, Curator of Birds, U. S. National Museum. Large 8vo. 16 colored plates and several hundred text cuts. $7.00 net.

The most comprehensive one-volume work on the subject. A modern, popular account.

"Admirable. . . . No better single source from which to begin one's study."—*Independent.*

"The best guide to the aquarium."—*Independent.* (Illustrated. $2.00 net.)

A New Author Seems to Be Looming Up

The following opinions have been expressed on

Bashford's The Pilgrim's March

"A really charming narrative. They're all very real, these good people, even the most lightly sketched among them, while Broggers, and lisping Chris, and good old Lomax, and sweet, human Margaret, and brave, brave Betty, these are altogether too nice and wholesomely lovable to shut away with the memory of their story's single reading. There's too much to be learned and enjoyed to think of perusing but once."—*Chicago Record-Herald.*

"Those critics who have asserted that all possible plots have been used will be compelled to retreat. More than one noteworthy figure, carefully finished and consistent and adding to the general merit of a remarkable first novel."—*The Living Age.*

"Extremely clever and charming. It reminds one here and there of the manner of De Morgan, which is praise enough for anybody."—*Wm. Lyon Phelps, Professor of English Literature at Yale.*

"Somewhat of the temperament of 'The Divine Fire.' . . One of those unusual novels which gather force as they advance. Will be one of the notable books of the season."—*Washington (D. C.) Star.*

HENRY HOLT & CO., 34 West 33d St., New York

VITAL AMERICAN PROBLEMS

An Attempt to Solve the "Trust," "Labor," and "Negro" Problems

By HARRY EARL MONTGOMERY

Crown 8vo. $1.50 net.

"A sane and thoughtful contribution to the solution of great questions which the American people are facing."—*N. Y. Times.*

"A useful book, both because of its clarity of statement and its suggestiveness."—*The Outlook.*

"His sane views are stimulating."—*Louisville Courier-Journal.*

A BOOK FOR EVERY GIRL.

THE GARDEN OF GIRLS

By MARIAN A. HILTON

A FRESH, entertaining tale of two high-bred girls making their way in New York, and having a good deal of fun along with their hard work—a lot of humor, a touch of pathos, and just enough innocent romance to interest a girl.

Just the book for an Easter Gift, nothing better for a Graduation or Birthday present. *Fully illustrated,* 380 *pp.,* 12*mo, cloth,* $1.50.

The Nation.

NEW YORK, THURSDAY, APRIL 15, 1909.

The Week.

The action of the Assembly Judiciary Committee in reporting against the direct-primaries bill, makes it probable that the measure is killed for this session. Presumably, the managers of the machine in both houses will so manœuvre that the Legislature may appear to have given the proposal due consideration and then have voted it down. To smother the bill in committee, to burke it without even reporting it—this would afford the Governor only too good an excuse for calling an extra session. But no one need imagine that this apparent defeat has either surprised or disappointed the Governor. This is not the first time that the Legislature has balked at his plans and later accepted them. Indeed, every one of the important measures which he has urged has seemingly been beaten at the outset; this is the regular programme. But for the Governor, the fight has just begun. He has already spoken in Buffalo and Rochester with great effect. And if the present Legislature does not give us a direct-primaries law, the matter—it is practically certain—will be the dominant issue in the autumn campaign. What is necessary is that the question be fairly presented to the voters. The election last November was a complicated one, with the Presidential and Congressional candidates, as well as those for State offices, appealing for support. Next autumn, in the State at large, the candidates for Assembly can be singled out and effectively attacked unless they favor the direct primary. In many Assembly districts the issue can be made so clear and simple, by such a formidable campaigner as Gov. Hughes, that this setback can only be regarded as temporary.

Norman E. Mack's plan of a national monthly magazine devoted to the interests of the Democratic party has something in its favor. We understand that to be successful a magazine should have variety, snap, and sensation. No other subject is evidently as rich in these potentialities as the Democratic party. No other collection of men can be trusted to present a more varied series of views on any conceivable topic than a group of Democratic statesmen. The element of suspense may be provided by bringing a number of Democratic leaders together, and seeing how soon they will begin to knife each other. Interesting reading a national Democratic monthly would probably make, at least for a time. But whether it would at the same time advance the interests of the great Democratic party is more doubtful. Mr. Mack must not be carried away by the example of Editor Bryan and Editor La Follette. Bryan knows what he wants. La Follette knows what he wants. But the Democratic party does not know. A magazine standing for high tariff and free trade, public economy and paternalism, States' rights and Federal concentration, can scarcely hope to win a steady public.

W. H. Hunter, chief engineer of the Manchester Canal, and one of the experts called in on the Panama plans, gives little credence to the easy promise of a completed canal across the Isthmus in 1915. Reviewing in the Manchester *Guardian* a recent book on the Panama Canal, he points out the fallacy of assuming that the Culebra Cut yields an accurate measure of the time required to finish the canal. Because the cut will be excavated, at the present rate of progress, in less than six years, it has been argued that the crux of the engineering problem will have been surmounted. Not so, affirms Mr. Hunter. The great obstacle, and the chief consumer of time, is the flight of locks at Gatun. This engineer, like many another, has grave doubts about a safe foundation at that location, but waiving those, he says of the projected works that they are "of a sort never conceived of on this planet before":

> At Gatun the three-step twin locks (each lock is to have a usable length of 1,000 feet and a width of 110 feet) will require the completion of a complicated structure of concrete, granite masonry, and steel which will be nearly three-quarters of a mile in length, with a width of some 330 yards and a height, measured from the foundations of the lower lock to the coping of the upper, of from 55 to 60 yards! Of the time which may be required for the construction of preliminary works no living man can form even an approximate estimate, but such work must be completed before the actual building of the locks can even be begun. The locks at Gatun are to be paralleled by works of similar dimensions upon the Pacific side (except that the latter will be divided into two groups instead of being concentrated into one)—that is to say, that there are twelve locks of the dimensions already named to be built. Let these dimensions be realized, let due allowance be made for the difficulties relating to the supply and delivery of the enormous mass of materials, to the provision of the highly skilled labor required, and to the inevitable day-by-day obstructions and delays which must be encountered in the conduct of such works in such positions as these locks upon the isthmus, and it will be acknowledged that there is some reason in the suggestion that 1915 as the date for completion should be read even by the most sanguine as meaning 1919 or 1920.

This is not the cheery, dirt-flying optimism which we all like, but it sounds dangerously like the truth.

Filipinos are having old suspicions freshened by the open hostility a large section of American residents is showing toward public schools in the islands. Dr. David P. Barrows, the Director of Education, says in his latest report, that the government has checked the proper development of primary instruction by refusing funds. The appropriations, smaller this year than in 1908, will not even maintain all the schools already open. Filipino radicals, who would expel all American teachers at once, join in these obstructionist tactics; but the chief strength of the opposition derives from the white carpet-baggers who wish to keep the natives in ignorance while exploiting their labor. These Americans, says Dr. Barrows, are crying out that "the schools interfere with the availability of labor, train boys away from the fields, and expend large sums which would better be devoted to industrial and commercial development." The Manila *Times* has been campaigning stoutly for the reduction of school funds, on the ground that education should be "more practical." Such arguments, which Dr. Barrows hears on every hand in American quarters, bode ill for the men in the insular government who are sincerely working to restore the archipelago to its inhabitants.

Fair answer has never been given to the question whether the American saloon can be redeemed. Prohibitionists say it cannot, until good becomes evil and evil good; intelligent liquor dealers are sure that what is possible in Germany must be here; but, in the absence of a thorough test, all is conjecture. Neither a model barroom nor a model brewer here and there proves anything. Only concerted action by the liquor interests of a whole State or a large city will ever do that; and such a move was never made, with more than the thinnest show of thorcughness, until the Ohio Brewers' Association secured the passage of the Dean law and joined the Cincinnati Anti-Saloon League and the Municipal Reform League to stamp out dives. It is too early to gauge the success of that effort; but if they work a year for strict observance as faithfully as they have begun, we shall at least know whether reputable liquor traffic is a contradiction in terms. To renew or to retain a license under the Dean law, a saloonkeeper must swear that he has not violated the statute; the dishonest man is thus exposed to a jail sentence for perjury, and to blackmail by lawless patrons.

Charter revision is astir in many parts of the country. In most cases where a new plan of city government has been worked out, it has been modelled after the commission form, originated at Galveston, and developed subsequently by Des Moines and other cities. The latest instrument embodying that idea is the charter which has been prepared for submission to the voters of Colorado Springs on May 11. It proposes to concentrate all municipal authority in a mayor and four councilmen, who will be the only elective officers, each acting as head of one of the five city departments. The mayor is to have the further duty of naming all appointive officers, or employees, subject to a civil service system. In order to eliminate party politics as far as possible, no party name or designation shall be allowed on the ballots. Upon petition of 30 per cent. of the voters, an election must be held for the recall of any elective officer, while the initiative and referendum are provided for upon petition of 15 per cent. of the voters. Bond issues and franchises must be submitted to popular vote.

President Jordan of Stanford University, in his annual report for the year ending July 31, just issued, comes back to his former recommendations:

> That the work of the present first and second years be regarded as preparatory to the university, and that the work of these years be designated collectively as the Junior College. . . .
>
> That as soon as the work of the Junior College is effectively carried on in California by other agencies, this work shall be no longer given at the university, the date of May, 1914, being taken as a possible date on which such change may take place.

He proposes, in short, that Stanford become a university in the strict sense of the term, to which no student shall be admitted who has not done nearly as much work as is now required for entrance to a German university. Such an experiment, as we have said before in discussing President Jordan's plan, would be both interesting and valuable in this country. Most of our university study—of the graduate and professional schools—has been an outgrowth of our college courses. At Harvard, Yale, Columbia, and Cornell, for example, the university departments are, so to speak, superimposed on the college, which is still maintained in full vigor. Johns Hopkins and Clark started as universities, but both have since established undergraduate departments, partly, perhaps, to serve as feeders. Neither Johns Hopkins nor Clark, we may add, can command the financial resources of Stanford. An institution of such enormous wealth, devoted to higher study, ought to exert a wide and profound influence on our educational system; it ought to find a rich field for its endeavor. And there are on the Pacific Coast a number of colleges well equipped for giving that undergraduate instruction which President Jordan would relegate to other institutions. From this distance no reason appears why Stanford should not, in a few years, take this important step.

The existence of the Clemenceau Cabinet is more seriously menaced by the latest revelations concerning naval mismanagement than by any number of impending labor insurrections. The French navy has made a deplorable record during the last few years. A number of war vessels, including one battleship and several cruisers, have been wrecked or damaged by explosion, by collision, and by being run aground. The laborers in the naval arsenals have been in a state of chronic mutiny. On board ship discipline has been reported as breaking down. The large number of accidents was attributed to the growing habit of opium-smoking among the officers. Not long ago the government forced the retirement of an admiral who openly declared that the fleet was in no condition to meet an enemy. The ships were said to be short of supplies and fittings. To complete the circle, a commission of inquiry is now bringing to light the most astounding instances of peculation on the part of naval contractors. Russia, the classic home of official thievery, must look to her laurels, if half what is told concerning the French navy be true. At a time, therefore, when the nations are going mad over naval defence, France seems to be finding out that she has scarcely a navy at all. Similar revelations regarding the disorganization of the French army in the winter of 1904 forced the resignation of Premier Combes just as he was about to crown his career by passing the Separation Law. The French army to-day is in good condition. That the navy should have been allowed to come to such an evil pass is a grave reflection on M. Clemenceau's administrative ability.

The scheme of reforms for India is still in the modelling stage. Probably the most important feature of Lord Morley's plan is the creation of Provincial Executive Councils to which natives are to be admitted. Now, since the Executive Council in India is really the ruling body, the step is a far-reaching one, it is still being debated, and its fate is uncertain. As for the Viceroy's Executive Council, Lord Morley only a short time ago was not prepared to go so far as to make one of its six members a native. That, however, is what he has recently done. The results of this action are bound to be far-reaching. In the first place, the appointment ought practically to solve the problem of the Provincial Councils. Once the Viceroy's Council has been thrown open, it would be absurd to keep the inferior councils closed. The new appointee is a distinguished Hindu lawyer, Mr. Sinha, who succeeds an Englishman as legal member. The London *Times* says that for the first time since the begin-

ning of British rule in India, "the supreme authority will shortly pass from exclusively British hands." It goes on to emphasize the gravity of the step:

> A member of the Viceroy's Executive Council is much more than a departmental chief. He is, in a truer sense than the ministers of most European states, a ruler of men, and he should have the intellect and the moral training of a ruler. The largest and the weightiest problems in all branches of government come before him, and the decisions which he and his colleagues reach not only affect the lives of the 300,000,000 inhabitants of India, but often exercise a powerful influence upon the policy and the fortunes of the empire. For him there are no State secrets and no confidential documents. He has a right to know and to debate the *imperii arcana*. The most delicate mysteries of diplomacy, the most carefully guarded of military precautions, are trusted to his faith and to his discretion.

In other words, were the Viceroy's Council confronted with the possible danger of another Sepoy rebellion, a native of India would be party to the British plans. The impartial judge must, however, conclude that, on the whole, the new arrangement will remove the cause for more rebellions than it will incite.

THE SENATE TARIFF.

The tariff bill which Mr. Aldrich reported to the Senate on Monday is, properly speaking, no tariff bill at all. It is the Payne bill scratched and scored, with a mixture of the Dingley bill mangled. Important schedules are left for later introduction. Like the deformed Richard, the Aldrich bill can say that it was

> sent before my time
> Into this breathing world, scarce half made up.

For the speed with which this patchwork was laid before the Senate, reasons are given in the report from the Finance Committee, or, rather, from its Republican members. The urgent need of passing a tariff bill at the earliest day possible, in order to end business uncertainty, is dwelt upon as justification for asking the Senate to take up and discuss an incomplete measure. This is sound enough, especially in view of the fact that the Senate may alter the bill out of its original semblance, and also that the final rates are to be written in conference between the two houses. Yet this plausible excuse that the king's business requireth haste, does not explain the whole procedure. It is plain that, in some of the contested parts of the tariff, the Republicans on the Finance Committee could not agree. Wood pulp, coal, hides, together with the entire provision respecting maximum and minimum duties, and the administrative sections, are "left open for further action." What lies behind that specious phrase, everybody knows: good trading material has been placed in the hands of the log-rollers. What will emerge, after they have got their work done, nobody can tell. Yet final judgment on the Senate bill must be deferred until we do see what comes out of the Senatorial melting-pot.

As the Aldrich bill stands, it has some features which are better than the corresponding ones in the Payne bill. The Senate rejects the 100 per cent. increases over the Dingley duties on gloves, and restores the rates as in the existing law. These themselves are too high, even considered as a tax on an imported luxury. Still, the Finance Committee has repelled this grab, and has also resisted the attempt to raise the taxes on hosiery; and for this, due credit must not be withheld. And if it is true, as Senator Aldrich asserts, that the rates in the Senate bill are "lower than in the bill as it passed the House," this fact will appear as the measure is analyzed, and the country will decide whether Republican pledges have been kept.

Meanwhile, we are bound to note certain disquieting symptoms. Senator Aldrich plumes himself on the fact that "the actual number of reductions" is "about three times the number of increases." But why any increases at all? The demand of the people, and the demand of President Taft, was for reductions. The President has declared that the increases should be "few, if any." But one-third is not a few. These increases are blandly explained by Senator Aldrich as in part due to the need of "preserving the symmetry of the schedules." The rueful taxpayer knows all about that symmetry. It is symmetrical greed, perfectly harmonious division of the plunder, on the principle that if you don't give me my share of the booty, by Heaven, I'll prevent you from getting yours. Furthermore, there is a suspicious change in the Senate bill from *ad valorem* to specific duties. This is especially the case in the cotton and silk schedules. Now, specific duties are the notorious lurking-places of tariff "jokers," and it will be necessary to submit these new specific duties to close and expert examination in order to discover just who are the manufacturers and campaign contributors that have been getting in their fine work.

We think, too, that the country will regard the taking of iron ore off the free list, where the House put it, as not only a backward step, but an ominous one. It gives color to the rumor that the Senate was all along determined to make short work of free hides, free coal, and free wood pulp. It is about those articles that the Senatorial "hog combine" was reported to be forming, and the restoration of iron ore to the dutiable list will cause fears for the worst in the other items, too. Making iron ore free was, as Congressman McCall pointed out, one of the significant and strategic features of the Payne bill. It meant a determination to withdraw a perfectly needless protection from the few great corporations which control practically all the iron-ore deposits in this country. By so much, it implied a purpose to tax wealth, not poverty, at least in the sense that wealth would not be aided by law to heap up its accumulations at the expense of the masses of the people. But this good impression of the Payne bill, Senator Aldrich and his colleagues have at once gone to work to destroy.

Tariff legislation has now entered upon its really critical stage. The next few weeks will show whether the Senate can be responsive to public sentiment, or whether selfish and powerful interests are so firmly entrenched in the upper chamber of Congress that no popular attack can dislodge them. We may be sure that President Taft will not be deceived by any glib assurances that the Aldrich bill is a sufficient fulfilment of party promises, or a measure that will actually relieve the consumer. He will look closely to the facts. If they convince him that the tariff bill, in its final form, is playing fast and loose with the country, he will not hesitate to say so; and if a treacherous measure is in the end offered for his signature, it will, we are confident, get instead a veto.

THE DEMOCRATIC BREAK-UP.

Republican tariff-thieves are rejoicing that many Democrats are becoming as one of them. That is the real moral significance of all the talk about South-

ern Democrats having been at last converted from the error of their free-trade ways. Their showing in the House has, in truth, already been bad. It will probably be even worse in the Senate, as opportunity offers. Over thirty Southern Democrats voted in the House last week against the amendment to make lumber free. One of them was the chairman of the last Democratic National Convention, which said in its platform:

> We demand the immediate repeal of the tariff on wood-pulp, print-paper, *lumber*, timber, and logs, and that these articles be placed upon the *free list*.

Political recreancy could not well be more unblushing. Looking at it, first, from the point of view of party, we can now see plainly how vain it would have been, in the last Presidential campaign, for tariff-reformers to pin their hopes to the election of Mr. Bryan. Himself never really a soldier in the war against protection, he had come to have a party following so drugged and debauched by protective and other socialistic arguments, that it could not be depended upon to attack resolutely even the most flagrant iniquities of the high tariff. Two Democratic Representatives were talking last week about the great defection on the tariff within their own party. One of them said that, on that issue, they had lost the Democratic whip, as well as the chairman of their National Convention and a Democratic member of the Ways and Means Committee. "Yes," chimed in his colleague, "and let us thank God the Democratic Presidential candidate was not also in the House, or he might have voted for a duty on oil." Of course, there have always been some Democrats who called themselves, openly or secretly, protectionists. Mr. Randall headed a group which, before Cleveland's day, prevented any revision of the tariff. But after the party has in four Presidential campaigns hoisted the banner of a tariff for revenue only, has once carried the country on that issue, and finally forced the Republicans to take it up, it becomes an act of peculiar turpitude for a Representative to say: "I am a Democrat to the core, but I am a protectionist." When you penetrate to that "core," you find a strong desire for a portion of the tariff swag. And the proportion of Democrats that now confess themselves to be actuated by that desire is large enough to rob their party both of its prestige and its power.

The explanation, to be sure, lies at hand. Poor human nature being what it is, the motive for going in for a part of the tariff plunder is obvious. It has been bluntly put by Senator Tillman. "Your whole system," he said to the Republican Senators, "is one of stealing; but so long as the stealing is going on, we of the South propose to have our share of the booty." Nor would we too severely blame the Representatives themselves. Behind them stands the mass of their constituents, with itching palms. The fatal lesson has been drilled into them that every citizen is entitled to finger coin from the national Treasury; that the only way to get on in business is to obtain a Federal grant in aid; and that the way to make a fortune is to secure the right to tax your fellows, so that their property may be, under the color of law, transferred to you. With these ideas both preached and practised for more than a generation, and with the "new South" reproached so long for standing for a principle, instead of rushing to fill its pockets out of the public funds, it is not a political miracle that we see Democratic Representatives from the South unable to withstand the pressure of selfishness and greed in their districts. While we must lament this, we cannot deny that it is wholly intelligible.

What we cannot easily understand, however, is the jubilation of high-tariff Republicans over Democratic accessions to their band. It is much like the illtimed rejoicing at England's lurch away from free trade, or the raising of protective barriers in France and Germany. Considered from the narrowest self-interest of protection, this is a mistake. Success in that game can be won only when large numbers are "frozen out." Protection made universal, ceases to protect. There must always be some nation, or some class in a nation, unprotected, and hence open to exploitation, otherwise protection, on its own theory, is a dead failure. Therefore, to have Democrats insisting upon breaking into the grand system of log-rolling and corrupt bargaining which goes to the making of a protective tariff, is really an embarrassment to the high-tariff experts and beneficiaries. It makes their task both more difficult in execution and more dubious in effect. If tariff favors are too widely distributed, with too even a hand, they cease by so much to be favors. And if we pass from protectionist tactics to public morals, what does all this mirth of the high-tariff Republicans over Democratic betrayals amount to? Why, merely to saying: "Others have become as bad as we are. They do not believe any longer in a fair field and no favor. To our doctrine of grab and push and squeeze and filch, they have come over. They will strengthen the forces of selfishness and of Socialism. They will fasten so many more blood-suckers upon the Treasury. They will sow envy and hate. They will be recruits to the army of political corruption. Therefore, let us thank God and take courage!"

ANGLO-GERMAN DIPLOMACY.

If statesmanship in Germany and England has not gone sterile, and diplomacy become imbecile, some way of making and keeping the peace between those two countries will speedily be found. The present situation of either, as pictured by its own public men, is growing rapidly to be intolerable; while their relations, as expressed in the alarms and jealousies and recriminations over the desperate competition in naval armaments, are daily becoming more bitter and tense. If ever there was a chance for large statesmanship, it is offered to-day on both sides of the North Sea.

Consider the plight of both nations, as they themselves confess it. It is, primarily, a contest between them of exhaustion. Each is studying the other to see which will first bleed to death. By heightened and oppressive taxation, each is opening its veins; and the financial doctors are standing by to determine which one will first fall fainting to the ground. Mr. Chiozza Money, the English statistical expert, has been taking stock of British wealth that can be flung into the ship-building game, and gravely assures his countrymen that, if they stand ready to surrender their last penny, they can hold out in the wasteful competition a year or two longer than Germany. Misery confronts the people of both countries, if the path they are now treading is followed to the end, but both are seemingly prepared so to pursue it. If Bishop Butler were alive, he would find in this Anglo-German madness fresh prompting and point to his speculation whether it were possible for a whole nation to go crazy.

As if to add to the impression of lunacy, the very naval experts in the two countries, who have precipitated the trouble, are now confessing that they are not sure even of their own ground. They are straining every nerve to carry out a policy which they have to admit may be entirely mistaken. The British Admiralty has placed all its faith in Dreadnoughts, yet is not sure even of them. That the new monsters have practically made England's preceding splendid fleet of battleships and cruisers unavailable for the line of battle, was reluctantly conceded by the First Lord of the Admiralty in the House of Commons the other day. But when pressed for reasons why the government did not, then, order at once eight of the indispensable Dreadnoughts, instead of four, he replied that he was not certain that the best type had yet been found. Thus, as the Dreadnoughts had made the pre-Dreadnoughts antiquated, the post-Dreadnoughts may send the Dreadnoughts to the scrap-heap. Moreover, the development of the warship of the air may soon make the battleships of the sea a vain thing for safety. Pending that event, we have now the report that naval expert opinion, in both Germany and England, is veering to the conviction that future naval battles will be decided, after all, not by Dreadnoughts, but by torpedo-boats! Thus it seems that, for all the taxpayers know, their money is being wrung from them only to be as truly wasted as if it were cast into the sea.

There was a vast amount of bristling military talk when the House of Commons debated, on March 29, the vote of censure on the government, but the most sensible thing said came in a question addressed to the Prime Minister. A member, W. P. Byles, asked Mr. Asquith whether the time were not auspicious for discussing with Germany "the mutual reduction of armaments"; and whether the existing strain did not present "a suitable opportunity for renewing in more definite form the British proposals for an Anglo-German understanding concerning the extent and cost of the naval programmes of the two countries." The Prime Minister replied that the government was "prepared either to make or to receive" such proposals, but did not wish to urge them "where they are not likely to be welcome." But the questioner persisted: Would not the Prime Minister "watch out for an opportunity?" "Yes," said Mr. Asquith. "We have been watching for it a long time."

There we have the open door to a good understanding. If diplomacy did not exist, it would have to be invented to avail itself of this great chance. Neither the German government nor the English can justify itself to its own subjects, to say nothing of the deliberate judgment of mankind, if it neglects so plain an opportunity to compose an insensate quarrel. Sir Edward Grey, the Foreign Secretary, spoke in the House with great restraint and fairness. He warned the extremists on either side. If England, on the one hand, attempted to isolate Germany, or if Germany, on the other, sought to "dominate and dictate the policy of the Continent," a conflict would be almost inevitable. But between these two violent extremes, which he believed that the sober people of either land would not countenance, Sir Edward Grey asserted that "there is a wide space in which the two nations can walk together in a perfectly friendly way." This sentiment found a speedy echo in Germany. Noteworthy is the fact that the Social-Democrats in the Reichstag have sent greetings to the Labor members of Parliament. This is significant of the way in which the struggling masses in either country resent the steps by which militarism is crushing out social reform, and binding burdens grievous to be borne upon the backs of the workingmen. It is for enlightened statesmanship to give heed. The troublous conditions fairly clamor for those "four men around a table" who, Lord Salisbury used to say, could settle any international question if they were given a free hand. Public-spirited citizens in both these educated and civilized nations cannot stand by consenting when the policy of suspicion and hatred is leading straight to financial ruin, if not to a wicked and terrible war. We believe that both German and English diplomacy is ready to make an effort for agreement. All it needs is a little *vis a tergo*. It is for public opinion to push on conciliatory statesmanship to the needed activity.

CONVERSATION.

Is conversation, like letter-writing, rapidly becoming one of the lost arts? Complaints to that effect are heard even in the classic land of conversation—France. If we may believe Abel Bonnard, the tribe of those in Parisian society who deliver a monologue, evidently prepared, and call it conversation, is mightily increased; while the number of really good *causeurs*, able to take the chance word or the accidental subject and play upon it, and make it flutter, butterfly-like, from chair to chair at dinner or in salon, is not what it was when Matthew Arnold wrote in praise of the intellectual quality of French social pleasures. In England, it is said that many think it good form to refuse to converse at all. With us, a similar rule has been creeping in—a rule partly of mercy to the listener to fashionable small talk, partly of necessity, founded in the mental limitations of the talker—and hired "entertainers" more and more relieve the social tedium. We believe that H. G. Wells reported only one place in America where he found that conversation had been kept alive, and that was at the Round Table in the Congressional Library at Washington.

These views, however, we think too pessimistic. The decay of conversation cannot be made out by confining our study of the subject to those who do not converse. Nor are those monopolizing tyrants of the social scene who lecture all comers, and will allow no dog to bark in their presence, the best authorities on the decline of wit and the waning of repartee. According to Buckle, the conversation of Charles Darwin was very far below the level of his books. But Darwin's own account of the interview was that Buckle talked so incessantly that he himself was not able to utter a word. Yet there have been usurping conversers, or haranguers, who would have taken Darwin's mute listening, on that occasion, as a signal display of a high gift for conversation. One who gives attentive ear to your prolonged brilliance can hardly be without talent.

If intellectual conversation is, indeed, disappearing from the world, it is certain that we cannot stay its flight by taking thought. Since it is by nature spontaneous and impromptu, any painful going about to make a set labor of it, or a discipline, or to study up in advance for an encounter of congenial spirits, must be fatal. The form may be kept alive by such means, but the

spirit is murdered. Nothing can be more deadly than to meet a conversationalist freshly primed, and craftily seeking an opening to discharge his carefully loaded weapon. Dr. Holmes's social ornament who was fluent and surprising on all subjects, down to the letter M, but an ignoramus from there to Z, illustrates the perils of talking not only like an encyclopædia, but straight out of an encyclopædia. M. Bonnard writes in the *Figaro* of an experience of his own. At a certain breakfast which he attended, one of the guests fairly emitted radiance. Throughout the entire meal he kept up his exhibition of knowledge and command of epigram, until finally some one asked him in sheer wonder how he managed to sustain his *verve* so brilliantly. "Oh, well," was the horrible confession, "when I know that I am to spend an hour in witty company, I prepare myself before coming." This, truly, was to carry secret weapons to a meeting where the honest gentleman goes unarmed.

The chief rule of conversation is that it must have no rules. There can be nothing cut-and-dried about it. People meeting by chance, or by appointment, do not solemnly say to each other: "Go to, let us converse," just as they might say: "Let us have a game of bridge." The fine flower of conversation is that it is a continual surprise, a perpetual voyage of discovery, even to those taking part in it. They cannot tell where the give-and-take will carry them. They only know that, once embarked, the wind will blow them where it listeth. It is theirs to yield themselves, not to struggle. If they visibly resent and resist the course which improvised conversation is taking, they at once break the magic spell, and might as well be in a class or listening to a sermon.

Yet even the unlimited charter of conversation contains one restriction. The work must be one of collaboration. The really "great conversers" are not the men who dominate the table or the drawing-room with a flow of eloquence that brooks no interruption, but those who have the art and the grace to contribute something of their own while drawing out the best that others have. Macaulay must have been overpowering and dazzling at times, but we should prefer being oftenest in the company of men like Hallam, with his mouth "filled with cabbage and contradiction." In this idea of coöperation in conversation, there is, also, comfort for the stupid man. The presence of even a dunce among *gens d'esprit* sometimes gives to the latter, according to M. Bonnard, a new sense of mutual understanding and complicity, so that they gladly pour out their riches more fully than usual before their stolid companion. This thought should give the most despondent fresh hope. If conversation depends upon a supply of dull people, it must and shall be preserved.

ALGERNON CHARLES SWINBURNE.

The passing of Swinburne last Saturday morning will be to many like the closing of the door to another of the chambers of romance. And this may be said in an almost literal sense. For years, the Pines at Putney Hill, where Swinburne and Mr. Watts-Dunton have lived together, has been the goal of longing for the more romantic of England's younger poets. The life of the two men was passed latterly in a kind of fraternal retirement, not even much broken, we believe, by the recent marriage of Mr. Watts-Dunton; but their home was the refuge of a great tradition, and their example an inspiration to those who regretted the on-creeping of the grayer reign of prose. Not only was the house stored with the pictures and other tangible relics of Rossetti and those others who maintained the protest of a rebellious imagination through the mid-Victorian days, but something of the very mental atmosphere and authority had been carried from the famous house in Cheyne Walk, where they had waited upon Rossetti, to their freer dwelling on Putney Hill.

Swinburne was born in social circumstances which permitted him to follow from the first his natural bent. His family connections were aristocratic. His mother was a daughter of the Earl of Ashburnham, his father, Charles Henry Swinburne, was an admiral in the Britsh navy, his grandfather a rich north country baronet. He was born in London on the fifth of April, 1837, and in due course, he was sent to Eton, where he speedily acquired a reputation as an eager but capricious student. He was then, as all through his life, fond of acquatic sports, and became a famous swimmer. But of his boyish days not much is known. From Eton he went to Oxford, entering as a commoner at Balliol in 1856, and before long he became a prominent figure in the Union, where he made the friendship of Morris, Burne-Jones, and Rossetti. In later days a magazine writer, referring to his appearance at that time, said:

> I shall never forget my first meeting with Algernon C. Swinburne, the poet, now famous, then unknown. It was in the rooms of the Oxford Union Society, and I still have before my mind's eye the vision of a slight youth, whose whole appearance indicated individuality. His locks were of the tint so dear to the pre-Raphaelites, and there was a superfluity of them on his head, with a few struggling hairs on his delicate chin. His complexion was white as a statuette, his throat slender as a girl's, his features refined, his upper lip proud as that of a Scottish chieftain. He is, in fact, Scotch in type of physiognomy, as also in the supple clean limbs, so different from those of wiry, robust Matthew Arnold, or stalwart William Morris. It was impossible to remove one's gaze from a being so unlike the average men of intellectual humanity.

But he reaped no laurels in his university career, although he was known as a classical scholar of considerable attainments. Without taking a degree, he left college and made a Continental tour, in the course of which he encountered Walter Savage Landor. The similarity of their tastes led to an intimacy which was not without influence on the younger man. Upon his return to England, he went to live in Chelsea for a while, sharing a home with Rossetti and George Meredith. Already he had ventured into print with three articles and a poem, published in "Undergraduate Papers," in 1858. In 1860, he made his first pretentious publication in two plays, "The Queen Mother" and "Rosamond," which did not attract much attention. Five years later came his "Atalanta in Calydon," which at once gave him a place in literary London. Everywhere it was recognized as a masterpiece of its kind, wonderfully rich in its imagery and in the melody and power of its diction. Some of the critics found fault with the tricks of alliteration and a certain wild exuberance of language—flaws which were to become more serious faults in his maturer works—but all admitted the brilliancy and sheer poetic beauty of the achievement. "Atalanta" was followed speedily by "Chastelard," the first of many compositions in which Mary, Queen of Scots, was to figure. Then followed the first series of "Poems and Ballads" (under the title "Laus Veneris") in which Swinburne broke the bonds of all restraint, giving vent to morbid suggestions and exposing himself thereby to a series of fierce denunciations.

In 1867 he published his "Song of Italy," with its new note of radicalism, which in some of his poems was to swell into a tumult of vituperation, and which, with the improprieties of his "Poems and Ballads," prevented him from being a possible candidate for the Laureateship after the death of Tennyson. From this date he sent out a rapid succession of dramas and lyrical and narrative poems: "Sienna" (1868), "Songs before Sunrise" (1871), "Bothwell" (1874), "Songs of Two Nations" (1875),

"Erechtheus" (1876), "Poems and Ballads, Second Series" (1878), "The Modern Heptalogia" (1880), "Songs of the Springtides" (1880), "Studies in Song" (1880), "Mary Stuart" (1881), "Tristram of Lyonesse and Other Poems" (1882), "A Century of Roundels" (1883), "A Midsummer Holiday and Other Poems" (1884), "Marino Faliero" (1885), "Locrine" (1887), "Poems and Ballads, Third Series" (1889), "Sisters" (1892), "Astrophel and Other Poems" (1894), "A Tale of Balen" (1896), "Rosamund" (1899), "The Duke of Gandia" (1908). All these, with the exception of the last named, have been republished by Harper & Bros. in a uniform edition of eleven volumes, with a dedicatory epistle to Mr. Watts-Dunton.

His prose has not yet been added to the uniform edition of his works, and in part has never appeared in book form. It runs parallel with his verse, and, indeed, began in 1866 with a retort upon his critics under the title of "Notes on Poems and Reviews." There followed: "William Blake, a Critical Essay" (1867), "Under the Microscope" (1872), "George Chapman" (1875), "A Note on Charlotte Brontë" (1877), "A Study of Shakespeare" (1880), "Miscellanies" (1886), "A Study of Victor Hugo" (1886), "Study of Ben Jonson" (1889), "Studies in Prose and Poetry" (1894), "Love's Cross Currents" (1905; a novel written much earlier), "Age of Shakespeare" (1908).

Swinburne, like his living friend, was thus both poet and critic, but if the influence of the two is analyzed it will be found that his power has been primarily in the way of direct example, whereas the hold of Mr. Watts-Dunton on the younger generation is more that of the maker of critical phrases. To the latter, for instance, we owe the formula, which by the poetical protestants of to-day is proclaimed as a summing up of the movement started by Coleridge and Wordsworth and as the watchword for the romantic rebellion of to-morrow—the Renascence of Wonder. It is indeed one of the intuitions that come only to the critic of genius; its full meaning can be appreciated by those alone who know how systematically the critics of the early eighteenth century suppressed the sense of wonder—mystery, or enthusiasm, they called it—which stirs us in such writers as Sir Thomas Browne, and how deliberately Coleridge attempted to restore that emotion. Whether the preaching of that gospel in the particular form given to it by the *par nobile* of Putney Hill is altogether suitable to the time, whether there is not a strain of falsetto running through their fury, is another question. At least the tactless indiscretion of some of their disciples, such as James Douglas, the biographer of Mr. Watts-Dunton, is of a kind to make us doubt.

The part of Swinburne in this battle of the romantics might be characterized, not invidiously, as the renascence of sound. When he first took the public with his "Atalanta in Calydon," discerning readers knew that here was a music, a riot of rhythmical sound, which for almost two centuries had not been heard in England. It might be described as a renascence of the harmonies of Milton's and Sir Thomas Browne's prose, moving now to the measured step of verse. Tennyson had perhaps pointed the way, but he had not found the exultant swing and the impetuous disdain that liberated the lines of the younger poet. And if any doubted of the new music, they must have been persuaded when the next year came the "Poems and Ballads,"

> When, with flame all around him aspirant,
> Stood flushed, as a harp-player stands,
> The implacable, beautiful tyrant,
> Rose-crowned, having death in his hands;
> And a sound as the sound of loud water
> Smote far through the flight of the fires,
> And mixed with the lightning of slaughter
> A thunder of lyres.

That stanza of "Dolores" might almost be taken as a portrait of the young poet himself, with his lyre of thunder, his new melodies as of the beating of loud water, and, to many it might seem, with his shameless taste for death and the sting of morbid desires.

So with his prose. It is probable that those who admire his critical essays do so chiefly on account of the rolling cadences of his language. He was not a man of ideas, nor was his taste ever certain; all things to him were "incomparable," incomparably good or incomparably bad, with no middle ground whatever. Readers who look primarily for thought and judgment are for the most part strongly repelled by Swinburne's rhapsodical manner; they may even be bold enough to whisper that all this is sound and fury, signifying nothing. But under the right inspiration, he could at times set a critical emotion, if not a critical idea, to a singing melody of words as magnificent as it was inimitable. Passages of his volume on Blake read like the stumbling prophetic books of the seer translated into a rhythmical ecstasy:

> At the entrance of the labyrinth we are met by huge mythologic figures, created of fire and cloud. Titans of monstrous form and yet more monstrous name obstruct the ways; sickness or sleep never formed such savage abstractions, such fierce vanities of vision as these: office and speech they seem at first to have none: but to strike or clutch at the void of air with feeble fingers, to babble with vast lax lips a dialect barren of all but noise, loud and loose as the wind.

It would not be easy to express more resonantly the emotion aroused by a first introduction to the mythical figures of Blake, and to his "amazing capacity for such illimitable emptiness of mock-mystical babble."

The literary sources of Swinburne's mastery of sound are not altogether easy to trace. Evidently it is in part a revival of the large rhythms and polyphonous words of seventeenth-century English prose; a true renascence, indeed. But it owed much also to foreign models. The melody of Victor Hugo he thought more sublimely beautiful than any music heard since the morning stars sang together; and he evidently sought to catch some echo of these harmonies in English. For Spanish we do not know that he had any special predilection, yet to our ear his rhythms have more affinity to the sweeping majesty of that language than to his beloved French or to any other modern tongue. In the lyrics of Espronceda's "El Diablo Mundo," in the grave lilt of the opening words, "Boguemos, Boguemos," we have something that suggests very strongly the manner of the later English poet.

But withal the sheer delight in prolonged, reverberant sound was in the man himself. There are stories abroad that show him on a day of storm pacing swiftly back and forth in a room, mouthing out poetry to the rhythm of the wind, and raising his voice to a defiant shout at the rattle of the thunder. It was his very temper. If a cab-man asked him for more pay, the fellow might be deluged with choruses from the Greek tragedians till he drove away as from a maniac. Above all, he loved the ocean, not so much, apparently, for its radiant and variable beauty, but, like De Quincey, for its lisping and clamorous voices and for its responsiveness to the free-blowing winds. He loved its rhythmical motion also, and his verse is never more successful than when inspired by the joy of the swimmer buffeting the waves of the deep sea. He revelled in its salt, estranging charms with a pagan, sensuous delight:

> I will go back to the great sweet mother,
> Mother and lover of men, the sea.
> I will go down to her, I and none other,
> Close with her, kiss her, and mix her with me.
> Cling to her, strive with her, hold her fast:
> O fair white mother, in days long past
> Born without sister, born without brother,
> Set free my soul as thy soul is free.
>
> O fair green-girdled mother of mine,
> Sea, that art clothed with the sun and the rain,
> Thy sweet hard kisses are strong like wine,
> Thy large embraces are keen like pain.
> Save me and hide me with all thy waves,
> Find me one grave of thy thousand graves,
> Those pure cold populous graves of thine
> Wrought without hand in a world without stain.

Other poets may have accomplished greater things during the lifetime of Swinburne, there may be something to censure in his methods and themes, but he cannot be deprived of the honor of being the greatest master of musical words in the nineteenth century.

FRANCIS MARION CRAWFORD.

Francis Marion Crawford, the novelist, died at Sorrento, Italy, April 9, after a long illness. He was born in Italy in 1854, the son of Thomas Crawford, in his day a well-known American sculptor, and Louisa Cutler Ward, a sister of Julia Ward Howe. At an early age he showed an aptitude for language and became familiar with French, German, and Italian. When he was twelve he came to this country and began his more formal education at St. Paul's School, Concord, N. H. Three years later he was back again in Italy. By that time he had developed a taste for mathematics, a taste which ultimately led him to Cambridge University, England. There he is said to have paid more attention to athletics than to study. Without finishing his course at Cambridge, he went to Karlsruhe and Heidelberg, and finally to Italy, where he became much interested in Sanscrit. The pursuit of Sanscrit took him to India, where for more than a year he edited the Allahabad *Indian Herald*. By 1880 he was in Italy again, hanging on the outskirts of journalism. Then family affairs drew him to this country, where he found his final vocation.

Here he was dividing his time between Boston and New York, with incidental study of Sanscrit at Harvard. At a dinner in New York with his uncle, "Sam" Ward, he told the story of a man named Jacobs, who, as agent for an English syndicate, sold what was then supposed to be the biggest diamond in the world to the Nizam of Hyderabad for $240,000. The English government protested, on the ground that a petty ruler should not squander so much money. Mr. Ward thought the tale a good one, and advised Crawford to make a novel out of it, though the young man had always declared he had no constructive imagination. The result of the attempt was the highly successful story, "Mr. Isaacs," published in 1882. He followed it up the next year with "Dr. Claudius," and then Thomas Bailey Aldrich got him to write "A Roman Singer" for the *Atlantic Monthly*. After that he generally composed at least one novel a year, and sometimes two or three in the course of the twelvemonth. Doubtless, he wrote too rapidly, for at the time of his death he seemed to have passed the summit of his literary career. His later books were not so successful as the earlier. The great popularity which his novels long enjoyed was deserved, in the sense that he was an excellent story-teller, and the world will be served with story-telling. No one in his generation excelled him for mastery of movement and sustained interest in his narratives. Then, too, he had travelled widely, and he showed an exceptional faculty for the effective use of local color. It was in picturing Italy, however, that he chiefly excelled, as in the Saracinesca stories. His characters were not always free from convention, but in the main they were human and likeable, showing his power of keen if not penetrating observation. For literary workmanship, or for profound thought, he was never distinguished; but such qualities were not demanded in a writer so facile, so alert, so interesting. His chief works are: "To Leeward" (1884), "An American Politician" (1884), "Zoroaster" (1885), "A Tale of a Lonely Parish" (1886), "Marzio's Crucifix" (1887), "Paul Patoff" (1887), "Saracinesca" (1887), "With the Immortals" (1888), "Greifenstein" (1889), "Sant' Ilario" (1889), "A Cigarette Maker's Romance" (1890), "Khaled" (1891), "The Witch of Prague" (1891), "The Three Fates" (1892), "The Children of the King" (1892), "Don Orsino" (1892), "Marion Darche" (1893), "Pietro Ghisleri" (1893), "The Novel—What It Is" (1893), "Katherine Lauderdale" (1894), "Love in Idleness" (1894), "The Ralstons" (1894), "Constantinople" (1895), "Casa Braccio" (1895), "Adam Johnstone's Son" (1895), "Taquisara" (1896), "A Rose of Yesterday" (1897), "Corleone" (1897), "Ave Roma Immortalis" (1898), "Via Crucis" (1899), "In the Palace of the King" (1900), "The Rulers of the South" (1900), "Marietta, a Maid of Venice" (1901), "Cecilia, a Story of Modern Rome" (1902), "The Heart of Rome" (1903), "Whosoever Shall Offend" (1904), "Soprano, a Portrait" (1905), "Venetian Gleanings" (1905), "A Lady of Rome" (1906), "Arethusa" (1907), "The Little City of Hope" (1907), and "Francesca da Rimini," a play (1902).

Several of these volumes, it will be noted, are historical or descriptive. His writings on Rome, Venice, and Sicily, though not the work of a trained historian, were from the hand of a competent craftsman, who always saw the romantic and fascinating side of his subject. At the time of his death he was engaged on a "History of Rome in the Middle Ages," which was to extend through several volumes.

NEWS FOR BIBLIOPHILES.

The remarkable catalogue of the library of the late E. Dwight Church, upon which George Watson Cole has been working for seven years, is nearing completion. The first portion, Vols. I to V, describing the collection of Americana (unequalled in private hands) was published in 1907. The second portion, describing other books collected by Mr. Church, mainly English literature, will form two additional volumes, the first of which has just been issued, and the second of which is in the press. Bibliographically and typographically, the catalogue is as notable as the collection which it describes. Collations are full and exact, and the title-pages of more than three hundred important volumes have been reproduced in fac-simile. In the notes, variations in different issues are pointed out, and references are made to the most important bibliographies and sources of information; and of many important books, other copies are noted in public or private libraries. The issue consists of 150 copies on Dutch hand-made paper, printed at the University Press.

The Americana were arranged chronologically; this second portion is arranged alphabetically by authors, with a few subject headings. For example, in this first volume, which extends to Kempis, the books on angling, and those illustrated by Bewick and Cruikshank, are grouped in classes. Among the older English authors Mr. Church's strongest interest lay in his collections of Shakespeare and Spenser. The Shakespeare collection is certainly the finest in America, and is surpassed by only four others in England—those of the British Museum, of the Bodleian, of Trinity College, Cambridge, and of the Duke of Devonshire. The Shakespeare folios show more variations in title-pages than were ever before brought together in a single library. Mr. Church, it will be remembered, purchased the famous "Rowfant" library entire, in order to secure Mr. Locker-Lampson's Shakespeare quartos. The Shakespeare collection will be described in the second volume of the English portion, and a more particular note about it will be given later. The books on angling 87 lots, include one of the finest sets of the rare first five editions of Walton's "Complete Angler" ever brought together. The first edition (1653) in the original sheep, is superior in Mr. Church's opinion to the Rowfant copy in similar condition, which brought £1,290 when offered in the Van Antwerp sale in March, 1907. The series of books illustrated by Thomas Bewick comprises 62 lots; the Cruikshank collection, 66 lots. Among the rarer early English books described in this first volume are Bacon's "Essays" (1597), first edition, the only copy in this country; the second edition (1598), of which Richard Hoe and W. A. White possess copies; Bunyan's "Pilgrim's Progress" (1678), first edition, with a unique impression of the frontispiece not found in any other of the six or seven known copies; the equally rare third edition (1679), fourth edition (1680), fifth edition (also 1680), sixth edition (1681), eighth edition (1682), ninth edition (1683); the first edition (1684) and the third edition (1690) of the genuine Second Part, and two editions (1683-84) of the spurious Second Part. The collection of editions of Butler's "Hudibras," formed by the late C. B. Foote, is one of the most extensive ever brought together. The Kilmarnock Burns (1784), first editions of "Robinson Crusoe" (1719); Fielding's "Tom Jones" (1749), in the original boards, uncut; and Gray's "Elegy" (1751) are other notable books. The series of first editions of Dickens is very extensive, and includes most of the rarities. Very few books in foreign languages are described, the most important being the first (1605), second (1605), and third (1608) Madrid editions of "Don Quixote," and the first edition (1615) of Part II of the same book. Mr. Church owned a number of fine vellum manuscripts, and these are described accurately with lists of miniatures, and with beautiful repro-

ductions of some of the most interesting pages.

On April 19 and 20 the Anderson Auction Co. of this city will sell Part VI of the library of an "Old New York Collector." This portion includes a long series of first editions of the works of John Addington Symonds and publications of the Grolier Club. On April 21 and 22, the same firm will offer the library of I. H. McCortney of Chicago. Among the titles of interest are some scarce pamphlets relating to the American Revolution; a nearly complete set of the publications of the Grolier Club, including the "Decree of Star Chamber Concerning Printing" and the "Rubaiyat," the first and second of the club's publications and the scarcest.

At the sale of Part V of the Henry W. Poor library by the Anderson Auction Co. on April 5, 6, and 7, some of the volumes of the Valentine Blacque collection brought high prices. The little manuscript by Nicholas Jarry, in a mosaic binding by Trautz-Bauzonnet, was bid up to $3,350; and "Les Amours pastorales de Daphnis et Chloé," in mosaic binding by one of the Monniers, executed in the latter years of the eighteenth century, $950. The first editions of Edward FitzGerald sold low: "Euphranor" (1851), binding in full levant by Zaehnsdorf, only $5; the second edition (1855), said to be rarer than the first, $10.50; "Salámán and Absál" (1857), $30; and "Agamemnon" (1876), $16.50. Other records were: Goldsmith's "Vicar of Wakefield" (1766), binding by Riviere, $450; "The Deserted Village" (1770), $140; Rossetti's "Sister Helen" (1857), $37.50; Ruskin's "Poems" (1850), $125, a very low price; Shelley's "St. Irvyne" (1811), $141; "Queen Mab" (1813), in the original boards, uncut, $5.95, and "The Cenci" (1819), $160; Swinburne's "The Queen-Mother" (1860), with the Pickering title-page, $125; a complete set of the publications of the Hakluyt Society, 152 vols., $742.50; the collection of books on the Rose, 127 vols., uniformly bound, $330; and the collection of autographs of the signers of the Declaration of Independence, lacking four only of being a complete set, $950.

Correspondence.

CHAPMAN AND THE CLASSICS.

To the Editor of The Nation:

Sir: The idea that the first, if not the whole, duty of an author is to be original at all costs is distinctly modern. The very word "plagiarism" was unknown to the Elizabethans. It appears for the first time, according to the "New English Dictionary" in Bishop Montague's "Diatribæ," published in 1621, but composed before 1619. It is not to be wondered at, therefore, that the great writers of the Elizabethan age helped themselves to other men's stories, thoughts, figures, even words and phrases, with a freedom appalling to our perhaps overscrupulous age. Not only did they see nothing wrong in such borrowings, they even held them, when cleverly effected, to be a virtue. One of the essential requisites of a poet, writes Ben Jonson in his "Discoveries," is "*imitatio*, to be able to convert the substance and riches of another poet to his own use." Jonson, as is well known, followed to the full this precept. Dryden said of him that he was a learned plagiary; you track him everywhere in the snow of the ancient classics. In recent times the work of Prof. Felix E. Schelling and M. Castelain has shown that Jonson's so-called "Discoveries" is little else than a commonplace book of translations and adaptations, chiefly from the classics, made with a view, as Charles Crawford has shown, to using this material in his poems and dramas. The forthcoming edition of Jonson, now in preparation by C. H. Herford and R. Simpson, will probably point out more fully than has yet been done how largely Jonson drew upon his classical reading in the composition of his works.

In the meantime my studies in the works of Chapman, Jonson's friend, collaborator, and fellow student, have convinced me that Chapman no less than Jonson levied tribute at will upon the ancients. His poems and plays show on every page the influence of his classical studies. The plot of his best comedy, for example, "All Fives," is a mere blending, a *contaminatio* as classical scholars call it, of the "Heautontimoroumenos" and the "Adelphi" of Terence. Chapman takes over from Seneca many well-known dramatic devices, the messenger who describes the duel in "Bussy d'Ambois," the ghost who rises to demand vengeance in the "Revenge of Bussy," the Nuntius who plays the part of a Chorus in "Cæsar and Pompey." These all lie on the surface; but owing to the lack of a critical and scholarly edition of Chapman's plays, it has yet to be pointed out how frequent, how varied, and how cleverly adapted are Chapman's direct borrowings from classical writers. This has been done in part by Professor Boas in his excellent edition of the two plays on Bussy in the Belles-Lettres Series; but there are a number of extremely interesting borrowings which Professor Boas has not recorded, and for the other tragedies practically nothing has been done. I mention the tragedies rather than the comedies because, so far as I can see at present, these borrowings are at once more numerous and more carefully woven into the texture of the verse in the serious plays. In the edition of Chapman on which I am at present engaged I hope to point out at least the greater part of these—no one but a classical scholar of Chapman's own depth and wide extent of reading could hope to find them all. Here it will be sufficient to note some characteristic passages. In quoting from Chapman I shall refer by page to the most accessible edition of his work, that by R. H. Shepherd, published by Chatto & Windus.

In the first scene of "Bussy d'Amhois," p. 141, we have a long tirade by Monsieur on the advantages of public life. This speech, passed over without comment by previous editors, is a mere mosaic of phrases from Plutarch's "De Latenter Vivendo." A comparison of the English verses and a Latin version of Plutarch will substantiate this assertion. I cite from the Latin, not only because it is easier for the general reader, but because I think it likely that Chapman, like most of his contemporaries, used by choice a Latin, or a parallel Greek and Latin, text of classical authors.

Chapman:

Callest thou men great in state, motes in the sun?
They say so that would have thee freeze in shades,
That (like the gross Sicilian gormandist)
Empty their noses in the cates they love,
That none may eat but they. Do thou but bring
Light to the banquet Fortune sets before thee,
And thou wilt loathe lean darkness like thy death.
Who would believe thy mettle could let sloth
Rust and consume it? If Themistocles
Had liv'd obscur'd thus in th' Athenian state,
Xerxes had made both him and it his slaves.
If brave Camillus had lurk'd so in Rome,
He had not five times been Dictator there,
Not four times triumph'd. If Epaminondas
(Who liv'd twice twenty years obscur'd in Thebes)
Had liv'd so still, he had been still unnam'd,
And paid his country nor himself their right;
But putting forth his strength he rescued both
From imminent ruin; and like burnish'd steel,
After long use he shin'd; for as the light
Not only serves to show, but render us
Mutually profitable, so our lives
In acts exemplary not only win
Ourselves good names, but do to others give
Matter for virtuous deeds by which we live.

Plutarch:

Philoxenum . . . et Gnathonem Siculum, obsoniorum nimia cupiditate impulsos, narium sordes emungere in patinas solitos ferunt, ut, aliis ab edendo deteritis, ipsi soli implerentur propositis cibis. Atque sic etiam isti nimio gloriæ studio repleti gloriam apud alios traducunt tanquam rivales suos, ut ipsi ea absque æmulis possint potiri.—i, 2.

Si Themistocles Atheniensibus ignotus fuisset, non repulissent Græci Xerxem: si Camillus Romanis, periisset Roma.—iv, 4.

Epaminondas quidem ad quadragesimum usque annum obscurus, nihil profuit Thebanis: postmodo cognitus et rebus præfectus patriam pessum euntem servavit, Græciamque servitute liberavit. . . . Dum quippe in usu est splendet, æs ut nobile; In otio si jaceat, labescit non modo, ut est apud Sophoclem, domus, sed etiam ingenium viri.—iv, 5.

Nimirum sic sentio; sicut lumen non manifestos tantum nos, sed et utiles invicem facit; ita notitiâ non gloriam modo, sed et agendi materiam virtutibus parari. —iv. 4.

It will be noticed, of course, that here is no slavish translation, Chapman omits, rearranges, expands, inserts his own ideas; the sentence, "Do thou but bring," etc., has no parallel in Plutarch. Yet on the whole, the parallel is so close as to suggest that Chapman wrote these lines with his copy of Plutarch open before him, unless indeed he kept a commonplace book after the pattern of Jonson's "Discoveries."

An entirely different use of the classics appears in "Bussy," ii, 1 (p. 148):

Then, as in Arden I have seen an oak
Long shook with tempests, and his lofty top
Bent to his root, which being at length made loose,
(Even groaning with his weight) began to nod
This way and that, as loath his curled brows
(Which he had oft wrapt in the sky with storms)
Should stoop; and yet, his radical fibres burst
Stormlike he fell, and hid the fear-cold earth.

The origin of this elaborate simile is, I fancy, a well-known passage in Virgil:

Ac veluti summis antiquam in montibus ornum
Cum ferro accisam crebrisque hipennibus instant
Eruere agricolæ certatim; illa usque minatur
Et tremefacta comam concusso vertice nutat,
Volneribus donec paulatim evicta supremum
Congemuit traxitque jugis avolsa ruinam.
—Æneid, ii, 626 seq.

There is no question of translation here, even of the freest Elizabethan translation. The trees are different, the places in which they grow are different, the reasons of their fall are different. Yet it seems plain that Chapman's simile was inspired by that of Virgil, and even that the English poet's choice of words was suggested by the Latin; compare "groaning with his weight" and "congemuit," "gan to nod" and "nutat," "curled brows" and "comam," "storm-like

he fell" and "traxit . . . rulnam."

The "Revenge of Bussy" is even more marked than the preceding play by its draught upon the classics. It is, in fact, saturated with classical adaptations and reminiscences. Mr. Boas has pointed out the strong influence of Epictetus, several passages from whose "Discourses" are worked into the texture of the play, but there are other borrowings which he has omitted to note. One of the most interesting of these is found in ii, 2 (p. 185), in the speech of Tamyra, beginning "That is so far." The simile which closes this speech is taken over with a few changes from a poem by Chapman himself, entitled "A Good Woman," which appeared a year before the publication of "The Revenge," *i. e.*, in 1612. This poem is a paraphrase in heroic couplets of parts of Plutarch's "Conjugalia Præcepta," an essay which had been already translated by Lily in "Euphues and His England" (the epistle of Euphues to Philantus, ii, 223, Bond's edition). I give here the Latin of Plutarch (Conjug. Præcept., §14), followed by the rendering in the poem, "A Good Woman."

Plutarch:

Sed quemadmodum geometræ dicunt lineas et superficies non se ipsis moverl, sed motus corporum comitari: lta uxor debet non proprias habere affectlones, sed mariti seria, joca, austeritatem vultus, ıi-sumque subsequi.

Chapman:

And as Geometricians approve
That lines nor superficies do move
Themselves but by their hodies' motion go;
So your good woman never strives to grow
Strong in her own affections and delights,
But to her hushand's equal appetites,
Earnests and jests, and looks' austerities,
Herself in all her subject powers applies.

The passage in the play simply rewrites these lines in blank verse. A little further on in this scene (p. 185) we come upon the fable of the wind and the sun. Chapman took this also, not from Æsop, but from the "Conjugalia Præcepta" (§12), where it ls found, along with its application to the husband's treatment of the wife. Another bit of the same treatise which appears in the poem, "A Good Woman," is not introduced in this scene, perhaps because Chapman had already alluded to it in an earlier drama.

Plutarch:

Qui ad elephantos accedunt, splendidò; qui ad tauros, puniceo vestitu non utuntur, quod his coloribus animalia ista in rabiem vertuntur.—§45.

Chapman:

And as those that in Elephants delight,
Never come near them in weeds rich and hright,
Nor hulls approach ln scarlet, since those hues
Through both those heasts enrag'd affects diffuse.

Compare:

To bulls we must not show ourselves in red,
Nor to the warlike elephant in white.
"Byron's Conspiracy," ii, 1 (p. 224).

Another instance of Chapman's making double use of a loan from the classics occurs in the third and fourth acts of this play. A substantial part of the long speech of Clermont (p. 197) beginning "God hath the whole world perfect made and free," and going on to the end of the speech is expanded, as Mr. Boas has shown, from the "Discourses" of Epictetus iv, 7, 6-11. This work, however, was not done for the play, but had already appeared in the shape of a poem in herolc couplets, entitled "Please with thy Place." among the poems appended to Chapman's translation of Petrarch's "Seven Penitential Psalms," 1612. This poem, for some unknown reason, was not included in Shepherd's edition of the "Minor Poems," and as no copy of the original volume exists at the British Museum, lt is only known to the few who have had the curiosity to examine the tlny book at the Bodleian. Only part of the poem appears at this point in the drama, but the frugal author, determined to lose none of it, inserted the latter half in a subsequent speech of Clermont's (p. 200), beginning "That in this one thing all the discipline," and going on to the end of the speech. It is interesting to note that after making a few changes in the first lines of this latter passage to remove the end-rhyme, Chapman, tired of his task, and transferred the remainder, rhyme and all, from the poem to the play.

One of the most curious of Chapman's adaptations appears in the second act of "The Revenge" (p. 189), in the long speech by Clermont beginning "So children." The simile beginning "And as the foolish poet," and going on through the speech, attracts attention at once by its phraseology: "parchment ruled with lead," "smoothed with the pumice," "strung wlth crimson strings." It is evident that Chapman is thinking of an ancient manuscript, not of a modern book, and the supposition lies on the surface that he is here negotiating another loan from the treasury of the classic poets. And, true enough, the whole simile turns out to be a clever adaptation from a poem of Catullus. I print so much of the poem as Chapman seems to have used.

Catullus (xxii):

Suffenus iste, Vare, quem prohe nostl,
Homost venustus et dicax et urhanus,
Idemque longe plurimos facit versos.
Puto esse ego illl milla aut decem aut plura
Perscripta, nec sic ut fit in palimpseston
Relata: chartæ regˈæ, novei lˈhri,
Novei umhilici, lora rubra, membrana
Derecta plumho, et pumice omnia æquata.
Hæc cum legas tu, hellus ille et urhanus
Suffenus unus caprimulgus aut fossor
Rursus vldetur: tantum abhorret ac mutat.
Hoc quid putemus esse? qui modo scurra
Aut slquid hac re scltius videhatur,
Idem infacetost infacetior rure,
Simul poemata attigit, neque idem nnquam
Æquest heatus ac poema cum scrihit:
Tam gaudet ln se tamque se ipse miratur.

Chapman:

And as the foolish poet that still writ
All his most self-loved verse on paper royal,
Or parchment rul'd with lead, smooth'd with the pumice,
Bound richly up, and strung with crimson strings;
Never so hlest as when he writ and read
The ape-lov'd issue of his brain, and never
But joying in himscif, admlring ever;
Yet in his works hehold him and he show'd
Like to a ditcher, so these painted men,
All set on out-side, look upon within,
And not a peasant's entrails shall you find
More foul and measled, nor more starv'd of mind.

An examination of the context in which this passage is set, and a comparison of Chapman's verses with their source, will throw an interesting light upon Chapman's method of compositlon. Clermont is denouncing in a long tlrade the degenerate aristocracy of France, "the breathing sepulchres of noblesse." In order to add weight and dignity to the speech, Chapman turns to his classics for apt illustrations. He begins with a quotation from Epictetus, and, contrary to his practice, actually makes an acknowledgment of his source in the margin. He goes on with a curious version of an Æsopian fable (Æsop, No. 184, ed. Teubner), of which I have not been able to find the counterpart elsewhere. Then, passing on to the characteristic attention paid by a decadent generation to externals, he happens to remember some verses by Catullus describing a poetaster who published his wretched verses in the most beautiful form. Chapman, we may imagine, opens his Catullus to refresh his memory, and, with his eye on the Latin text, composes the verses printed above. His opening phrases, "the foolish poet," and "self-lov'd verse," are inspired rather by the general tone of Catullus's poem, than by any particular words; but "paper royal," "parchment rul'd with lead" and "smooth'd with the pumice," are lifted directly from the Latin. Chapman omits the "novei umbilici" as too hard to fit into English blank verse; but "novei libri" appears as "bound richly up," and "lora rubra" as "strung with crimson strings." Further, the words, "never so blest," "writ," "joying in himself," and "admiring," are all directly suggested by the original. The two and a half Latin lines beginning "hæc cum legas" are condensed into a line and a half in Chapman by the omission of the epithets attached in the original to Suffenus, and the word "caprimulgus." The close of Chapman's passage differs absolutely from that of the poem. Catullus has his own moral to draw, that each of us is, in one way or another, a Suffenus, each rides a hobby, to his own delight and the derision of others. Chapman strikes a graver tone, and completes his simile by applying it to the condition of the French noblesse, "painted men," gay without as the manuscripts of Suffenus, but within foul, sickly, and hunger-pinched. Would any modern author dare to treat a classic writer in this fashion, to convey not only ideas, but words and whole phrases from him, and yet to handle him with such masterful freedom, omitting, condensing, rearranging, and finally giving an entirely different turn to the borrowed idea? Nothing, I think, could mark more plainly the change of attitude that has taken place than the fact that such a performance as this we have been considering is now wholly impossible. We think at once too much and too little of our classics.

Princeton University, April 2.

LEGAL PROCEEDINGS AGAINST ANIMALS.

To the Editor of The Nation:

Sir: It may not be superfluous to call the attention of those who have been interested in Dr. Furness's note in your issue of March 4, on the hanging of wolves, and M. Reinach's comment (*Nation*, April 1), to Mr. Frazer's elaborate note in Vol. II of his edition of Pausanias, p. 370. Mr. Frazer makes special reference to A. Chaboseau, "Procès contre les animaux," and cites many quaint and curious instances.

Charles St. Clair Wade.

Tufts College, Mass., April 2.

THE LATE PROFESSOR CARPENTER.

To the Editor of The Nation:

Sir: Will you give me the privilege of adding to more formal expressions of sorrow for the lamented death of Prof.

George Rice Carpenter a word of the esteem in which he has been held by the schoolteachers of the city, and indeed of the whole country?

Professor Carpenter's work had interested him in the school teaching of English, the most important and the most unbearably difficult of our burdens. We had learned thus to respect him as a leader. He gave to our school work freely for many years the aid of his taste and discretion. Where he directed we found it safe to follow. But in our relations we learned still more to value him as a friend. He was a helper not less than a leader. In the execution of our tasks, not less than in the solution of our problems, he bore a hand, always giving generously his sympathy, and ungrudgingly his practical coöperation. If anything worth while has been done to meet the ever-growing necessity of teaching better English to the school community, no man of us has contributed more effectively to this result than Professor Carpenter did.

Of his personal character, as we who were so happy as to be near him have known it, it is now difficult to refrain from speaking, little as he would desire such speech. Manly and strong in all ways, he was one of those who most justify the noble phrase of the English author, which calls upon the "holy and humble men of heart" to bless their Maker. In all his profession there was no better man than he, nor one more humble of heart, and surely we may say, in fraternal farewell, that his short life blessed the world, and Him who gave it. JAMES G. CROSWELL.

New York, April 10.

JEFFERSON ON CENTRALIZATION.

TO THE EDITOR OF THE NATION:

SIR: I enclose you a copy of a letter of Thomas Jefferson to Nathaniel Macon. The original is a part of a small collection of Macon papers, belonging to Mrs. Walter K. Martin of Richmond, Va. In Ford's (Federal) edition of Jefferson's "Writings," Vol. XII, p. 206, there is a letter to the same correspondent, dated August 19, 1821. The enclosed is another letter treating the same general subject, and written only one day earlier. I need hardly say that the book which is discussed is John Taylor's "Construction Construed."

WILLIAM E. DODD.

Chicago, March 30.

Monticello August 18. 21

SIR: Your favor of the 7th is just now received. The letter to which it refers was written by me with the sole view of recommending, to the study of my fellow citizens, a book which I considered as containing more genuine doctrines on the subject of our government, and carry us back more truly to its fundamental principles, than any one which had been written since the adoption of our constitution. As confined to this object I thought, & still think, its language as plain & intelligible as I can make it, but when we see inspired writings made to speak whatever opposite controversiallists wish them to say, we can not ourselves expect to find language incapable of similar distortion. My expressions were general; their perversion is in their misapplication to a particular case. To test them truly, they should turn to the book, with whose opinion they profess to coincide. If the book establishes that a state has no right to tax the monied property within its limits, or that it can be called, as a party, to the bar of the Federal judiciary, then they may infer that these are my opinions, if no such doctrines are there, my letter does not authorize their imputation to me. It has long, however, been my opinion, and I have never shrunk from its expression (altho, I do not cause it to be put into a newspaper, nor, like a Priam in armour, offer myself its champion) that the germ of dissolution of our federal government is in the constitution of the federal judiciary; an irresponsible body (for impeachment is scarcely a scare-crow) working, like gravity, by night & day, gaining a little to-day and a little to-morrow, and advancing its noiseless step, like a thief, over the field of jurisdiction, until all shall be usurped from the states, & the government of all become consolidated into one. to this I am opposed; because whenever all government, domestic & foreign, in little as in great things, shall be drawn to Washington as the centre of all power, it will render powerless the checks provided, of one government on another, & will become as venal & oppressive as the government from which we departed. It will be as in Europe where every man must be either pike or gudgeon, hammer or anvil. Our functionaries and theirs are wares from the same work shop; made of the same material, & by the same hand. if the states look with apathy on this silent descent of their government into the guiph which is to swallow all, we have only to weep over the human character, formed incontrolable but by a rod of iron; & the blasphemers of man, as incapable of self government, become his true historians. But let me beseech you, sir, not to let this letter get into a newspaper. tranquility, at my age, is the supreme good of life. I think it a duty, & it is my earnest wish, to take no further part in public affairs; to leave them to the existing generation, to whose turn they have fallen, and to resign the remains of a decaying body & mind to their protection. The abuse of confidence, by publishing my letters, has cost me more than all other pains, and made me affraid to put pen to paper in a letter of sentiment. if I have done it frankly in answer to your letter, it is in full trust that I shall not be thrown by you into the Arena of a newspaper. I salute you with great respect. TH JEFFERSON.

THE ORIGIN OF THE GUILLOTINE.

TO THE EDITOR OF THE NATION:

SIR: The reviewer of "The Gay Gordons," *Nation*, December 31, 1908, p. 653, writes: "The silly, gallant lad who got himself beheaded (*guillotined* is surely a curious anachronism for 1769) at Brest as a spy," etc.

The italics are your reviewer's. Was the author guilty of an anachronism in describing one of his characters as *guillotined* in 1769? I am not so confident on the point. Undoubtedly the *word* "guillotine" comes from Dr. Guillotin, a member of the National Assembly in 1789, who proposed that capital punishment consist of beheading by means of a machine (in place of axe or sword). Yet, strange as it may sound, there is no evidence that Guillotin ever invented any such machine, while there is abundant evidence that the method of beheading by means of the "drop" was known long before 1789.

First, let me criticise the "Oxford Dictionary": "Guillotin, the name of a physician at whose suggestion the instrument was employed in 1789." Guillotin made the suggestion not as physician, but as Deputy; and the instrument subsequently adopted was employed first in 1792. The maker was one Schmidt of Strassburg. In consequence of the adoption, in 1791, of the new penal code, which prescribed "beheading" as the sole capital punishment, the Minister of Justice, at the request of the magistrates, asked the Assembly for instructions concerning the means to be employed. The Assembly thereupon appointed a committee, and this committee consulted Louis, the secretary of the Academy of Surgery. On March 20, 1792, the committee recommended and the Assembly adopted the mode of execution proposed by Louis. This was "the mode adopted in England. The body of the criminal is laid on its stomach between two posts connected at top by a cross-beam, whence a convex hatchet is made to fall suddenly on the patient by the removal of a peg. The back of the hatchet should be strong and heavy enough to perform the object, like the weight with which piles are driven."

Louis seems to have heard of the Halifax drop axe, once in use there, but scarcely a general instrument in England. A similar "drop," known in Scotland as Morton's Maiden, is mentioned by Walter Scott, in "The Abbot," chapter xviii. It is interesting to note that Marshal de Montmorenci was beheaded at Toulouse in 1632 by means of such an instrument. In truth there are evidences that the drop machine was known in Germany and Italy. It seems to me quite possible, then, that the gallant young Gordon may have been beheaded in this fashion at Brest in 1769. Before the Revolution, even before the Terror, each province went its own way. What the action of the Assembly in 1792 accomplished was to generalize the method and the new machine. It should also be noted that Schmidt's machine was first named *le petit Louison;* but this was almost immediately supplanted by *la Guillotine.* Why, is a puzzle; for, as I have said, there is no evidence to connect the doctor with the events of 1792.

For the above facts I am indebted to an article by Croker, in the *Quarterly Review* of December, 1843. J. M. HART.

Cornell University, April 8.

CORRECT SPEAKING.

TO THE EDITOR OF THE NATION:

SIR: It is a disappointment to me to find that in your article, "The New English Requirements for College" (April 1), no word is offered on the beauty of *spoken* English and the growing tendency towards careless articulation and indifferent pronunciation. It is surely true, as you say, that the literary works to be studied and the subjects set for composition should be chosen with the direct purpose of discouraging "pupils in the habit of slipshod thinking and hazy expression." It is also true that the "art of clear writing" ought to be easily mastered in the happy environment of cultured parents and schoolmates; but it should be remembered that many thousands of words are *spoken* to every one word which is written, and the "art of clear writing" should not be extolled to the neglect of pure, clean, distinct speaking.

It is a question whether the attendance of boys of all nationalities at our schools and colleges is the handicap which it is made out to be. Such boys are for the most part of the second generation born in this country—and my own experience has been that it is almost impossible to make these boys speak the native language of their parents even in the home circle. They speak the language of the school they attend and that of their classmates in the same school or of their playmates in similar schools. The question is: What *is* the school language, as to its purity, and who makes it? Sure-

ly it is not the boys who make it, and if the boys are allowed to grow in garbled pronunciation it is not because of any foreign accent, or because of the foreign tongue spoken at home by their parents. The responsibility belongs elsewhere. When teachers and professors indulge in mispronunciation—or, if that is too severe a word, say that "shading down" which robs a sound of its characteristic definiteness and the language of its characteristic charm—what is to become of the pupils?

The subject of language should be treated as a whole and the spoken language should have greater consideration proportionate to its greater use. In the intercourse between man and man why should not speech be made as pleasing to the ear as the subject under consideration may be fascinating to the mind? Why should our students be allowed to develop speech which seems lacking at once in those elements which constitute culture and refinement? Phonology—the science of sound in language—is not taught in our schools or colleges. And yet how important this is! By technical phonology the misplacement and transposition of vowel sounds and the beggaring of consonantal forms, which go to make up what some writers call the ugliness of English, can not only be easily detected, but can also be easily remedied. As to the incongruities in our careless pronunciation, "their name is legion," and you could not fill your pages with an adequate enumeration of them; but perhaps I may be allowed to cite one single example—the simple word "better." In all classes, with but few exceptions, you hear this word pronounced more like "bedder." If you will listen for this and other similar words, you will soon be convinced that T is gradually losing its clear definement and is merging into the sound which we represent by the alphabetical character D. This very example shows how easy is the remedy by the application of the principles of phonology. After more than thirty years' study of the subject I can say that it is as easy in the beginning to teach correct speaking as it is to teach the rudiments of *any* subject taught in our schools. And why not do it? What a boon to lovers of pure language to feel that when, after his college days, the average student takes his place in the world, it might be said of him: "It is good to hear him speak"!

CHARLES ELKIN.

New York, April 7.

Notes.

A second impression of "The Letters and Memorials of Wendell Phillips Garrison" will be issued on April 17, under the imprint of Houghton Mifflin Co.

John Murray will publish this month a study of "Six Oxford Thinkers," by Algernon Cecil. It deals with Gibbon, Newman, Church, Froude, Pater, and Lord Morley.

Sherman, French & Co. have on their spring list the following books: "The Passing of the Tariff," by Raymond L. Bridgman; "The Art and Science of Advertising," by George French; "Religion and Life," chapel addresses by members of the faculty of the Meadville Theological Seminary; "Providence and Calamity," by Charles W. Heisley; "Love, Faith, and Endeavor," by Harvey Carson Grumbine; "St. Peter," by Richard Arnold Greene; "Modern Light on Immortality," by Henry Frank; "The Trial of Christ," by John B. Kaye; and "The Vision of New Clairvaux," by Edward Pearson Pressy.

The spring list of Cassell & Co. includes the following titles: "Little People," by Richard Whiteing; "George Borrow," by R. A. J. Walling; "Women of All Nations: A Record of their Characteristics, Habits, Manners, Customs, and Influence"; "Quaint Subjects of the King," by John Foster Fraser; and "Faith: The Word and the Thing," by the Right Rev. Handley C. G. Moule.

The Dun Emer Press of Dublin will soon have ready a volume of poems by the late J. M. Synge. It is said that many of the poems are conceived in a spirit of tragic irony, as it were the poet's farewell to the world.

In a new edition of "The Gate of Death," now issued by Putnams, Arthur C. Benson acknowledges his authorship, which, as a matter of fact, has been pretty generally taken for granted.

To the convenient pocket edition of Kipling in limp red leather Doubleday, Page & Co. have added three new volumes: "Under the Deodars," "The Five Nations," and "Stalky & Co." This is an attractive form of these works, for the type is large and the paper is not so thin that it crumples.

"Travels in the Far East," by Mrs. Ellen M. H. Peck, is noteworthy as the detailed record of the experiences of a member of a personally conducted party in a "round the world" tour. It was mostly over very familiar ground, the novel features being a visit to Java, a voyage up the Yangtse River to Hankow, and thence by rail to Pekin and Mukden in Manchuria, and a trip to the Korean capital. The aim of the writer is purely instructive, and she gives much information in regard to the temples and palaces in India, Java, and Japan. Numerous personal details, relating chiefly to hotels, shopping, and modes of conveyance, though often extremely trivial, serve to lighten the prevailing guide-book character of the narrative. The great attraction of the work is its wealth of beautiful and well-chosen illustrations, 175 in number, which give a graphic representation of nearly every scene or building described in the text, as well as pictures of the varied native life. (Published by the author: 5 Waverly Place, Milwaukee, Wis.)

In "Peru: Its Story, People, and Religion," by Geraldine Guinness (F. H. Revell Co.), we have a book which, in spite of its offensive tone of gushing religiosity, contains an element of human interest. This lies in the first contact of an ardent young missionary with the varying types which Peru offers. These are rendered with a semblance of life, notwithstanding the exclamatory style. The best thing in the volume, however, is the illustrations after photographs, which are numerous, characteristic, and reproduced with unusual success.

To the photogravures in "Shamrock Land," by Plummer F. Jones (Moffat, Yard & Co.), must be credited its chief attraction. Most of them are good and some are well-nigh brilliant. As for the text, in which Mr. Jones narrates his "Rambles through Ireland," it gives only the innocent impressions of one who writes with an amazing air of being the first discoverer of a country and people that, somehow, have figured in the literature of travel and description. Amiable scraps of history and poetry are pinned to a narrative which is artless else. To turn from this author's Irish castles to R. Barry O'Brien's "Dublin Castle and the Irish People" (Kegan Paul, Trench, Trübner & Co.) is to pass from an ineffectual book to one of pith and moment. What Mr. O'Brien gives us is a condensed historical account of English administration in Ireland, with all its machinery and personnel, not omitting the ways in which it impinges upon the feelings of Irishmen. The subject is dry, yet the laboriously compiled information is shot through with flashes of national spirit and with stories to the point. It is one way, not least instructive, of recording England's most conspicuous failure in government. That, too, is in effect the theme of "Contemporary Ireland," by L. Paul-Dubois (Baker & Taylor Co.). This is a translation of "L'Irlande contemporaine," that excellent French study which was reviewed in the *Nation* in 1907 (August 15, p. 142). It is here furnished with an introduction by an Irish M. P., T. M. Kettle, who naturally dwells upon the historic relations of France and Ireland, and acknowledges the capacity of this "sympathetic student," despite now and then "an irritating phrase," to produce "the best book that has been written in recent years on the problems of Ireland."

Ever since the publication two years ago of Layard's "Shirley Brooks of *Punch*," there has been a renewal of interest in the attitude of that national jester, Lord Punch, toward America during the civil war. It then was for the first time made certainly known that the famous retractation, printed after the death of Lincoln, was written by Tom Taylor, and with this knowledge came the unpleasant information that there had been strong opposition to any such amends, that indeed Shirley Brooks himself, afterwards editor of the paper, regarded the action as a gratuitous self-humiliation. Now William S. Walsh has brought together the cartoons, comments, and poems printed during the war, and calls his little book "Abraham Lincoln and the London *Punch*" (Moffat, Yard & Co.). It affords a curious glimpse into the humor of a past generation, and has a certain historical interest besides. Mr. Walsh's own running comment on the cartoons and poems will help younger readers to understand the prejudices and passions of the day.

The University of Glasgow has published as a memorial to Dr. John Young, a "Catalogue of the Manuscripts in the Library of the Hunterian Museum." The work was planned and begun by Dr. Young, and on his death in 1902 was completed by a committee. The handsome quarto volume of more than 500 pages is a worthy memorial and points the way for other institutions having like possessions. Unlike a book, a manuscript possesses unique qualities, and no two manuscripts of the same work are exactly alike, as scholars have found to their cost. The description and history of

each item cannot be too detailed, and every feature has interest for the expert who is in search of the best possible text. In this respect the present catalogue is a model, even giving diagrams of the leaves of a signature to show what particular portion of a leaf is missing. The Oriental manuscripts are separately described, and naturally the medical treatises are numerous.

The Virginia archives were long in such a condition as to forbid examination by students or use by the State officials. For three years, the librarian has been engaged in arranging them, and as one of the results a "Calendar of Legislative Petitions" coming from the counties from Accomac to Bedford is now issued, prepared by H. J. Eckenrode, archivist. The arrangement is by counties, and chronologically under each county an elaborate index of names and subjects offers a convenient means to trace a particular document. A glance at the "free negroes" and "slaves" entries will prove the richness of material thus opened to the investigator.

Clement Shorter has done a valuable service in gathering together in a single volume, "Napoleon and His Fellow Travellers" (Cassell & Co.), several first-hand accounts of Napoleon's sayings and doings from his embarkation on the Bellerophon at Rochefort till his landing from the Northumberland at St. Helena. He has offered nothing *absolument inédit*, but it is well to rescue from oblivion the little known accounts of Home, Ross, Smart, Bowerbank, and Bingham, and make it possible to compare them with the Warden Letters (here reprinted with notes) and the Glover-Cockburn Narratives. The accounts of all these eye-witnesses, written from different angles of vision and with varying emotions, are of intense human interest and offer valuable material for historical and psychological study. In his introduction the editor takes Lord Rosebery and J. H. Rose to task—the former for his judgments on Las Cases and Gourgaud, the latter for echoing the average British Philistinism in trying to condone the English government's treatment of the fallen foe.

The "Itivuttaka" belongs to the same division of the Pāli Canon as the "Dhammapada" and the "Jātakas," and is an interesting anthology of the "Sayings of Buddha." A translation of this, as of many other volumes of the Pāli Text Society, has been a desideratum, which we are glad to see met by Dr. Justin Hartley Moore (The Columbia University Press). The English of the translation is well enough, but a very considerable number of errors of interpretation and some of fact compel the judgment that the task was undertaken before the writer was fully prepared for his task.

Paul Sabatier has published his recent Jowett Lectures, "Les Modernistes," as an instalment of "Notes d'histoire religieuse contemporaine" (Paris: Fishbacher). One will find here a brief and, needless to say, cordial account of the main champions of the Modernist cause—Loisy, Murri, and others. As necessary documents, the petition of a group of French Catholics to the Pope and translation of the Encyclical Pascendi and the Syllabus Lamentabili are added. As a clear and in the main candid record of the French disestablishment and the aims of the Modernists the book is valuable. It has the persuasiveness and conciliatory spirit of all of M. Sabatier's writing. It seems to us, however, to come short of complete candor in failing to admit the revolutionary implications of Modernism.

As *Heft* 4 of the current series Texte und Untersuchungen zur Geschichte der altchristlichen Literatur, edited by Prof. A. Harnack and C. Schmidt, we have now a new book of sources entitled "Das Leben des heiligen Symeon Stylites." Prof. Hans Lietzmann of Jena, with the assistance of the members of his seminar for church history, has furnished a critical edition of the Greek sources, while Heinrich Hilgenfeld has added an excellent translation of the Syriac sources, and will later publish this Syriac text itself. The work, which is a model of accurate scholarship, is a *Festgabe* issued on the occasion of the recent centennial celebration of the University of Jena.

Original and scholarly investigations in archæology fill from cover to cover the new fourth annual volume of the Palästinabuch issued by the German Archæological Institute, in Jerusalem, edited by Prof. G. Dalman (Berlin: E. S. Mittler & Sohn). These investigations are along the Dead Sea, through the East Jordan country, and along the arduous way from the so-called Mount of Moses to the tomb of Moses. Several articles deal with topographical problems in modern Jerusalem, and with the description of modern marriage customs illustrative of Biblical times.

"Bosnische Eindrücke," by J. M. Baernreither, with the subtitle "Eine politische Studie" (Vienna: Manz), is a timely booklet, far more critical and careful than many of the recent books dealing with the Balkans. The author discusses intelligently such subjects as the political life, the government, and the schools of the country.

"Griechen und Bulgaren im neunzehnten und zwanzigsten Jahrhundert" is an authorized German translation of the work of the Greek author Nikoles Kasisis (Leipzig: Liebisch). The work is decidedly Hellenistic in bias.

Martin Richter's "Kultur und Reich der Marotse: Eine historische Studie" (Leipzig: Voightländer), the latest issue in the series Beiträge zur Kultur- und Universalgeschichte, edited by Prof. K. Lamprecht, is in every way an excellent addition to recent Africana. The author is a good observer and skilled narrator. His work is divided into two parts, one treating the history of the Marotse people, and the other their culture and civilization.

The programme for the celebration of the five hundredth anniversary of the University of Leipzig will cover three days, July 29-31, together with a *Vorabend* with a public reception especially for visitors from other universities on the 28th. The festivities proper begin with a divine service on the 29th in the Paulinerkirche, followed by addresses of the King and the rector in a public meeting in the New Theatre. The historical pageant takes place on the second day and an excursion to Meissen as the special guests of his Majesty, on the third. Naturally a *Kommers* on a grand scale occupies a prominent position on the programme.

The English teachers of language have organized a Joint Committee on Grammatical Terminology, "in the hope of framing some simplified and consistent scheme of grammatical nomenclature, tending in the direction of uniformity for all the languages concerned." The committee is making particular inquiry on the following points:

(a) Terms open to practical objections on the score of obscurity or inadequacy in representing the usage of any one particular language considered alone, and

(b) Terms which though not giving rise to difficulties within the study of one language appear nevertheless to be inconsistent with those used to describe similar things in other languages.

George Rice Carpenter, professor of rhetoric and English composition at Columbia University, died April 8. He was born in 1863, on the coast of Labrador; prepared for college at Phillips Andover Academy, and was graduated from Harvard in 1886. After two years of study abroad, he returned to Harvard as instructor in English. From 1890 to 1893 he was associate professor of English at the Massachusetts Institute of Technology; and in the autumn of 1893, he came to Columbia, where he reorganized the work in composition, introduced the most approved methods, and displayed remarkable skill both as a teacher and administrator. He was author of a number of text-books, including "Elements of Rhetoric," "English Grammar," and "Notes for Teachers of Composition." He had edited a volume of "American Prose," another of "Model English Prose," and Latham's "Letters of Dante"; and he was general editor of Longmans' English Classics. But, in spite of his labors as teacher and writer of textbooks, he found time for more purely literary work, as shown in such competent books as his "Life of Longfellow" (in the Beacon Biographies, 1901), "Life of Whittier" (in the American Men of Letters Series, 1903), and "Walt Whitman," just published in the English Men of Letters Series, and reviewed in the *Nation* of April 8.

Mrs. Will H. Low (*née* Berthe Julienne) has died at her home in Lawrence Park, Bronxville. She was born in Caen, France, in 1853, and was married to Mr. Low in Paris, in 1875. For several years Mr. and Mrs. Low were much with Robert Louis Stevenson. Later Mrs. Low translated "Dr. Jekyll and Mr. Hyde" into French, and at the time of her death was engaged on a version of his complete works. She wrote also for the magazines, and compiled a book on "French Home Cooking, Adapted to American Households."

THE POWER OF THE MEDICI.

Lorenzo the Magnificent, and Florence in Her Golden Age. By E. L. S. Horsburgh. New York: G. P. Putnam's Sons. $4.50 net.

Lorenzo de' Medici is likely to remain the most attractive of despots. To-day his political activity would cause him to be classified with party bosses, to most of whom he could easily give points. In the nineteenth century he had at least one imitator on a large scale—Napoleon III, who not only successfully won his way to the throne by

a mingling of audacity and guile, but deliberately tried to maintain himself there by a lavish use of display and public amusements, and by the ostentatious patronage of arts and literature. Louis Napoleon's problem differed widely from Lorenzo's, and eventually, at the age of sixty-two, he went down into the great gulfs; Lorenzo died in his forty-third year, with his hold on power apparently unshaken. He had shared in the government of Florence since he was twenty, and had been her single and undisputed tyrant since he was twenty-nine. Yet within a few weeks of his death, his despotism melted away. We ask whether, had he lived ten years longer, he would have managed to keep his seat, or, like the third Napoleon, he would have been blasted by a coalition of hostile circumstances which he misjudged and could not control. The question cannot be answered, but Mr. Horsburgh furnishes data for those who would speculate upon it.

Lorenzo's life has been a favorite theme for historical writers. At least one historian of unusual ability has treated it—William Roscoe, whose biography, first published in 1795, is still read, and deserves to be. Sixty years later Von Reumont produced a solid work, embodying the then latest investigation of sources. After him, Professor Villari, in his biographies of Savonarola and Machiavelli, and in his Florentine history, had much to say about Lorenzo. In 1895 Edward Armstrong of Queen's College, Oxford, wrote an excellent brief life, with which Mr. Horsburgh's volume will naturally be compared. Indeed, the reviewer finds himself forced to reply to readers who ask: "We cannot read both Armstrong and Horsburgh; which shall we choose?" It is safe to reply that either gives a fair survey of Lorenzo's life and times. Armstrong is more compact; Horsburgh more detailed. Both see the main line of historical evolution, and describe it intelligently. Horsburgh pays more attention to the state of Italy, and to Renaissance civilization in general. Both do justice to the wonderful flowering of Humanism at Lorenzo's court. Both analyze Lorenzo's own poems with much minuteness. In his criticism, as in his historical research, Mr. Horsburgh, who comes after Mr. Armstrong in time, seems to have formed his opinions independently. It is interesting to see how much influence J. A. Symonds has had on both.

To come now directly to Mr. Horsburgh, we like his introduction, in which, in the course of fifty pages, he gives a clear summary of Italian politics in the fifteenth century. This is indispensable, because the reader needs to have such a clue to the incessant, intricate, and seemingly purposeless turmoil of that period. The only common motive was love of power. The law of the jungle prevailed. But Mr. Horsburgh has succeeded in disentangling the skein of events in Naples, Milan, Rome, Venice, and Florence, so that we see the elements out of which Lorenzo's policy had to be woven. Perhaps he does less than justice to Venice, but that is natural in one who has saturated himself with the Florentine ideals. His account of the rise of the Medici, beginning with Cosimo *Pater Patriæ*, is clear and satisfactory. The student of comparative government will find material here for contrasting the way by which a fifteenth century Florentine boss got control of his city and state, and the way by which a modern, say, Tweed or Croker, Platt or Quay, accomplished a similar result in New York and Pennsylvania four hundred years later. We commend Mr. Horsburgh for correcting a common notion that Lorenzo crushed any valid political liberties. By the time he became despot, Florence was a republic in only a Pickwickian sense. Her liberty-loving folk had about as much understanding of true freedom as the French Terrorists had. Lorenzo's domination meant order, which the upper and well-to-do classes craved. The one dramatic episode of his career, the Conspiracy of the Pazzi, Mr. Horsburgh describes fully. His chapter upon it is the high-water mark of the book, and will suffice to furnish the curious with a gauge of his scope and calibre. Most striking is his sobriety. Equally sober are his descriptions of Lorenzo's statesmanship at home and abroad, and of his family life. Like the other biographers, he makes us feel Lorenzo's charm so intimately that we wonder why his own pages do not fascinate us more. Instead of color, instead of glow, as might befit the subject, we have a picture done in sepia, lifelike, indeed, in its outlines, but not quite living.

Nevertheless, the book is interesting, its information has been painstakingly gathered, and is well-presented. Though it does not rank among great biographies, it belongs among the good ones, and that fact, with the perennial charm of its hero, ought to commend it to many readers. Illustrations and genealogical tables add to its usefulness; but we have marked many *corrigenda*, especially in the Italian proper names. It seems incredible that Mr. Horsburgh, after working as conscientiously as he has done, should never have observed that Machiavelli is spelled with one *c*, or that the name of his hero is Lorenzo de' Medici (not *dei*).

The Medici Popes (Leo X and Clement VII). By Herbert M. Vaughan. New York: G. P. Putnam's Sons. $4 net.

This is, above all else, an amiable book. It is written as nearly without partisan bias as one could ever expect in a work treating of a subject that involved religious considerations of any sort. It would be impossible to judge from internal evidence whether the author is a Roman Catholic or not. In his preface he disclaims all intention of going deeply into the tortuous ways of Medicean politics or of discussing the burning religious questions of the hour. The former promise the book redeems as well, probably, as any moderately extended treatment of a Medicean subject could. The men whose lives are here described were born into a community in which politics was the very breath of life. That they happened to be devoted to the clerical calling was the merest accident. That profession was far more a political than a religious one. It was assigned to these Medicean youths as a fair division in the spoils of government that belonged by a kind of right of preëmption to their house. The Papacy, the crown of religious politics, was as much a legitimate object of Medicean ambition as was the sovereignty of Florence. In the combination of these two powers, whether in one hand or in the hands of coöperating members of the family, lay the ultimate goal of Medicean policy for generations. If it could have been permanently attained, the control of all Italy might easily have followed, and a united Italy would have reacted decisively on the fortunes of Germany and of France.

It was, therefore, quite in the nature of things that in trying to give a picture of the early lives of Leo X and Clement VII, Mr. Vaughan should have been led into rather more detail of political complications than he perhaps intended or was conscious of, and these portions of his narrative will be the least satisfactory to his readers. When he brings his hero—if we may so describe Pope Leo X—into the full enjoyment of his most enjoyable Papacy, he is freer to dwell upon personal qualities and characteristic incidents, and here, we think, will be found the chief value of the book. "God has given us the Papacy: let us enjoy it!" is the keynote of Mr. Vaughan's account of Leo's administration of the headship of the Christian world. The story makes no pretence of originality. It is frankly indebted to many modern sources, but it reserves a certain judgment of these which saves it from being a mere compilation. The reader gains a sufficiently clear impression of the tumult of affairs in which a Medicean Pope inevitably lived—the conflicting demands of politics, religious and otherwise, of the arts in all their varieties of expression, of "society," if we may use the term to express the manifold personal relations into which the Pontiff was thrown, of business in the strict sense of the word, of sensuous gratification of every sort, of "sport," quite as we mean it nowadays, and (not to be utterly overlooked) of religious observance.

Mr. Vaughan is willing to give these

Medici their due as regards the seriousness of their interest in the nobler ideals of the literary and artistic life, but he cannot conceal the impression that this idealism was satisfied with a certain grade of achievement and could not rise to the highest levels. The favorites of the Medicean court were not the greatest geniuses of their day, but rather the typical brilliant talents of that incredibly talented age. After all is said, it was a rotten thing, this Medicean Papacy, and it demonstrated once more that rottenness at the core will penetrate to the remotest circumference and poison the life of the whole organism.

The question of the religious schism is handled very lightly; but we get some curious glimpses of the lightheartedness with which the whole subject was viewed by this heathenish pretence of a Christian institution—as, for instance, when the Pope and all his court are thrown into fits of uproarious laughter by the spectacle, on the stage of the Vatican theatre, of a nun selecting a husband from a group of monks, all under the patronage of Cupid and his lady mother.

The treatment of Clement VII is naturally less detailed than that of his more famous cousin, with whose fortunes, indeed, his own were from the beginning very closely connected. Its central feature is, of course, the sack of Rome in 1527, the events leading up to this, and its effects upon the politics of Europe. A very brief final chapter is given to two other Medicean Popes, Pius IV (1559-1565) and Leo XI (April 1-April 27, 1605).

CURRENT FICTION.

Maurice Guest. By Henry Handel Richardson. New York: Duffield & Co.

This is not a book to be lightly undertaken or lightly dismissed. The mere courage of the author in launching upon this world of restless magazine-story readers, avid of sensation and quick solution, a novel of 562 wide, closely-printed pages, challenges respectful attention. Mr. Richardson has manifestly chosen Balzac for his master and has shrunk from no elaboration of detail that will go to build up and furnish his environment, from no thrust of the analytic probe that will penetrate the innermost selves of his characters. Season by season, week by week, almost day by day, we live through Maurice Guest's two years in Leipzig, till we know, almost as well as he does, its romantically homely streets, its comfortably sylvan parks, its river gay with skaters, its chattering crowds of music students of all nationalities. So abundant are the details, so frequent and apparently inconsequent the conversations, so continual the shifting, scattering, and regrouping of the minor characters, that for a while we really do not see the forest for the trees, and not till the clouds gather heavily over the coming end and the lesser actors begin to slip away, leaving Maurice and Louise to play out their tragedy of temperament and passion in comparative isolation, do we realize how intimate with them we have all the time been growing and how skilfully and artistically planned has been the long, slow passage from the soaring youthful hopes of the bright April morning with which the story opens, to the chill daybreak which brings an end to suffering beyond all remedy.

There is unquestionably much in the book to give more pain than pleasure. The theme itself, the demoralization and destruction of a hopeful young life by a great passion—the fatal, unreasoning, irresistible passion of the mediæval romances—for a woman who has neither principle nor goodness of heart, who is a mere embodiment of the mystery and power of sex, is all the more distressing because of the complete lovableness, the loyal, trusting, pure, and tender nature of poor Maurice. Some of the realism is not only disagreeably, but unnecessarily, coarse, and the general picture of student life in Leipzig is not one to encourage the parents and guardians of young persons of either sex who propose to study there. In this realistic picture, by the way, though it has all the air of being done from the life, there is one absurdly false touch. All the American students speak that marvellous "Yankee" lingo which is never heard this side of the footlights of English theatres. A pretty, well-dressed girl, apparently intended for a lady, exclaims on hearing that the river is frozen:

> Is that so? Oh, gee, that's fine! . . . Say, you people, why don't we fix up a party an' go up it nights? A lady in my boarding-house done that with some folks she was acquainted with last year. Seems to me we oughtn't to be behind. . . . An' by moonlight, too—but, say, is there a moon? Why, I presume there ought to be.

After this sort of thing, it takes all the power and convincing quality of the book as a whole to win back the reader's confidence. That confidence is reconquered, however, and the book makes a very serious impression.

The Pilgrims' March. By H. H. Bashford. New York: Henry Holt & Co.

By their fruits shall ye know them. This novel is palpably one of the fruits of the De Morgan tree, and emphasizes, if that were needed, our knowledge of the excellence of the parent stock. For the maker of minor fiction to have a good model means much. For his reader it means everything. Thus, though irritated, perchance, by a *bouffe* opening, and by the use of small, everyday material, and by an excess of the soliloquizing spirit—exaggerated De Morgan echoes all—the reader ultimately yields to the honesty of the work and the broadly human sympathies that animate the pages.

A young man possessed of an embryo sculptor-soul goes up to London to engage in the tea business. He is lodged with a family of missionary volunteers to whom evangelizing is all and art anathema. He is converted for a time to their ways and works and daughter, but as artist friends and a beautiful model cross his path, he finds his sculptor's soul, which eventually, after miry wanderings, triumphs, soaring above a narrow Puritanism on one hand, above unworthy weakness on the other. Good folk full of faults, careless ones full of virtues, flourish naturally and abundantly, while the scene swings about in green fields, gospel meetings, and studios. The characters are defined as by a good friend to them all. One feels the human tenderness in this writer's pen and one would be glad that he should write out the matter that is within him without drawing on reminiscence for his manner.

A Poor Man's House. By Stephen Reynolds. New York: John Lane Co.

We cannot tell how much fiction there is in this book. It is of the type which seems to stand between the sociological commentary and the literary study of "low life." The story-teller, or commentator, is an Englishman of, we suppose, the upper middle class, indigenous to society in the smaller sense of the term and inclined to learn something of it in the larger. He is also a novelist seeking copy. He goes down into a little English fishing village, and takes up his dwelling in a fisherman's shanty. He is startled to find human beings living there, not mere objects of study, but people worth knowing and liking. His ingenuousness at the outset is amazing—perhaps British. One might think the "poor man" with his charms and his virtues had been pretty thoroughly discovered. Mr. Reynolds discovers him all over again, is enchanted with the find, and succeeds in passing on some of his pleasure in it. Going among his fishers as a chiel takin' notes, with a novel in view, he keeps a journal and writes letters. In the end, he finds himself indisposed to work it all up:

> I was unwilling to cut about the material, to modify the characters, in order to meet the exigencies of plot, form, and so on. I felt that the life and the people were so much better than anything I could invent. Besides which, I found myself in possession of conclusions, hot for expression, which could not be incorporated at all into fiction.

So he gives us merely an arrangement of the diary-entries and letters, with a

moral drawn more or less by afterthought.

The whole thing strikes one as a really sincere record and commentary. The fisherman and his household, their ways of life, speech, and thought, are presented with equal fidelity and sympathy. The author has what would seem a rather superfine literary manner if it were not overpowered by the candid simplicity of his substance. The house is full of children, scolding, confusion, coarse talk; but he manifestly likes it all. He finds no vulgarity there, no rooted selfishness. Even the canons of taste cease to seem of primary importance:

> The poor will read the literature of life's fundamental realities quickly enough, once they know of its existence. What they will not read, what in the struggle for existence they cannot waste time over, is the literature of the *et ceteras* of life, the decorations, the vaporings. Sane minds, like healthy bodies, crave strong meats, and the strong meats of literature are usually the worst cooked. I am inclined to think that the taste of the poor, the uneducated, is on right lines, though undeveloped, whilst the taste of the educated consists of beautifully developed wrongness, an exquisite recession from reality.

The author believes, moreover, that the "typical poor man's evolution is proceeding with a great solidity." In other words:

> The poor have kept essentially what a schoolboy calls the better end of the stick; not because their circumstances are better —materially their lives are often terrible enough—but because they know better how to make the most of what material circumstances they have.

Certainly the Widgers, as Mr. Reynolds succeeds in picturing them, are happy enough, good enough, successful enough in matters that count, to furnish ground for the opinion.

The Fate of Iciodorum: Being the Story of a City Made Rich by Taxation. By David Starr Jordan. New York: Henry Holt & Co. 90 cents net.

This is an amusing little fable of protection. The first draft, says the author, was made at Auvergne in 1883; the first publication was in the *Popular Science Monthly* in 1888. This issue in book form is peculiarly timely, because the attention of the country is again centred upon the subject, and also because, since "the chronicle was written, most of the events and nearly all the speeches have had their close parallels even in America."

The tale, in brief, recounts the process by which Iciodorum (modern Issoire) develops its industries by means of an *octroi*, or tariff. The Mayor conceives the happy idea that if all the boots, for example, are made at Issoire, "the boot-money will remain at home. It is as though, so far as the city is concerned, Issoire gets her boots for nothing." To be sure, the neighboring town of Clermont, with good water-power, nearness to the mountains, and cheaper hides and tanbark, can make boots more cheaply; but the tax certainly succeeds in establishing at Issoire a flourishing boot-factory. Yet, "strangely enough, the more boots that were produced, the more barefooted children were seen in the streets. But the money went steadily into the hands of those who used it best, and that is the main element in communal prosperity." The advocate of the *octroi* also urges a familiar doctrine:

> The great charm of this tax is that the people will not feel it at all, for it will be paid by outsiders, by those merchants from Clermont and Lyons who send their goods to our town. . . . They pay the *octroi*, for we shall not buy a single thing of them until the goods are safe inside the city gates.

Gradually the tax, which begins with boots, is extended to one article after another, till practically everything is taxed and the whole trade of Issoire is on an artificial basis. The only people who are really profiting by the arrangement are certain wealthy citizens; for the government is, in fact, robbing the poor in order to support the enterprises of the rich.

As a vehicle of instruction such a fable as this has a manifest value. We do not understand the real structure of the human body till the anatomist has dissected away the fair skin and rounded muscles and stripped to our view the gaunt skeleton and hideously grinning skull. In like manner President Jordan offers us an anatomy of protection. By reducing the problem to its simplest terms, he shows us the repulsive reality that our Congressional orators have been decking with fine phrases about the prosperity of the laboring man, luxuries for the wage-earner, and defence of the American home against the low standard of living that has made Europe a vast poorhouse. These noble sentiments disguise the crude fact that a body of predatory manufacturers—among whom, for example, ex-Representative Lucius N. Littauer, the glove-man, is a conspicuous offender —have been contriving a tariff that takes money from our pockets and puts it into theirs. After reading this book, no man who wishes to get at the fundamental theory of protection can plead ignorance.

Yet it is unhappily true that were ten million copies of this tract distributed among the voters, we might still make very little headway toward free trade; for the practical application of a very plain doctrine is attended by vast difficulties. It is easy to call protection theft; it is comparatively easy to make men of even ordinary capacity see at least the main fallacies of the vicious system; but the debates in Congress this last week show how much easier it is to appeal to prejudice and passion, and thus win support for this or that item which is logically and morally as indefensible as burglary. Intellectual belief that the tariff is iniquitous can never withstand the importunate assaults of the emotions. The one thing which bulks large in men's eyes, shutting everything else from view, is the certainty that unless they join the swine, biting, squealing, and trampling in the mire, they and their families must go naked and hungry. Can men be expected to show a stout heart in what appears a hopeless struggle in defence of an abstract theory the real bearings of which they but feebly apprehend?

Bartholomew de las Casas: His Life, His Apostolate, and His Writings. By Francis Augustus MacNutt. Pp. xxxviii+472. New York: G. P. Putnam's Sons, 1909. $3.50 net.

Mr. MacNutt's sumptuous edition of the "Letters of Cortes," which appeared last summer, has been followed by the present volume within the space of eight months. Doubtless, the author has been working at both books at the same time. This last, though shorter, is in one sense the more ambitious, for the major part (309 pages) consists, as the title implies, of an original biography, whereas, in the "Letters of Cortes," Mr. MacNutt's work was rather that of editor. Still he has not entirely refrained from the publication of sources in the present book, for the life of Las Casas is followed by an English translation of the most celebrated of all the "Apostle's" works—the short treatise, first published in Seville in 1552, under the title of "Brevissima Relacion de la Destruycion de las Indias," which is in effect a description and arraignment of the conduct of the Spaniards in America during the first half-century of their occupation. Not that the "Relacion" has lacked for earlier editions: upwards of two dozen (most of them English translations) appeared in different countries before the end of the seventeenth century, and were used with telling effect in the Protestant nations of Europe, to inculcate hatred and dread of Spain. The title of the English edition of 1689, "Casas's Horrid Massacres, Butcheries, and Cruelties that Hell and Malice Could Invent, Committed by the Spaniards in the West Indies," is significant; but it also shows, perhaps better than anything else, that there was plenty of room for a new and accurate translation, aimed at an exact rendering of the author's meaning, rather than an immediate political purpose. Such a translation, Mr. MacNutt has given and for it he deserves our thanks.

The more original part of Mr. MacNutt's volume affords less reason for congratulation. A sane and scholarly

biography of Las Casas was badly needed, for much new material has been discovered, and many old verdicts have been revised since the appearance of Sir Arthur Helps's life of the "Apostle of the Indies" more than forty years ago. But it is obvious from the very outset that Mr. MacNutt has neither the linguistic equipment nor historical background to enable him to take the best advantage of his opportunity. His "List of Authorities Consulted" reveals an ominously significant aversion to all books in German, and almost all books of any kind that have appeared within the last fifteen or twenty years. Armstrong's "Charles the Fifth," Zimmermann's "Kolonialpolitik Spaniens," Häbler's "Spanien unter den Hapsbürgern," Lannoy and Van der Linden's "L'Expansion coloniale des peuples européens," and Bourne's "Spain in America" are some of the most striking omissions. The glowing but unconvincing description of Ximenes (pp. 75-7) is apparently based on three French biographies of the Cardinal, none of which is less than two hundred years old. The details of Las Casas's life Mr. MacNutt seems for the most part to know fairly thoroughly, but his attitude towards his hero, whom he frankly describes as "the noblest Spaniard who ever landed in the Western world," is far too favorable to inspire confidence in the impartiality of his judgments. So deeply is he impressed with the importance of emphasizing the greatness of the "Apostle's" efforts on behalf of the natives, that he falls into the grave error of judging the evils of the Spanish treatment of them solely from the words of their passionate advocate. "Las Casas," as one of the modern historians whom Mr. MacNutt has ignored, has rightly said, "was the Lloyd Garrison of Indian rights; but it is as one-sided to depict the Spanish Indian policy primarily from his pages, as it would be to write a history of the American negro question exclusively from the files of the *Liberator*; or, after a century of American rule in the Philippines, to judge it solely from the anti-Imperialist tracts of the last few years."

The book, like "The Letters of Cortes," is handsomely made and beautifully illustrated, though between them the author and publisher might have been expected to detect some of the more obvious misprints (*e. g.*, "Sergoria" and "Sergovia" for "Segovia," on p. 469). The portraits—including Charles V, Philip II, Adrian VI, Paul III, Ximenes, Columbus, Sepuloeda, the historian and rival of Las Casas, and others—are for the most part well selected, though it was a pity to choose the least admirable of the various Titian likenesses of the Emperor—namely, the Bologna portrait of 1530. Indeed, the book is in many ways so satisfactory that one lays it down with a distinct feeling of regret that lack of thorough and careful study has prevented it from being really good. We trust and believe that these defects may be remedied before the appearance of Mr. MacNutt's "Life of Cortes," now in preparation.

Science.

The Origin of Vertebrates. By Walter H. Gaskell, University lecturer on physiology, Cambridge, England. Pp. 537; 168 figures, many original and some colored. New York: Longmans, Green & Co. $6 net.

It is significant and encouraging that, within fifty years after the publication of "The Origin of Species" there should appear a volume beginning: "It is no longer a debatable question whether or no evolution has taken place; . . . zoölogists desire now to find out how it has taken place." The "how" includes two categories of problems, viz., the nature and operation of the laws of heredity and variation, and the exemplification of those laws by given species or groups. Within either of the great sub-kingdoms, *e. g.*, the arthropods (insects, crustacea, etc.),or the vertebrates, there is such structural and developmental homogeneity that—given a fairly complete series of fossil remains—the determination of probable lines of descent usually seems only a question of moderate time. For example, the ancestry of the modern horse is generally accepted; frogs and toads were probably descended from salamander-like forms, and birds have been aptly characterized as "glorified reptiles."

But efforts to outline the derivation of the vertebrates themselves from any known arthropod types encounter not merely an obvious lack of correspondence in many details, but four more fundamental difficulties which may be stated briefly as follows:

(1.) Unlike the arthropod, the vertebrate has a body-axis, represented by the spine in the adult of higher forms, but in certain lower, and in the early stage of all, by a gelatinous rod, the notochord.

(2.) Unlike that of the vertebrate, the arthropod gullet passes through a ring formed by the brain in front, the first of the series of ganglia behind, and nerve-cords at either side.

(3.) Unlike that of the arthropod, the vertebrate central nervous system is tubular.

(4.) In the usual attitude of the vast majority of both groups, the central nervous system is above the alimentary canal and the heart below it in the vertebrate, while the arthropod central nervous system is below and the principal blood vessel above.

Undismayed by these contradictory conditions, during the last twenty years two men have devoted themselves largely to the exposition of the "ways and means" of the origin of vertebrates from an arthropod stock. In 1890 Prof. William Patten of Dartmouth published in the *Quarterly Journal of Microscopical Science* a paper entitled "On the Origin of Vertebrates from Arachnids," including under the last name not only spiders and scorpions, but shielded and crab-like extinct forms now represented only by the limulus, or king-crab. In that and in subsequent papers Patten points out the structural as well as external resemblances of these ancient arachnids to their contemporaries, the mailed and earliest known fishes, the very nature of which, in some cases, was for a time problematic. He calls attention to the fact that limulus and some other arthropods often swim upon their backs, thereby bringing their main organs into the position, relative to the supporting surface, which prevails among vertebrates. He also emphasizes the significance of certain cavities in the brain of some arthropods. By an interesting coincidence, immediately following Patten's paper in the *Journal* was one by Gaskell, "On the Origin of Vertebrates from a Crustacean-like Ancestor." In that, in later papers, and in the present volume, he enlarges upon the similarities of the mailed fishes to trilobites and their kindred, living and extinct, and extends his comparisons to the larval lamprey, which (p. 227) "gives more valuable information as to vertebrate ancestry than all the rest of the vertebrates put together."

Naturalists generally regard the resemblances above referred to as analogic and suggestive rather than homologic and conclusive, and are indisposed to recognize as connecting links between the arthropods and the vertebrates relatively specialized forms comparable with limulus and the mailed fishes. Upon this point, however, Patten and Gaskell constitute a united minority, and we may now consider the distinctive views of the latter. He rejects "inversion" as a basis of comparison between the two great groups, and maintains the validity of a theory formulated by him in 1887 and promulgated in the two following years, that the characteristic tubular constitution of the vertebrate central nervous system has resulted from the inclusion of the alimentary canal of the arthropod ancestors within its ganglionic chain, the longer and narrower portion becoming the central canal of the spinal cord and the shorter, wider portion the ventricles of the vertebrate brain. Gaskell's papers were evidently unknown to Patten when his earliest contribution to the subject was submitted, and Gaskell has frankly expressed his disappointment at the general indifference toward what Huxley hospitably greeted as an "earthquake hypothesis." He devotes to it the initial chapter of the present volume, and offers several diagrams (Figs

21, 160, 167), purporting to represent the stages of the engulfment of the arthropod alimentary canal by its nervous cord, and the concomitant evolution of a new alimentary canal for the ancestral vertebrate. Your reviewer appreciates the labor of gathering real or supposed facts from so many and varied sources, the zeal of argumentation, and the ingenuity of the original hypothesis, and is not—he hopes—influenced unduly by the lack of its public acceptance, so far as he is aware, by any competent morphologist, but he finds himself unable to characterize it in terms more fitting than those applied by its author to an idea that did not commend itself to him (p. 15): "It is not only unheard of in nature, but so improbable as to render impossible the theory which necessitates such a position." But whatever be the fate of its main thesis, Gaskell's book will stimulate research and discussion respecting an interesting and complex problem, and it may hasten the publication of the volume which Patten has long been preparing. It may also further a reaction from the extreme specialization that has been forced upon biologists by the prodigious accumulation of facts and elaboration of ideas during the last half-century. There may be devised a coöperative educational scheme that will qualify certain selected minds to deal effectively with large questions demanding intimate knowledge and impartial judgment respecting data derived from the structure, development, and geologic succession of forms supposed to represent the transition from invertebrates to vertebrates.

The illustrations of the present volume are numerous and clear, but not always accurate. Some appear to have been borrowed and even modified without specification. There should be a complete list, with acknowledgment of all sources. The admirable summaries of the several chapters deserve to be in larger type. The bibliography is so nearly complete that it is not easy to account for the omission of the title of Patten's critical letter in the *American Naturalist* for April, 1899. The printing is well done, and, especially considering the numerous technical terms, typographic errors are few. It would be interesting and instructive to ascertain how much space might have been saved had the oft-recurring terms "central nervous system" and "alimentary canal" been replaced by *neuron* and *enteron*, already familiar in the compound, neurenteric canal.

Among the books on science in the spring list of Cassell & Co. are the following: "The Nature Book," with an introduction on "The Love of Nature," by Walter Crane; "Gardening in the North," by S. Arnott and R. P. Brotherston; "Sweet Peas and How to Grow Them," by H. H. Thomas; "Live Stock," by Primrose McConnell; "Life Histories of Familiar Plants," by John J. Ward; "Little Gardens," by H. H. Thomas; "Cassell's A B C of Gardening," by Walter P. Wright; "Cassell's Cyclopedia of Mechanics," edited by Paul N. Hasluck; "The Handyman's Enquire Within," edited by Paul N. Hasluck; "Cassell's Household Cookery," by Lizzie Heritage; "Estimation of the Renal Function in Urinary Surgery," by J. W. Thomson Walker; "Structural Engineering," by Prof. A. W. Brightmore; "Outlines of Electrical Engineering," by Harold H. Simmons; "Elementary Dynamo Design," by W. B. Hird; "Popular Electricity," by W. Hibbert.

"The Baby: His Care and Training," by Marianna Wheeler, will be issued this spring by Harper & Bros.

Lieutenant Shackleton's exploit (see the *Nation* of April 1, p. 340) gives a special significance to the opening article of the *Annales de Géographie* for March on the Antarctic continent by M. Zimmermann. It is a résumé of the scientific results of the voyage of the Discovery and it closes with the enthusiastic statement that practically no work has been left for succeeding expeditions in that particular region except the collection of species of marine animals.

A work has been in serious demand when it reaches a seventh edition, which is the present status of Dr. C. W. Dulles's "Accidents and Emergencies" (Philadelphia: P. Blakiston's Son & Co.), noticed in these columns in former years. That demand was fully justified by the clear and sensible discussion of those unforeseen occurrences which we call accidents, and this fully illustrated issue has been enlarged and truly revised. Its most novel injunction is the treatment of general freezing by heat, not mere warmth, applied with vigor and care by the hot bath or dry. Of this the author seems assured, and he cites confirmatory experiments with animals. His well-known skepticism as to hydrophobia leads him to advise against resort to Pasteur Institutes, on account of bites by presumably rabid animals; but in all other respects the well-indexed little volume may be accepted as a trustworthy compendium of practical information.

Dr. Persifor Frazer, a handwriting expert, died at his home in Philadelphia April 7. He was born in that city in 1844, and was graduated from the University of Pennsylvania. He served in the army and navy during the war, and afterwards joined the faculty of his university, teaching chemistry and geology until 1882. He wrote various papers on these subjects, but his most important publication was his "Bibliotics" (3 eds., 1894-1901), which, in the opinion of Bertillon, was the first scientific treatise on handwriting.

Dr. Arthur Gamgee, a distinguished London physician, died in Paris, March 29, in his sixty-eighth year. He was educated at Edinburgh University, was professor of physiology in Owens College, professor of physiology at the Royal Institution of Great Britain, and was active in the investigation of physiological chemistry. He translated and edited Hermann's "Human Physiology" (1875), wrote a "Text-book of the Physiological Chemistry of the Animal Body," and contributed to scientific publications many papers on his specialty.

Drama.

HELENA MODJESKA.

Helena Modjeska, the Polish actress, died at Bay City, California, April 8, after an illness of about two months.

She was born in Cracow, in 1844, the daughter of Michael Oppido, a musician of fine cultivation, who had a large acquaintance among artists. Her early youth, therefore, was passed in a refined and inspiring intellectual atmosphere. Almost from the first she seems to have felt an impulse toward the stage. Two of her half-brothers became actors, and she wished to follow their example, but encountered strong opposition from her mother and her guardian —for her father had died while she was still a child. But when she was in her fifteenth year, the loss of family property forced her to earn her own living. Soon after her marriage to her guardian, Modrzejeweski, she turned to the theatre, appearing under the abbreviated name Modjeska. Her success was immediate, and her husband straightway organized a travelling company, with which she visited all the principal towns in Galicia. In 1862, while she was still in her 'teens, she secured an engagement for three months in the government theatre at Lemberg. After this she passed through a difficult period, but she continued to advance in reputation until she was encouraged to lease a theatre, on her own account, in Czernowice, where she played the heroines in various standard dramas, with her two half-brothers and a sister in her company. By 1865 she was so popular that she was engaged as leading lady for the theatre at Cracow, and thenceforth her triumph was assured.

Her fame soon extended beyond the confines of Poland; offers began to come to her from European managers; and then the younger Dumas invited her to go to Paris, and play the part of Marguerite Gautier in his "Dame aux camélias," a sufficient proof of the prominence to which she had attained. All these offers she steadily refused, in order to devote all her energies to the Polish stage. By this time she had become a widow, her first husband having been many years her senior, and, after a brief interval, she married the Count Bozenta, who was to be her devoted manager during the remainder of her public life. Leaving Cracow for Warsaw, she began a series of performances in prominent Polish plays, and in the masterpieces of Shakespeare, Goethe, Schiller, and Molière, displaying notable versatility. There she remained for seven years, during which she played in nearly three hundred parts, with increasing fame. It was as Adrienne Lecouvreur, that she then achieved her greatest reputation.

But her husband incurred the ani-

mosity of the authorities on account of his political writings, and she herself incurred their ill will by resisting to the uttermost the Russian censorship of the Polish theatre. In course of time her health began to give way beneath the pressure of these worries, and in 1876 she resolved to emigrate to America, where she finally settled on a ranch near Los Angeles, hoping to found in that neighborhood a Polish colony. A year later she visited San Francisco, where, having won high praise by recitations in Polish, she began to study English, with the view of acting upon the American stage. In this enterprise she was encouraged by Edwin Booth, John McCullough, and others, and in due course she made her first appearance in California, as Adrienne Lecouvreur. This was the beginning of her successful American career which was to endure, with but brief interruptions, for thirty years. After a tour of the United States she recrossed the Atlantic to play two engagements in London —where she was hailed as one of the greatest actresses of her day—and also to try her fortunes once more in Poland. But soon she found herself excluded, by official decree, from Russian territory, and thereafter practically all her professional work was done in this country. In 1905 she bade farewell to the New York stage. Since then she had appeared in different parts of the country, but of late she had spent most of her time on her California ranch.

She was generally acknowledged to be one of the most gifted performers of her generation. In her prime her personal fascination was of an exceedingly rare kind. Her tall figure was singularly graceful, her face, though not of classic beauty, was wonderfully attractive in its intellectual charm and eloquent mobility, while her gestures were full of animation and significance. Her range of emotional expression was very wide. She could give full utterance to stormy emotion, maintain herself on the heights of tragic dignity, or relax in the gayest mood of refined comedy. All her work was distinguished by exquisite finesse. Her Adrienne Lecouvreur was a magnificent performance, glowing in its sentiment, superb in its scorn, most pitiful in its pathos. As the unfortunate Mary Stuart she presented a moving study of gracious womanhood and broken majesty. Her Juliet was bewitching in the early love scenes and finely tragic in its despair, although in the potion speech she could not attain to the frenzied horror of Adelaide Neilson or Stella Colas. Her Rosalind was more nearly the realized ideal of Shakespeare's delightful heroine than any interpretation known to modern playgoers. Her embodiment breathed the very spirit of romance and the woods. It had just the right touch of masculinity in the masquerade, and yet was irresistibly and indisputably feminine. It had the air of high-breeding, it had buoyancy, courage, tenderness, wit, and grace. Henrietta Crosman comes, perhaps, the next in order, but her Rosalind is of less ethereal and poetic texture. Another exquisite embodiment of Madame Modjeska was her Ophelia, which might well be compared with that of Ellen Terry. She played this part on the memorable occasion of the benefit for Lester Wallack; and Edwin Booth, the Hamlet, had to act his best to save himself from eclipse. In England she created a sensation with her Odette, and her admirable work in "Frou-Frou" and "Camille." Her Magda also was eloquent in its pride, its fierce contempt, and its despair. But it was not in the modern emotional drama or in such sensational pieces as "Les Chouans" that her best powers were revealed. These found their full scope only in the higher regions of the poetic drama. She was in later days the sole representative of such Shakespearean women as Imogen and Isabella, and she was the last notable interpreter of Lady Macbeth, although that was not to be accounted among her greatest achievements. Nor must her Viola be forgotten, a delightful bit of true Shakespearean comedy. Shakespeare was always her chief delight.

OUR FOREIGN AND NATIVE ACTORS

The death of Helena Modjeska may be said to mark the end of a theatrical era. She was the last surviving member of the group of great players of foreign nationality and training who repeated here in English the triumphs which they won originally in their native tongues. Prominent among them were Adelaide Ristori, Fanny Janauschek, Daniel E. Bandmann, and Charles Fechter. Tommaso Salvini, who, happily, still lives in retirement, may be added, perhaps, to the company, for although he never ventured himself to act in any language but Italian, he played habitually in this country with English-speaking support, and so great was his genius that it suffered comparatively little from that polyglot arrangement. Among their illustrious contemporaries, who contributed to the glories of the American stage, but adhered to their native speech, may be mentioned Bogumil Dawison, Seebach, Rossi, Sonnenthal, Ludwig Barnay, Frederick Haase, and Constant Coquelin—all of whom have joined the great majority—Sarah Bernhardt—who may or who may not be seen here again—and Eleonora Duse.

All these performers and the list might be increased, have acted in this country during the last forty years, and it may be interesting to glance for a moment at the sum of their artistic achievement, as compared with that of their English-speaking contemporaries on both sides of the Atlantic. Such a comparison cannot be made very flattering to the Anglo-Saxon theatre. What players of the first rank—not to insist too particularly upon the word "great"—has it produced since Macready, Phelps, Charles Kean, Edwin Forrest, E. L. Davenport, J. W. Wallack, and Charlotte Cushman, ended their careers? The question, it must be remembered, relates only to interpreters of the higher drama, the drama that demands imagination, brains, eloquence, and artistic cultivation. Two or three names suggest themselves instantly. Among them are those of Edwin Booth, Henry Irving, and Ellen Terry. Next in order—but on a distinctly lower level—come Lawrence Barrett, John McCullough, and Richard Mansfield. Of these, all but one are already dead. Their most promising successors are Robert Mantell, E. H. Sothern, Julia Marlowe, Forbes Robertson, Oscar Asche, Arthur Bourchier, and Beerbohm Tree, and of these all except Oscar Asche have already reached their meridian. Of competent performers in the modern drama —except when it partakes of the romantic—there are many, but their art is lower in degree, although some of them are eminent in their specialties.

If the actor be judged by his identification with the most notable characters in the imaginative drama, Edwin Booth is the greatest English-speaking actor of his period. In Hamlet, Lear, Shylock, and Macbeth, as well as in such romantic characters as Richelieu and Bertuccio, he attained heights that none of his rivals could approach. Henry Irving, at least his equal in romance and his superior in comedy, was, in tragedy, his inferior. Ellen Terry was supreme in the brilliant comedy of Portia and Beatrice and in the pathos of Ophelia. She was out of her depth in Lady Macbeth, or even in Juliet. John McCullough's highest achievement was his Virginius, though he had inspired moments in Othello and Lear. Barrett was sound and able in many characters, great in none. Mr. Robertson is the most eloquent, intellectual, and attractive of living Hamlets, but it would be absurd to compare his impersonation with Booth's.

None of the other English players mentioned has accomplished anything very significant. None of them certainly has done anything comparable with the Othello of Salvini, or—with the single exception of Mr. Booth—anything to equal certain passages in the Lear and Macbeth of the Italian actor, who, in grandeur of passion and pure pathos, was without a peer. In his own peculiar characters, Niger, Saul, Samson, and Conrad, for instance, he defied rivalry. Ristori's Lady Macbeth, whether in Italian or in English, was probably the greatest, after that of Sarah Siddons, while her Elizabeth, Marie Stuart, Phèdre, and Medea were ac-

knowledged masterpieces. But in three at least of these great parts—Medea, Marie Stuart, and Lady Macbeth—she was closely pressed by the Bohemian actress, Fanny Janauschek, who scored yet greater triumphs in the heroic character of Brünnhilde, not to speak of her Deborah and her facile descent to Lady Dedlock and the maid Hortense. Of Modjeska's place we have already spoken. Charles Fechter, upon whom fell the mantle of Lemaître, exhibited the art of romantic acting in its best estate, and furnished a wonderfully picturesque and fascinating Hamlet, which delighted the modern, but enraged conservative critics. In its prime his Dane was as popular as that of Irving or Booth, and gave more of the lover and prince than either. The gifted but unmanageable Bandmann was excelled in Shylock by Booth alone; and the Italian Rossi played Romeo with a passionate ardor and a tragic intensity that had almost the force of revelation.

It would be easy to multiply examples of the invaluable work done on the stage here and in England by foreign-born actors, in preserving high artistic standards which otherwise might have disappeared. Nothing has been said of the tragic triumphs of Bernhardt, Duse, or Mounet-Sully, of Seebach, Sonnenthal, Barnay, Frederick Haase, and others. Nor is it necessary. Enough evidence has been adduced to show that, during the last generation, actors of foreign origin have been among the most faithful and potent illustrators of that noble dramatic literature which is the priceless heritage of the English race. For the greater part of the third of a century there has been but one native American tragedian of the first rank, Edwin Booth, to maintain the credit of his country's stage. And he has left no visible successor. The fact is indisputable and humiliating, but by no means inexplicable. Foreign nations have no monopoly of histrionic genius. But they do have permanent stock companies—the only practical schools of acting—free and severe competition, and a certain amount of enlightened management. These are points on which we have frequently dwelt; but we cannot emphasize the idea too often. The foreign actors have opportunities of development which ours do not possess. Here there are no stock companies, no competition, very little enlightened direction, and, consequently, no great players. And, unfortunately, conditions in England do not appear to be much better.

"Ernst von Wildenbruch: Ernstes und Heiteres aus seinem Leben," by Dora Duncker (Berlin: Hermann Paetel), conveys a very favorable impression of the circumstances under which the lately deceased German dramatist grew up. The book also shows the obstacles and bitter disappointment he experienced along with his literary successes. Wildenbruch's father was a diplomat, and the boy's earlier days were passed in Beirut, Athens, and Constantinople. There he felt not only the influence of the classical environment, and the charms of nature, but met persons of distinction. In course of time he became familiar with mediæval Germany; and he was long identified with Berlin, sent there as a school boy, later a bureaucrat, and passing his declining days between the Tiergarten and a summer home he had built at Weimar. Wildenbruch was also a soldier, active in the campaigns of 1866 and 1871. All his works contain evidence of these varied experiences; and yet these favoring conditions did not prevent such failures in dramatic essay that Wildenbruch more than once declared he would never write another play. Love for the work, however, and confidence in what he was undertaking, led him ultimately to success, particularly in his "Rabensteinerin," which promises to become a popular German classic.

"The Happy Marriage," the latest play by Clyde Fitch, which was produced with a fair measure of success in the Garrick Theatre Monday evening, is more nearly allied to theatrical farce than true comedy. It is superior in character and purpose to many of Mr. Fitch's later productions, although by no means free from characteristic defects. Starting from inadmissible premises, and proceeding through unnatural, if frequently humorous, developments, it finally reaches an effective and wholesome ending. Briefly, the story is of a silly, sentimental, jealous, but not essentially disloyal wife, who, in a fit of pique over her husband's apparent neglect and faithlessness, listens to the traitorous advances of a rascally young lawyer and agrees to elope with him. As a matter of fact she does actually desert her home to join him at his office. There, through the agency of a fond old nurse, she is confronted by her husband, whose manliness of conduct and tender consideration for her welfare—in vivid contrast with the selfish conduct of her favored lover—convince her of her folly, arouse all her better instincts, and lead to what promises to be a permanent reconciliation. In original design the piece is good, but in execution it is often insincere and tricky. Human nature is sacrificed throughout upon the altar of theatrical effect. The conduct of both husband and wife is inconsistent. Neither of them—being what they are represented to be—could be guilty of the behavior attributed to them. In order to "save her face" the wife is endowed with an ignorance and simplicity wholly inconceivable in a married woman of her experience. Thus the first two preliminary acts, though full of Mr. Fitch's habitual cleverness and sufficiently amusing, have no real illusion. But the third act is better and stronger in every way and has genuine dramatic fibre in it, though it puts the husband upon a pinnacle where he does not properly belong. The matrimonial philosophy which it enforces is undeniably sound, if not especially new. The performance is respectable, but not brilliant.

"The House Next Door," an adaptation from the German by the English dramatist, J. Hartley Manners, which is now running, with good prospects of success, in the Galety Theatre, is a product of the Semitic question which has so long been vexing Europe, and is written mainly from the Hebrew point of view. The children of two families—the one headed by an immensely wealthy and remarkably broad-minded Jew, and the other by a ridiculous old Gentile bigot, the incarnation of rabid prejudice—fall in love with each other. Their union is opposed by both parents, but the Jew soon relents, even after enduring the grossest insult, and finally the hard heart of his Gentile enemy is softened by his magnanimity, and all ends happily. As drama, the piece is almost entirely worthless, being a wholly theatrical and artificial bit of special pleading, with only an occasional faint reflection of actual life. But the sentiment at the bottom is sound enough, and the play is frequently amusing. The piece is welcome, if only for its reintroduction of that accomplished comedian, J. E. Dodson. His impersonation of the irascible and bigoted old Gentile, is a fine example of highly finished eccentric acting. The dry humor of it is admirable, and its elocution perfect. It is a treat in these days to hear English spoken with such clarity, point, and crispness.

Gerald Lawrence and Miss Fay Davis have just begun their six weeks' Shakespearean season at the London Court Theatre. The plays selected for presentation are "As You Like It," "Romeo and Juliet," "The Merchant of Venice," "Twelfth Night," "Hamlet," and "Much Ado About Nothing." These are to be given without scenery, the stage being draped with tapestries.

Arthur William Gregory, an actor, died April 10 at East Orange, N. J., at the age of sixty-three. Early in his career Mr. Gregory, a native of England, took parts of importance in casts with Edwin Forrest, Edwin Booth, Lawrence Barrett, Joseph Jefferson, the elder Sothern, William Florence, Charlotte Cushman, and other noted actors. For many years he was stage manager for Daniel Frohman.

Music.

Analysis of the Evolution of Musical Form. By Margaret H. Glyn. Longmans, Green & Co. $3.50 net.

It cannot be said that this is an entertaining book, or one in which it is easy to follow the author's course of reasoning at all points. She indulges in an abstruse style of ratiocination which requires pages to explain what a more concrete and imaginative writer would more fully elucidate in as many paragraphs. Yet it is a stimulating and instructive book, which must be commended not only to students—and experts—in musical theory and history, but to composers as well. One may not agree with the author that "the educational need of the day is for a truthful intellectual presentment of the growth of musical form"; but we must concede that her book goes far toward supplying

such a need, so far as it exists. Its chief value lies in the application of the comparative method. Musical evolution in Europe is contrasted with what we know of the development and present condition of the art in Oriental countries, and in this way new light is thrown on various disputed problems. The writer is not afraid to question generally accepted doctrines, such as the belief that harmony had its origin in the "organum" of the eighth century—an evolutionary stage which can be studied among the Andaman Islanders of our time who sing in three parts, the parts rising and falling simultaneously in consecutive fourths and fifths.

When a European or American travels in the East he speaks derisively of the chaotic and cacophonous music he hears. A perusal of these pages will convince such a person that in assuming this attitude he places himself in the position of an unmusical or semi-musical person who sneers at Beethoven or Wagner, whom he does not understand. It is true that the Orient knows not our harmonies, or even our keys and our tonality; but it has a bewildering variety of subtle details of melody that atone for these deficiencies. To understand these, we lack the Asiatic's "microtonal" instinct; that is, the faculty of distinguishing and relishing intervals smaller than semi-tones. Not a few European composers and theorists, among them Saint-Saëns, have held that the next step in our music will be the adoption of such microtones—say, quarter tones; and the East can show us the way. In rhythmic variety, too, the Orientals can teach us much, as well as in irregular, poignant accentuation. On this point Liszt wrote eloquently in his book on Hungarian gypsies; but our author, being an Englishwoman, of course does not mention him, ignorance of Liszt being in England an essential of good breeding.

The Hindu is much more emotional than the Englishman who rules over him, and his microtonal instinct makes him susceptible to delicate and subtle inflections of pitch to which the foreign invader is deaf. The Hindu is also, in his way, "a more thorough theorist than the European musician." Of British music our author speaks with contempt. The English musician, she informs her readers, "is still in the pre-Darwinian stage." "Vulgarity in music," she says on another page, "is invariably a sign of rhythmic degeneration, and to this cause must be assigned the present condition of English popular music." There is "some music that is attractive to everybody"; but, generally speaking, music is now in the position of literature at the time when a book was as completely a sealed thing to the people as a score is nowadays.

It will be seen from foregoing remarks that the author uses the words "musical form" in the widest sense, including the most elementary tonal crystallization. She proceeds to consider the evolution of the scale, of harmony, tonality, counterpoint, phrase and stanza, imitation, the cycle, and the continuous style, which was one of Wagner's contributions to musical evolution. On all these subjects she offers suggestive views, not infrequently so novel that they involve the coining of new words; but there is a glossary which explains them; and there is also an appendix with many illustrations in musical type. Not a few of her statements might be disputed, notably this, that "if we admit poetry as the equal partner of music, good results of the combination may be obtained, but the finest in music will not be reached"—an assertion contradicted by hundreds of songs and the best scenes in Wagner's operas.

In anticipation of the one hundredth anniversary of the birth of Richard Wagner, May 22, 1913, the different houses which publish his writings have united to issue a cheap edition of his operas. The first part will appear on Wagner's birthday this year.

Jaroslaw de Zielinski is preparing a condensed English version of Hoesick's life of Chopin, the first two volumes of which appeared in Polish in 1904. Hoesick sides with those who give February 22, 1810, as the date of Chopin's birth.

Last season Wagner was losing ground at the Metropolitan Opera House. This season he not only recovered the lost ground, but went ahead of the other favorites; his operas were sung 34 times, while Puccini, who came next, had 26 performances, and Verdi 24. The most encouraging thing about this progress is that it came about although the Wagner casts were not so great as in some past seasons; but Mr. Dippel effected such remarkable improvements in the orchestra, chorus, and stage management that the public crowded to these performances (including five of "Parsifal") as in the golden age of German opera. Altogether, there were 73 representations of operas by Italian composers, 45 of German, and 19 of French. A notable success was the Bohemian opera, "The Bartered Bride," which was sung six times, and will be heard once more, on April 23, when the company returns from its Western tour, for the benefit of the Legal Aid Society. The other three novelties—"Tiefland," "Le Villi," and "La Wally"—are not likely to be in next year's repertory. Five other novelties had been promised, but while the scenery for them was at hand, the lack of time for rehearsing made it necessary to defer their production. This lack of time was due largely to the appearance of the company not only in Brooklyn and Philadelphia, but in Baltimore and Washington. The retirement of Sembrich and Eames will be felt as a serious disadvantage next season; but Nordica has been engaged and there is talk also of inducing Calvé to come back. The general manager imported from Milan has discovered that what fills an opera house in New York is stars and star casts. Caruso did not sing during the last four weeks of the season except twice. He will have to rest till the autumn. Should the impairment of his voice prove permanent, it would be a grievous disaster to Italian opera.

Oscar Hammerstein at the Manhattan gives no operas in German, and the most popular of his productions this season was Richard Strauss's "Salome" in French; it was given ten times. Of four operas that were presented seven times each, one "Les Contes d'Hoffmann," was by a German; one, "Lucia," by an Italian; two, "Le Jongleur de Notre Dame," and "Thaïs," by Frenchmen. Two of last year's successes, Debussy's "Pelléas et Mélisande" and Charpentier's "Louise," did not hold their own. A gratifying incident was the successful revival of Verdi's "Otello"; another, the equally successful production of "Samson et Dalila," by Saint-Saëns, whose operas have been too much neglected in this country. "Don Giovanni" was not given, but a brilliant revival of it is to open the next season. The number of performances at the Manhattan was 116; at the Metropolitan, 143; total, 259. And this will be greatly exceeded next time.

Three American composers will conduct their own works at the concert arranged by David Bispham for the American Music Society at Carnegie Hall, Sunday afternoon, April 18. They are: Arthur Bergh, whose musical setting of Poe's "Raven" will accompany Mr. Bispham's recitation of the poem; Arthur Farwell, whose "Dawn," a phantasy for orchestra, will have its first New York hearing; and George W. Chadwick, who will conduct for the baritone ballad, "Lochinvar," which Mr. Bispham will sing. Franz X. Arens will conduct the People's Symphony Orchestra in two numbers, the prelude to "The Hamadryad," by William J. McCoy, and "Creole Days," by Harry Rowe Shelley. Miss Augusta Cottlow will play Edward MacDowell's concerto in D minor, opus 23. The concert in its entirety promises to be one of the most interesting of the entire season.

Art.

Legend in Japanese Art: A Description of Historical Episodes, Legendary Characters, Folk-lore, Myths, Religious Symbolism, Illustrated in the Arts of Old Japan, by Henri L. Joly; with upwards of 700 illustrations, including 16 full-page reproductions in color. New York: John Lane Co. $25 net.

Japanese Sword Guards. By Okabe-Kakuya, in coöperation with the Department of Chinese and Japanese Art. Boston: Published by the Museum of Fine Arts. $1.25.

Japanese Wood Engravings: Their History, Technique, and Characteristics. By William Anderson. London: Seeley & Co. 75 cents net.

In "Legend in Japanese Art" the delight of a collection of poems, of an anthology, and also of a collection of paintings, is all to be had in the form

of an encyclopædia. That such a difficult and beautiful enterprise might be carried out differently, and perhaps more successfully, is possible, but only at the risk of making a still larger collection, when this one is almost too bulky for convenience. This book, then, is, for the average Japonizer, a gift of importance. Japanese and Chinese art are, like all others, based on history, legend, religion. With the Japanese, all representations of story and of nature connect with the immeasurable past. We cannot think of Hokusai, for instance, without it. The work of art, then, is a variation upon a theme already accepted; the artist has already met his public half-way. The pages of this book give us stories of delicious folk-lore and fairy tales, and stories from the shadowy borders of ghostland. Our own art has been thin in helping our childhood; but this volume indicates the richness of information on which the Oriental mind feeds. There is no endeavor to deal with art as such, but merely with the themes illustrated; yet the book will be a treasure-house for any artist sensitive to the rendering of these subjects as subjects, to the principles of their design, and the wonderful skill of their making.

The second book on our list is a catalogue of a special exhibition of Japanese sword guards, or *tsuba*. With the catalogue goes an account of the principal schools and the makers, with illustrations, classified and explanatory. The author was assistant professor of metal work at the Imperial School of Tokio, under the late Kano-Natsuo, one of the most noted metal artists of recent times; in 1899 he wrote a series of articles on metal work based on the material in the Nippon-Bijitsuin, and for three years he has been in charge of the metal work of the Boston Museum, studying, cataloguing, and putting articles in good condition. The *tsuba*, from various sources, comprise more than 1,200 examples; and our authors give us lists of all the artists who worked on these fragments of the sword, with an account of their schools and their characters. The work may be taken as a supplement to the "Japanese Legends in Art," before noticed, wherein many sword guards are displayed with an account of their meaning and story. Here also, with the lists of names, such explanations are given as are necessary to acquaint us with their place in Japanese history and legend. Thus these sword guards become for us important documents in the story of a civilization. The sword has from the most remote past and among many peoples been a sacred image of power and arbitrament by force, of honor and duty. Never, however, has the worship of the sword gone as far as with the Japanese. At a time coeval with our middle ages, the Samurai, the nobles of Japan, embodied this symbolism in their supreme code:

> The steel taught them the virtue of that self-control which calmly prepares for a mighty struggle. In the unclouded face of the crystalline blade they beheld mirrored the purity and chastity inseparable from true loyalty. The most precious dowry a bride could bring to a Samurai was the honored sword of her ancestors, while many an old Japanese drama is based on the quest and recovery of some lost flame. The sword was part of the Samurai's own personality. Of course (as we would ourselves) people judged his character from that of his weapon.

Thus we follow the evolution of the sword as the feudal and Zen notions gain more and more power, and then as they decline under the stress of modern civilization. Along with these symbolical matters runs a history of the decoration and make-up of the sword, with numerous details to guide the expert and the amateur art student.

"Japanese Wood Engravings" is a pocket edition of the well-known book by the late Dr. William Anderson, best known for his "Historical and Descriptive Catalogue of the Japanese and Chinese Books in the British Museum," which Mr. Joly, in the preface to the great work of his above noticed, characterizes as "an inexhaustible mine of information, not only upon schools of painting and their representatives in the collection, but also upon the subjects treated by the artists." Most of the illustrations of the present work are taken from examples in Dr. Anderson's collection in the British Museum. The larger edition of the book, belonging to the Portfolio Monographs, is naturally a little handsomer, but the loss from reducing the pictures to pocket size is less than might be expected, and there is now no excuse for the poorest amateur's remaining ignorant of the successive developments of that Japanese form of art, which has taken hold of us, amused us, taught us refinement to the point of surprise. It is unnecessary to go through the various schools here catalogued. To-day a part of the older work is occasionally almost rivalled, but the modern necessities of commercial life threaten the only thing which is of value in a work of art, that it should be impossible to duplicate. The learned writer takes a dismal view of the future and predicts "the extinction of an art industry to which Japan owes so much; but the end is inevitable."

Cassell & Co. will publish this spring: "Cassell's Royal Academy Pictures and Sculpture, 1909"; and "Cassell's House Decoration," edited by Paul N. Hasluck.

The Clarendon Press (Henry Frowde) has issued a very interesting volume, "Historical Portraits: Richard II to Henry Wriothesley, 1400-1600," the lives by C. R. L. Fletcher, formerly fellow of All Souls and Magdalen Colleges; the portraits chosen by Emery Walker, fellow of the Society of Antiquaries; with an introduction on the history of portraiture in England. The plan is for a series, coming down to the middle of the nineteenth century. This volume, like all previous works of the kind, begins with Richard II, for the sufficient reason that portrait-painting was practically unknown in England before the opening of the fifteenth century. It is interesting here to trace the development of the art, from faces that to our eyes seem conventional and without much individuality, down to Holbein, who is the dominant artist of the collection. His hand or his influence is marked by many portraits, starting with that of Henry VIII. Many of these pictures are, of course, familiar to visitors at the National Portrait Gallery in London and other important English collections. The reproductions in photogravure are well printed in dark brown ink. The lives are brief but sufficient.

Lionello Venturi's "Origini della Pittura Veneziana (1300-1500)" was reviewed in the *Nation* of October 10, 1907, p. 335. The title-page bore the true but misleading statement that the work had received a prize from the Royal Venetian Institute of Arts and Letters. It received as a matter of fact the second prize, and now we have the first prize essay, "Storia della Pittura Veneziana," Part I, "Le Origini," by Nicola Testi (Bergamo: Istituto Italiano d'Arti Grafiche, 30 lire). The affair must have been irritating to Signor Testi, and one can hardly blame him for directing a running fire from his foot-notes against Signor Venturi's volume. But one feels, too, that, as is often the case, the man in the right is the real sufferer from the controversy. Signor Testi has merely burdened his already laborious treatise with superfluous controversy. His book is in every way a contrast to its rival. Venturi's work was virtually a big essay, very readable and useful as such, dealing only with main issues. Testi's single volume, though of equal bulk, covers half the ground of Venturi's, treating exhaustively the whole history of graphic design in the Veneto. Mosaics and miniatures are constantly considered, as well as the relevant bits of sculpture. Of course, Signor Testi's method is the more truly scientific, but this very thoroughness takes it out of the class of books possible for the general reader. It is a great storehouse of facts, and presents in tolerable reproductions many pictures unknown to art history. Students will doubtless find it a happy hunting ground, and to them we must leave it, merely observing that Signor Testi seems to us to have established his main thesis, namely: that the Gothic-Byzantine style at Venice was not one of decadence, but of progress towards more veracious and vivacious methods of composition and draughtsmanship. This rather surprising view he draws from his study of the mosaics.

Prof. Karl Frey of the University of Berlin has published a German edition of the letters of Michael Angelo, "Die Briefe des Michelagniolo Buonarroti" (Berlin: Julius Bard). The letters are arranged chronologically, and an appendix contains copious notes, selections from the poetry of the artist, and letters addressed to him. This volume will be valuable for everybody in-

terested in the civilization of the renaissance, for not only does it afford an insight into the inner life of the artist, but it also gives a faithful picture of his surroundings. The language of the translation is very readable—an advantage that merits special mention, considering the difficulties of Michael Angelo's Italian.

A second and enlarged edition of Herrmann Muthesius's "Das englische Haus" (three vols. Berlin: Wasmuth Co.) has just left the press. This work is one of the most comprehensive historical and descriptive accounts of the English house.

Among the exhibitions in the dealers' galleries in this city are paintings by A. Walkowitz at Haas's, till April 17; portraits of old masters, Ehrich's, April 19; paintings of eastern Oregon, Childe Hassam, April 21; and engravings after Watteau, Lancret, Pater, Chardin, Boucher, Van Loo, Fragonard, and other artists of the eighteenth century in France, Frederick Keppel & Co.'s, May 4.

The fifteenth annual architectural exhibition of the T Square Club and the Philadelphia Chapter of the American Institute of Architects opens at the galleries of the Pennsylvania Academy of the Fine Arts April 17.

From Meulan comes the report of the death of Victor Vignon, the French landscape painter, at the age of sixty-one. He exhibited at the Salon of the Société Nationale des Beaux-Arts.

Anton Hess, professor of plastic art at the Technical Highschool of Munich, has died at the age of seventy. He was himself a sculptor of note, and executed statues for the Rathaus and other public buildings.

The death is reported of the well-known picture restorer, Alois Hauser of Berlin, in his seventy-ninth year.

Finance.

SPECULATION IN HARD TIMES.

The recent outburst of excited speculation for the rise on the Stock Exchange points again to the oddity of a phenomenon with which our people became familiar in 1908. It is not wholly unusual, when finance and industry have reached the low level of after-panic reaction and are gradually rising to normal, for the incidental recovery in prices to be rapid for a time; and such recovery would naturally be attended by speculative operations for the rise. It is not even unprecedented for speculators just emerged from a serious panic to make up their minds that nothing of consequence has happened, and that good times are immediately ahead. Such illusions were indulged in even in the year following the panic of 1873, which tradition pictures as a period of profound depression. But speculative activities such as were witnessed in 1908, and have been witnessed this month, are not in line with precedent.

In the case of the present Stock Exchange "boom," the first abnormal fact to notice is that the rise began with prices for many active stocks already back at the ante-panic level. Furthermore, it is not unfair to say that definite belief in, or anticipation of, immediate industrial improvement, has played little part. In last year's markets, such faith appeared to exist. Taking its cue, perhaps, from the remarkable Prosperity League, the Stock Exchange asserted in the series of "bull markets" of 1908, and got itself to believe, that hard times were actually over. In the active speculation of last spring, the arrival of large numbers of buyers in the dry goods trade, in response to the cut in prices at the mills, was taken as visible evidence of a returning "boom." In the summer, another similar speculation was based on definite assertions from the Middle West that the prospect of a good harvest had started up the mills and caused reëmployment of 17,000 idle laborers. A third demonstration, in November, was plainly based on the inference that, since election of the Presidential candidate favored in financial circles had, in 1900, been followed by great prosperity, therefore results would be similar in 1908. It has not been easy, however, to discover such a process of inference on the present occasion. The signs of trade reaction have been too plainly in view, since the steel market's artificially-held prices gave way in February, to make possible any illusions, such as those of a year ago, to the effect that the "boom times of 1906" were about to be reproduced. Actual events, including the tariff controversy, have been of a kind to inspire hesitation rather than enthusiasm. Nevertheless, prices for many stocks have not only risen substantially, but have actually—as in the case of United States Steel shares—gone above the highest price in such prosperous periods as 1905 and 1906.

How is a movement of this sort, under such conditions, to be explained? A common explanation is that industrial reaction has released great sums of actual money from the channels of trade; that this money, accumulating in New York bank reserves, in the form of an abnormally large surplus, has brought money rates to an extremely low figure, and has thus afforded unusual facilities to speculative borrowers. Such a condition certainly does exist; but it existed also in 1894, when the New York surplus bank reserve rose to $111,000,000, as against a maximum of $59,200,000 last year. Yet 1894 was marked on the Stock Exchange by inertia, depression, and liquidation. Furthermore, at the present moment and for similar reasons, the great European banks are making a showing quite as remarkable as New York's, and money rates on the European markets are quite as low; yet no such speculation for the rise is seen on the other side of the Atlantic. And if, in fact, it were to be conceded that low money rates must, *ipso facto*, bring about high prices for speculative stocks, then the converse should logically be true, and the high money rates of an era of real trade activity should produce a falling stock market. But every one knows that nothing of the sort happens. If it did, then the Stock Exchange would certainly have to abdicate its office as the index and prophet of real industrial conditions.

The problem, from an economic point of view, is puzzling. What the phenomena of the day appear to indicate rather clearly is, that sums of capital, quite without precedent in the history of markets, are used in this country for stock speculation pure and simple. Something of the sort was visible in Jay Gould's time; but Gould and his confederates were rarely able to make headway on the stock market when actual conditions pointed the other way. There must, then, be some other underlying difference, economic or psychological. In both regards, there are certain peculiarities of the present period which explain, even if they do not justify, the singular position of the markets. One is, that the American people as a whole have not been reduced to poverty or forced into close retrenchment, as happened after all our former panics. The prosperity of our agricultural section, as compared with these former periods, is one patent illustration. Evidently, also, the appetite for speculation, in the American community, has not been destroyed by the lesson of 1907. Whether this is or is not a wholesome sign, and exactly what are the probable consequences, are other questions.

"The Meaning of Money," by Hartley Withers (London: Smith, Elder & Co.), is a simple account, in non-technical language, of the modern mechanism of exchange. From metallic money, the author passes to such subjects as bills of exchange, checks, banknotes, the clearing system, foreign exchange, commercial banking, and the money market. Designed for English readers, the volume considers chiefly the English money market, but pays due attention to the various elements affecting the world's exchanges. As a compendium for people untrained in the intricacies of finance, the book merits hearty commendation. Its explanations are clear, its illustrations striking, and its underlying theory extremely sound and sensible. The author's views concerning the gold reserves of Great Britain and the best method of increasing them are worthy of the careful consideration of economists and financiers. American readers may well take to heart the concluding chapter, upon "Other Reserves," in which Mr. Withers emphasizes the fact that a high cash reserve is of little avail unless the other assets are such as to command confidence, and that this "confidence" is a "psychological reserve"

depending upon the character of bankers. "Control of a chain of banks," he remarks, "by a gambling group, and the use of the banks' credit to further the group's gambling," is a poor basis upon which to build a "psychological reserve." We wonder what country and what particular city our author could have had in mind.

BOOKS OF THE WEEK.

Alden, Raymond Macdonald. An Introduction to Poetry. For Students of English Literature. Henry Holt. $1.25.
Bainbridge, William Seaman. Life's Day: Guide-Posts and Danger-Signals in Health. Frederick A. Stokes.
Batson, Mrs. Stephen. The Summer Garden of Pleasure. Chicago: A. C. McClurg.

The Playground of Europe

By LESLIE STEPHEN

With 16 Full-page Illustrations. Crown 8vo. $1.50 net

"What were the qualities which made Leslie Stephen the first among living English critics? This book supplies for any intelligent reader the answer to our question. His preëminence among the writers of his time was not due to any single talent; it was not due to his mere literary gifts, great though they were. It was due to obvious presence, in every work which he has produced, of four qualities rare in themselves, and hardly ever found in combination—sincerity, individuality, humor, and the scientific spirit."—*N. Y. Evening Post.*

G. P. PUTNAM'S SONS, NEW YORK LONDON.

The Nation.

NEW YORK, THURSDAY, APRIL 22, 1909.

The Week.

The cruellest suggestion yet made regarding the best way to reconcile the differences between the Payne bill and the Aldrich bill, comes from the White House. Unite the good features of each, and then improve the resulting combination, is the startling proposal of the President. Certain Dingley duties were cut in the House bill, others in the Senate; agree to accept both sets, and afterwards cut some more. This seems a natural thing to do, but we presume that Mr. Taft is not so innocent of the guile of tariff-making as would appear from his urging this course. It is the bad features of two rival bills upon which agreement is easiest and most common. The President may not remember the historic conflict between House and Senate about the duty on coal. The House had voted 25 cents a ton, the Senate 50. Neither would recede. So they compromised on 75 cents a ton! If Macaulay had been well informed about the process of framing protective tariffs, he could have laid heavier emphasis on the assertion that government consists of compromise. The Democrats at Washington are ready to compromise everything, beginning with their principles.

"During the month, Taft has lost the confidence of Roosevelt and of the loyal Roosevelt following." This is the pained announcement which the readers of several Western newspapers found confronting them simultaneously on April 5. A special dispatch from Washington to the papers comprised in the Scripps-McRae League, and several others in the Central West, gave the sorrowful details. Under the heading, "Roosevelt's Policies Are in the Ditch for Sure," this Washington spokesman for "the people who loved and followed Roosevelt," accumulates the damning evidence. It has to do chiefly with President Taft's surrounding himself with corporation attorneys. Wall Street, it appears, is once more in control of "the machinery of government that HANDLES PROSECUTIONS." In many other ways, during one short month in office, Taft has made "a studied effort to repudiate the things for which his predecessor stood." And there can be but one result:

> Yes; the storm is bound to break. The friends of Roosevelt have clung tenaciously to the hope that they might yet remain the friends of Taft. They have held their judgment in abeyance. They have refrained from criticism. They have thought up explanations and apologies on their own account. They have even gone in person and voiced their fears and criticisms at the White House. But to no purpose. Taft has made it clear that his alliances are not with Roosevelt's friends.

Nor is the disappointment confined to the friends. This veracious and inspired chronicler asserts of his own knowledge that "Roosevelt carried a sad heart away." He had "suffered from the deepest wound known to man"—ingratitude. Yet "the former President was game," and "kept up a cheerful front"; but:

> The friends of Taft will seek in vain for any spoken or written word which puts the endorsement of Roosevelt on the actions of the present occupant of the White House. . . . President Taft and President Roosevelt have said their political farewells.

All the Washington correspondents are said to know that the facts are as stated.

This outbreak has its amusing aspects, but we advise nobody to think it merely laughing matter. The readers of the cheap and widely circulated newspapers in which this prediction of impending rupture appears, take it, we may be sure, with the utmost seriousness. It only voices, in fact, what thousands and thousands of ardent Rooseveltians, particularly in the West, have been saying under their breath. They are bitterly disappointed in Taft. Why, the man goes ahead exactly as if he did not exist by grace of another. Nothing could appear further from his thoughts than the idea of being simply an obedient place-warmer. He even listens complacently when people acclaim him with cries of eight years in the Presidency. Could anything be more preposterous to the inner circle of Rooseveltian intimates? That they confidently reckon upon a restoration in 1912 is an open secret. Any other political forecast they have been in the habit of dismissing with scorn. Until recently, they have counted upon Taft's willingness to make way gracefully for his distinguished predecessor-successor. But of late their faith has been rudely shaken. The severest jar was given to these ever loyal, ever hopeful, by the appointment of Frank Hitchcock as Postmaster-General. To them it meant only one thing: President Taft was preparing to hold the Southern delegates in the next national convention. This was not only insubordination, but very nearly foul play. It was so well settled that the holding up of Mr. Roosevelt's little finger would bring Southern Republicans trooping to his support, that deliberately to build up a Taft machine in the South is almost treason. It has been felt to be fully such by all that band of idolatrous hangers-on who are only living until "he comes back." They look for Republican defeat in the State and Congressional elections of next year, and then there will be such a loud call for the old invincible leader, that nothing can prevent his riding in again. That President Taft should venture to have other plans is the really enraging thing. Corporation counsel in the Cabinet might be condoned, but a search for popularity and for delegates can never be forgiven.

If President Taft sticks, in his army appointments, to the policy he has indicated by his first selections announced on Saturday, he will do much to restore happiness to a discontented service. For the first vacancy as brigadier-general, he chose an excellent officer, Col. Jacob A. Augur, Tenth Cavalry, the senior of his grade, who unfortunately died on Sunday. Next he picked Col. J. G. D. Knight of the Engineers, a most worthy member of that expert corps; and finally Col. Marion P. Maus, Twentieth Infantry, whose abilities were long ago recognized and rewarded by Gen. Miles. For the coming vacancy in the rank of major-general, Mr. Taft designates Brig.-Gen. W. H. Carter, again the senior in his grade, excepting Gen. Funston, who for some years past has been regularly and properly jumped. Not one of these officers advanced is a Rough Rider, or has been in any way personally affiliated with the present President. It will also be observed

that Augur, Maus, and Knight are full colonels, not captains or majors, as was so often the case under the last administration. No mere civilian can fully appreciate what a great feeling of relief and encouragement this fact will bring to the army, which asks only that senior officers of merit be advanced to the prized positions. Exceptional promotions in war-time for special achievements there will always be. But if there ever comes a time when not a single one of the forty-three line colonels proves fit for a generalcy, it will mean that there is something radically wrong with the whole army.

Some of the President's ideas respecting diplomatic appointments, as explained in Washington dispatches, are excellent; but some give us pause. Mr. Taft is not looking for rich men as such. He would prefer in an ambassador a long head over a long purse. Nor does the President intend to be in haste about dealing out the diplomatic offices. He would also like to relieve those now filling them acceptably from the haunting fear that their heads may be any day cut off. All this is well; but the disquiet begins when we hear about "obligations inherited from the last administration," and debts to politicians, and also when we consider some of the appointments already made or offered. These do not seem to argue that the President is exercising as great care and independence in selecting diplomats as he did in choosing his Cabinet, or as he has announced that he will exercise in nominating judges. Yet neither he nor the country can afford to have our representation abroad made to appear a matter of indifference, much less a part of the spoils system. We trust, therefore, that the unpleasant rumors afloat in Washington respecting the intentions of the administration, are unfounded. The offer of the Chinese mission to ex-Senator Fulton of Oregon was doubly ill-advised, but it now appears to be probable that China would not receive him, even if he wished to go to the land of those Chinese whom he had violently attacked in his own country.

No one mentioned Castro at the dinner of the Bureau of American Republics last week at Washington; yet Castro must have been in pretty nearly everybody's mind. The dinner was well-timed. The United States has just got through with a little affair of South American politics which only a few years ago would have aroused violent resentment and talk about the dangerous ambitions of those Yankees. Our government has taken it upon itself to keep Castro out of Venezuela. To that end it has enlisted the coöperation of every other foreign government in the Caribbean. Our action is possibly open to criticism from the strictly legalistic point of view. Yet we have been able to send Castro packing back to Europe and to prevent almost certain civil war in Venezuela, because nowadays there is no danger that our motives will be construed into a dreadful conspiracy against the liberties of South America. The Brazilian Ambassador welcomed in Secretary Knox the inheritor of the policy of Secretary Root. That policy has its very justification in such an exchange of views as took place at the dinner. For it would not be an exaggeration to describe John Barrett's state dinner as an informal ratification by the Latin-American diplomats of what we have recently done for South American peace.

Pike and Daviess Counties, Indiana, do not border on Kentucky; they lie in the second and third tiers back from the Ohio River. Their farmers have probably never seen a real live Night Rider from the tobacco country. But Kentucky's recent civil strife has taught afar the art of coercion. Raking fields, burning barns, and torturing defenceless men and women in the dead of night are easy tricks. It is only necessary that a dozen stalwart rascals agree, and the whole countryside is at their mercy. Indiana's new marauders are trying to establish their own schedule of land rentals. If they succeed, and it is by no means impossible, another county's ruffians may attempt to regulate village taxes, or even the high-school curriculum. The great tobacco war may never be repeated anywhere in the country; but its miniatures will appear, again and again, in such outbursts of organized crime as Pike and Daviess Counties have been witnessing. And each of these uprisings must remind us what a heavy price we are paying for having dealt gently with lawlessness. Had Kentucky stamped out her Night Riders in their first anarchy, Indiana would not now be vexed.

Two hundred of the "best citizens" of Ada, Oklahoma, had on Monday the stern civic duty to perform of lynching three citizens of Texas, who were, at home, "popular among the best class of citizens." When best meets best, then comes the tug of the lynching rope. The whole account reads like a wild burlesque—a mixture of "Martin Chuzzlewit," the *Police Gazette*, and a stage extravaganza. We cannot undertake to judge of the local conditions or of the alleged crimes which led to this culmination, but regarding the net effect there can be no doubt: it is to make this country seem to foreigners the home of savages, and to cause all our protests against lawlessness in Turkey or inhumanity in Russia to appear like a huge joke.

Cæsar putting away the crown is nothing to a philanthropist removing his halo. Yet Judge Gary has taken off the one that President Roosevelt conferred upon him in November, 1907. At the annual meeting of the United States Steel Corporation, the chairman of the board declared that the account which Mr. Roosevelt had given of the acquisition of the Tennessee Coal and Iron Company was "not entirely accurate." In a letter to his Attorney-General, dated November 4, 1907, the President stated that Messrs. Gary and Frick "inform me that, as a mere business transaction, they do not care to purchase the [Tennessee] stock; that under ordinary circumstances, they would not consider purchasing the stock; . . . but they feel that it is immensely to their interest, as to the interest of every responsible business man, to try to prevent a panic and general industrial smash-up." There stood revealed the noblest financial altruism, and Messrs. Gary and Frick have been ever since trying to hide their blushes from the country. But the blushing was left off when Judge Gary told his stockholders that "Mr. Roosevelt's interpretation of the situation" was "not quite correct," since, in fact, the Steel Corporation had been negotiating for the Tennessee Company long before the panic, and considered it an excellent purchase. Philanthropy is good, but truth is better. Yet the Steel Corporation officials may find it hard to

make an incredulous public believe that they did *not* act from purely disinterested motives. President Roosevelt asserted that they did, and they cannot contradict him without leaving that astute enemy of monopolists in a most embarrassing position.

The senior of '09 is now casting about for a niche in the world. If he is studious, he perhaps tries to win a college post. It would be well for him to remember, however, that the school of lower grade is no longer a mere waiting-room for people in search of better opportunities; it has its own openings. Few college men realize what they might accomplish, were they to train for school management or for high-school teaching. President Eliot spoke in the fulness of wisdom the other evening, when he urged Harvard undergraduates to engage in these lines of work, adding that they are "worthy of an accomplished man of letters or of science, or a gifted administrator." More than 10,000 high schools are now open; many of them are as large as universities, more prosperous than some, and more advanced than our fathers' colleges were. Signs are abundant, too, that they will one day become, in popular esteem as well as in fact, the centre of the American educational system. But even if this does not happen, they will certainly be numerous and strong enough to reward fittingly the man who trains himself for their work.

It is to be hoped that the Assembly will speedily concur with the Senate in passing the bill to prohibit the publishing of betting odds in the newspapers. The measure would effectually expose a pet hypocrisy of certain papers, and force them to discontinue its daily exhibition. While professing to be against gambling, they encourage it; some even of those who advocated the suppression of public gambling at the race tracks are doing what they can to promote it in the poolrooms. A little legal compulsion laid upon these inconsistent journalists would do them good. But the public benefit is the main thing, and this would obviously be compassed by the prohibition of these daily hints to gamblers. They come distinctly under the head of provocations to crime, with the suppression of which the Legislature may properly deal.

If Abdul Hamid goes down at last, as the chances stand at the present moment, it will be very appropriately in a welter of bloodshed. The tale of the slaughtered in the eight-day massacre in Asia Minor is mounting to dreadful proportions. Five thousand is estimated to be the number of dead in the vilayet of Adana. To no other cause can the outbreak at present be assigned than to the ruthless despot on whose head is the blood which has run in Armenia, in Bulgaria, and in the streets of Constantinople. It has been said that Europe has had a softer heart for the Sultan than his own subjects. It was largely in deference to European opinion that the leaders of last summer's revolution allowed him to keep the throne and life. Short shrift with Abdul Hamid at that time would probably have cost far less blood than has been poured out during the last week; and the tempest of Moslem fanaticism which has been set raging in Asia Minor is not yet checked. The Young Turks have their work made easier by the news from Asia Minor.

If a juster scale of values in heroism were prevalent among us, the deaths of the two missionaries at Adana, Turkey, would not pass with so little mention. They were killed "in the line of duty," as naval reports run, but only because the line of their duty, as they conceived it, covered every demand of Christian self-sacrifice. While trying to extinguish the flames in the house of an old Turkish woman, Daniel Miner Rogers and Mr. Maurer were shot by the blindly infuriated mob. It was a death as glorious in spirit as Gen. Gordon's—giving up life to save the feeble and friendless—and we may be sure that the recording angel will not be misled by the absence of newspaper glorification.

Since Webster, in a moment of exhilaration, undertook to pay the national debt out of his own pocket, nothing so magnificent has been seen as the offer of L. J. Maxse to the Chancellor of the British Exchequer to build a Dreadnought. He is the well-known editor of the *National Review*, furiously anti-German and tremendously bellicose. It is true that Mr. Maxse forwarded his cheque for only £200, and Dreadnoughts cost slightly more; but the point was that this showed, in Mr. Maxse's own words, that "the government can get all the money they want by a frank appeal to the patriotism of the nation." Mr. Lloyd-George's reply, however, was rather cruel. He admitted Mr. Maxse's exalted patriotism, but somewhat questioned his good judgment. The Chancellor reminded the editor that "the willingness of the taxpayer to contribute is not, as you appear to think, the proper measure of the burdens to be imposed upon him by the government." It is just as culpable to rush into unnecessary expenditure as it is to neglect national defence. In determining the true policy to be followed, wrote Mr. Lloyd-George, responsible statesmen should not be influenced by "journalistic clamor." With this significant glance at the furibund editor, the Chancellor returned his cheque. Mr. Maxse is, he lets it be known, to "devote it to some other patriotic purpose." Possibly, to the campaign fund of the Conservatives. If you can't build eight Dreadnoughts for £200, you can at least help turn out the Liberals.

In Germany, the government has recovered a good deal of lost prestige through its diplomatic success in the Balkan difficulty. It was also helped by England's flurry over German naval development and by the contrast between the angry debates in the British Parliament and the passing of the naval estimates by the Reichstag without debate. Yet official and Conservative organs are now warning the Germans not to boast as if their own troubles were surmounted. Financial legislation has as yet come to nothing, though the need of covering the huge deficits and providing new revenue is urgent. The fight over that question will go on through the summer. To date, the government has had, as even the *Norddeutscher Zeitung* admits, only a series of failures. Still more significant is the present attitude of the *Kreuz Zeitung*. It strongly advocates seeking an agreement with England regarding "naval construction." Germany, it argues, is in no financial position to build and maintain a fleet to cope with England's in war. And it sensibly adds that to endeavor to arrive at an understanding with England would be a proof "not of weakness, but of wisdom." Such advances bear out what we said last week about the opportunity of Anglo-German diplomacy.

SENATOR ALDRICH'S BUDGET.

If the country were to judge Senator Aldrich's speech of Monday solely on the basis of the general principles it propounds, it would in many respects deserve high praise. Unlike most Congressional "budget speeches," Mr. Aldrich's has something to say about adjusting expenditure to income. That "the rapidity with which our national expenditures have increased within the last three years is a source of anxiety, if not alarm"; that "there are periods . . . when the spirit of extravagance pervades the atmosphere and the public money is scattered right and left, often without reference to the results to be secured"; that the appropriations of the last session were such that nothing can "relieve Congress from responsibility for their unprecedented extravagance"; and that "no excuse whatever can be found for similar legislation in the future"—these are not new doctrines to careful students of public finance. But it is well that they should be declared thus bluntly on the floor of Congress itself, and from so influential a quarter. The manner in which some of the proposals for direct taxation, with estimates of enormous productiveness, have been thrown out in Congress, might well encourage Congressional spendthrifts to imagine that, somehow or other, all their drafts on the public purse will be met without difficulty. This easy optimism Mr. Aldrich at least is wise enough to avoid.

In certain other respects, however, his speech will encounter and will merit severe criticism. One comment will be inevitable—namely, that his indignation over the appropriations for the coming fiscal year is a little belated. Why did we not hear something about the responsibility of Congress, the pervading spirit of extravagance, and the anxiety if not alarm which it inspired, when the appropriation bills were before the Senate, two or three months ago? We recall one or two meekly deprecatory remarks upon the subject, to which the Senators listened much as they did to the prayer at the opening of the day's proceedings, and that was the end of it. Mr. Aldrich's declaration of Monday, then, that the appropriations "could have been reduced at least $50,000,000 without impairing the efficiency of the public service," and that when the country is confronted with a deficit, it is "the imperative duty of Congress to reduce expenditures and make them conform to actual revenue conditions," sounds curiously like an afterthought. We hope, however, that the afterthought will be pressed on Congress in the future.

But when we come to Senator Aldrich's actual budget of revenue and expenditure, under his committee's tariff measure, it is necessary to look at details rather than generalities. Warranted or unwarranted, the appropriations for the twelvemonth beginning with next July are made. It is the present business of a budget committee to make sure that the revenue will meet them, and we are not by any means certain that Senator Aldrich's plans will accomplish this.

To begin with, his estimates are pervaded with that spirit of happy-go-lucky confidence to which was largely due the very size of the appropriation bills which he condemns. When Mr. Aldrich figures out the probable yield, under his schedules, he assumes that the import trade will be the same as in 1907, which was "the last year in which the finances and business of this country were in a normal condition." That is to say, a year which all business men have agreed in pronouncing a period of trade inflation, a year in which economic experts have shown that the demands of industry had so far overstrained the facilities of capital and credit as to precipitate worldwide financial trouble, is to be taken as the norm of the country's foreign trade. Now in the history of finance nothing is more familiar than the fact that the tide of excessive imports which invariably precedes a serious panic, does not rise to such a height again for many years. The country's import trade of the fiscal year 1873 was not again approached until 1880; not until 1902 did imports reach the volume of 1893. Yet Senator Aldrich calmly looks for customs revenue on the basis of the trade for the twelvemonth ending June, 1907.

His reason for this assumption is singular: "We can feel the change in the air." But trade movements which gentlemen feel in the air or in their bones are not the safest basis for the fiscal plans of a great government. That the import trade last month increased with great rapidity, and with it the customs revenue, is a fact, and the main cause of that increase, reduced stocks of imported merchandise, is correctly stated by Mr. Aldrich. When, however, the Senator jumps to his next conclusion, and asserts that "it must be conceded that the era of prosperity which commenced the first part of March is likely to continue uninterruptedly with the enactment of wise tariff legislation," he is indulging in curious language for a financial expert. This sort of cocksure prediction belongs to the Stock Exchange, and not in the halls of legislation.

The assertion that "there can be no reasonable question of the sufficiency of the Senate bill to provide adequate revenue" is quite of a piece with this childlike assurance. We can scarcely believe that Congress will approach the further consideration of the problem in such a spirit. As to the actual yield under the new schedules, it is impossible to speak definitely until the numerous clauses of the Senate bill which the finance committee has left for further deliberation are filled out. It is right that the question of avoiding excessive revenue should be as carefully considered as that of avoiding a deficit; and plans for direct taxation ought to be severely scrutinized with a view to escaping both contingencies. But it is equally necessary to avoid the pitfalls of blind and hasty optimism. Senator Daniel's declaration for the Opposition that he will "vote first of all to raise revenue," and next "to lift every burden of taxation off the people that can be eliminated with just regard to the conditions in which we legislate," is the only programme that is rational.

NAVY-YARD REORGANIZATION.

If it will but centre the attention of the new Secretary of the Navy upon the need of radical reorganization, we shall be inclined to thank the nine line officers at League Island for their pamphlet criticisms of the recent changes in navy-yard administration. They are not, it now appears, to face courts-martial for the peculiar method which they took to air their views—a method not, however, altogether unheard-of in naval annals, for similar acts in the past have brought about important changes. But the need of the hour is a complete overhauling of our naval manufacturing methods, that millions may be saved and the efficiency of

the fleet at the same time increased. We care not who gives the impetus, so long as Mr. Meyer can be made to comprehend the needs of the service and the magnificent opportunities which lie before him. Mr. Taft, it is said, has impressed each member of his Cabinet with his desire to make his government famous for its efficiency and its economy. But no other departmental head has such plain sailing as Mr. Meyer—if he will but steer by the proper charts.

Since Mr. Newberry, despite his brief term of office, was fully aware of the reforms needed, and had grappled with those relating to the navy yards with marked success, many naval officers were disappointed that he was not retained by Mr. Taft, and with him the Assistant Secretary, Mr. Satterlee. The officers argued, plausibly enough, that the incoming officials, however skilled in administration, would naturally need some time to become familiar with their duties and to understand the innumerable currents and cross-currents in the department which have stranded and left helpless more than one civilian head. But since Mr. Meyer was one of the two members of Mr. Roosevelt's Cabinet reappointed by Mr. Taft, these officers felt that the President must have specially chosen Mr. Meyer for the Augean task of cleaning up the department, reorganizing the navy yards, and then making the staff lion and the line lamb lie down together in peace. Hence they, too, will not regret the offence of the nine officers at Philadelphia, if it should compel the new Secretary to make plain his endorsement of the Newberry reforms.

These are worth recalling. It has long been a scandal that the five manufacturing bureaus of the department have had in nearly every yard their own separate plants. Thus, until recently, there were at the Brooklyn yard five blacksmith shops, five joiner shops, five carpenter shops, at least three foundries, as many paint-shops, etc., etc. It is not necessary to point out the waste this involved or the number of sinecures it created. Conceived as a whole, any navy yard is but one great plant. not a group of five competitive plants. What private enterprise could exist if it employed five master founders instead of one, five carpenter foremen instead of one, and five head blacksmiths instead of one, and so on throughout its force? The absurdity of the thing was at once apparent to Mr. Newberry, and he ordered the consolidation of all these shops and their management by one responsible head, who might be termed the "manufacturing manager" of the yard.

Unfortunately, Mr. Newberry limited the officers eligible to this new post to those of the corps of naval constructors —and the fight with the line was on at once. This is just the point that has so stirred the Philadelphia officers. With amazing ignorance of the large savings already made, and of the great profit to the sea-going officers resulting from the new methods, they want a return to the old system; so long as there are separate bureaus in Washington, they want separate establishments at the navy yards, and the whole managed not by a naval constructor, but by a sea-going or line officer. They ignore the fact that the commandant, a sea-going officer, remains the superior of that manufacturing director (the naval constructor); and that the commandant is now, for the first time, a real executive, and not merely a man who signs his name to papers several hundred times a day. They fail to see that, for the first time, the captain of a ship in a navy yard knows what is going to be done to nis vessel; that one gang of laborers of the Bureau of Equipment, ordered to run electric-wire conduits, does not sit down and wait in idleness until another gang comes from the Bureau of Construction shops to drill the necessary holes. Moreover, for the first time, the captain of a ship is inspector of the work done on it, and is asked to report any laborers who loaf on their jobs. Ten days were saved in fitting the Chester for sea at Brooklyn as soon as the new system was tried.

Now what is needed in Philadelphia is not a court-martial—our naval officers ought to be as free to express their views about things and methods, in the proper way, as are English naval officers, who never hesitate to criticise the Admiralty in the London *Times*—but a sound lecturing from Mr. Meyer to set them right. He might well aid in clearing the atmosphere by modifying Mr. Newberry's restriction of the post of manufacturing director to the Construction Corps and specifying that any officer of any corps could be made director if only he had the necessary ability. Even civilians of merit might be appointed—though this suggestion wrings tears from the nine recalcitrants at Philadelphia. What the public wants is efficient and economical navy yards; what insignia of rank and corps the manufacturing director is to wear it cares not at all. Mr. Meyer will, we trust, make it clear when he comes to Brooklyn, as he now plans to do in the near future, that he is on the side of reform and economy. If he will but perfect the workings of the Newberry system, he will then be free to attack—if he can—the greater question of the unnecessary Senatorial navy yards, and insist that they be closed and millions more saved.

THE RURAL INDUSTRIAL SCHOOL.

The Southern Educational Conference, which met last week in Atlanta, devoted no little time to the needs and opportunities of the small rural industrial schools, those miniature Hamptons and Tuskegees which are springing up all over the country in surprising numbers—for example, such institutions as Calhoun at Calhoun, Alabama; Kowaliga, in the same State, and Okolona, in Mississippi—all of which are doing a most useful work thoroughly deserving of support. Indeed, it is no exaggeration to say that collectors for both white and colored schools of this character fairly overrun our Northern cities and almost fall over one another in their quest for funds.

Unfortunately, there is no board or fund which deals expressly with schools of this character. When the Southern Education Board began, and was followed by Mr. Rockefeller's princely gifts to the General Education Board, it was thought that the rural industrial schools would be the chief beneficiaries. But the Rockefeller money is now flowing in other directions, largely to established universities and colleges; we have only recently heard of a gift to a small negro school—$5,000 to Kowaliga, to which Mr. Carnegie has added a similar sum. Indeed, Hampton and Tuskegee have both suffered in consequence of the General Board's millions; many contributors appear to think that no further aid from them is needed; and the smaller schools have

labored under a similar misunderstanding. The Southern Education Board devotes itself to educational campaigns in Southern States, and has had great success in improving public-school conditions there. The Jeanes Fund aids only the rural one-teacher public school. Thus merely the Slater Fund, with its limited means, interests itself to any extent in the rural industrial school; for the Peabody Fund, which might have been kept intact for this useful purpose, is to be distributed, a good part going to a teachers' training school in Tennessee.

To our mind, the work of these rural and industrial institutions is of such great moment to whites and blacks alike that no philanthropist could to-day invest a large sum more wisely than by endowing a board which should primarily interest itself in their development. Many of these country schools, like that at Manassas, Virginia, are the result of genuine self-denial and sacrifice on the part of the colored people; others like Lyman Ward's at Camp Hill, Alabama, and Miss Martha Berry's at Rome, Georgia, represent similar praiseworthy exertions on the part of Southern white leaders. All of the schools are developing in a more or less haphazard way, some with exclusively white teachers, some with mixed faculties, and others with only colored instructors and managers. In some, particular stress is given to agricultural training; in others, the manual industries receive especial attention. In few, if any, have the book-learning and hand training been properly coördinated; while many are entirely without proper systems of book-keeping and accounting. Hardly any insist upon fixed standards for entrance or graduation or make sure that the pupil who carries away a certificate is at least a master of the fundamental three R's.

Each new school for lack of intelligent supervision and direction by some central body falls into precisely the errors of its predecessors. Some institutions, like Okolona, are self-supporting; others do not know how to use their resources to this end. Again, there are several places where two such schools exist with a wasteful and needless duplication of work similar to that at Atlanta, where no less than three weak and struggling institutions are competing for the higher education of the negro. It must be admitted, too, that some of the rural schools that appeal for aid are in no wise entitled to it. There is an impostor named John J. Smallwood, for instance, who lives well on his collections for a school that does not exist, and a "Georgia Nautical School" for negroes is perpetually in being—that its founder may live comfortably on the contributions he collects.

A board especially charged with the interests of genuine schools of this kind would be in a position to drive out impostors, to raise scholastic standards, to prescribe a system of bookkeeping, and a form for financial statements, by giving or withholding its approval and gifts, just as the Carnegie pension fund has made numerous colleges raise their entrance examinations in order to qualify for pensions for its teachers. By acting as a clearing-house for information, a central board could be of enormous value in placing the experiences of one school at the disposition of others, and it could intelligently advise as to what is now becoming the most important feature of these small industrial schools—their community extension work. Through allied land companies, through farmers' conferences, mothers' meetings, and teachers' institutes, Manassas, Kowaliga, Calhoun, Utica, and others in every State of the old Confederacy are extending their influences a thousand-fold—again after the manner of Hampton and Tuskegee—by blazing the way to prosperity for poor white and poor black alike, and often breaking down the barriers of prejudice between the races. Surely, so great a work ought not to be allowed to languish or to develop in haphazard fashion.

UNCONSCIOUS PIRATES.

It was doubtless what Paley called an "undesigned coincidence," but nevertheless it is a striking one, that the government's final attempt to have the courts declare the Standard Oil Company a wicked monopoly and an outlaw, should have been made in the same week in which the head of the Standard published his *apologia pro vita sua*. At St. Louis, the counsel for the Department of Justice were calling Mr. Rockefeller a pirate, who for years had flown the black flag, at the very time when he himself was coming before the world in a book simply agush with the milk of human kindness. If he was ever a pirate, he certainly appears in it as a man who could outdo the gentlest Stockton or Gilbert and Sullivan buccaneer in knitting or any other fireside art.

We have no intention of discussing Mr. Rockefeller's "Reminiscences" in detail. It is not the place to go for real information about the rise and achievements of the Standard Oil Company. Of all that, he but skims the surface. The interest of his book is not historical nor industrial nor financial, but psychological and moral. We spoke of it as an *apologia*, but in his mind it is nothing of the kind. He is sublimely unaware that there is anything to be apologized for. He does, indeed, speak with pain and protest of the fact that some of his honored associates have been charged with "grave faults"—to quote his mild-mannered phrase. As regards his own career, however, no reader of his book who had no other sources of information, would dream that the writer felt anything but humble satisfaction and joy in the noble example which, by the grace of God, he had been able to set before ingenuous and aspiring American youth. Nor can we regard this as a mere assumption of virtue. Only a great literary artist would be able to feign innocence so completely, and to sustain it so successfully to the end of the last chapter; but Mr. Rockefeller is an artless writer. Our inference is that his pages are simply the genuine expression of his real attitude of mind If he is or has been a pirate, he is as unconscious a one as ever drew breath.

Such a phenomenon as he and others like him present, throws us back upon our definitions, and forces us to scrutinize human nature. If a whole system has been built up on the philosophy of the unconscious, it is only fair to ask if the men whom we call wicked, may not be quite oblivious of their wickedness. As there are glad souls without reproach or blot who do God's will and know it not, so may there not be the other kind, who do the Devil's work and know it not? Granting that a man may be, in actual fact, a devourer of widows' houses and an oppressor of the poor, we are not to imagine that he begins his day by asking himself: "What villany shall I be able to execute ere set of sun?" He does not look about for a given widow whose property

he may take away by nightfall, or gloat over a definite orphan whose pittance he thinks he may get into his own pocket before going to bed. If even pickpockets and burglars go about their jobs with an absorbed sense of merely pursuing the business by which they live, we must be prepared to admit a certain degree of the same unconsciousness, or overlooking, of evil in those who wreck railroads, loot banks, or destroy the property of a rival.

It is clear, too, that a man whose business practices have made him disliked or even execrated, may move through the world pretty nearly ignorant of the opinion of his fellow-men. He has few means of finding it out. The newspapers, he may make it a boast, with Mr. Balfour, that he never reads; or, if he does read them, he discovers in them so much that is exaggerated, sensational, or false, that he sees no reason why he should pay any attention to what they say about himself. And even when he is dimly aware of a certain outside hostility, which he easily sets down to misunderstanding or slander, he is able to fall back upon unfailing appreciation and admiration among his intimates—and it is the world in actual touch with us which makes up, for most of us, that external conscience which we so readily transform into the voice within. The unjust magnate knows little or nothing, by any outward sign, of his injustice. In his office and in directors' meetings, his dependents fawn upon him and his associates flatter him. His family hangs upon him in affection. In church he is consulted and deferred to, with no one to suggest, as the English lord did to the bishop, that he would do well to indulge in "piety of a less ostentatious character." Wrapped up in his large projects, delighting in the game of money-making for its own sake, surrounded by friends, overwhelmed by college presidents with expressions of that gratitude which consists in the expectation of favors to come—how can it be wondered at that such a man, his sensibilities which were never delicate grown callous with long absorption in affairs, should be blandly unconscious of what the world thinks him to be or of what he really is?

Fortunately, both social laws and the statutes deal with overt acts, not with a state or soul. If we had to be sure that a monopolist had to be acutely conscious of sin, or a devastator of industry stricken through with remorse, before he could be properly convicted or punished, the worst of the lawless rich could count upon going scot free. A man may smile and be a villain; an industrial pirate may think he has the face of a saint, to go with his devout thoughts. But the law does not undertake to read the hearts of men. If the Federal courts decide that the Standard Oil Company is a piratical organization, the fact that its head is all unwitting of piracy will alter neither the judgment nor the penalty.

THE MINOR TONGUES.

The New York State Board of Regents has just added Biblical Hebrew to its examination list. There is no reason why it should not have done so. Our law students and medical students, intent on passing off their preliminary "counts," will undoubtedly find it just as easy to forget the Pentateuch and the Song of Songs as they do Cæsar's Commentaries, the Æneid, and the Anabasis. But in the action of the Regents something more than a delicate compliment to our growing Hebrew citizenship was probably intended. The Hebrew language, as a spoken tongue, may be practically dead. Yet as the language of the Jewish ritual and the most common branch of elementary education among the orthodox, Hebrew is sufficiently familiar to give the ordinary Jewish student a decided advantage over the outsider. And this aside from the fact that many Hebrew words in corrupt form enter into Yiddish, which is still the dialect of a very large part of the Jewish population of New York city. A generation or two hence, when the children of our Italian and Greek immigrants begin to flock to the colleges, they will have a similar legitimate advantage in their tussle with Cæsar and Xenophon.

The vitality of Yiddish and, indeed, the struggle of the smaller nations for the preservation of their native language constitutes one of the most significant features of contemporary European history. Sentiment and practical reasons are both involved. The Poles in East Prussia, the Ruthenians and the Poles in Russia, the Czechs and Germans in Bohemia, the Bulgarians, Greeks, and Serbs in Turkey, the Flemings in Belgium, the rival French and German factions in Alsace-Lorraine, are actuated in part by national pride, in part by clear recognition of the fact that a common language is one of the firmest bonds of national existence, but in part also by the desire for material advantage. A Czech or a Greek-speaking population means that, whoever holds the reins of power, there will be need of a certain number of Czech-speaking or Greek-speaking officials, judges, priests, journalists, and school-teachers. The preservation of its language thus means to a subject race the preservation of an irreducible minimum of local self-government and a chance to grow up into something else than tax-paying hewers of wood and drawers of water. At the same time, a language is the most easily defended of all national treasures. Land, liberty, opportunity may all be taken away, but not even German ingenuity has as yet found a perfect device for making a conquered race hold its tongue. And the forbidden speech, so easily defended, is also easily passed on. The Polish landowner in Prussia can never feel sure that his son will hold the estate after him. But to drill a child in his father's speech may mean insurance of patriotism for a generation.

Thus habit, sentiment, ambition, worldly prudence, are all concerned in the modern strife of tongues. Subject peoples cling to the language they have inherited, as the Poles, the Flemings, and the southern Slavs do; or bring back to life forgotten languages of their own, as the Irish with Gaelic and the Jews in Russia with Hebrew; or attempt to purify and ennoble the common vernacular, as the Greeks did in the early nineteenth century, as the Rumanians are doing at the present day, and as the Jews, again, in this country and in Europe are doing with the Yiddish dialect. The Yiddish newspapers in New York city circulate probably a quarter of a million copies. There is a respectable Yiddish literature and a more than respectable Yiddish drama. Yet of recent years Jewish writers have grown discontented with the medium to which they are bound. Upon a double foundation of German and Hebrew, the Yiddish has piled up treasure-trove from every language with which the race in the course of its chequered history during the last five

hundred years has come into contact. Limited in vocabulary and almost devoid of fixed grammatical structure, the dialect would not respond to the uses which ambitious writers wished to impose upon it. At the same time, there could be no possibility of throwing it over altogether. Such as it is, Yiddish is the spoken tongue of probably seven or eight million Jews. But more than that, the new spirit of Jewish nationalism, which is one of the most striking consequences of the late Russian revolution, felt the need of a national language. There was none other practicable. So the problem resolved itself into keeping Yiddish and rebuilding it into an organic and modern tongue. Side by side with the older dialect, this firmer and broader, if less colored, language is now growing up.

A magazine written in this reformed Yiddish and published in this city is *Dos Naaye Leben*; its first four numbers have reached us. A glance at the list of contents shows why its editors have felt the need of a more vigorous and refined medium than the spoken Yiddish of the street. Very solid food is spread out here for the East Side reader, food of a quality we are accustomed to associate with the English quarterlies and with the various *Jahrbücher* and *Mitteilungen* on the other side of the North Sea. The proper limitations upon the freedom of the creative artist, the death and resurrection of gods and religions, the Turkish revolution and Zionism, the Hegelian conceptions of logical and historical fact, Jewish nationality, and Jewish Socialism—these are a few topics which argue well for cultural standards in the Ghetto, if we are right in supposing that Yiddish magazines, like magazines in a certain better-known language, are edited on the principle of giving the public what it wants. The thought occurs that here is found within the limits of what is, after all, a dialect a good deal of excellent thinking and writing that might have found a broader forum than the Yiddish. But that is just what is being done in the other minor tongues, in Gaelic, in Flemish, in Czechish, in the various minute Slav dialects, every one of which can show highly gifted writers sacrificing the chances of a wider fame to the call of patriotism.

THE PRESENT AND FUTURE OF COLLEGIATE COEDUCATION.

I.

Ten years ago the conspicuous presence of coeducation in our educational system was accepted either as desirable or as a necessary evil. Now, although statistics show that it still prevails, and that the number of women in coeducational institutions far outnumbers those in women's colleges, there is yet a growing tendency to reopen the dispute. It may not be amiss, therefore, to reproduce certain impressions which resulted from personal experiences, all pleasurable but now clarified by distance, in a woman's college, in a coeducational State university, and in a woman's college affiliated with a university for men. This article, I may add, takes no account of secondary schools or of graduate work. The word "university" is used, according to a frequent custom, interchangeably with "college."

Coeducation is the most economical method of giving instruction. Faculties, libraries, and laboratories are expensive, and legislatures administering public exchequers, or patrons anxious to make a thrifty use of their own money, will hesitate long before duplicating them. In the case of legislatures this is especially true, for while private benefactors may solve their doubts or follow their inclination by giving to either sex alone, no State in these days would be allowed to revert from its acquired habit of offering exactly equal advantages, in one form or another, to both sexes. The frugal adherence of State universities to coeducation cannot be justly attacked from the point of view of actual instruction. In spite of all that may be said, experience proves that boys and girls between eighteen and twenty-two have about the same kind of mental digestion and need about the same kind of pabulum; that they do not need to be taught the same subjects in different ways; that they can study biology and literature together; and that they can work in the same intellectual harness without diminishing the ambition of the one sex or the health of the other.

Aside from the question of economy, a further point in favor of coeducation may be submitted to those who are particularly interested in the education of women. While boys would seem not to be losers by such a system, girls may easily be gainers; for, whatever the reason, the faculty of the best State university is stronger than the faculty of the best woman's college, and the intellectual impulse is potentially greater.

II.

We say "potentially" because demonstrable facts seriously limit the efficacy of the reasoning. There is a set of arguments against coeducation quite other than the superficial ones to which we have briefly referred. Over against these thrift may come to seem but a secondary matter. Before passing to details, however, it must be clearly stated that what follows does not relate to that small class of young men and women whose exceptional abilities or natures enable them to use advantageously any outward environment. Here we are concerned with the great majorities, with the students whose minds and characters lack conspicuous originality and whose development is materially affected by outside influences. In the case of most young people there are other forces than teaching and scholarship which make for intellectual training, and there are also other things than intellectual training which make for complete development. Here, at both points, the separate college for men or for women has the advantage of the coeducational. There is a necessary student life, rich in wholesome activities, which, on the one hand, develops the sense of responsibility and communal feeling, and on the other stimulates and widens the imagination, and makes the mind more plastic to the influences of learning and of culture. Of course, as President Woodrow Wilson so admirably said in a recent address, student life may anywhere become a non-conducting medium through which intellectual discipline fails of transmission. But where coeducation exists there are additional and special dangers.

On the administrative side of this student life probably boys suffer much less than girls in a coeducational university. In their more strenuous activities, in athletics, and debating, they are as satisfactorily (or as unsatisfactorily) developed as any undergraduates who are entirely quarantined from feminine influences. Girls, on the contrary, always play the secondary rôle in common affairs, such as class organizations and the like, and their own separate pursuits, however well conducted, are never anything larger than tributary streams to the main current of university life. They lose, therefore, a certain breadth of experience in spite of their often spacious surroundings. Even in a small woman's college the student life has a more definite end, a finer coherence, a truer charm.

But college life outside the classroom and the study includes a beneficent idleness, as well as microcosmic activities. In the idler hours boys and girls alike suffer from coeducation. This matter is important, not only because of its bearing on character, but because of the very intimate connection between the kind of play with which students beguile their free time and the mood and manner in which they approach intellectual discipline. In all colleges popularity and social success bulk large. The "all-

round man" and the "all-round girl" bear off the prizes that are most precious in the estimation of their fellows. But usually in the separate colleges "all-roundness" includes many fine qualities and the popular judgment is at fault in its limitations (those of youth) rather than in its standards. In coeducational colleges, however, the standards themselves are in danger of becoming foolish and jejune, aping those of any frivolous social group, but lacking the compensations to be found in the larger world of men and women. Wherever boys and girls are fellow-students "on good terms," there occurs a particular kind of cleavage between different classes of students. On the one side, in artificial darkness, languish the girls who fail to please the young men, and the young men who bore the girls. On the other side, flutter in artificial light the socially eligible. Often the former are unhappy, with the peculiar bitterness of youth. But it is when they are wise beyond their years and philosophically content that a spectator most appreciates the commonplaceness of ideas which relegate them to a false wilderness. The elect meantime lead a life of conventional gayety. At its best, this life almost entirely destroys the attractive originality of college recreation, and is as subversive of its real purposes as intercollegiate athletics can be. In a recent "story by twelve authors," Mr. Howells makes the father of the "co-educated" heroine say to his wife that if their daughter was going to get married, "he didn't see how she could have a better basis than knowing the fellow through three or four years of hard work." But the mother, more sympathetically aware of the real life of young people, replies that "she guessed if it came to that, they would get to know more of each other's looks than they did of their minds." And with her any one must agree who has watched coeducated students with eyes sharpened by affectionate interest. "Hard work" often seems like a needle in the haystack of dances, calls, walks, and drives. A certain kind of girl boasts that by "cramming" in the afternoons, she can keep every evening free for "fun with the boys." A certain kind of young man seems to omit even the cramming, if one may judge by the persistence with which he haunts the reception rooms of the girls' dormitories. Conversations give no indication of a burdensome number of ideas in the minds of the talkers. The absence of pedantry is altogether delightful, but wit is at as low an ebb as in any group more intimate with each other's looks and clothes than with each other's minds. By far the larger number of boys and girls of twenty do not "meet on a basis of intellectual sympathy, free from sentiment." We should not find them nearly so engaging if they did, nor would they be half so well worth educating. But since they are heirs to human nature, when they are jumbled together in the freedom of college life, and unrestricted by the traditions of ordinary social groups, they are bound, not to stimulate each other intellectually, but, like Hippocleides, to "dance away" their finer opportunities.

At its worst, this student gayety gradually creates standards which extort a harsher epithet than foolish. By no means rarely the students who are regarded as socially eligible (and it is they who see most of each other) constitute a crowd of heedless young people too intent upon the pleasures of the moment to enforce very severe standards. Lacking the guidance of their homes, some girls grow indulgent toward lapses, which, in the openness of college life, they cannot fail to perceive. Some boys, meeting with leniency instead of inspiration, are not constrained to climb to their highest levels. It must be borne in mind that this is not a question of the obvious dangers which beset any college for men and from which any woman's college is free, but of the insidious dangers creeping *sub specie boni* into the characters of either young men or young women. The harm that is here considered is that of the steady, if slow, infringment of the highest standards, the dulling of the sharp edge of spiritual perceptions. On the surface this shows in a certain hardening of manners. In another chapter of the story of the coeducated heroine, Henry James represents her æsthetic older brother as protesting that "the poor girl—a perfect little decorative person, who ought to have iridescent-gray plumage and pink-shod feet to match the rest of her—shouldn't be thrust into any general menagerie-cage, but be kept for the dovecote and the garden, kept where we may still hear her coo. That's what, at college, they'll make her unlearn; she'll learn to roar and snarl with the other animals." It is possible to dismiss with a smile the dovecote and the menagerie, and yet feel regret that in a world so much in need of gentleness even a few young women should lose, or fail to acquire, the charm of delicate manners.

III.

So far the case has been made—fairly, it is hoped—to stand as follows: Coeducation is the best means toward the desirable end of economically giving to boys and girls the same instruction; separate education develops the best student life, and exerts on mind and character the best subtle influences. It would seem that the verdict might be given according to one's opinions about the necessity for economy and about the reality and power of social dangers. But the curious thing about most private conversations on the subject is that reasoned arguments, capable of analysis, of proof and disproof, make way for vehement statements originating, apparently, in that wider reasoning which includes feeling as well as logic. Supporters of coeducation maintain that the union of the sexes in college as out of college is the way of nature and therefore the way of freedom and sincerity; some of them hold this opinion so intensely as to assert that "their religion would be lost to them were coeducation to prove a failure"; others express the same conviction with more philosophic detachment. Opponents of coeducation declare that the presence of both sexes in one college is tasteless and even vulgar, offending the instincts ("always the surest guides") of "manly" men and "ladylike" women. Those who have formed calm opinions after a due weighing of rival claims may listen in amazement to these more passionate sentiments, but it is through them that the question of coeducation is being reopened and becoming once more a live issue.

At present, it looks as if the opponents were growing unexpectedly powerful. They are certainly justified in pointing to indications that some institutions and some branches of study are likely to suffer under coeducation. Undergraduate boys say that they do not want girls about. Girls say that they will not go where there are boys. These young people may not be able to give any reasons for their feelings, but they have it in their power practically to demonstrate them. Already private coeducational colleges have been forced to worry over the effect of the presence of women students on the desired increase in the number of men students. Already those who are interested in the preservation of democratic standards have begun to fear that girls (perhaps even boys) of a certain type and a certain degree of worldly prosperity will turn away from State institutions towards separate colleges, bringing about the same unfortunate but apparently inevitable social cleavage which now exists in cities between the high schools and private schools. And already in the largest State universities, young men are avoiding courses in literature and language, and girls are giving up courses in history and political economy. In short, in the half logical, half emotional estimates of young people and of their elders, forces are continuously at work which are scarcely dreamed of in the philosophy of educators. During the last few years they have created a situation sufficiently serious to move presidents and trustees and faculties to certain precautionary measures. Some universities have limited the number of women, a device too arbitrary and superficial to be anything but temporary. Others have segregated the women in the courses of the first two years, so

that the same professors teach the same subjects to boys and girls in separate classes. Others have attempted this segregation only to be defeated. Such defeats, however, are probably little more than ripples in the on-rushing tide. More and more the original principles of coeducation are being abandoned by those who are still its stoutest adherents. Ten or fifteen years ago the policy of most State universities was to treat its women exactly as it treated its men. Now scarcely one lacks its woman dean or advisor, its dormitories with women presiding over them, and its hopes, if not its plans, for some more general building, in which the life of the women students may find a decorous centre. The gradual perfection of such measures as these—partial segregation, or the development of a more wholesome student life, or both—may satisfactorily solve the problem that confronts State universities without really changing their form. But a radical transformation is not an impossible event of the future.

IV.

This brings us to a third form of education not yet discussed. At present a few women's colleges are affiliated, in varying degrees of legal and practical intimacy, with universities for men. Such colleges would seem to combine the advantages of coeducation and of separate education, for they offer the same instruction to both sexes, and at the same time cultivate an entirely distinct student life. At present, however, certain facts militate against their unquestioned success as an educational experiment. Unless they are as rich as the universities to which they belong, they cannot offer as many elective courses as are offered to the men. And unless they are rich enough to support separate professorships and inaugurate a system of exchange with the universities, they obtain the services of the university professors only by adding an often inadequate sum to the regular salaries. Whether, therefore, they can count upon the older men and the heads of departments depends largely upon the size of the salaries. Unless it is financially necessary, scholars ought not to spend their extra time in teaching rather than in investigation or writing. It is not a question of their loyalty to any college or to either sex, but rather of their prior allegiance to the service of learning.

It has already been indicated that the difficulty of obtaining absolutely equal instruction is minimized when the affiliated college is rich. But two general facts prevent colleges of this kind from receiving very generous support. For one thing, they share the ill fortune (commercially speaking) of all women's colleges in not being able to count on as much or as independent wealth among their graduates as men's colleges can, or on the same traditions of giving in certain families or certain communities. Furthermore, they meet with special obstacles because they are associated with coeducation, incurring, curiously enough, the dislike of both opposing camps. Those who prefer coeducation will have none of these "halfway measures." Those who object to it fear a measure which is "so far along the road." This latter point of view explains why the majority of the undergraduate boys dislike the affiliated college even if they do not have to meet the girls in any way whatever, and why a large number of girls refuse to go to such colleges. It also explains why many professors object to admitting even advanced and mature young women into their small university electives or their graduate courses. They say frankly that it is no prejudice against the particular applicants, or even against local conditions, but a needed protest against any intrusion of the coeducational idea.

In spite of the difficulties now inherent in the question of affiliating women's colleges with men's colleges, some of us cannot refrain from cherishing a roseate vision of what may yet come to pass. Possibly, some day a rich State university may be willing to form two distinct undergraduate schools for young men and for young women. In spite of a specious resemblance, this will be very different from the plan now being considered in Minnesota, by which (significantly enough) "segregation of the sexes" is anticipated as the natural result of buying a new campus and physically separating the professional schools from the "academic college." It is to be hoped that State universities will continue to attract young men who wish a liberal education, and that academic colleges for men and for women will be coessentials. Each college should have not only separate buildings, but also a separate campus. This would involve expense because land would have to be bought and lecture halls, laboratories, and small reference libraries would have to be duplicated. But the same faculty would teach in each, enlarged only as every faculty has to be enlarged when the number of students necessitates the subdivision of classes. And a large general library could be used as properly by both sexes as any public library. The total expense, therefore, would in no way compare with that of creating a separate university for women. What would be the advantages? As opposed to coeducation, each college would suitably develop the morals and manners of its own sex. As opposed to separate education, girls would share the best instruction within the command of a powerful university. As opposed to affiliated or "coördinate" education, faculties would be obliged by the terms of their contracts, and enabled by the adjustment of their work, to teach the women as well as the men; the students would lose their objections to each other's presence as soon as it was understood that coeducation, instead of subtly encroaching, had abdicated; and many fathers would take pleasure in perpetuating their own college traditions in their sons and daughters alike if they were convinced that it would not be at the expense of more important things. If some influential State university would begin the change, probably the fashion would spread as rapidly as States could afford it. And this would react favorably on the experiment of affiliated colleges in States where privately endowed universities hold the place of command occupied in the West by State universities. Probably, however, it will be many years before the plain taxpayers of even the richest State will become convinced that so drastic a reform is necessary. They will content themselves with partial segregation and with women's buildings and deans, and of changes like these we may expect to see many in the next decade.

In the meantime, we may congratulate ourselves that any form of education is better and brighter than its enemies can imagine, and even more useful and persuasive than its friends can hope. In the great game there is more than one way of checkmating the devil.

ELIZABETHAN REVIVALS IN COLLEGE.

TO THE EDITOR OF THE NATION:

SIR: One of the most convincing signs of the growth and expansion of a genuine interest in the drama to-day may be found in the dramatic performances that have become so regular a feature of undergraduate life in our colleges. The range is very wide, from the poor imitation of a cheap Broadway "show," with tinkling tunes, "stunts," and college boys masquerading as short-skirted chorus ladies, to original drama of such sincerity and strength as that of "The Promised Land" at Cambridge last autumn. To the student of literature the most interesting performances are, no doubt, the revivals of Elizabethan drama. Such a play intelligently staged and simply, if at times a little crudely, presented, may throw much light upon the stagecraft and dramatic methods of our old playwrights. A notable instance of such a revelation occurred at the performances of "Dr. Faustus" at Princeton two years ago, when the despised comic scenes proved to be rich in the elements of farcical burlesque, and still capable of attaining the very effects for which they were originally designed, that of relaxing the audience in gales of laughter between the tense strain of the tragic scenes. And an attempt at Har-

vard some years ago to rearrange "The Shoemaker's Holiday" for presentation showed that Dekker—usually thought of as the typical careless genius, who attains his effects by happy chance—had here, at least, displayed a regard for balance and proportion that rendered it almost impossible to cut a scene without destroying what must have been a carefully planned symmetry. After all, our old dramatists, from Shakespeare down to the neediest of Henslowe's hacks, were practical playwrights. They wrote for the stage, not for the closet, and it takes the stage to reveal the strength and persistent vitality of their work.

It is, therefore, most encouraging to find an undergraduate organization, formed originally for purely social purposes, devoting itself to Elizabethan revivals with a continuity and success that have given it a tradition on which its members look back with just pride. Such is the Harvard Chapter of Delta Upsilon, whose performance of Chapman's "All Fools" I had the pleasure of attending in Cambridge on April 12. Without financial support, limited in the field from which to draw its actors, aided only by an amateur coach, this fraternity has for eleven years presented, always with credit, at times with marked success, some of the masterpieces—often too little known—of Elizabethan comedy and romance. Beginning with "The Shoemaker's Holiday" in 1898, the list includes "Fortune by Land and Sea," "The Maid in the Mill," "The Elder Brother," "Eastward Ho," "The Alchemist," "The Silent Woman," "The Wise Woman of Hogsden," "The Knight of the Burning Pestle," "Bartholomew Fair," and "All Fools"—a record unparalleled, I believe, in this country. As the latest editor of Chapman's comedy I was especially interested in attending the performance of "All Fools," the more so as William Archer had asserted that the praise bestowed upon this play by historians of the drama was extravagantly high, a mere echo of the romantic enthusiasm of Charles Lamb, and that tried by a modern and rational standard the play was so far from being great that it could not even be pronounced good. To my delight I found that tried by the standard of actual representation, by intelligent amateur actors, the play gave distinct pleasure to a mixed and highly critical audience, which followed the story with unbroken interest, and burst out from time to time in hearty and spontaneous applause.

Curiously little adaptation was needed, and the adapter, Arthur S. Hills, deserves high credit for the skill with which he performed his work. The frank license of Elizabethan speech had at times to be cut out or toned down; the long declamations, half in imitation, half in parody of Lyly, originally written to tickle the fancy of listeners who knew their "Euphues" by heart, were of course struck out, and the play was distinctly the better for the omission. On the other hand, the action was preserved intact and in its original sequence of scenes, enlivened here and there by songs and dances which do not appear in the text, but the like of which can hardly have been wanting at a performance by the Children of the Chapel. An occasional bit of business in dumb-show was used to introduce an act, and a couple of clever "curtains" were provided, notably at the end of Act iv, where Gazetta came stealing back over the darkened stage to her empty home and was caught to the arms of the jealous but now repentant husband who had driven her away. It is not surprising, after all, that but little alteration was needed, for the main action of the play is borrowed, as is well known, from Terence, who drew it in turn from the New Comedy of the Greeks. And the New Comedy, as preserved for us in the adaptations of Plautus and Terence, has been, since the renaissance, the unfailing source and the constant model of much of the best of modern comedy. A recent performance at Harvard of the largest fragment remaining of Menander's work has shown how deft was the hand of this early master in the construction of simple and effective plot, and in the delineation of type characters which have been stock figures of comedy ever since.

As far back as Terence the practice prevailed of increasing the amount of action, usually by the simple method of boiling down two old plays to make one new one. When such classical scholars as Jonson and Chapman began to adapt Latin comedy to the Elizabethan stage this process was repeated, and two Latin comedies were combined to furnish sufficient action to hold the attention of an Elizabethan audience. Even this was at times insufficient; in "All Fools," for example, we have a "contamination," to use the technical term, of the "Heautontimoroumenos" and the "Adelphi," plus a sub-plot of Chapman's own invention, dealing with the humors of a jealous husband and an amorous courtier. As a result, the "intrigue" of "All Fools" is extremely complicated, "a criss-cross of deception and dupery," as Mr. Archer calls it. Yet the complications which bewilder the reader become, in the light of actual performance, only an amusing puzzle to which the clue has been furnished. Whether every member of the audience the other night could have passed a rigid examination in the reconstruction of the plot is, I think, doubtful, but I am sure that the play as it unrolled carried along every spectator, with no trace of that feeling of hesitation and bewilderment which is so fatal to the enjoyment of a comedy of intrigue. As a measure of Chapman's originality it was interesting to note that the most effective scene, the mock repentance of Valerio and his father's feigned forgiveness, was one for which Chapman found no hint in his sources. Yet it contains a situation directly and legitimately evolved from the original story and by no means merely superimposed upon it.

Another interesting feature in Chapman's adaptation of Latin comedy is his transformation of the type characters of Terence into embodiments of Elizabethan "humors." Gostanzo is by no means only the stern parent of Latin comedy; he is a distinct and individual character dominated by the "humor" of senile self-conceit. Valerio is no mere stock figure of the prodigal son, but a young gallant with a strong dash of Elizabethan wit and romance. And the chief merit, I think, of the performance at Harvard lay in the firm grasp of these "humors" by the young actors, and the simplicity and sincerity of their presentation. This was especially true in the case of such minor figures as those of Dariotto and Cornelio in the underplot, presented respectively by T. S. Kenyon and James A. Eccles. Mr. Kenyon as the foppish, idly amorous courtier, a creature of airs and graces, wandering eyes, and delightfully irresponsible legs, was a pure joy, while the really masterful interpretation of the jealous husband by Mr. Eccles lifted that figure at once out of the sphere of farce comedy and struck a sombre note of real passion which furnished an admirable undertone to the merry chorus of gulls and jesters which constitutes the main body of the play.

It is easy to point out flaws in all amateur, perhaps in most professional, performances. But it is enough to say that the performance as a whole revealed in Chapman's play a vitality and breadth of comic power unrealized before even by one who has long loved and dutifully studied the work of this noble old poet and playwright.

Princeton University, April 16.

A SHAKESPEARE MEMORIAL IN AMERICA.

To the Editor of The Nation:

Sir: The successful launching in England of a Shakespeare memorial theatre undertaking, with the pledge already of $350,000 of the estimated cost of $2,500,000, recalls to my mind the fact that in a semi-private note I broached the same idea here in America in 1901. The veteran Shakespeare editor, Dr. William J. Rolfe, wrote to me at that time:

> Your plan for a Shakespeare memorial theatre in Boston is admirable, and it would be an honor to the city to carry it out. I sincerely hope that it may commend itself to people of culture and wealth and that I may live to see it accomplished.

I was unfortunately called away immediately after I had thrown out this idea, and the matter was allowed to lapse.

I remember that Mr. Henry T. Clapp wrote me that he did not favor the theatre part of the project. I should have said that a main feature of the plan then (and I would make it the sole feature now) was the concrete embodiment of our strong American enthusiasm for Shakespeare in a small Shakespeare memorial gallery and library building, either on Riverside Drive, say, in New York, or in Fenway Park in Boston. Here could be gathered together not only busts and portraits of Shakespeare himself and Shakespearean actors and actresses of the last three hundred years in England, Germany, and America, and books on the literature of the Shakespeare stage during that period (the tercentenary of Shakespeare's death occurs in 1916), but also a library of rare and early editions and of all the great modern editions of the plays, and Elizabethan toolbooks of all kinds, for consultation and daily use by bona-fide scholars. Such a building need be no larger than Roslyn Chapel, but it would be the pride of Americans, and an inspiration to thousands of young pilgrims and old, and a stimulus to the study of the prince of poets.

The trustees of such a Shakespeare memorial, after incorporation, would open books for subscription, and I venture to say the response would be as immediate and hearty as it has just been in Eng-

iand. The charging of a smaii admittance fee to the memorial wouid soon result in the accumulation of a permanent fund for the enriching of the coiiections and perhaps for the ultimate addition of an amphitheatre for the staging of Eiizabethan plays. If the *Nation* will express editoriai approval of the project and take the matter off my hands, I wiii giadiy bow myseif into retirement and consider this broaching of the idea to be my part of the undertaking, although I do not wish to shirk any duty and would subscribe what I couid afford. I am not sure but a national subscription, made up of contributions from the schools and coiieges of each State, would be the best pian.

WILLIAM SLOANE KENNEDY.

Boston, April 14.

THE BIBLE AND SHAKESPEARE.

TO THE EDITOR OF THE NATION:

SIR: May I thank you for your editoriai of April 8 on "The Bible as Literary Model," and at the same time suggest that a simiiar warning is even more needed in regard to Shakespeare. Many a young writer hears that Lincoln's chief study was the Bibie and Shakespeare, and fondiy hopes that industrious and constant perusai of those two books wiii assist him more than anything else in the formation of a strong Engiish styie. There are even, I believe, living historians of high rank whose chief literary reading is of a simiiar nature, for a similar purpose.

You have weii shown the error of this view in regard to the Bibie. It is, I think, even more erroneous, so far as Shakespeare is concerned. Every one wiii probabiy agree that in high-wrought and passionate imaginative expression Shakespeare surpasses all other writers. But it so happens that this is precisely the iiterary quaiity that cannot be iearned. What can be learned is ciear, vigorous, logical exposition and terse, energetic, unadorned description and narrative. In these points Shakespeare is less strong, partiy from the nature of dramatic writing, stiii more from the very richness of his imagination. When the wheel of Shakespeare idoiatry is come fuii circle—and there are signs that that hour is approaching—these deficiencies in Shakespeare's style wiii be more generaiiy recognized, and above aii we shaii see that his influence on your writers is likeiy to be by no means a beneficiai one. His great qualities are inimitabie, his defects are caught only too easiiy. In the same way we shaii in time come to understand that the siavish foiiowing of Shakespeare has, for a century, been one of the chief causes of the prostration of the English drama.

As to modeis, the practicai prose writer of to-day will sureiy iearn most about the technique of his art—and this is the only part of it about which he can iearn anything—from the great authors of the eighteenth century, Swift, Addison, and Fieiding, and, if a foreign language is aiiowabie, Voltaire. But is it not best of aii to avoid models altogether, to read as wideiy as possibie, and authors as unlike as possibie, to turn from Goidsmith to Montaigne, and from Sir Thomas Browne to Anatoie France? Contact with such varied minds and styles must necessariiy broaden and enrich. And there is but one true recipe for writing with clearness and vigor: to think with clearness and vigor. Let a man penetrate his mind with the grandeur of Sophocies and the speed of Voitaire. Then iet him feel human iife with passionate iove and sympathy. He cannot heip writing weii—unless he finds something else to do that is stiii better.

GAMALIEL BRADFORD, JR.

Wellesley Hills, Mass., April 13.

CLASSICAL STUDY IN THE SOUTH.

TO THE EDITOR OF THE NATION:

SIR: In the *Nation* of March 18 (pp. 280-281), the scholariy reviewer of Sandys's "History of Ciassical Scholarship" says: "And the work cioses with a courteous and even too complimentary review of American schoiarship." While this is true, we notice in the treatment of this part of the subject some iack of a sense of proportion, and there are some strange omissions. For instance, on page 456 of the third volume, a notice of three lines is aii that is accorded to Prof. W. W. Goodwin, and the impression is produced that he is the "cracker to the whip" of President C. C. Felton.

A Southern reader, naturaiiy a iittie oversensitive, iooks in vain for recognition here of work done by men and coiieges south of Mason and Dixon's line. In view of the influence exerted by the University of Virginia, for example, in the spread of classical learning in the South, we had expected to find that in the outiine of the work of George Long (p. 430) his connection with this university had been stated and the standard of schoiarship there set by him had been recorded to his credit. It wouid seem proper to record, too, the work of Long's distinguished successor, Dr. Gessner Harrison—that pioneer in America in the fieid of comparative philology, who did so much to further the scientific study of ianguage aiong the iine foiiowed by Bopp and Curtius, and who, more than any other man, perhaps, succeeded in raising the standard of education throughout the South. Again, the work of Prof. B. L. Giidersieeve in Latin and in Greek sureiy entities him to something more than a passing and incidental reference of three lines, in which he is mentioned mereiy as the editor of a *Journal of Philology* (p. 468), if Hayiey, for instance, is to have a paragraph and a caption (p. 461).

Perhaps the omission which is most surprising is the faiiure to mention Wiiliam and Mary College among eariy American coiieges. It is true that this coiiege has, for the ionger part of its corporate existence (*i. e.*, since 1693), stood rather for professionai and scientific training than for classicai iearning; but for a time at ieast it was the Harvard of Virginia; and the aima mater of Thomas Jefferson and his peers, both in the interest of historical accuracy and because of the real value of the work there accomplished, shouid receive recognition and respectful mention. Would it not disturb the shade of Sir Edwin Sandys to know that one of his name has faiied to recognize the oid coiiege, the incorporation of which, though iong deiayed, was the direct resuit of the efforts of the good treasurer of the London Company to promote the spread of iearning in the colony which he ioved so weii and served so iong?

Hampden-Sidney, Va., April 12.

THE PRONUNCIATION OF THE CLASSICS

TO THE EDITOR OF THE NATION:

SIR: Wiii you aiiow me to answer some of the points raised by your correspondent in the *Nation* of March 18 in regard to the pronunciation of the classics? He maintains that it is foiiy to continue longer the pretty but useless custom of pronouncing Latin by the Continental method, adopted a generation ago in our coiieges and schoois. His reasoning appears to me to be defective, and his experience is not mine.

The first day I ever spent in Rome I feii in with a Franciscan friar on the Pincian Hill. As I knew not a word of Italian, and couid only shake my head when asked a question, Brother Hippolytus tried Latin on me. He spoke his Latin fiuently and pronounced it exactiy as though it were Italian. I had no difficuity whatever in foiiowing him, though many minor variations were absoiuteiy new to me. Of course, when I answered with my Continental pronunciation and came to my first hard "g," the good brother was shocked. I was teiiing him that I had *read* a good deal of Latin, but had never spoken it. Interrupting me with a warning gesture and taking a pinch of snuff, he proceeded to give me some fatherly advice: "Non 'leg-ere' utpote Germanici, sed 'legere'" (with the soft "g"). I tried my best during the rest of the conversation not to wound Fra Ippolyto's national pride. Heaven only knows what would have happened, if I had sprung Angiicized Latin on him. I have never had to depend upon conversational Latin in Germany, but have had no difficulty whatever in foiiowing the German brand of Latin when read to me. Its variations from the standard American system are iess than those of the Itaiian. I cannot understand how a man who reaiiy knew his Latin couid be completely thrown off by the comparativeiy siight differences in pronunciation which must necessariiy exist in different countries even under a theoreticaiiy uniform system. I have even been abie to understand much of modern Greek through the ancient, wideiy different as the current methods of pronunciation are. But to say that we shouid go back to the strictiy Engiish pronunciation, because the Continentai fails of absoiute perfection, is to advocate unwarranted retrogression.

Let me cite another experience of mine. Your correspondent's chief contention in support of the Engiish pronunciation is that the ear can be used as weii as the eye in detecting the etymoiogical source of Latin derivatives in the Engiish ianguage. Thus, according to him, the schooi-boy who hears the word "iicentia" in his Cicero, if it is pronounced by the English method, will at once think of "license," and will feel a glow of pleasure which it were a shame to deprive him of by caiiing the word "iee-ken-tia." Against such a narrow idea of etymoiogical studies I protest, and the personai experience to which I refer is as foiiows: Not iong ago I had occasion to give a Bohemian friend a first lesson in English. I explained to him that Engiish was a queer and rather deceitful language. It had stolen a iot of useful words from Latin, and then so disguised them that none of the descendants of old mother Lat-

in could reclaim their property. "Take, for instance," I said, "the Latin word 'natura': in Italian we have 'natura,' in French 'nature,' in German 'Natur'—all square and above board so far; but in English—'nay-chr'! Yet to see the word 'nature' in print you would not think it had deserted its kin so completely." Now, according to the theory of your correspondent, we ought to pronounce the Latin "nay-chura," so that the young American will not be misled and will feel the "æsthetic delight" which comes from an "appreciation of etymological derivations." Give the boys and girls a chance! Don't confound their ideas of the fundamentals of one of the greatest families of modern languages just to make one minor department of classical studies a shade easier of apprehension. And give them credit for a little intelligence! I never found a youngster yet who couldn't grasp the etymological connection between Latin and English, and get pleasure out of it too, in spite of the difference of pronunciation.

To quote from the article in question: "Why longer prejudice the vanishing number of novices who hesitate at the threshold of Greek and Latin?" Any one who is going to be scared away from Latin simply because it is not pronounced like English either has reached a stage of intellectual timidity which deserves the epithet molly-coddle or has sunk into a narrow provincialism from which he deserves to be aroused by no gentle measures.

So much by way of rebuttal. The chief positive argument in favor of the pronunciation now used in America your correspondent has not mentioned; namely, that we are now pronouncing our Latin essentially as the Romans did. I know that this assertion often strikes the layman as chimerical, but the problem is not so difficult as would appear at first sight. The actual statements of ancient grammarians as to how their native tongue was pronounced; the transliteration of Latin words into other ancient languages; and above all the science of phonetics, working on the phenomena exhibited by the Romance languages, has established beyond the shadow of a doubt the main elements of the pronunciation of classical Latin. (For a clear and concise exposition of the whole matter see the "Appendix" to Prof. C. E. Bennett's "Latin Grammar," published separately.) And just think what this means for Latin poetry. Can the poet's cadences be rightly appreciated unless we approximate our pronunciation as far as possible to his own? There is no distinction between dead and living languages here. Virgil, Dante, and Goethe are dead, but the Æneid, the "Divina Commedia," and "Faust" are very much alive. Shall the music of poetry be forgotten for the sake of etymology? Is there any more reason for inflicting the inconsistencies of English on the Æneid rather than on other poems which happen to be "modern"?

Personally I do not believe that there is the slightest danger of our returning to the Anglicized Greek and Latin of former days, but an appeal for the old system advanced by one in authoritative position deserves an answer. D. P. L.

The American School of Classical Studies in Rome, April 5.

BRYCE ON SANE ATHLETICS.

To the Editor of The Nation:

Sir: The following letter was refused the courtesies of the *Daily Princetonian's* columns on the ground that it was "rabid" and "dangerous":

Ambassador Bryce was recently quoted to the effect that the University of California was the only one in the country with sane athletics. If he was correctly quoted, his statement shows a most extraordinary lack of observation. Is it necessary to call his attention to the fact that Princeton has so often held the intercollegiate baseball championship of America? Surely he does not think that such a title could ever be won by any but the sanest and most businesslike policy, backed by the enthusiasm of the entire university. It is to be feared that he has never read the impassioned editorials in the *Princetonian*, entreating the students in the name of Princeton spirit to turn out and support the team, to attend practice every afternoon, and to uphold the honor of the university by sitting in rows on the bleachers and giving vent to semi-articulate sounds.

It is indeed distressing to feel that so enlightened a thinker as the British Ambassador can still hold to the worn-out theory that baseball and football are simply games, to be indulged in for purposes of amusement and recreation, and are not serious and essential factors in the standing of a university, the support of which is a solemn purpose of undergraduate life—I had almost said the only solemn purpose, but I remembered the clubs. Yet, if Mr. Bryce was not misquoted, he still clings to these obsolete notions.

But let us be lenient with the Ambassador, for there is an element of pathos in this failure of a once robust intellect to keep abreast of the times. Let us not judge too harshly a man who is so far removed from the sacred and uplifting atmosphere of Princeton spirit. Let us rather pass over in charitable silence these first evidences of the disintegration of a splendid mind under the influence of approaching age; and let us gently remind ourselves that although Mr. Bryce may have known, in his time, a good deal about the American Commonwealth, yet he evidently knows as little about the American undergraduate as does a certain gentleman within our gates, scarcely less known and less honored by the crass unthinking world, who has done and is doing his worst to bring Princeton down to the level of a mere educational institution. Herbert Jones.

Princeton, April 2.

THE AUTHOR OF THE JUNIUS LETTERS.

To the Editor of The Nation:

Sir: Apropos of a critique in your issue of March 25, on the everlasting question of the authorship of the Junius Letters, let it never be forgotten that Dr. Benjamin Vaughan of Hallowell, Me. (1751-1835), ex-member of the British Parliament, intimately acquainted with every writer and politician in London for years, enjoying a vast acquaintance all over Great Britain, as well as in France and Switzerland, stated repeatedly in his life time that he *"knew beyond the shadow of a doubt"* that the author of the Junius Letters was William Gerard Hamilton. So positive was he of this fact that, if the topic were brought up at his hospitable board at Hallowell, he would not listen to it for a moment without rising from his chair and saying: "Please cease to discuss this matter. I know that Hamilton wrote those letters, and it is useless to discuss a truth like that at my table."

James A. Spalding.

Portland, Me., April 8.

THE REMEDY FOR MISGOVERNMENT.

To the Editor of The Nation:

Sir: Apropos of Deming's "Government of American Cities" (reviewed in your issue of April 8) and a host of volumes of similar character, dealing with the defects of our municipal governments, suggesting remedies, and discussing causes, it has seemed to me for a long time that such books failed adequately to lay bare and emphasize the fundamental defect in our political system. Each city, large or small, undoubtedly has its own peculiar problems, but perhaps a certain typical American city may be cited as a fair, if extreme, example of the evil I have in mind. Let me give a few concrete instances:

(1.) The following announcement has been brought to the notice of the perhaps 400,000 voters of that city:

The first direct primary for the nomination of party judicial candidates will be held to-morrow. One party candidate for Superior judge and fourteen party candidates for Circuit judge are to be chosen. All qualified electors are entitled to vote. Polls open from 6 A. M. to 5 P. M.

(2.) I have just taken the trouble to count the number of candidates in a recent election, and I find it was over four hundred. The number of offices was 106.

(3.) Among the offices I note: Secretary of State, Attorney-General, State Treasurer, University Trustees, State's Attorney, Recorder of Deeds, Clerk of the Circuit Court, Clerk of the Superior Court, Coroner, Circuit Court Judges, County Surveyer, County Assessor.

Now, unless we are ready to admit that the whole system was intended to be, and, in fact, is, a roaring farce, the only theory on which the above phenomena can be explained is that the average voter, the man in the street, in whose hands the ultimate solution of every civic problem lies, is actually capable of passing on the qualifications of all these candidates, and that he also has a competent knowledge of the scope, duties, and responsibilities of each of the numerous offices. Such a theory is certainly political idiocy. And it needs hardly to be pointed out that the average man in these days, engrossed in the struggle to make a living for himself and family, has neither the time, energy, nor inclination to inform himself on the duties, scope, and functions of 106 public offices, nor to make a suitable investigation into the personal character and mental qualifications of some 400 candidates. If the founders of this republic could come to life again and see what we are doing, they would feel that their worst fears as to the inability of the people to govern themselves were abundantly realized in hundreds of American cities.

It is useless to rail at such conditions; but it is wholesome to look them squarely in the face. The fault, it is respectfully submitted, lies not so much in the restrictions which a State Legislature may lay on the activities of a city council; not in the apathy, stupidity, or perverseness of the average citizen; not in the corruption and inefficiency of a low class of public officials; it is ingrained in the vicious system that throws on the back of the electorate burdens which never belonged there and which cannot be borne. One need be neither a shallow, babbling optimist nor a

disillusioned, disgusted pessimist to see that if reform is ever to be achieved in municipal government, the very first step must be to cut down the number of elective offices to about one-tenth of the present number, to concetrate responsibility on that small number, to extend and perfect the merit system, and to arrange that the higher offices shall offer an attractive career to any self-respecting and intelligent citizen.

In economics we have learned, slowly and painfully, that the average human being is far different from the "economic man" figured by the early economists, and we are realizing now that what our doctors and students of political science need most is a careful social, economic, and psychological study of the habits, attainments, and limitations of the average voter. In dealing with matters that he understands and with men that he knows, the average American citizen may be safely entrusted to do his civic duty manfully and every time; but we persist in ascribing to him various godlike attributes which he never did possess, and which he never professed to possess. He has his limitations, he is made of ordinary clay like the rest of us poor, weak, sinful creatures here below, and, whatever else he may be, he is certainly not omniscient in political matters—all our political theories and philosophical speculations to the contrary notwithstanding.

It is a platitude worthy of serious reflection that any government of the people, for the people, and by the people ought to be adapted to that people; it should fit the exigencies of the man in the street and not the man in the clouds. As a rule in American cities, ours does not; hence these tears.

E. L. C. Morse.

Chicago, April 12.

FROMENTIN AND VERMEER.

To the Editor of The Nation:

Sir: A contributor (p. 370 of your issue for April 8) says that Fromentin did not find a word to say on Jan Vermeer. This is misleading. It is true that Fromentin did not find space for many words on Vermeer, preoccupied as he was with problems that loomed larger in 1875, but the few words he did say convey no faint praise. Discussing the question whether a just idea of Dutch art can be formed from examples in the Louvre, without visiting Holland, he remarks that Franz Hals has come to his own but recently, that Jan Steen is well seen only in Holland, and then says ("Les Maîtres d'autrefois," p. 224):

> Van der Meer is almost untouched in France (*inédit*), and since he follows lines of observation sufficiently rare even in his own country, the journey would not be wasted if devoted entirely to study of this special variety of Dutch art. Aside from these discoveries and some others of little value, there are none of note to be made outside of the Louvre and . . . certain French collections. . . .

Adapting himself then to French readers, and confining himself to masters accessible to them in the Louvre, he draws on Metzu, Terburg, and Pierre de Hooch for examples. Formentin died the year after he discovered Vermeer. He had not time to say much more, and on this voyage of discovery we have his own word for it that his "chief concern" was the Night Watch (p. 317), the mystery of which he did so much to unravel. H. M.

Gloucester, Mass., April 12.

Notes.

Prof. Kenneth McKenzie of Yale University announces "A Concordance to the Italian Poems of Francesco Petrarca," to be published by the Oxford University Press, provided a sufficient number of subscribers are obtained in advance. The cost is five dollars, and orders may be sent to the author at No. 67 Mansfield Street, New Haven, Conn.

It is pleasant to hear that a new edition of John Jay Chapman's "Emerson and Other Essays" is to be published immediately by Moffat, Yard & Co. Mr. Chapman's work is too good to be forgotten.

The reprints in green and gilt from the Oxford University Press are not only comely to the eye, but have been unusually successful in their choice of subjects. The latest volume is "The Heroine" of Eaton Stannard Barrett, with an introduction by Prof. Walter Raleigh. We commend to the seeker after amusement these "adventures of a fair romance reader," which first appeared in 1813. We shouldn't like to subscribe to the judgment of a contemporary who pronounced the book "not inferior in wit and humor to 'Tristram Shandy,' and in point of plot and interest infinitely beyond 'Don Quixote,'" but it is a thoroughly amusing take-off on the romantic and gothic taste of the day, after the manner of "Northanger Abbey." Miss Austen was able to write a satire and a regular novel at the same time. That feat was too great for Barrett, but he has put together a surprisingly ingenious series of adventures.

Two more volumes of the New York Edition of Henry James's "Novels and Tales" (Charles Scribner's Sons) follow quickly upon the last instalment. The contents are, Vol. XVII: "The Altar of the Dead," "The Beast in the Jungle," "The Birthplace," "The Private Life," "Owen Wingrave," "The Friends of the Friends," "Sir Edmund Orme," "The Real Right Thing," "The Jolly Corner," and "Julia Bride"; Vol. XVIII: "Daisy Miller," "Pandora," "The Patagonia," "The Marriages," "The Real Thing," "Brooksmith," "The Beldonald Holbein," "The Story in It," "Flickerbridge," and "Mrs. Medwin." In the prefaces, which for the most part treat mere short stories, Mr. James takes himself with portentous seriousness. He dwells at interminable length on the details of unimportant matters. More interesting than some of his other confessions is his admission that "the ghost-story, as we for convenience call it," has ever been for him "the most possible form of the fairy-tale." "Daisy Miller" was, he tells us, rejected by a Philadelphia editor, probably on the ground that it was "an outrage on American girlhood." "The Real Thing" was suggested by an incident of which Du Maurier told Mr. James, "of a call from a strange and striking couple desirous to propose themselves as artist's models for his weekly 'social' illustrations to *Punch*." These people were "originally, by every sign, of the best condition and estate, but overtaken by reverses even while conforming impeccably to the standard of superficial 'smartness.'"

The fifteenth edition of Baedeker's "Central Italy and Rome" (imported by Charles Scribner's Sons) has just been issued. It contains nineteen maps (five more than the fourteenth edition), and fifty-five plans and views (as compared with fifty-one).

Vol IV of Miss Toulmin Smith's edition of Leland's "Itinerary" (London: George Bell & Sons) is made up of a singularly miscellaneous selection from Leland's remains, containing portions of the original narrative, passages from the "Collectanea," and sundry notes on genealogical and social matters taken from other parts of his writings. No one of the volumes shows more clearly the confused state of Leland's writings as they now exist. Of chief interest are the descriptions, frequently elaborate, of places and conditions in Kent, and the account of the itinerary from Alberbury in Shropshire through the northern counties. The task of editing has been performed with the same high regard for quality and thoroughness that characterized the earlier volumes, and the maps show the same painstaking regard for details. A fifth volume containing Parts ix to xii will complete the work.

"Neglected Neighbors" (Philadelphia: John C. Winston Co.), by Charles Frederick Weller, secretary of President Roosevelt's Homes Commission, gives a lively narrative dress to the commission's recent findings as to conditions in Washington. Washington's under-worlds are in the shape of alleys set in the centre of blocks fringed with clubhouses, apartments, and fashionable homes. There are some 300 of these alleys, and they shelter fully 16,000 people, or, rather, expose them to filth, disease, and vice. Were Mr. Weller not a veteran charity worker of established repute, we should be tempted to suspect that his stories were doctored, and his photographs invented in a gallery. He depicts a sick white woman lying for two weeks in a cold room, about her four dead chickens, and refuse ankle-deep; or again, a consumptive negro coughing his life away in a hole, entirely below the street level, entered through a trap-door. And these are relatively inoffensive samples. Washington building lots were originally made so deep that, as taxes increased, owners were obliged to make their back-yards yield revenue. Furthermore, new Federal edifices in recent years have displaced hundreds of dwellings, and the new Union Station, with its approaches, alone wiped out a small village. The clearing up that is immediately necessary for the health and morals of the entire community will cost so much that only a small fraction can be fairly charged against the direct beneficiaries. If Congress will not charge the bill to the Federal government, it should at least devise some scheme of loans. No nation can, with good conscience, scatter millions every month for undeserved pensions and useless warships, while the Washington Monument's shadow touches 300 slums.

The Carnegie Institution of Washington is making fairly rapid progress with its index of economic material in documents published by the States of the United States, an undertaking initiated by the late Carroll D. Wright and his colleagues of the department of economics and sociology.

Six volumes, indexing the materials of Maine, New Hampshire, Vermont, New York, Rhode Island, and Massachusetts, have already been issued, and now a seventh, dealing with California, lies before us. The term economic embraces nearly everything not political and religious; the arrangement is by subject; and the period covered runs from 1789 to 1904. It is designed that the student be able to trace the historical development of each economic subject as it is reflected in the documents of an individual State, as well as to make a comparative study of that development in the country at large. There can be no question of the value of the index. Though but seven volumes have been issued it has already proved itself of great advantage to workers in this field. The indexing is confined to printed documents only, and therefore does not include all the material that the student of economic history will need to use. There are doubtless some subjects for which the printed material will be deemed adequate, but for others the investigator will hardly confine himself solely to the printed reports of administrative officers, legislative committees, and special commissions and to Governors' messages. At the present rate the work will not be completed for twenty years.

"After Waterloo," by Major W. E. Frye (London: William Heinemann) is not at all a military book. Its author served in Egypt and in India, but left active service in 1814. His only connection with Waterloo is that, chancing to be in Brussels on June 18, he heard the cannon from that safe distance; and four days later when he rode out to the field of battle the sight made him sick. During the years 1815-19 he travelled through France, Italy, Switzerland, and Germany, noting his impressions which, with quaint conceit, he put in the form of letters to an imaginary correspondent. After his death at St. Germain-en-Laye in 1853 his manuscript was lost to sight in a cupboard for half a century. It is now published with notes by Salomon Reinach. Frye was a man of some literary attainments, and was really familiar with half a dozen languages; he could translate the Edda, quote Ariosto and Voltaire at length, or write a pretty Italian verse to the guide who took him up Vesuvius. He does not, like his contemporaries, Ticknor and Bancroft, introduce his reader to a host of literary personages; nor has he Arthur Young's keenness of vision for social conditions. He is often naïve, but still this account of his travels is pleasant reading. Though an Englishman, he was an ardent partisan of Napoleon, Voltaire, and "divine liberty," and often takes occasion to inveigh, in Dantesque fashion, against his mother-country "always ready to lend a hand to crush liberty, to perpetuate abuses and to rivet the fetters of monarchical, feudal, and ecclesiastical tyranny."

"The Sisters of Napoleon," by W. R. H. Trowbridge (Charles Scribner's Sons), is an entertaining story of the lives of Elisa, Pauline, and Caroline Bonaparte. The frivolities, intrigues, and ingratitude of these women and their fate after the fall of Napoleon leave on the reader a depressing effect which is not lightened by the author's cynicism and exaggeration. The book based on the recent popular French studies of Turquan, consists largely of quotations from the well-known memoirs of Madame d'Abrantès, Fouché, and a score of other men and women of the First Empire who wrote volumes of gossip. It is interesting, but makes no serious contribution to scholarship.

The most striking paper in the Proceedings of the Massachusetts Historical Society (Serial II) is that of Charles Francis Adams, describing the situation in Washington at the first inauguration of Lincoln. Mr. Adams, who was in the city, pictures the general condition of unrest and expectancy, and the precautions taken by Scott to avoid trouble. He gives a quotation from a letter he wrote at the time, in which he expressed a belief that, the inauguration over, matters would become peaceful, a belief soon to be rudely broken. Even Lincoln was more engaged in distributing offices than in facing a great conflict. Dr. E. H. Hall gives a calm and intelligent statement of the existing national pension system, dwelling upon the evil it has produced, and seeking to explain how it came to pass, "a system of paternalism never dreamed of by the civilized world before, a system which offers every possible inducement to mendicancy and conceals every possible inducement to fraud." As Mr. Hall served as chaplain in the civil war his opinion has authority. James Schouler describes Lincoln's only political visit to New England, in 1848, when he was recognized as a "suckerized Yankee."

An excellent discussion and bird's-eye survey of what has been done and what yet remains to be done for the reform of the higher grades of educational institutions is furnished in a small work by Dr. Julius Ziehen, an experienced educator of Frankfurt-am-Main, entitled "Die bisherige Entwicklung und die weiteren Aufgaben der Reform unseres höheren Schulwesens" (Frankfurt and Berlin: Moritz Diesterweg). The basis and purposes of modern school reform, the proper training of efficient teachers, the pedagogical importance of the personality of the teacher, the value and character of proper school supervision, are among the topics treated.

The *Literarische Echo* has published the result of its annual inquiry among libraries and publishers concerning the books most in demand, and the authors that have been most popular during the year ending with October. The books were Sudermann's "Das hohe Lied," Hermann's "Henriette Jacoby" and "Jettchen Gebert," Viebig's "Das Kreuz im Venn," Heer's "Laubgewind," Ernst's "Semper der Jüngling," Herzog's "Der Abenteurer," Stilgebauer's "Das Liebesnest," Stratz's "Herzblut," Schnitzler's "Weg ins Freie," Ompteda's "Minne," and Zahn's "Die da kommen und gehen."

A volume of letters by the three greatest representatives of the dialect known as Plattdeutsch has just been published: "Briefe von Fritz Reuter, Klaus Groth, und Brinkman, an Eduard Hobein," edited by Prof. Wilhelm Meyer (Berlin: Weidmannsche Buchhandlung).

The recent publication of Franz Ehrhardt's "Die Philosophie des Spinoza im Lichte der Kritik" (Leipzig: Reisland) is a positive contribution toward the solution of one of the intricate problems of the history of philosophy, although not a final settlement of all or even the leading questions involved. In a volume of more than five hundred pages the author discusses the history of Spinoza's doctrine, especially as it has been judged, favorably and unfavorably, in former times and in our own. The older literature on the subject has been thoroughly utilized.

Richard Garbe, rector of the University of Tübingen, delivered on the birthday of King Wilhelm II of Würtemberg an address of exceptional interest, which now appears in an enlarged form as "Kaiser Akbar von Indien: Ein Lebens- und Kulturbild aus dem sechzehnten Jahrhundert" (Leipzig: H. Haessel). The author, a fine Orientalist, largely basing his account on the excellent work of Count de Noer, published from 1880-85 in Leyden, here gives a picture of the Grand Mogul Akbar, generally regarded as the greatest of Asiatic princes in recent centuries.

"Voltaire in seinem Verhältniss zu Friedrich dem Grossen und Jean Jacques Rousseau," by Georg Brandes, has just been published in Berlin by Marquardt & Co. Voltaire's relation to Frederick the Great has been thoroughly discussed by historians and biographers; but the author of this little book is always likely to disclose, even in a time-worn topic, some interesting features that have escaped his predecessors. Brandes traces briefly the evolution of the peculiar friendship between the French philosopher and the Prussian sovereign and omits no detail of the story so rich in humorous incident. The picture of the famous round table of scholars and wits at which the young king presided in Potsdam Brandes presents, if not in a new light, at least in a new perspective. He spares neither Voltaire nor Frederick in enumerating evidences of the pettiness which entered into the characters of both. That part of the book which is devoted to the relation of Voltaire to Rousseau bears evidence of sympathetic partiality towards the two iconoclasts of their century. Rousseau's indebtedness to Voltaire is ably presented. He was inspired by the writings of his already famous contemporary to pay more attention to style and to emulate his art of expression. Through Voltaire also Rousseau had become acquainted with the English thinkers that were to influence him. But Rousseau was by birth a plebeian and by temperament a solitary and conceived an invincible dislike for Voltaire's social gifts. The more he became a practical exponent of his contempt for the conventions of civilization, the wider grew the breach between them. It is curious to follow the alternating hostilities and amiabilities in which the profound antagonism between these two individualities found expression.

The seven hundredth anniversary of the birth of Saint Elizabeth has been the occasion for the publication of what professes to be an objective and scientific story of her life, by Albert Huykens, "Quellenstudien zur Geschichte der heiligen Elisabeth, Landgräfin zu Thüringen" (Marburg: Elwert). It is not the individuality of Elizabeth but her character, as representative of the thought of her age, that here is brought into the foreground; and since the elimination of the mythical from the historical is particularly difficult here, one is not surprised that the Catholic author has not been able to do absolutely satisfactory work. Yet his book

is doubtless the best among the many that the anniversary has produced. Large portions of the work appeared originally in Vol. XXVIII of the scholarly Catholic journal, *Historisches Jahrbuch der Görres-Gesellschaft.*

The last issues of the Old Norse Text Society of Copenhagen (*Samfund til Udgivelse of gammel nordisk Litteratur*) are a continuation of the Thidreks Saga edited by H. Bertelson and begun in 1906; and No. 3 of the society's edition of the Volsunga Saga and Rognar Lodbroks Saga, which is being prepared by Magnus Olson. This number contains the critical apparatus to the former saga which has now been issued complete. Simultaneous with these appear also the Proceedings of the Society with list of past publications and roll of members. The Samfund was organized in 1879, it has at present a membership of 260 individuals, and libraries, principally in the Scandinavian countries and Germany, but fifteen in the United States.

According to a London dispatch there is no trace of John Davidson, the poet, who has been missing from his home at Penzance since March 23, and his family have now given up hope of seeing him alive. Documents found among his papers make it almost certain that he has committed suicide. Mr. Davidson, the son of a Scottish Evangelical Union minister, was born at Barrhead, Renfrewshire, in 1857, and in his thirteenth year was put to work in the chemical department of a sugar factory. When fifteen years old, he went to school again in the capacity of a pupil teacher, and afterward was at Edinburgh University for a single session. Until 1890 he earned a subsistence as a teacher in various schools in Scotland, and then made his way to London, supporting himself thereafter by literary work. He began by writing reviews and other articles for the Glasgow *Herald*, but first attracted critical attention by his poems on various subjects, which were marked by boldness of thought and vigor of expression. His first work of considerable consequence was a chronicle play, "Bruce," published in Scotland. This was followed by a book of poems entitled "Scaramouch in Naxos." After this came two series of "Fleet Street Eclogues," "The Wonderful Mission of Earl Lavender," "Godfrida," and other plays, and several volumes of poems, including some of a satirical and political nature. Among his later productions were "The Testament of a Vivisector," "The Testament of an Empire Builder," "The Testament of a Prime Minister," "The Triumph of Mammon," and "Mammon and His Message." Not long since he was awarded a pension from the Civil List in recognition of his literary achievements.

The death is announced from London of the Rev. Dr. James Harrison Rigg, the well-known Wesleyan Methodist minister. He was born at Newcastle-on-Tyne in 1821, entered the Wesleyan ministry in 1845, was a member of the first London school board, and was on the Royal Commission of Education, 1886-88. For fifteen years he edited the London *Quarterly Review*, and published, also, a number of religious works, including: "Principles of Wesleyan Methodism," "Modern Anglican Theology," "Essays for the Times," "The Churchmanship of John Wesley," "The Living Wesley," "National Education, English and Foreign," "A Comparative View of Church Organizations," "Dr. Pusey: His Character and Life-Work," "Oxford High Anglicanism, and Its Chief Leaders," and "Reminiscences, Sixty Years Ago."

The death is announced in his ninety-fifth year of Canon Henry Holden, headmaster of Uppingham School from 1847 to 1853 and of Durham Grammar School from 1853 to 1881, rector of South Luffenham, Rutland, from 1881 to 1898. He was co-editor of "Sabrinæ Corolla," and wrote "Symbolical Teaching of the Sanctuary" and "Single Sermons to University and to Schoolboys."

NOTES ON TEXT BOOKS.

EDUCATION.

A group of books (intended for texts in normal schools or for private study by teachers) has lately been issued, dealing with the management of schools, with methods of instruction, and with the principles underlying both. "School and Class Management," by Dr. Felix Arnold (The Macmillan Co.), treats of the relations between teacher and principal and between teacher and child. A subject on which much has been written is here discussed by Dr. Arnold with such insight, common sense, and thoroughness that it must command close and interested attention and convey a clearer conception of some of the important phases of a teacher's conduct and duty. Perhaps the most valuable feature is the emphasis upon the development of right conduct. In spite of all that is said about the function of the schools in character building, in practice it is the intellectual training that occupies the chief place in the thought of the teacher. In the rush to meet the encyclopædic demands of the present curriculum, ethical training is pushed into a very small corner. Class management has discipline in view and discipline means the enforcement of more or less arbitrary rules. Gratitude is therefore due Dr. Arnold for making conduct so distinct an object of school training.

"Modern Methods for Teachers," by Chas. C. Boyer (J. B. Lippincott Co.), is the latest of those attempts to include in a single volume instruction in methods of teaching all the subjects of the elementary curriculum. It discusses briefly the nature of education, the operations of the mind, and the general principles of instruction; and then, in the light of modern psychology, each of the common subjects, showing its value, the way in which it should be presented, the objects to be attained by study of it. The suggestions offered are in harmony with the best practice of the present time.

"Standards in Education," by A. H. Chamberlain (American Book Co.), is intended primarily as a text for normal schools. The author discusses not only psychology and the general aims of education, but the curriculum of the elementary school, the method of its presentation, and the training of teachers. The book is rather a compilation of material on a variety of subjects than a treatment with completeness of any one phase of educational theory or practice. Though there is nothing new in point of view or treatment it has some merits as a text-book. To each chapter are appended an excellent summary, suggestive topics for study, and references by means of which the student may profitably continue his work.

Each of the eight brief essays in Prof. Paul H. Hanus's "Beginnings in Industrial Education" (Houghton Mifflin Co.) makes the reader sigh for more of the same kind. Five of the eight give the book its title. They set forth the conditions which have started a country-wide agitation for vocational training, and the manner of accomplishing this reform. Professor Hanus's experience as a member of the Massachusetts Commission on Industrial Education has stocked him richly with facts, and these he has ordered admirably. There is an excellent account of what Massachusetts has done in this direction, and another about the *Fortbildungsschulen* in Munich. Three other essays deal with the professional preparation of high-school teachers, religious instruction in public schools, and Bavarian country schools. Nowhere has the case against the Bible in schools been presented more pointedly and yet with greater calm than here.

The literature of the history of education is increased by the addition of three books designed as texts in normal schools and colleges. The first is Graves's "History of Education Before the Middle Ages" (The Macmillan Co.), which contains a comprehensive account of the history of education before the rise of the monastic schools. The author follows Thomas Davidson in regarding education as a part of the process of evolution, but he views it as "conscious evolution" toward more definite ends. The plan is well carried out. Liberal quotations are made from original sources, and a bibliography is added to each chapter. The book is suitable for college use. For normal schools C. O. Hoyt has prepared "Studies in the History of Modern Education" (Silver, Burdett & Co.), which is well adapted to its purpose. It furnishes sufficient material for an intensive study of the great reform movements in education from Comenius to the present time; it proposes questions calculated to lead the student to further investigation and to comprehend the process by which modern doctrines and methods have been evolved; and it suggests books for further study. The work is a distinct advance upon most normal school text-books on this subject. Many books have been written about Pestalozzi. To these is now added H. Holman's "Account of the Life and Work of Pestalozzi" (Longmans, Green, & Co.), in which the author aims to present objectively as much of the man as possible. Large quotations are made from the letters and other writings of the great educational reformer. Thus the reader is provided with the data for estimating at its real value the work of Pestalozzi and the influence he has exerted upon education during the last century.

HISTORY.

Certain well-defined tendencies in history teaching are at once illustrated and stimulated by some recent books for class use. To accompany his "Short History of England," Prof. E. P. Cheyney has compiled a "Book of Readings in English History" (Ginn & Co.), in which he has brought together some unusually interesting material. The collection is especially noteworthy for its illustration of the life of various periods, and contains very few of-

ficial documents such as statutes, charters, and proclamations. In the same series comes "Readings in Modern European History" (Ginn & Co.), by Profs. J. H. Robinson and C. A. Beard, to accompany their "Development of Modern Europe." This collection is largeiy new though much of tbe part of the French Revolution and Napoleonic era has been taken from Professor Robinson's "Readings in European History." Likewise Prof. William MacDonald in his "Documentary Source Book of American History, 1606-1898" (The Macmillan Co.) has brought together and condensed much of the material in his "Select Charters," "Select Documents," and 'Select Statutes" for the use of classes covering tbe whole of American history in one year. Tbe rapid development of such publications emphasizes the hold which the method of teaching history not merely by collateral reading, but by selected extracts has at present in our schools. Though it may be doubted whether tbis will ever be a substitute for reai reading, much iess encourage that habit, it is certainly an advance on the older methods. And, apart from their pedagogical value, many of these collections do make interesting reading in spite of their apparently tabloid character.

The spread of American history downward in the schools with a consciousiy patriotic as well as pedagogical purpose finds expression in two new books: "Short American History by Grades," by Everett Barnes, and "A First Course in American History," by Jeanette R. Hodgdon (D. C. Heath & Co.). Each is to consist of two volumes, one colonial, the other constitutional. Each aims at imparting the salient features of American history in simple form for the intermediate grades. Such a movement as this has much to commend it, and its peculiar strength and significance are well brought out in these volumes.

The third and last volume of Prof. Charles Seignobos's "History of Civilization," translated by Miss Wiseman under editorial supervision of Prof. J. A. James (Charles Scribner's Sons), is just at hand. It covers the eighteenth and nineteenth centuries, to 1888, and is characterized by tbe same qualities as his previous volumes on ancient and mediæval civilization. The emphasis is on the social and economic aspects of the period; and, perhaps as illustrative of these, an extraordinary amount of personal or biographical detail of the chief personages appears in his pages. The book includes also considerable chapters on the New World and European peoples outside of Europe, together with bibliographical appendices. It forms, on the whole, a readable and useful book. From the Clarendon Press (Henry Frowde) comes a new text-book of the sixteenth century, "The Renaissance and Reformation; A Text-Book of European History. 1494-1610," by Miss Emmeline M. Tanner, a compact and well-printed volume of some three hundred pages, designed for what would perhaps be in the United States late preparatory or early college classes. Miss Tanner has handled a peculiarly complex and controversial period with vigor and directness. In spite of the title only about fifty pages are devoted to the period before 1494, the body of the book, as the sub-title reveals, being given to the years between 1494 and 1610, or much the same period covered by Johnson's "Europe in the Sixteenth Century," to which Miss Tanner frequently refers. One finds here, as always, the difficulty of being at once concise, wholly accurate, and humanly interesting, but on the whole, Miss Tanner seems to have solved her problem as well as could be expected. The arrangement and proportion are, generally speaking, good. Each chapter is followed by questions and a brief bibliography, and often accompanied by footnotes and references. The index is good. A full parallel column chronological summary and eight large folding maps make up what, for its period and purpose, is one of the most useful text books of its class which has appeared in recent years.

Dr. A. G. Keller, professor of the science of society in Yale University, has issued (Ginn & Co.) a work entitled "Colonization; A Study of the Founding of New Societies," designed as a text-book for the study of colonization in general. The sub-title seems to us a little unfortunate as leading the incautious observer to assume that the work has a socialistic or utopian character. It is, in fact, a strictly historical production, treating of Portuguese, Spanish, Dutch, and Scandinavian colonization with a chapter devoted to the recent colonizing efforts of Italy and Germany. The history of English and French colonization is omitted entirely, and nothing is said of the accomplishments of Russia, Belgium, America, and Japan in the same field. Apparently the author intends that the work shall be used in the classroom, but how far it will meet any particular demand of this kind will depend on the number of lectureships in our colleges and universities devoted to this subject. At present the number is exceedingly small. The work is far too elaborate to be used as an ordinary text-book, and it would seem as if its most important function would be to enlighten the intelligent reader. Its style is not unattractive, its arrangement is good, and its standard of accuracy is high. In the main, it is a compilation from fairly well-known treatises, and lays no claim to profundity or originality of thought. Dr. Keller has made almost no attempt to frame conclusions or generalizations, usually confining himself to descriptions and historical narrative. In view of the important service that the work might render to the public at large, it is to be regretted that Dr. Keller has not made his study complete. Had many of the details here given been omitted, a broader view of colonial experience been given, and systematic deductions been drawn from the evidence presented, the book would have appealed to a much wider body of readers. As it is, however, we can heartily recommend it as an able and scholarly essay upon the subjects which the author has chosen to treat.

GREEK AND LATIN.

Prof. A.T. Robertson's "Short Grammar of the Greek New Testament"(A.C. Armstrong & Sons) is an attempt to put before senior students the facts of New Testament usage. It thus presupposes a knowledge of ordinary Attic Greek. The author correctly regards New Testament Greek as not a mongrel Attic but an example of the vernacular of the day, which in its more colloquial form is shown in the newly discovered papyri, of which much use is made. Professor Robertson accordingly attempts to treat the phenomena of New Testament usage as a stage in the evolution of language—and so is perpetually referring to Sanskrit or to more modern languages, as Gothic. Anglo-Saxon, and English. He also dogmatizes vigorously about origins of usage, such as that of pronouns, voices, and the like, where much that he says is very doubtful. In fact the book resembles more a philosophical discussion of general linguistics, illustrated by New Testament Greek. An immense amount of material is included, which in the hands of a competent student would be valuable as an introduction to more extended study in the same field.

The English tendency to put everything within the reach of beginners is well exemplified in the edition of the "Euthyphro" of Plato by St. George Stock (Henry Frowde). A brief introduction is followed by a summary of the dialogue, and then the text. The commentary is written for students "who have grammar behind them and philosophy before," but, as a matter of fact it is pitched in a key much higher; for the notes abound in quotations in the Greek from other dialogues of Plato, and occasionally from Aristotle or the Septuagint. The edition ought to be serviceable, in aim and scope, but it is entirely different from the American edition by Heidel. Prof. C. L. Brownson of the College of the City of New York has given us a useful edition of "Selections from Xenophon's Hellenica" (American Book Co.). This important work has been less read than it deserves and this edition should be in common use in our colleges. A brief introduction discusses the life, writings, syntax, and style of Xenophon, and the "Hellenica". But as Xenophon's peculiar style cannot be dismissed in two pages, it would have been better to omit this part and make suitable references in the commentary. The commentary itself is brief, intended apparently for freshmen; it lacks life and inspiration, but is careful and useful. Some appendices treat more in detail problems touched upon in the introduction and furnish material for further study by the teacher. There is also a good bibliography in addition to the more or less unnecessary list of disputed readings. The edition of Herodotus, Books vii and viii, by Prof. C. F. Smith and A. G. Laird of the University of Wisconsin (American Book Co.), furnishes the first important study of Herodotus since the late Professor Merriam's time. It is a good piece of work, more or less uneven, but showing the results of independent study as well as thorough acquaintance with the literature of the subject. Most noteworthy is the chapter on the dialect of Herodotus, an independent investigation by Professor Laird which ought largely to supersede the treatment of Stein. There is a bibliography of special works on the syntax of Herodotus, which, however, would seem almost unnecessary to students of Professor Laird's own work. The notes are brief and designed mainly for students who are reading Herodotus for the first time, but are sufficient for practical purposes.

The eternal question as to the best beginner's book in Latin meets us again in "Latin Lessons," by D. W. Lothman (Ginn & Co.), and R. H. Locke's "Latin Forms and Syntax" (Allen, Lane & Scott). Both works differ from the customary beginner's book and from each other. Mr. Lothman believes that better results would be secured by more extensive and more intelligent use of the grammar; and he consequently refers to three widely used grammars for the learning of all forms; but there seems to be no gain other than that of space by referring the student to the grammar for the paradigms only. The English-to-Latin part of each lesson has been made brief; in other words, the smallest portion of time and energy is given to the most difficult part of the subject—a view which is widely held in this country and could be well abandoned. A serviceable introduction on the principles of English grammar meets a need felt seriously by most teachers. Reading lessons are added from Cæsar and Livy. Mr. Locke's book employs the style of the kindergarten to set forth the most intimate secrets of philology. We are told to distinguish between agglutinative, analytic, and synthetic language; we are helped to an appreciation of the ablative singular by the gutturals of the North American Indian; we are introduced into the habits of thought of primitive peoples. The five declensions are studied together. From the outset the words in the reading lesson must be looked up in the general vocabulary at the end of the book. No exercise is given in translation from English into Latin until all the forms have been learned and a review of syntax has begun. The vocabulary is limited in range, mainly Cæsarian. It is impossible to say how successful such a book would be, but it would seem to require a very sympathetic teacher. There have been many Latin prose composition books intended for second or third-year pupils in high schools, but no satisfactory book has as yet been prepared for the last year. C. McC. Baker and A. J. Inglis's "High School Course in Latin Composition" (The Macmillan Co.) offers a systematic treatment for the second, third, and fourth years. It is divided into three parts, one for each year; and it contains an extensive summary of the elements of Latin syntax, together with references to the leading grammars. The syntactical exposition is clear and good. In the first part the vocabulary is mainly Cæsarian; in the second, Ciceronian words are added, and in the third certain words not commonly met with until Virgil. This plan is based upon Professor Gonzalez Lodge's recent "Vocabulary of High School Latin." The earlier exercises consist of detached sentences paralleling in subject matter the work in Cæsar and Cicero, and nearly one-half of the last part is devoted to connected exercises.

A. C. Clark, editor of "Cicero's Orations" in the Oxford Text series, has issued an edition of Cicero's Philippic Orations I, II, III, V, and VII (Henry Frowde) for schools. The notes and introduction are taken almost entirely from J. R. King's large edition of the whole series of Philippic Orations. Though the book is serviceable, the introductions are too brief and the commentary curiously uneven, containing a good deal of textual criticism, which is out of place in such an edition. A welcome addition to the list of college text-books is Dr. A. P. Ball's "Selected Essays of Seneca" (The Macmillan Co.). This contains the "Ad Polybium de Consolatione," "Ad Neronem de Clementia," the "Apocolocyntosis," and ten letters—chosen to illustrate Seneca's personal connection with the history of his time. An interesting introduction on Seneca, the stoic philosophy, and Seneca's style, leaves us a pleasant impression of a man whose position was often very difficult, but whose influence was always helpful. It might have been well to discuss more fully Seneca's philosophical opinions and explain why the Christian fathers had such a high opinion of his teaching. The commentary is adequate, neither overloaded nor descending to trivialities. The inclusion of the "Apocolocyntosis" puts into the hands of the student what has been hitherto inaccessible. Prof. O. F. Long has prepared a short book of selections from the first decade of Livy (Scott, Foresman & Co.), designed to show a reaction against the overloaded text-books now in common use. There is a brief introduction with an inadequate chapter on Livy's style; the notes, often little more than translation, are printed at the foot of the page. The book will come into comparison with Dennison's similar selection much to its disadvantage, for this one seems adapted to little more than sight translation. For this purpose it might be useful; otherwise it is hard to see a place for it. W. D. Lowe's "Scenes from the Life of Hannibal" (Henry Frowde) is an elementary reading book for students that know little more than the leading forms. The text is excerpted from Livy, though the order of events and often the text itself has been modified to make it more suitable for beginners. Brief notes, but even these of a more advanced type than those of Long above referred to, are followed by a vocabulary and by a series of exercises for translation from English into Latin based more or less closely on the narrative. The book is worth trying in our high schools.

MODERN LANGUAGES.

"A French Grammar," by H. P. Thieme and J. R. Effinger (The Macmillan Co.), intends to give only the essentials. But all teachers are not agreed on what these "essentials" should be. Some will find that the subjunctive is not sufficiently accounted for, and others will complain of the scattered way in which the pronouns are treated. Still this book has excellent features. It is well graded, distributes composition material wisely, and discards the baby reading matter to offer mature, sound, and attractive texts. Too many slips, however, have crept into even the second printing.

The editions of the Clarendon Press (Henry Frowde) are annotated with a uniform competence by professors most of whom are French. We may pass over "Le Douanier de mer" by the popular feuilletonist, Élie Berthet, a story of the French coast, obviously edited for English sea-loving pupils; and "Batailles de terre et de mer," by a now forgotten French vice-admiral, which can have no interest outside of military and naval academies. But Vigny's "Chatterton," which, in 1834, was one of the triumphs of the Romantic School, is a legitimate and welcome addition to the library of annotated texts. The editor, Prof. E. Lauvrière, has a solid knowledge of both French and English literature. The introduction consists of an essay, in French, of ninety-three pages on the life and work of Alfred de Vigny, while the notes are, from the literary as well as philological point of view, an illuminating commentary on the text. Whether Balzac's "Le Médecin de campagne" can make the kind of reading which our story-mad undergraduates will relish is open to question. This political and social treatise, of which M. Brunetière speaks so highly, may seem dull to the readers of "The Three Musketeers." At any rate, the introduction and notes by De V. Payen-Paine are bound to be helpful. It ought to be easy to get out a satisfactory edition of "Le Cid," after all the work done by the commentators from Scudéry down to the French school editions. Prof. James D. Bruner's text (American Book Co.) contains a great wealth of notes and literary comparisons, many of the latter touching on English drama. Instead of the usual biography of Corneille the editor has an acceptable essay on "The Theory of the Classical Drama in France," in which students will find some essential information. While modern spelling is used in the tragedy, some unfortunate forms and a misprint have been overlooked in the "Avertissement" and the "Examen." Although our students have all the French tragedy they want, Henri de Bornier's "La Fille de Roland" (D. C. Heath & Co.) may prove an interesting complement to a study of the "Chanson de Roland." This play was one of the great triumphs of the Comédie Française after the war of 1870 because it expressed, with something of the spark of Corneille, heroic feelings that always stir the French nation. Prof. C. A. Nelson's edition is adequately presented. Jules Lemaître's "Contes extraits de Myrrha" (D. C. Heath & Co.) show a studied simplicity and a certain charm of style; still there is something constrained about this effort of an avowed skeptic to appear naïve in telling puerile stories of country priests and devout peasants. Nothing need be said about the short account of his life except that *all* his plays, the editor notwithstanding, were not produced at the Comédie Française. The new text of "Les Misérables" (Henry Holt & Co.) is welcome, with its clear type and scholarly notes. Instead of the biography of Victor Hugo the editor might better have given us the interesting history of the publication of this epoch-making novel. He would thus have avoided an unfortunate blunder (result of a careless reading of Biré) in naming the ridiculous Père Lorlquet as one of Victor Hugo's teachers.

Among the increasing number of Spanish texts mention must be made of J. D. M. Ford's "Selections from Don Quixote" (D. C. Heath & Co.), which contains a rapid survey of the latest critical works on Cervantes; G. L. Lincoln's conscientious edition of Valera's "Pepita Jimenez" (Heath); and R. E. Bassett's elaborate treatment of "Pedro Sanchez" (Ginn & Co.), which shows what the combined efforts of an industrious author and painstaking publishers can do to raise the standard of modern language texts.

The "Report on the Teaching of English in the United States," by M. Atkinson Williams, lecturer in an English training college (C. W. Bardeen), though an unpre-

tentious little volume, contains a good deal of suggestive comment on American methods in primary and secondary schools. This observer is inclined to think that our teachers give rather too free rein to the individuality of their pupils, and are overnervous about the danger of imposing their opinions upon the unfolding mind. She was very much bewildered, furthermore, by the prevailing standards for grading written work. She has apparently always been familiar with a truth which is not yet thoroughly recognized, even in our higher education, namely, that a high passing grade usually means a low standard of excellence. English pupils, she believes, are less fluent and spontaneous than their American cousins. On the other hand, they are brought up with a greater respect for the proprieties of diction and grammar.

Those who distrust the "natural method" of acquiring the elements of their mother tongue should welcome James C. Fernald's "Working Grammar of the English Language" (Funk & Wagnall's Co.). The author sets out with a belief that English is perhaps the simplest and most perfect of all languages, and that it needs only a sensibly written grammar to secure general acceptance of his views. It must be said, however, that in some cases he has simplified his grammar by ignoring some of the awkward facts of the language; his treatment, for example, of the horrible shall-and-will question is beautifully plain as far as it goes, but it quite disregards the difficult complications that arise in dependent clauses. Yet, in the main, the book does live up to its title by presenting with tolerable comprehensiveness and with unusual freedom from pedantry in definition and classification the essentials of English grammar.

Dr. Charles A. McMurry's "Special Method in Reading in the Grades" (The Macmillan Co.) is written around the popular modern theory that there *is* a royal road to learning, along which little pilgrims may pass in play. It puts great stress upon oral story-telling as the preliminary to reading, and upon manual training, singing, marching, games, and the various kindergarten devices for growing wise unawares. It rightly emphasizes the attractiveness and the cultural value of folk-lore and classical myth and story in the reading of childhood, and it supplies fairly extensive lists of books containing such material. Finally, it insists quite as much upon the necessity of flexibility, energy, and training in the teacher as upon the virtues of the special method. The fact that Dr. McMurry speaks with the enthusiasm of conviction and experience should make this work stimulating to primary instructors.

There is much good counsel in Grenville Kleiser's "How to Develop Power and Personality in Speaking" (Funk & Wagnalls Co.). The good orator, according to Mr. Kleiser, must not only be a good man, but must also possess a trained mind, cultivated voice, and fresh, resilient body. Among the precepts for the care of the body, it is refreshing to find that the successful speaker must expect to take Mr. Dick's celebrated prescription for David Copperfield "at least once a day." Besides the usual directions and exercises for voice culture, there are many sensible suggestions on the development of a vocabulary, training of the memory, power in conversation and extemporaneous speaking, and various other matters. Though the book is designed to be especially helpful to ministers, its sound and fundamental method should make it generally useful.

Of the annual crop of books dealing with the theory and practice of writing, two seem to have some justification for existence. Martha Hale Shackford and Margaret Judson, of Wellesley and Vassar respectively, have prepared a "Composition Rhetoric-Literature" (Benjamin H. Sanborn & Co.), designed to serve for a four years' course in secondary schools. This book is to be commended for its definite purpose, its systematic arrangement, and its adaptation to the college-entrance requirements. Among its special features, one notes with pleasure that it begins with a thorough review of grammar, that it contains a sensible and helpful chapter on letter-writing, that its treatment of the principles and types of poetry is exceptionally full, and that the study of literary masterpieces is closely related to practice in writing. The "Composition and Rhetoric" of Charles Swain Thomas, head of the English department in the Newton High School, and Prof. W. D. Howe, head of the English department in Indiana University (Longmans, Green & Co.), does not, in spite of its 509 pages, cover all the ground covered by the Shackford-Judson book, but it has a particular virtue of its own: it goes so close to the actual problems of the student, its suggestions are so practical and concrete, that it almost teaches itself. Many other manuals discuss the importance of choosing suitable materials for composition; few are so fertile in specific examples and vital hints. Many rhetorics supply ample materials for the study of principles; few provide such interesting material or such definite instructions for operating upon it.

In "A First German Book" (Henry Holt & Co.), George M. Howe follows the theory "that the best type of exercise is that which aids the student in a thorough assimilation of a well-chosen German text." Most teachers would agree with this statement; but many would disagree with the author as to what constitutes a suitable text for the earliest stages of instruction. The author has chosen three stories by Volkmann, has provided the earlier ones with both an interlinear and smooth translation, and added copious notes, followed by grammatical material and oral and written exercises. Lesson i, for example, treats forms of the preterite of simple verbs, yet the text itself is rich in noun and adjective inflections, the use of prepositions, separable verbs, etc. This material, when taken together with the vocabulary, would certainly seem to make too great demands upon both teacher and pupil. For some time the oral and written exercises must perforce entail a far too large amount of pure memory work. "German Grammar," by R. J. Ham and A. N. Leonard (Ginn & Co.), is a beginner's book that strikes no new note. We find the modern spirit of foreign language teaching expressed only in the anecdotes which form the basis of the lessons. In other respects the work follows traditional lines. The rules and paradigms with which each lesson begins, though well stated and selected, are out of proportion to the practice given. Moreover, the examples and word-lists are seldom vitally connected with the exercises. This is a weakness in any text-book. The sentences to be translated into and from the foreign language are rather better in quality than usual. A good feature is that only the more common words from the anecdotes are employed in them. Although a far safer book than the one criticised above, and although it is probably adequate for college classes, the grammar is really but another attempt to perfect a model which for secondary school purposes, at least, ought to have been discarded years ago. "Modern German Prose," compiled and annotated by A. B. Nichols (Henry Holt & Co.), is a chrestomathy of prose for use in advanced college classes. It is compiled much in the spirit of the books of Paszkowski and Henschke, but is superior to them for American students because of the notes, and the greater range and greater attractiveness of the material. The selections are short without being choppy; nor are they too difficult or too technical. In fine, it is an excellent compilation. It is a pity, however, that the proof-reading was not more carefully done. Let us hope that the sales will soon warrant a second revised edition. "Mit Ränzel und Wanderstab," by Emil Frommel, with exercises, notes, and vocabulary by W. Bernhardt (D. C. Heath & Co.), is a welcome addition to the all too few texts of the kind in which a love-story is not a part. It is a brightly told account of a walking trip a number of *Gymnasiasten* took many years ago in the Black Forest. It is wholesome reading, truly German in humor, and it ought especially to interest a class of boys. The exercises are in the form of three letters based upon the text. They read well and are supplemented by German questions based upon them. The notes and vocabulary seem adequate.

SCIENCE.

There are not too many introductions to psychology which steer the beginner safely between meaningless experiment and obscure theory. So Prof. Max Meyer's free, somewhat condensed translation of Ebbinghaus's "Abriss" is welcome. "Psychology" (D. C. Heath & Co.) has all the merits of its excellent original; it is brief, tainted by no fads, conservative, clear, and rich in example. It is not easier to read than the science is to learn. The translator generally remains true to Ebbinghaus and English alike; but the Teuton will out now and then in phrases like "the focalness of consciousness." Psychology is reduced to lowest terms in Prof. Carl E. Seashore's "Elementary Experiments in Psychology" (Henry Holt & Co.). The author aims to deliver first-year students from complicated, time-consuming instruments, which often serve only to confuse. His manual and its accompanying envelope full of "apparatus" constitute a pocket laboratory which is by purport a vestibule to a larger one and to the classroom. Professor Seashore has chosen experiments which arouse interest and deepen insight. His formal directions are clear, and his comments illuminating. A surprising amount of general psychological information is sprinkled about.

The "Economic Zoölogy" of Herbert Osborn (the Macmillan Co.) is intended for college students and general readers, described as an "ever-increasing body of citizens," but does not quite fulfil the promise

of the title. A rather meagre text is fully illuminated by illustrations, mostly from standard works, although a few are original, so that a good teacher many find the book useful. In the "First Course in Biology" (the Macmillan Co.) are brought together with separate paginations a "Plant Biology," by L. H. Bailey, and an "Animal Biology" and a "Human Biology," by W. M. Coleman. The book is declared to be an effort to make elementary instruction in these subjects more "applicable." The result is not very convincing, but in these matters everything depends upon the teacher.

In "A Text Book of Experimental Chemistry (with Descriptive Notes), for Students of General Inorganic Chemistry" (Philadelphia: P. Blakiston's Sons & Co.), Prof. Edwin Lee, of Allegheny College aims to combine experiment and theory in due proportion, to devote more attention than usual to the energy side of the subject, and to introduce the newer theories of equilibrium and dissociation. But the fulfilment of this purpose is disappointing; for the book does not differ in scope and character from several others on the market, and it has some faults of its own, the chief of which are confusion in arrangement and clumsiness of wording. Why should the beginner in chemistry be met on the first page with the question whether matter is merely a product of thought, a manifestation of energy, or a cause of sensation? No sufficient explanation is given of what these different definitions mean. They are simply set down with the cautious conclusion, "Science seems unable as yet to predicate what matter is." The volume abounds in misprints and inconsistencies and disregards the ordinary rules of grammar to an extent unusual even in scientific text books. In one chapter "Hydrascids" and "Oxascids" are discussed and these are duly indexed. Another chapter refers to compounds of strikingly similar formula to the latter as "Oxacids," but this is not indexed, so it seems likely that the first word is merely an allotropic form of the second.

Among recent mathematical works from the Cambridge University Press are "A Course in Pure Mathematics," by G. H. Hardy, the second volume of Prof. G. H. Darwin's "Scientific Papers," and "The Thirteen Books of Euclid's Elements," by T. L. Heath. Of these works (all of which are published in America by G. P. Putnam's Sons) the first begins with a detailed analysis of the linear continuum, and culminates in the theory of the logarithm and the exponential. Designed for first-year university students, and intended to be read in connection with the usual text-books of analytical geometry and the calculus, it is chiefly notable for the omission of many of the usual topics, as, for example, the principle of convergence, for extraordinary emphasis on such regulative ideas as infinity and continuity, and for the deliberately prolix and multilateral treatment of them. The nine memoirs contained in the second volume of Darwin's "Papers" all deal with questions of tidal friction and its cosmogonic effects. To the mathematical astronomer they are of especial interest as giving the latest and best word of mathematics respecting celestial evolution. No mathematician, unless quite without historical and philosophical sense, can fail to be delighted with Mr. Heath's edition of Euclid. For it is not merely the first and only English translation of the famous "definitive MS." of Heiberg, but in three beautifully printed volumes it brings together in a most masterful exposition the results of critical inquiry from pre-Euclidean times down to the very latest European researches in the foundations of geometry. It is indeed a work that neither geometrician nor philosopher can afford to ignore. A specially commendable feature of Daniel A. Murray's "Differential and Integral Calculus" (Longmans, Green & Co.) —a respect in which most of its rivals are lacking—is the citation, in connection with important or difficult ideas, of standard works dealing with them. To be able to say of a secondary school book of mathematics that it is fresh, teachable, and sound is indeed rare, and it is, therefore, a special pleasure to be able to say these things of Prof. E. R. Hedrick's "Algebra for Secondary Schools" (American Book Co.).

The subject of physics has gradually increased in favor with teachers in the secondary schools. We have now associations of teachers, who hold yearly meetings to discuss proper methods of presenting the subject. Unlike chemistry and botany, physics demands more or less complicated and expensive apparatus, and it is therefore the constant endeavor of writers of text-books to suggest experiments that may be within the means of the ordinary school. Two of the most recent works are "Elements of Physics," by Prof. George A. Hoadley of Swarthmore (American Book Co.), and "Physics for Secondary Schools," by Charles F. Adams of the Detroit Central High School (American Book Co.). One will find it difficult to choose between these treatises. Both are intended for recitation work, and the performance by the student of qualitative experiments. Problems are given, but they are not connected with quantitative study. Both treatises have the merit of being compact. The "New Laboratory Manual of Physics," by S. E. Coleman of the Oakland High School, is what its title indicates. At the beginning of each class of experiments it gives references to text-books by various authors. One is surprised not to see any reference to the Harvard descriptive list of physical experiments which have had an important influence on the establishment of laboratory courses in secondary schools; yet one finds in Mr. Coleman's experiments suggestions from this list. We may add that there is a growing conviction among college instructors in physics that students preparing for college would be better fitted for the future study of physics if they devoted their time to trigonometry in the preparatory schools rather than to laboratory work. "A Text-Book of Physics," edited by A. Wilmer Duff (Philadelphia: P. Blakiston's Sons & Co.), is the combined work of Mr. Duff, Karl B. Guthe, William Hallock, E. Percival Lewis, Arthur Goodspeed, A. P. Carman, and R. K. McLung, and it has the merits of such co-operation. It is an excellent reference book for college students and takes the place of Ganot's "Physics," which has been a useful book in the past. "Electricity, Sound, and Light," by Prof. Robert Andrews Millikan of the University of Chicago and John Mills of Western Reserve, is called by the authors a short university course, and it promises to be a useful book in elementary college courses.

"Alternating Current Machines," by Samuel Sheldon, Hobart Mason, and Erich Hausman (D. Van Nostrand Co.), is a compact elementary treatise on a rapidly growing subject. It is lucid and moderately free from full-page illustrations of dynamos which can be described equally well by small diagrams—much to the profit of the pocket of the student. "Applied Mechanics for Engineers: A Text-Book for Elementary Students" (The Macmillan Co.), by Prof. E. L. Hancock of Purdue University, is a modest but sound work which will be welcomed by students of engineering.

MORE CARLYLE LETTERS.

The Love Letters of Thomas Carlyle and Jane Welsh. Edited by Alexander Carlyle; with numerous illustrations, two in color. 2 vols. New York: John Lane Co. $8 net.

At the end of May, 1821, Edward Irving took Carlyle from Edinburgh out to Haddington to visit Jane Welsh. From that visit, Carlyle, as he wrote to his brother, "came back so full of joy" that he had "done nothing since but dream of it." Four days after his return he sent his first letter to the young heiress, as he regarded her, with directions for her reading and with excited allusions to the "few Elysian hours" they had spent together. It was the beginning of a correspondence which closed with a letter from Carlyle, dated October 9, 1826, a week before their marriage. These love letters between the two, preserved almost intact, were in the hands of Froude when he wrote the Life, and were interpreted and excerpted by him in a manner that was to bring on an Iliad of woes. In the "Early Letters of Thomas Carlyle," published by Professor Norton in 1886, a few of the letters were printed with the design of correcting Froude's misstatements, but the collection as a whole he regarded as "too sacred for publication"; and, indeed, Carlyle himself had left an injunction to this effect. Now, after long hesitation, Carlyle's nephew, feeling that the sacred trust was long ago violated by Froude, and that the finest service to the dead could be done only in this way, gives to the world the, practically, complete correspondence.

So far as mere interest goes, these two thick volumes will be a disappointment to readers who know the writers from Froude and from their other letters. There is something in the very *genre* of love letters that makes for dulness, and not even Thomas Carlyle and Jane Welsh could entirely overcome that tendency. Nor are the reasons for this rule hard to define. Such letters are commonly the product of youth—respectively twenty-six and twenty were the ages of our lovers at the beginning —whereas the real epistolary charm is rarely attained before full maturity.

Good letters must be personal, yet the writer must at the same time stand apart from himself, so to speak, with a kind of amused or disillusioned indulgence in his own egotism; their style must be entirely spontaneous, yet adjusted to the nicest effects. Such a combination no writer is likely to possess until well along toward middle life; for a young man is too serious about his future, an old man too conscious of the waning of his powers. And in love the anti-epistolary faults of youth are all intensified. There have been few thoroughly interesting collections of love letters; those that occur to our memory as exceptions, Swift's and Mérimée's, were not written in youth, and were without passion in the ordinary sense of the word.

Here and there a passage shows Carlyle's power of caustic portraiture, as when, after seeing Coleridge in London, he writes of him as "sunk inextricably in the depths of putrescent indolence"; but these descriptions have been mostly omitted by the editor—unnecessarily, we think. Endless talk of "thee and me" is the burden of the letters, as, indeed, was proper and natural.

But if the entertainment afforded by these letters is not extraordinary, they have great value of another sort. We will not presume to say that we fully understand the characters of these strange lovers, but at least certain points in their courtship now stand out clearly. Carlyle, it is evident, was smitten by love at first sight in good orthodox fashion. Miss Welsh was dazzled by his intellect, but for some time scarcely conceived the possibility of marrying him. At the very beginning she gives him to understand that there is a social gulf between them, and Carlyle sends a manly acknowledgment and defence:

> Once more, then, I entreat for one word of kindness. Forget the roughness of my exterior, if you think me sound within. Let me write to you with frankness and from the heart, if you would not have me altogether despicable. The Graces cannot live under a sky so gloomy and tempestuous as mine. I lament their absence, since you lament it; but there is no remedy. If nature had meant me for a courtly person, she would have made me richer and more impudent. In this latter point, you think she has been liberal enough. How widely, how cruelly do you mistake me!

Carlyle was to her a schoolmaster, an aid to her absorbing determination to excel in literature. Whether from conviction or for flattery—he showed himself throughout a canny wooer—he expressed unbounded belief in her future. Indeed, for a while their letters are more concerned with her ambitions than his, and he soon feels obliged to send her counsels of moderation. He holds up as examples those who have come to honors late in life. "Will you also let me say," he adds, "that I continue to lament this inordinate *love of Fame* which so agitates you; and which, as I believe, lies at the root of all this mischief. I think this feeling unworthy of you: it is far too shallow a principle for a mind like yours." At another time, and the words sound strangely from his pen, he is warning her against overstudy and contemplative melancholy and "that sickness of noble hearts, that deep and sad feeling of the nothingness of the world, which is apt to arise from too exclusive a pursuit of things high and spiritual, and too great an isolation from the every-day interests and enjoyments of life." And then, as the months pass and neither her proposed translation from the German nor her meditated novel gets on, she becomes less the author and more the woman. "Oh! but *I have no genius!*" she cries in July of 1823, seeking the encouragement which Carlyle returns with no niggardly hand. The cry is repeated, but with less emphasis and less insistence until it is lost in the more absorbing struggle against succumbing to the man who all the while is able both to love and to work.

This more personal relation between the two is complicated by the fact that Carlyle's letters passed under the eyes of the lady's mother. Perhaps one should say rather "were supposed so to pass," for one suspects that the lady used this pretext to keep the gentleman within bounds of a brotherly and tutorial affection. At any rate, those bounds were broad enough, including certain demonstrations that may be claimed by a brother but scarcely by a tutor, and permitting a language of high-wrought passion which could speak almost anything but the word marriage. The crisis comes in a letter from Carlyle, dated Pentonville, January 9, 1825, with its direct appeal: "Will you go with me, will you be my own forever?" The lady's reply is frank, if disquieting:

> Think of something else, then; apply your industry to carry it into effect, your talents to gild over the inequality of our births; and then—we will talk of marrying. If all this were realized, I *think* I should have good sense enough to abate something of my romantic ideal, and to content myself with stopping short on this side idolatry,—at all events, I will marry no one else. This is all the promise I can or will make.

To this Carlyle sends a long answer, passing from reproach to submission. "*You* are such a generous spirit," he says; "but your purposes and feelings are not such." It would not be easy to find elsewhere a letter from a woman like that which follows from Miss Welsh:

> My heart is capable (I feel it is) of a love to which *no* deprivation would be a sacrifice—a love which would overleap that reverence for opinion with which education and weakness have begirt my sex, would bear down all the restraints which *duty* and *expediency* might throw in the way, and carry every thought and feeling of my being impetuously along with it. But the all-perfect mortal which could inspire me with a love so extravagant, is nowhere to be found, exists nowhere but in the romance of my own imagination! Perhaps it is better for me as it is. A passion like the torrent in the violence of its course, might perhaps too, like the torrent, leave ruin and desolation behind. In the mean time, I should be very mad, were I to act as if from the influence of such a passion, while my affections are in a state of perfect tranquillity. I have already explained to you the nature of my love for *you;* that it is deep and calm, more like the quiet river, which refreshes and beautifies where it flows, than the torrent which bears down and destroys. Yet it is materially different from what one feels for a statue or a picture.

But she adds: "Not many months ago, I would have said it was impossible that I should ever be your Wife; at present, I consider this the most probable destiny for me." It was a virtual defeat, and, indeed, she herself regarded her words as practically an engagement. The third and fourth acts of the drama simply show the increasing domination of Carlyle's personality over hers. In the end the misgivings were more on his part than on hers. Having surrendered, she, with a woman's singleness of mind, saw but one thing, her love; whereas the dualism of masculine nature shows itself in his occasional sad self-questionings.

It is a strange drama of the heart that is set in these letters, and they have the further value of putting to rest a number of doubts that should never have been raised. To say, after reading these confessions, that Miss Welsh never really loved Carlyle, would be stark nonsense. They, moreover, forever put away Irving as an important factor in the event. Mr. Craig, we think, would not have written his recently published volume on "The Making of Carlyle" (see the *Nation*, April 8, p. 360), if he had perused this record. That Miss Welsh was once enamoured of Irving she herself admits in a letter of humble contrition; that she had any regard for him after Carlyle came well upon the scene her expressions of amused contempt for him and her attitude toward his wife make inconceivable.

More important is the light thrown by these letters on Froude. Undoubtedly that writer erred not only in matters of fact but in comprehension. First of all, the nasty scandal that he left to be scattered to the world after his death is again completely discredited. The letters of Carlyle here printed agree with those written after his marriage in rendering such an hypothesis perfectly foolish; and in his notes the present editor brings direct evidence against it, if such evidence be needed. To a certain extent also Froude's exaltation of Mrs. Carlyle at the expense of her husband be-

comes less plausible, for, if any such balance must be struck, the man comes through the ordeal of the drama now disclosed with higher honors than the woman. Yet, withal, in its larger aspects Froude's characterization is rather confirmed than discredited. If his judgment was highly peccable, he at least had that literary genius which alone could set Carlyle before us as himself a living genius. He understood also the egotism, the magnificent egotism, of Carlyle, which is so essential a part of his power. We may henceforth, out of regard for these letters and the other letters published since Froude's work, believe that the married life of the Carlyles was not so tragic as it was there presented. Twenty years after marriage the wife could write in a letter now in the possession of the editor: "I have grown to love you, the longer the more, till now you are grown to be the whole Universe, God, everything to me"; but it is still true, and these letters do not detract from such an impression, that Carlyle must have been, to use Froude's version of the phrase, "gey ill to *live* with." Not with impunity shall a woman surrender herself to the keeping of one with the intense, brooding, troubled egotism that made the *fond* of Carlyle's character. Nor was he himself blind to this danger. In a moment of expansiveness, after Miss Welsh had written her confession of an early love for Irving which she had concealed from Carlyle, he breaks out into a passionate cry of alarm:

> You feel grateful to me that I have "forgiven" you? You thank me, and say I treat you generously? Alas, alas! I deserve no gratitude. What have I done? Assured you that my affection is still yours, that you are even dearer to me for this painful circumstance. But do you know the worth of that affection? Have you ever seen *me* and my condition in the naked eye of your reason? You have not: you do not know me. . . . What is my love of you or of any one? A wild peal through the desolate chambers of my soul, forcing perhaps a bitter tear into my eyes, and then giving place to silence and death? You know me not; no living mortal knows me—seems to know me. My heart has been steeped in solitary bitterness, till the life of it is gone: the heaven of two confiding souls that live but for each other encircled with glad affection, enlightened hy the sun of worldly hlessings and suitable activity, is a thing that I contemplate from a far distance, without the hope, sometimes even without the wish, of reaching it. Am I not poor and sick and helpless and estranged from all men? I lie upon the thorny couch of pain, my pillow is the iron pillow of despair: I can rest on them in silence, hut that is all that I can do. Think of it, Jane! I can never make you happy. Leave me, then! Why should I destroy you? It is but one bold step and it is done. We shall suffer, suffer to the heart; but we shall have obeyed the voice of reason, and time will teach us to endure it.

These were not the words of an idle romanticism; they sprang from the depths of the man's being, and in them lies the justification of Froude's magnificent biography, however we shall be obliged to correct his work in details. After all deductions are made, the real Carlyle is the Carlyle of Froude.

CURRENT FICTION.

A Prince of Dreamers. By Flora Annie Steel. New York: Doubleday, Page & Co.

Before this book appeared, one would have said that Mrs. Steel was probably as well qualified to write an historical romance of India as any one living. Her wide acquaintance with modern India she has revealed in several novels of decided depth and power. Her recently published history of the country declares her interest in the long evolution of Indian civilization. Yet in spite of her combination of talents, she has fallen to the bottom of the pit which gapes for all historical romancers, and which is most dangerous, unfortunately, to those whose purposes are most serious. The interests of the novelist spoil the "Prince of Dreamers" as history, and the interests of the historian spoil it as fiction. It was perhaps true to fact to make the court of the great sixteenth century Mogul, Jelâl-ud-din Mahomed Akbar, as dull as a stagnant pond, even when the heir-apparent was conspiring against the throne. If the book really admitted us to the mysteries of Akbar's dream, we could dispense with external action; but though his interpreter tells us in so many words that he was dreaming of empire, the man himself remains a kind of graven image, inarticulate and impenetrable to the end. In the last two or three chapters the infinitely tedious plotting and tattle about the possession of the King's Luck, a big diamond which Akbar wore in his turban, comes to a sharp head, and we enjoy a few minutes of unexpected excitement. If there is any profound significance in the story, we reluctantly assent to the motto from Hafiz on the fly-leaf: "Not every one who readeth the page understandeth the meaning." Nor—to pass on to less obscure matters—is it always easy to understand the style. The problem of making the characters speak without destroying the illusion was, of course, difficult. But a modicum of stylistic tact would have felt the vicious dissonance of "messieurs," "Let her pass an' she will," "A Râjput lives by his sword—would I had it in some wames I wot of." So far as the merely descriptive passages go—and they go very far indeed—we will not question the accuracy of Mrs. Steel's antiquarianism. It is exactly the antiquarian's love of discoursing in detail on ancient manners, costumes, etiquette, games, morals, religions, and literatures—it is this antiquarianism, tempered by a love of gorgeous word pictures, that ruins the book. The ill-fated story, symbolic or not, is absolutely smothered to death by description.

The Straw. By Rina Ramsay. New York: The Macmillan Co.

A slight but fairly diverting book made up of a half-dozen foxhunts and a murder—the treatment is just serious enough to hit off the life of the rather seedy English gentry who follow the hounds, after the custom of their forefathers. The characterization of the dowdy, coarse-fibred women and empty-headed men is sketchy but light-handed and clever. The two rascally "Babes" who, subsidized by their aunt, pretend to be engaged in scientific farming, but in reality hang on the skirts of the hunt, are jolly novelties in humor—attached, to be sure, somewhat artificially to the main action. The Straw, the only "nice" woman in the community, is the pivot of the serious action. She excites the hatred of the faster element among her associates and the chivalry and sympathy of the better sort. She herself is an extremely passive and insignificant creature, standing mute and helpless amid the contending passions which she evokes. Yet though her attempt to save a morally drowning man leads indirectly to his ruin, the influence of the poor girl is in the long run salutary, and her sense of right and wrong becomes the touchstone to test the other characters. None of these people, however, is deep or subtle enough to excite any lasting interest. The zest of the book lies in the crisp, racy style, and in the fact that one is kept most of the time in the saddle, galloping furiously after the hounds.

Christopher Hibbault, Roadmaker. By Marguerite Bryan. New York: Duffield & Co.

This is a thoughtful story of serious purpose and of high-minded endurance, endeavor, and accomplishment. The scene is in England. Of the characters there is, first, the hero, who, having when a little boy tramped the road with his mother and having never forgotten how rough was the way for them both, dreams dreams of becoming a maker of "highroads—not in towns but across countries—roads that will be easy to travel on and will last." Then there is the memory of the mother, weary and worn, a Socialist who had fled from her husband, preferring poverty and the road to money made by oppressing the poor. Later comes into the story the father himself, still piling up his hard-hearted millions and desiring at last to find his son. Meantime a relative of his, an old lover of the mother, has plucked the boy from the poorhouse and

is bringing him up in an atmosphere of high thinking and useful doing. The family circle thus opened to include the young Christopher supplies a numerous addition to the list of characters, as well as a new set of problems. These, unrelated to roadmaking or to tainted wealth, are concerned with the irrational tempers of two of the group, the treatment of which is a problem in psychology. The marvellous insight and controlling force of Christopher in the case of the young girl lead to obvious results. It is doubly a document, no doubt, but no doubt, also, an interesting story written in a fine spirit. The greatest fault of workmanship is excessive deliberation. A hundred pages less and the weaving would draw together into greater firmness. The reviewer will also ever pray in the interest of the English language, and before the standard dictionaries have marked it for their own, that the word "cute" be banished from the pages of serious literature.

Old Lady Number 31. By Louise Forsslund. New York: The Century Co.

To write about the aged is difficult; for the sentiments, hopes, and passions of old people have been ground too fine under the wheels of the world. Great, then, is the triumph of one who catches the octogenarian soul as surely as Louise Forsslund has in this story of Abe and Angy Rose. Characters like Old Lady Number 31 and his friends are seldom found between covers. Abe is a senile failure, who sinks all his savings in an unknown gold mine and lives for the next eighteen years on what he can borrow. Angy accepts him for worse, as for better, apologizes full forty years without complaint of his shortcomings, and whispers not an unkind word even when the auctioneer, foreclosing a mortgage, turns the pair out of their cottage. The story tells how they found lodgings in an Old Ladies' Home, lost them, and then found them again.

Miss Forsslund has sacrificed much in the narrative, but always the right things. There is no more plot than in the lives of old people; what little there is ambles along from adventure to adventure, a highly respectable, profoundly trivial picaresque. Crises turn about old armchairs, a canister of tobacco, and an oyster stew. The jests are hoary and unadorned. But with all this there is imported an exquisite honesty finer than mere realism.

The Butler's Story. By Arthur Train. New York: Charles Scribner's Sons.

This is an interesting contribution to sociological fiction from the point of view of the servant. It must be taken into consideration, however, that the butler is English, and consequently born and bred to a sense of the divine origin of class that is usually absent in America. He is a Yellowplush up to date, more strenuous, more serious-minded, more given to moralizing in the intervals of melodrama. The book is essentially journalism, and flatters the reader with a sense of astuteness by allowing him to recognize through thin disguises divers sensations of the day, from the latest exposure of graft to the innocent pranks of the inexhaustible author of "The Metropolis."

William Lyon Mackenzie. By Charles Lindsey. Toronto: Morang & Co.

The important series of historical biographies, The Makers of Canada, is brought to a conclusion by this life of William Lyon Mackenzie, political reformer and leader of the Upper Canadian rebellion of 1837. The original intention was that Dr. W. D. LeSueur of Ottawa, one of the editors of the series, was to have contributed the volume on Mackenzie. Dr. LeSueur prepared the biography, but through some unfortunate differences of opinion between author and publisher as to the character of the work—the merits of which need not be gone into here—Dr. LeSueur's book was withdrawn, and another substituted. Failing Dr. LeSueur's biography, which, in such scholarly hands, could not have been anything but informing, it is fortunate that the publisher had available another life of Mackenzie of more than ordinary merit. Charles Lindsey's "Life and Times of William Lyon Mackenzie" was first published as long ago as 1862, and was found to be so full and impartial that it has remained to the present day the only published life of the great Canadian. Mr. Lindsey, who died a few months ago at an advanced age, enjoyed exceptional opportunities for acquiring the essential material for an account of Mackenzie. He had not only at command a mass of documentary material left by Mackenzie, bearing upon his career in politics and journalism, and on the history of the rebellion, but Lindsey's personal relations with Mackenzie had been exceptionally intimate. Politically, the two men were wide apart; yet the biographer handled his subject so judiciously that even in 1862, when the bitterness of party spirit had not yet been softened by a broader national outlook, the book commended itself to men of all political views. For the present series, Charles Lindsey's work has been carefully edited by his son, G. G. S. Lindsey of Toronto, who has condensed it and added a good deal of new material drawn from family documents. In an introductory chapter he has embodied a clear and well-balanced review of the stormy period in which Mackenzie's energetic personality filled so large a place. Here Mr. Lindsey has made effective use of Durham's "Report on Canadian Affairs," which furnishes striking testimony as to the intolerable conditions preceding the rebellion of 1837.

Mackenzie was born in Dundee, Scotland, in 1795. After several unsuccessful attempts to make a living in his native land, he sailed for Canada in 1820. After his arrival he was engaged for a time in business, but his impetuous temperament would not long brook the rôle of a mere onlooker. Upper Canada was seething with unrest, and, in 1824, Mackenzie threw himself into the fight for responsible government, almost immediately taking a leading part among the reformers. He established the *Colonial Advocate* at Queenstown, moving it the following year to York (now Toronto), and vehemently attacked the Family Compact and the abuses of power for which he held that select group of Tories responsible. Elected to the Legislature in 1828, he became the virtual leader of the reform party there, as well as throughout the province. Of the circumstances attending his repeated expulsions from the Legislature by the dominant party, and the obstinacy with which his constituents sent him back with increased majorities; his mission to England; the events leading up to the rebellion, and the rebellion itself; his exile in the United States, and his relations there with Presidents Van Buren and Polk, with Horace Greeley, and others; his return to Canada in 1850 and election to the Legislature the following year; his retirement from politics and later years—of all these matters a very full, impartial, and thoroughly interesting account is given. Few thoughtful Canadians nowadays will be found to condemn Mackenzie unreservedly, in face of all the facts, even in his final resort to armed rebellion. The principles for which he contended, for which he fought and suffered, are those which to-day form the very foundation-stones of the great commonwealths of Canada and Australia, and will be embodied in the Constitution of the coming commonwealth of South Africa. They are generally accepted by all English-speaking peoples.

Side Lights on Chinese Life. By the Rev. J. Macgowan; with 12 illustrations in color by Montague Smith and 34 other illustrations. Philadelphia: J. B. Lippincott Co. $3.75 net.

Every-Day Japan. By Arthur Lloyd; with 8 plates in color and 96 reproductions from photographs. New York: Cassell & Co. $4 net.

Notwithstanding striking contrasts which appear upon the surface, the Chinese and the Japanese are regarded by many persons as substantially one people, or, if not one, still as closely related and to be put in the same class. With other persons the question of the superiority of the one race or the other

is a topic of unending dispute. To all who are interested in such questions we can commend these two volumes. They are careful, unprejudiced studies by men who have lived long in the lands they describe and who are competent scholars, knowing not only the vernacular, but also the literature and history and religion of the people.

There is a difference in attitude, it is true, for Mr. Macgowan stands upon the outside of the life which he describes, and Mr. Lloyd identifies himself with the Japanese. To the first the Chinese remain a mystery:

> The Chinaman's mind is a profound and inexplicable puzzle that many have vainly endeavored to solve. . . . Any one who has ever studied the Chinese character must have come to the conclusion that the instincts and aims of the people of the Chinese Empire are distinctly the reverse of those that exist in the minds of the men of the west (p. 1, 2).

For example, the Chinaman never dreams of being straightforward, as "a straight line is something which his mind recoils from" and "he prefers an oblique and winding path." With this as thesis, the author proceeds; but as he writes he disproves it; for, after all, the differences which separate Chinaman and Englishman are neither insurmountable nor impenetrable, but are the outcome of differing traditions and differing environments. Mr. Macgowan succeeds in making us understand his Chinamen very well, for he sees that "one secret of the extraordinary power that the Chinese undoubtedly have is the very large amount of genuine human nature with which as a race they are endowed." This is a much better proposition with which to start, and it really dominates the book. The Chinaman, to make a composite photograph, has humor, delights in wit and in jokes, enjoys life, is usually full of kindness and sympathy and exercises these qualities in such a genial way that our hearts go out to him. Yet at times, when passion gets the better of him, he may be hideously cruel. Perhaps this trait is connected with the fact that he lacks nerves, and himself endures pain, labor, discomfort with a disregard which can be accounted for only on the supposition that he does not suffer as Europeans suffer. He has a rare tenacity which holds him fast to his purpose, let what will intervene. He has a strength of physique which make this possible, and he is sober, measured, and never in a hurry. This dogged inflexibility, indeed, acts to his hurt, for it represses originality and recoils from innovations. Hence there is an appalling monotony—houses, furniture, decorations, implements, clothes, literature, everywhere and always upon the same plan, so that one Chinese city may stand as representative of all. Thus it is that, in spite of present efforts progressive ideas will be very slow in penetrating the length and breadth of the nation, though the result is certain in the end. As a workman, the Chinaman is neither efficient nor thorough; as a farmer he is second to none in skill; as a merchant he is to be wholly trusted in certain dealings and wholly to be doubted in others; as an official he is altogether to be avoided and condemned. He is credulous in some things and a skeptic in others. In short, he is a very human being akin to us all.

With Mr. Lloyd we enter upon a different world. He finds nothing essentially strange or mysterious in the Japanese, though they are a bit reticent and self-contained; but this is "possibly a result of heredity, derived from the bitter experiences of the past," that is, of the feudal times when quick punishment sometimes preceded examination. In China all towns are alike; in Japan, they differ as English or American towns differ. Over against the Chinese dislike of change is the Japanese readiness to adopt whatever is good, whether old or new, native or foreign. Without dwelling on Mr. Lloyd's book, we may summarize his characterization of the Japanese. They are frugal, industrious, practical, generous, high spirited, kind to all with whom they come in contact, religious (though this religion is hazy), brave, enduring. But adjectives are misplaced when applied to any mass of humanity, and the "Japanese cannot be put in a class by themselves, they are just 'average human'; they have their vices as well as their virtues, their shortcomings as well as their excellences."

With that judgment we may end, certain that it expresses the truth of the Chinese as well. As we cannot indict a whole people, neither can we praise it; and as we come to know any race, the disposition to judge the whole disappears and the individual takes his true place. We learn that the differences which seem so great to untrained eyes are far less important than is the fundamental unity which makes all races one.

The Religion of Babylonia and Assyria. By Robert William Rogers. Pp. xiv +235. New York: Eaton & Mains. $2.

This volume, made up of five lectures delivered at Harvard University, is easy reading and gives, on the whole, a good cursory view of the subject, such as the ordinary intelligent student, not a technical scholar, can grasp. The lectures do not profess to contain any new material, the result of special research or discovery; but Professor Rogers is a competent Assyriologist, well versed in the literature of the subject, so that in general he presents the conclusions from the latest investigations.

The opening lecture, "The Recovery of a Lost Religion," is little more than a condensation of the first part of the first volume of the author's own "History of Babylonia and Assyria." The title of this lecture is rather misleading and the chapter itself scarcely a legitimate part of a volume on religion, being an historical account of excavations and explorations. Another point open to criticism is the illustrations, some twenty-six in all. Most of them are representations of Assyrian tablets, seven of the Creation and four of the Deluge. The ordinary object of photographic reproductions of tablets is to put the original text before the reader. But from the reproductions in this volume the text could scarcely be made out, nor could the readers for whom such a work is intended read the text, even if it were legible. One or two pictures would have been enough to enable the reader to see what an Assyrian tablet is like, and the author could have used the space thus gained to print valuable illustrations of another sort—statues, bas reliefs, monuments, seal cylinders, and the like—showing the gods and demons and the religious and magical acts and practices of Babylonians and Assyrians. On this, the archæological side of his theme, the author seems to be weak.

Among other illustrations (p. 91) are three tablets containing the name Yahawe (spelled elsewhere "Yahveh," an inexcusable combination of German and English). According to Professor Rogers's transliteration, the form of the sacred name known to us in the Hebrew Masoretic text was actually discovered on Babylonian tablets of 2000 B. C. (*Iaa've*, or *Iave*). Should not the name, however, rather be read *Iau* or *Iaum*, as, in fact, it appears according to Rogers's transliteration on the third tablet? Recent discoveries of Aramaic Jewish documents in Egypt and of Hebrew inscribed bowls at Gezer and Jericho would seem to show that Yahu (*Yhw*, a trigram, not Yahweh, a tetragram, was the name of the divinity in actual use among the Hebrews until and after the Captivity. This is also the form in which the name occurs in composition in proper names, even in the Masoretic Hebrew text. The form Yahweh, or Yahaweh, seems to be a special differentiation adopted later, possibly to prevent confusion of the God of Israel with the *Yahu*, or *Yahw*, of other kindred people.

Professor Rogers lays great emphasis on the similarity and relation of Jewish religion, Jewish myths, Jewish psalmody, and much more to the Babylonian, but at the same time warns the reader against the mistake which Delitzsch and his school have made in failing to note the still more important differences between the religious ideas and practices of Israel and those of Babylonia. In fact, the author's reiteration of the monotheistic, spiritual, and lofty character of Hebrew thought in contrast

to the polytheism, materialism, and superstition of the Babylonian religion becomes almost tedious. In dealing with the relation of Hebrew psalmody to the old Babylonian psalms and hymns, he enters what we think is a just protest against the present tendency of Old Testament critics to bring down all Hebrew literature, and especially the psalm literature, to a very late date. In this respect, as in others, the book is one of much interest for the student of the Old Testament as well as for the student of the ancient Babylonian and Assyrian religion as such.

Science.

Fish Stories: Alleged and Experienced, with a Little History, Natural and Unnatural. By Charles Frederick Holder and David Starr Jordan. Illustrated. New York: Henry Holt & Co. $1.75 net.

With Rifle in Five Continents. By Paul Niedieck; translated from the German by H. B. Stanwell. With 32 full-page photographic plates, and 174 illustrations in the text. New York: Imported by Charles Scribner's Sons. $5 net.

The American Nature Series provides, in its fifth branch, for "Diversions from Nature." It is under this heading that the volume of "Fish Stories," by Mr. Holder and President Jordan falls. As a document in the controversy precipitated a few years ago by John Burroughs, its main importance lies in its demonstration that a genuine scientific equipment does not of itself disqualify one for successful nature-writing, and that even when the exigencies of a good yarn demand that truth be thrown to the winds, the school children of the rising generation need not be fatally led astray, as the manner of some is. The reader who would distinguish the work of the individual authors is respectfully referred, in the preface, to "the well-known rules of the Higher Criticism." We shall not stop to solve the problem in detail, but wherever the reader sees anything like "the big dorsal sail-like fin of the sword-fish, gleaming, rippling in the sunlight like some gorgeous fabric set with turquoise, sapphire, and tourmaline," the hue of Mr. Holder's ink is evident. The attack on the "new school" nature writer which underlies the whole volume is in general impersonal, but in one chapter, "The Unnatural History of the Sea," the lance is hurled savagely at a definite object, "The Haunters of the Silences," by Charles G. D. Roberts. When the squid, with its tiny mouth, is made to swallow basking sharks, sawfish and swordfish for the delectation of children who are left to suppose that they are acquiring genuine facts of natural history, Dr. Jordan (we cannot stop to explain the rule of Higher Criticism which guides us in the attribution), thinks it high time for a vigorous protest. As an antidote to such tales, he closes the chapter with Holman Day's poetical tale of "The Shag-eyed Shark." But even Homer nods. Many an innocent reader of this very volume will lay it down under the impression that a St. Lawrence muskallunge may weigh two pounds and three-quarters before it has yet reached the length of twelve inches, in which case, it would be a "diversion from nature" somewhat suggestive of the obnoxious squid, after its dinner of basking sharks and swordfish. As a whole, however, the book is admirably done. It is interesting in every part, it teems with scientific fact clearly stated, and its facts and fictions do not overlap in that hazy borderland which marks the work of writers who try to elucidate nature with the equipment merely of the sensational journalist.

Mr. Niedieck's volume, recording the experiences of seven years of rifle shooting in most of the big game regions of the earth, naturally grows a little monotonous to any reader who is not an enthusiast. In his numerous accounts of absolute misses, and of wounded animals allowed to escape, one finds ample warrant for accepting the positive side of his story at its face value. He expressly disclaims any credit for scientific discovery, though the Berlin Zoological Museum seems to have profited to some extent from his collection of trophies, at least in his Alaskan hunting, where some sort of scientific credentials are necessary before trophies are allowed to be removed from the territory. It makes the intelligent reader a little restless to be solemnly informed that the sinking of a hippopotamus, after it is shot in the water, "is accounted for by the fact that his specific gravity is greater than the weight of the water he displaces." Mr. Niedieck follows his bent with no apparent regard for expense. We sometimes find a score or two of natives in his employ in various capacities, and for a trip up the White Nile he charters two sailboats, one of them carrying eight camels and two donkeys. The cheap and easily managed African and Asiatic native assistant, however, left him in no mood to appreciate the virtues of such help as he was forced to rely upon in Alaska. The idea of equality, brought in under the rule of the United States, he thinks, has ruined the Indian. The Russian did better, who used the knout, and where the knout failed converted the Indian to his faith and made him obedient by picturing to him the terrors of hell. But now "it has actually come to this, that in this country no one speaks of a gentleman—only of a man." One Indian, bearing the suggestive name of Dennis, "definitely disputed my right," he tells us, "to find fault with any of his work or give him any orders whatever. And these are utterly uncivilized creatures, who can neither read nor write nor speak good English, and yet think themselves our equals because they wear collars and ties and cowboy hats which cost twenty-four shillings, and, what is more, are paid sixteen shillings a day, with food provided!" This flagrant case was in British territory, and he thanks heaven that such a state of affairs is wholly unknown in other British colonies. "Canada, however, has been greatly influenced and spoilt by its close proximity to the United States. . . . There are only masters here, no servants." The photographic illustration of the book is in the main excellent and in solid value we are disposed to place it well above the text.

Coming almost at the same time with the announcement of Lieut. Shackelton's achievement in the Antarctic Circle, the publication (by Georg Reimer, Berlin) of "Die Russische Polarfahrt der Sarja," made in 1900-1902 under the leadership of Baron Eduard von Toll, is of special interest. The story is put together by the Baroness Emmy von Toll, from the diary of the intrepid explorer recovered after his death. The more or less *wissenschaftlich* text is brightened up with maps and fifty or more good illustrations from photographs. The narrative is eminently human, with the record of intense physical and mental suffering incidental to such a combat with the elements and such a protracted separation from home and friends. Baron von Toll first went to the Arctic in the expedition of 1885-87 directed by Dr. A. von Bunge; and in 1893 and 1899 explored for himself the New Siberian Island. The concluding chapters of the work sum up the considerable accomplishments of Von Toll, especially in the fields of geology and botany, and indicate that a mass of valuable material for several departments of science awaits working up at St. Petersburg. There are interesting references to De Long and Melville, and their work at Bennett Island, but it is odd that the details of the Baron's death are not given.

Dr. W. S. Bruce of the Scottish Oceanographical Laboratory has organized another Antarctic expedition, to leave England in 1911. The expedition is to be supplementary to the work of the Scottish National Antarctic and other recent Antarctic explorations, and the plans include extensive oceanographical working in the South Atlantic Ocean and in the Weddell and Biscoe Seas, between 40 degrees and 75 degrees south latitude, the mapping of the coast line of Antarctica to the east and west of Coat's Land, and an investigation of the interior of Antarctica. It is proposed to have a ship of 250 or 300 tons register, carrying about thirty-six men, including six scientists. The vessel is to be provided with all the most modern equipment for work in depths exceeding 3,000 fathoms, and several motor-sledges, light and easy to handle, as well as ponies and dogs, will be taken. Dr. Bruce, after setting up a winter station at or near Coat's Land, will dismiss the ship,

which, after landing stores and equipment for three years, and refitting at Cape Town, will proceed to New Zealand. The following season she will go on to McMurdo Bay or King Edward Land, in order to lay out caches and await the arrival of Dr. Bruce, who intends to attempt to cross the Antarctic Continent from Coat's Land to McMurdo Bay, or possibly King Edward Land. The programme includes a circum-Polar bathymetrical survey in high southern latitudes.

Drama.

THE PARIS THEATRE.

PARIS, April 3.

A few of the many plays which have appeared on the Paris stage during the winter deserve notice abroad, whether for the scandal of them or for literary merit. "Le Foyer," by Octave Mirbeau in collaboration with Thadée Natanson, unites both titles to attention in a high degree. Legal proceedings were needed to make the Comédie Française, where it had been incautiously accepted, finally resolve to produce it. The police had to intervene to keep order at the first representations; and its subsequent tour through the chief provincial cities has been accompanied by the same *succès de scandale*. From the beginning of his career, Octave Mirbeau has used his very perfect style to flagellate his literary masters and all who stand with them. He must have been unhappy at his highly respectable school, with its religious and conservative traditions. When it is not the clergy, it is *bourgeois* charity or business success, or, in general, everything that is looked up to in the respectable world, which he flays with the knotted, nail-studded whiplash of his language. His present hypocrite uses his wife, uses the orphan asylum over whose committee he presides, only to extort money for his own vicious pleasures. Of course, the hypocrite is Christian and Clerical; but these two qualities so little recommend a man publicly in France of to-day that the play seems an anachronism. Yet its production has been somehow followed by exaggerated, perhaps fabricated, scandals in real life concerning the treatment of children in two Conservative institutions—La Mettraie, where, in accordance with French traditions of parental authority, rich people have placed children refractory to ordinary and more humane schooling, with the countenance of precisely those Senators and Moral Academicians who have done most for the preservation of youth, rich or poor; and Orgeville for vicious, degenerate, and abnormal children, whom only prisons would otherwise receive, a colony founded by a Paris judge in memory of his father, whom the Commune shot among its hostages. The play, the prosecutions, and the press comments on both give the measure of the hatred against the Old France in the New.

Émile Fabre is another Aristophanes in French Athens; but his sombre satire, without being Clerical or Christian, has for its object those who "arrive" in the new order—"Les Vainqueurs," a play aided by the distinguished talent of the actor Gémier at the Théâtre Antoine. It follows the line of attack of his four previous pieces: Money is the root of all evil among men and women of to-day. His hero, a sorry one, has succeeded in all his combinations and is a member of Parliament on the point of becoming Minister, the goal of public life in France. Suddenly he is confronted by a shady money transaction of the past, in which, after all, he had played a part only half-consciously; and he averts ruin by sacrificing his wife, only to see his son die as the consequence when victory issues from his dishonor. Though not so strongly written, it is a more powerful play than Mirbeau's; and, without having had the aid of scandal for present success, it is likely to be more enduring in dramatic literature.

Two other of the great plays of the season are tinged with this acrid pessimism. "Connais-toi!" by Paul Hervieu, has all the qualities which brought this author into the Academy. Concentration of plot and doing away with all useless complication or talk, clearness of speech, and tense dialogue, all strike home the lesson which the hero learns —"Know thyself!" That is, when you set out to make others condone their sister's fault, you may find on the way many such sisters of your own (particularly on the French stage). "Le Scandale," by Henry Bataille is one of the most effective pieces of the season and perhaps the best written from the point of view of literature—and it is one of the most disagreeable. At the fashionable watering place of Luchon in the Pyrenees, a young wife, not evil, simply feather-headed, being left alone by her husband, manages to compromise herself heedlessly with one of those high-flying adventurers who infest such places everywhere on the Continent; and the play unrolls the successive epochs of his blackmailing and the attempt of forgiving husband and wife to stand up against the "scandal" of their provincial town. Henry Bataille, in poetry and prose, has won recognition as one of the writers who promises most for the future. He is not yet forty—is it already too late for him to escape the obsession of sex?

"La Furie" of Jules Bois also entered the Théâtre Français by the door of a lawsuit, but it turned on a mere question of contract. Costumes and decorations are imitated from the finds in the recent excavations of Crete; and the play is written, with infinite pains, in classical French verse. Yet it has neither the repose of Greek tragedy, nor the simplified unity of classic French pupils. Hercules is a citizen come home to teach wife and friends Pacifism and Free Thought. He finds war, within and without, and his wife not unwillingly in possession of the tyrant, whom he incontinently strangles; whereupon the fatal Egyptian woman hynotizes him and he slays wife and children. Euripides was doubtless an anti-Clerical, and Seneca would not have faltered at science; but the Hercules Furens of each of them would have found himself equally a stranger to this modern composite photograph.

"La Route d'émeraude" is also a play in poetry, with the gay, sounding verse to which we apply other sense adjectives like colored and warm and which we expect from Jean Richepin. Only the form is his; the matter is from the romance of Eugene Demolder, one of the chiefs of that Belgian literature which is now beginning to burst its local bounds. With many a Flemish detail, painters and models, gypsies and sea-captains, the hero wanders afar from his father's mill; but he is led back by a murder on his own part and a missed musket-shot intended to kill him on the part of another—and the gypsy model goes sailing away to Spain. It is the life which Richepin loved and which blocked his way to the Academy so long; and it has inspired him with the verse which won him his election at the same time as the appearance of this glorious, adventuresome play. "Beethoven" at the Odéon is a new kind of verse play by an almost new man, René Fauchois. It takes up the whole love life of the composer, who put at the head of one of his sonatas—*Durch Leiden Freude*. The succession of heartbreaks —through grief to joy—allows an orchestra to interlude the piece pleasantly with choice fragments of the hero's music. Naturally, the verse is not so good as Richepin's nor even as that of Jules Bois.

After all this serious or strenuous drama, it is a pleasure to wind up with pure light comedy—as pure as French comedy has been of late years, and admirably light, leaving the hearer without that bad taste in the mouth which so mixes sense metaphors with the critics. "L'Âne de Buridan" of Robert de Flers and Gaston de Caillavet, easily the day's masters of unalloyed humor, places the hero undecided between two charmers, like the scholastic ass, dying between equally attractive food and drink; an innocent girl decides him.

S. D.

The latest contribution to the Shakespeare-Bacon controversy is from the pen of Mark Twain: "Is Shakespeare Dead? From My Autobiography" (Harper & Bros.). The subtitle is fairly descriptive; for the volume contains considerable passages of

autobiography which are not vital to the argument, but which are sometimes rather amusing. The humor, however, it must be confessed, is occasionally somewhat forced. Otherwise the case for Bacon is presented clearly and forcibly. The main points are, of course, familiar; very little is actually known of Shakespeare's life, and that little does not show him as a great writer. The extraordinary acquaintance with the law displayed in his dramas can hardly be explained, while Bacon was a distinguished lawyer, to whom exact knowledge of legal terms was almost second nature. These points are elaborated with considerable ingenuity; but even then the book is rather insubstantial—a pamphlet expanded by means of large type and thick paper.

A notable contribution to the rapidly-growing Menander literature inspired by the recent discovery of extensive remains of four plays is the article "The Iambic Trimeter in Menander," by Prof. John Williams White of Harvard in the April number of *Classical Philology*. The laws which Menander observed in the construction of this verse are deduced from statistical exhibits of the facts furnished by the unbroken verses of the new text, and are discussed with the lucidity which characterizes the work of this scholar. Practically all the rhythmical vices which Menander is shown to have avoided are grimly illustrated by attempts upon the broken lines perpetrated by his modern restorers, to whom this study will bring welcome, if often humiliating, enlightenment.

Music.

WHY CONCERTS DO NOT PAY.

Rosenthal's advice to another pianist who complained that he was in need of money, "Give fewer concerts," sounds funny, but it also epitomizes the plain truth that too many concerts are given, at least in our large cities. A few artists, like Paderewski, Wüllner, Sembrich, Nordica, Schumann-Heink, Gadski, can give recitals here and make money; but most of the others are still dependent on the support of piano manufacturers, and women's clubs. In the metropolis, recitals are given chiefly for the press notices, which, after being judiciously pruned, are reprinted in circulars. These circulars are necessary for success in the provinces; so, at least the singers and players are informed by their managers. Thus concerts are multiplied, and the supply far exceeds the demand. While there are some concert-goers who avoid the opera houses, the vast majority of amusement-seekers prefer the opera, and the greater the number of operatic performances, the more the concert halls are depleted. During the season just closing, no fewer than 259 representations were given at our opera houses; is it a wonder that the concert virtuosi from abroad are beginning to look on New York as no longer belonging to the "dollar-land"? It is a curious situation; the opera singers get rich here, the concert-givers poor.

Yet conditions are by no means so hopeless as they would seem. The neglect of concerts by the public is, in fact, largely a result of the attitude of the concert-givers toward the public. At the opera houses, the managers offer what people want to hear. In concert halls, audiences—if there are any—have to submit to what the singers and players themselves like, or what they think the public ought to like. Now, what the public does like more than anything else in music, is melody, and this is usually withheld altogether, or served in homœopathic doses, unless a composer happens to be in special favor with the conductors, like Beethoven or Tchaikovsky. There is Dvorák, for instance, a composer who bubbles over with lovely melody and piquant rhythms, and whose orchestral coloring is far more beautiful than that of Richard Strauss; yet, of his many truly popular works we never hear any except the "New World" Symphony. Rubinstein's music is always loudly applauded when the conductors, once in a long while, condescend to produce any of it. Grieg never fails to arouse enthusiasm, but to judge by our programmes one would think he had never written anything but his first "Peer Gynt" suite. These men are melodists *par excellence*, hence, they are tabooed; tabooed, also, are the melodious rhapsodies of Liszt which, at the end of a concert, would stir up the hearers and make them eager to come again.

In place of such melodious music, what do the orchestral conductors produce? The polyphonic puzzles and megatherian "tone-poems" of Richard Strauss, Max Reger, and their imitators, and the misty productions of Debussy, with their elusive tone "wraiths" from which melody is deliberately excluded. It is great fun to conduct and play such things—they show how skilled the performers are—hence, they are conducted and played all the time. Ferdinand Scherber, writing in the *Neue Musikzeitung*, speaks as if there were a regular conspiracy between contemporary composers and critics to banish from the concert stage everything that is easily understood and melodious. Modern music, he declares, has become a "sport" for professionals, a thing to interest only a small minority. It has driven to the variety shows thousands who would have gone to the concert halls, had their appetite for melody been gratified.

If a list were made of the pieces played by pianists in public, it would probably not exceed one hundred, and most of these are of two kinds, being either sonatas which the pianists think the public ought to be educated up to, or show pieces calculated to display their own digital dexterity. With the exception of a few dozen pieces by Chopin and Schumann, it is seldom that the players put on their programmes what might be called the heart music of a composer. How stupidly indifferent the professional pianists are to the wishes of the people was shown at the time when funds were being collected for poor Edward MacDowell on his sickbed. In all musical circles, throughout the United States, he was being talked about, and everybody was eager to hear specimens of his music; yet what happened? Of the foreign pianists, who come over here so eager to make money, Harold Bauer was the only one who paid heed to this natural curiosity; he played the "Eroica" sonata; beside him there was only Miss Augusta Cottlow. As soon as it became known that she made a specialty of MacDowell's music, she received requests for recitals from all over the country, and she owes her national fame to-day largely to her having thus played what the people—the best people—wanted to hear.

The givers of song recitals are even worse than the pianists. Their programmes in general bear out Maurice Renaud's assertion that "musicians do not love masterworks." One wonders, in looking at the average programme, what could have induced its maker to bring together such a hodge-podge of mediocrity and inanity. But the explanation is very simple. Vocalists seldom consider the intrinsic merit of a song; they seek something which is easy to sing and which brings out the most telling qualities of their own voices. Their one idea is to impress the public with their own wonderful accomplishments; it never occurs to them that the kind of people who are likely to attend a song recital would be infinitely more impressed by the genius of Goethe and Schubert, or Heine and Franz, as united in a song, than by their own vocal feats. They have now had an opportunity to realize that this is true, as shown by Dr. Wüllner. He, thank Heaven, had no voice to show off. He simply saturated himself with the great poems and the immortal music set to them, and he aroused a frenzy of enthusiasm. He came to give a score of concerts and gave four-score. *His* concerts paid; he will take back with him a small fortune.

"Mozart: Sein Leben und Schaffen," by Dr. Karl Storck (Stuttgart: Greiner & Pfeiffer), is a fairly successful effort to furnish the general reader with an analysis of the personal character and of the art of Mozart. The writer finds in the personality of the master the key to his music, and the book is accordingly a close psychological study. Storck, who is also the editor of the letters of Mozart, of Beethoven, and of Schumann, has probably done his best work in this new, attractive, and exhaustive work.

Art.

Storia dell' Arte Italiana. Da Adolfo Venturi. Vol. VI: La Scultura del Quattrocento. Pp. lii+1180; 781 half-tone cuts. Milan: Hoepli. 30 lire.

In previous notices of Professor Venturi's stupendous history, we have found that its qualities and defects lay in a peculiar and interesting attitude of the author. He follows well-travelled roads in the spirit of a pioneer. Where one expects the geographer, one finds the explorer. He undertakes his gigantic task light-heartedly as a constant adventure, and so throughout he retains his enthusiasm. He is, moreover, an explorer of taste, and if in his capacity as sentimental traveller he at times exaggerates the interest of his discoveries, that, too, is thoroughly in character. That he should often discover what has already been charted, that he should judge too quickly and positively is also inevitable under the circumstances. *Solvitur eundo* is a shade too much his ensign. Every page of the present volume testifies to alert and genial investigation, but one suspects that he prints about as quickly as he writes. On page 662, for example, the Riario tomb in Santi Apostoli, Rome, is by an anonymous imitator of Mino; by page 950 it has become, rightly, we think, a fine work by Andrea Bregno. Such revisions are better made before printing begins. We hasten to add that a procedure which in the volumes on painting is often trying is acceptable in the present volume. Italian sculpture has never had a Cavalcaselle or a Morelli. Since Cicognara, more than a century ago, there has been no such comprehensive survey. We are more inclined, therefore, to be grateful for what is afforded us than to dwell upon defects. Scholars will find in this volume a constant source of suggestion and contention, and they will know how to use it with the necessary reserves. The general reader needs a word of caution, perhaps, that this big tome looks more authoritative than it is.

That Professor Venturi should not know the few fine examples of Italian sculpture in America is natural. He is also much inclined to regard as negligible whatever he must take at second hand. Yet the museums of Boston and New York, and the Widener collection, Philadelphia—to mention only obvious examples—would have furnished him necessary items. In the same way, he is too prone to stigmatize as forgeries works which he knows only in photographs. Sometimes one fears he goes on a calculus of probabilities in rejecting terra-cottas outside of Italy. Whoever declares all exiled Renaissance terra-cottas in public and private galleries to be forgeries will err only in about one case in four. Is Professor Venturi content with this degree of accuracy?

To discuss in detail so extensive a work is, of course, impossible in the limits of a review. We may, however, briefly note points that may specially interest both the student of art and the general reader. The life of Bertoldo is one of the best in the book, abounding in new material. Professor Venturi greatly overpraises that industrious Lombard craftsman, Gian Antonio Amadeo. The triviality of Amadeo is so patent and so generally recognized that we need not argue it. Enough to say that his sculpture is that of a decorator, his architectonic sense *nil*, his decoration rather exuberant than fine. The invention of the lovely frieze of the Portinari Chapel, S. Eustorgio, Milan, seems absolutely beyond his powers. In its execution he may have had some part, as Professor Venturi surmises One must question also the attribution of the terra-cotta Pietà in S. Satiro, Milan, to Amadeo. The usual attribution to Caradosso is far more acceptable, for the work is plainly that of a transitional sculptor imbued with the dawning ideals of the Golden Age. Andrea Bregno, dominant at Rome in Sixtus IV's time; Giorgio da Sebenico, a vigorous Dalmatian sculptor in the Venetian tradition; Giovanni Dalmata —these are examples of interesting artistic personalities now first brought within the popular ken. Even the fairly experienced student of Italian sculpture will find that to page over this bulky volume is the equivalent of many exploring trips. In such fireside travels, the range of which we have barely suggested, Professor Venturi is always the learned and genial, if at times erratic, guide.

"Great Masters of Dutch and Flemish Painting," by William Bode (London: Duckworth), is among the more recent importations of the Scribners. It is a translation of the second edition of "Rembrandt und seine Zeitgenossen." The encyclopædic director of the Kaiserfriedrichsmuseum never appears to better advantage than when he writes on the painting of the Netherlands, and these essays on Rembrandt, Hals, the Genre Painters, The Landscapists, Still Life men, Van Dyck, and Rubens are welcome in an English dress. Since the collection is already standard, it leaves the critic rather little to say. One might find that undue emphasis is laid upon Rembrandt's realism and his phantasmagoric quality insufficiently brought out. Many will feel that the great superiority of Vermeer of Delf, in his class, might have had fuller recognition. On the other hand, many will find it difficult to accept Dr. Bode's very high estimate of Wouvermans. With his many merits, the rather negative color and generalized textures of this artist seem to relegate him to a lower place. On the very disputable matter of Cuyp, Dr. Bode has almost persuaded us to regard golden mediocrity as greatness. This essay and that on Brouwer are perhaps the best in the collection. Certainly the keenest and most debatable portion of the book is the attempt to identify the early paintings of Van Dyck, particularly those which he executed as Rubens's assistant. In general Dr. Bode contrives to be true to humane criticism without being false to connoisseurship. The English version, by Margaret L. Clarke, is tolerable, but too often defective in idiom. "Sunday" repeatedly applied as an adjective to landscapes means, of course, "holiday" or "festal." The following sentence illustrates certain not uncommon defects of judgment in the author and of style in his translator: "Amongst the Teutons, art repeatedly reached a maturity which can stand comparison with the noblest art phases of the Greeks and Italians." But these are venial blemishes in a usually excellent book. About two score good half-tones, several from little known originals, give a special interest to this edition.

A. Maccallum Scott's "Through Finland" (E. P. Dutton & Co.) is a somewhat dry, but instructive reference book and guide for travellers. The illustrations are an important feature and give a good idea of the country. There are chapters on Art and Artists, Architecture, and Legends and Literature. The chapter on the architecture of Helsingfors is perhaps the most interesting. The author finds in the building there much that is related to Japanese and other Oriental style, sometimes grotesque, but "the expression of a national temperament, undisciplined as yet, without tradition and without experience, but gaining these as it develops."

Students of architectural style will be interested in the collection of façades and interiors, which is being issued by Nils Wasastjerna, one of the leading architects of Helsingfors. Many details support the above quoted verdict of Mr. Scott (Helsingfors: Helios).

The National Academy of Design has selected the following jury of selection for the winter exhibition of 1909: J. Carroll Beckwith, Edwin H. Blashfield, Howard Russell Butler, Walter Clark, Charles H. Davis, Frederick Dielman, Paul Dougherty, Frank V. Du Mond, Ben Foster, August Franzen, Daniel Chester French, William J. Glackens, Francis C. Jones, F. W. Kost, Will H. Low, Walter L. Palmer, Edward W. Redfield, F. K. M. Rehn, Robert Reid, W. T. Smedley, Henry B. Snell, C. Y. Turner, Henry O. Walker, Harry W. Watrous, J. Carlton Wiggins, Frederick Ballard Williams, and Cullen Yates. The hanging committee is made up of Elliott Daingerfield, J. Alden Weir, and Frederick G. R. Roth. The jury of selection for the annual exhibition of March, 1910, consists of Herbert Adams, John W. Alexander, Hugo Ballin, Gifford Beal, Emil Carlsen, F. S. Church, E. Irving Couse, Kenyon Cox, C. C. Curran, C. Warren Eaton, A. L. Groll, Birge Harrison, Childe Hassam, William H. Howe, William Sergeant Kendall, Louis Loeb, Herman A. MacNeil, J. Francis Murphy, Walter Nettleton, Edward H. Potthast, Henry Prellwitz, Leonard Ochtman, Will S. Robinson, Edmund C. Tarbell, A. T. Van Laer, Douglas Volk, and Irving R. Wiles. The hanging committee will be Gari Melchers, H. Bolton Jones, and Isidore Konti.

The National Academy of Design has elected twelve painters and six sculptors

as associate members. The painters are Miss Mary Cassatt, Reynolds Beal, Paul Cornoyer, Miss Lydia Field Emmet, George Bellows, Charles Noel Flagg, William J. Hays, George Hitchcock, Arthur Hoeber, Ernest Peixotto, Frederick J. Waugh, and Henry O. Tanner. The sculptors are Lorado Taft, Robert I. Aiken, Augustus Lukeman, Evelyn B. Longman, Attilio Piccarilli, and Henry M. Shrady.

Among the exhibitions in the dealers' galleries in this city are paintings by a group of Boston artists at Macheth's, till April 29.

At an auction of the paintings of the late John T. Martin, held in this city last week, the following prices were paid: Vihert, The Canon's Dinner, $6,500; Schreyer, Wallachian Post, $7,100; Bargue, The Sentinel, $9,600; Diaz, The Bathers, $6,300; Daubigny, Twilight on the Seine, $13,100; Millet, Going to Work, $50,000; Troyon, Animaux à l'ahreuvoir, $25,100; Corot, La Charette, $30,000; Breton, The Reapers' Rest, $6,000; Knaus, the Christening, $8,900; Van Marcke, Cattle, $16,500; De Neuville, Charge of Dragoons at Gravelotte, $10,200. Mr. Martin had bought the Millet in 1882 for $14,000.

Edward H. Barnard, the landscape painter, died April 16 at Westerly, Mass., at the age of fifty-three. Mr. Barnard first studied architecture at the Massachusetts Institute of Technology, hut later became a student at the Boston Art Museum. He then went to Paris as a pupil of Julian, and each year of his stay ahroad he exhihited a picture in the Salon. Returning to America he opened a studio in Boston.

The death is announced in Edinburgh of W. Beattie Brown, the landscape artist, at the age of eighty-six. He had exhihited annually at the Royal Scottish Academy since 1848.

Finance.

History of the Bank of England. By A. Andréadès; translated by C. Meredith, with a preface by H. S. Foxwell. London: P. S. King.

With all that Englishmen have written concerning their greatest financial institution, it has remained for a Greek to write in French, and primarily for French readers, the first complete history of the Bank of England. Since the work had to be done by a foreigner, it is by all means fitting that an English translation should be forthcoming; and Professor Foxwell's appreciative, yet discriminating, introduction adds materially to the value of the volume.

Professor Andréadès traces briefly the development of banking in England prior to the establishment of the Bank, and then discusses the foundation and organization of that institution. He does full justice to the economic and political conditions leading to the creation of the Bank, but deals very imperfectly with the interesting and little-known literature upon the subject of banking that appeared in England between 1650 and 1700. The early vicissitudes of the Bank are then narrated, as well as its discreditable record during the period of the South Sea Company. He makes it clear that the Bank would have seriously compromised itself if its enemies had not secured the rejection of its proposals, and that it finally avoided disaster "only by breaking its word" and "using methods unworthy of a great establishment."

The history of the next seventy years is briefly sketched, and it must be said that the author has not treated adequately the relation of the Bank to the development of banking facilities in England. The critical period from 1793 to 1819 is more fully considered, the author, upon the whole, inclining to the traditional view that the policy of the directors was fundamentally unsound and at times positively reckless. It is at this point that Professor Foxwell takes issue with him, pointing out that the real cause of restriction was the "persistent demands" of the government upon the Bank, and that the critics have never given due weight to the practical difficulties of the situation. Discussion of what might have been is usually unsatisfactory; but Professor Foxwell is on secure ground when he shows that even the severest critics admit that, prior to 1808, there was "no substantial ground for complaint" concerning the policy of the Bank; and that thereafter, with the usury law forbidding a higher rate than 5 per cent., the Bank could not control speculation by the modern expedient of raising the rate of interest. Most of the troubles attending restriction, Professor Foxwell thinks, were due "to the rapid growth and reckless advances of the country banks," the Bank of England being "practically responsible for the solvency of this crowd of small, ill-managed institutions," but not daring to "call them to account, on peril of provoking a general collapse of credit." Some of the policies and many of the arguments of the directors Professor Foxwell is, of course, obliged to disapprove; but in the main he believes that their action was "guided by sound instinct." In the interest both of historical truth and sound economic theory, it is greatly to be hoped that Professor Foxwell will find opportunity to write a thorough account of this most interesting chapter of financial history.

During the twenty years following resumption, Professor Andréadès shows that the policy of the Bank was frequently far from prudent, particularly during the crises of 1825-6 and 1837-9. He then considers the Bank Act of 1844 and the discussions that led to its enactment. In this part of his field he does little more than give a competent account of main events, and manifests some desire to avoid subjects about which so much controversial ink has been spilled. He notes a growing tendency of economists and financiers to accept the conditions created by the Act of 1844, but observes also that Mr. Palgrave and others believe that it is necessary to strengthen the reserve of the Bank, in view of present-day conditions, and give greater elasticity to note issues. To this latter opinion Professor Foxwell strongly inclines. The "constitution and policy of national banks" he regards as "in some respects the supreme economic question of the day"; and he believes that "institutions wielding national resources and under the direction of men representing general public interests" are imperatively demanded by the conditions of modern finance.

A second and revised edition of "American Railway Transportation," hy Emory R. Johnson, has recently appeared (see the *Nation* Decemher 31, 1903, p. 532). The book is unchanged in its plan and scope, the need for a revision being found in the rapid advance which has heen made in railway practice and railway regulation since the appearance of the treatise in 1903. Statistics and bihliography have heen hrought down to date, and the State and interstate legislation of the last few years has heen summarized. The hook still continues to he the only available comprehensive treatment of the railway question in the United States.

BOOKS FOR TRAVELERS.

French Cathedrals and Chateaux
By CLARA C. PERKINS. With photogravure frontispieces and 62 half-tone plates. 2 vols. 8vo. $5.00 net, boxed, carriage extra.
The author has a full knowledge of her subject; and the treatment is interesting. While appealing especially to those who have visited France, its elaborate illustrations and historical and architectural comment make this work an admirable guide to intelligent sight-seeing.
"Of genuine artistic value. Notable for its excellent arrangement."—*Boston Herald.*

The Builders of Spain
By CLARA C. PERKINS. A sumptuous and popular work similar to "French Cathedrals and Chateaux" in scope, appearance, and careful arrangement, and of uniform size and price.

The Poetic Old World
Compiled by LUCY H. HUMPHREY. $1.50 net; lea. $2.50 net.
Covers Europe, including Spain, Belgium, and the British Isles, in some 200 poems from about 90 poets. Some thirty, not originally written in English, are given in both the original and the best available translations.

Poems for Travelers
Compiled by MARY R. J. DU BOIS. $1.50 net; lea. $2.50 net.
Covers France, Germany, Austria, Switzerland, Italy, and Greece in some 300 poems from about 130 poets (nearly one-third of them by Americans).

The Nation.

NEW YORK, THURSDAY, APRIL 29, 1909.

The Week.

When Senator Aldrich got Senator Bailey to admit, on Monday, that an income tax exempting all sums below $5,000 would be class legislation, he wore an air of triumph. Perish the thought that the Republican party should ever commit itself to anything that could be called class legislation! A protective tariff, for example, is always drawn with an eye single to the general good. If anybody could point out in the Aldrich bill one instance of a special favor granted to a woollen or cotton manufacturer from his own State, the Rhode Island Senator would move indignantly to strike it out. For he believes, of course, that every schedule seeks to diffuse benefits equally to all the people. That is why the persons directly interested work so hard, and pay out so much money and bribe right and left, in order to get their particular tariff taxes inserted in the bill. They are dying to bestow the blessings of protection upon the common people, and know that the only way to begin is to secure first the privilege of robbing them.

It was asserted on Saturday, at the meeting in New York of the Academy of Political Science, that professors of political economy who are also free-traders have long been practically debarred from our colleges. We do not suppose that this was intended literally. In fact, the prejudice of protectionists, in this particular, is not so violent as it was twenty or thirty years ago. They used then to cry out angrily about the teachings of men like Professor Sumner of Yale and Professor Perry of Williams, and in the case of the latter, at least, sought to have him removed from his chair. Such a thing they would scarcely attempt to-day. Some latter-day types of professors undoubtedly find more favor in the eyes of protectionist trustees and endowers. A devotee of "the historical method" who gets himself so bogged in the minutiæ of the Hanseatic League that he never flounders out to reach a modern log-rolled tariff; or a teacher who has some metaphysical theory of value in which, as in a fog-bank, he hides all practical details—upon such college men the protectionists naturally look with the tolerance of contempt. And even over the outspoken free-traders in our college chairs, they have ceased to get very much excited, since they have learned that selfishness and greed are auto-intoxicants, and are more powerful with the majority than any disinterested and national policy can be. Still, the old danger is there. No one can tell when a student under some sound and honest professor may be in a position to do something to carry out what he has learned. Mr. Taft was a pupil of Professor Sumner's, and has been heard to say, laughingly, that, of course, he had long since outgrown the purely theoretic teachings of that professor, yet that somehow they did have an uncomfortable way of sticking in his mind.

Senator Stone's advocacy of our withdrawal from the Philippines within the next fifteen years is gratifying proof that this question is not to be allowed to lie undebated because Mr. Taft is so certain that our flag can only be hauled down a century or so hence. No man of sense and weight in either party now rejoices in our conquest of the Philippines; they are never discussed, save with a sigh and a regret that Mr. McKinley could not have read our "manifest destiny" otherwise than he did. As for the Filipinos, Senator Stone but told the truth when he said that theirs is "one long prayer for independence." The bribes we have offered of schools and railroads and better municipal and provincial governments affect them little. The Assembly, which is rapidly losing official favor in Manila, because of its differences of opinion with those in the Governor-General's palace, is, at heart, wholly for independence. Now, the question for practical statesmen in Washington is whether the Philippine Islands should not be neutralized and then given a definite promise of freedom on a certain date. As Senator Stone justly said, nothing could so inspire the Filipinos to progress as such a promise. More than that, there could be no better way of making firm friends of them and entering into close trade relations for all time. Adam Smith wrote that the founding of a great empire "for the sole purpose of raising up a people of customers" was "extremely fit for a nation whose government was influenced by shopkeepers," but for no other. We have attempted by overlordship, with much hesitancy and a total lack of legislative liberality, to make a trade conquest of the Philippines. Why not try the other tack of giving them what they want and earning their eternal friendship?

Mr. Carnegie and the Peace Society are quite within their rights and entirely practical when they urge the President of the United States to take the lead in exerting his influence on behalf of peace. Nothing in Mr. Roosevelt's Administration redounded more to his credit than his successful efforts to bring about peace between Japan and Russia. Must the present President await a war to work for international concord? Obviously not. The Society is correct in pointing out that the action of Germany and England in building Dreadnoughts contingent upon each other's programmes, is highly unsettling and leading to a veritable craze for Dreadnoughts among all nations—even Spain and Austria. The League for Peace, suggested by the late Prime Minister of England, ought to become a reality before the leading nations bankrupt themselves in their insensate rivalry.

Goldwin Smith's citation of our huge pension bills as a warning to Canada to avoid militarism receives added point from the action of the New York Senate. That worthy body has passed a State pension bill granting $6 a month to all soldiers who served in New York State organizations, irrespective of the question whether they served well or badly, were brave or cowardly, or are now rich or poor, strong or feeble. To provide the money, the State is to bond itself for two millions of dollars. Fortunately, if the Assembly concurs, this provision necessitates a popular vote at next fall's election. We cannot believe that so preposterous a measure will finally become a law. The Federal Government is now giving pensions to

every soldier of the Civil War; why must there be double pensioning? The bill must be written down as merely a final attempt to curry favor with the old-soldier vote. But Canada may well take warning from our enormous pension payments that the injury of war lasts for generations after its conclusion. Goldwin Smith is right in pointing out that the burden of the pensions rests upon "laboringmen who often have plied more dangerous as well as more beneficent trades." Even that, however, is not so bad as the general demoralization of public sentiment which results from these unchecked raids upon the Treasury and the degradation of patriotism by its outright commercialization.

Two Southern Senators showed in speeches last week how great are the difficulties before President Taft in his plans to break up the Solid South. Mr. Bailey of Texas urged in the Senate the political and economic reasons which incline the South to remain unbrokenly Democratic. But it was reserved for Senator Tillman, with his terrible but commendable frankness, to set forth at a dinner in New York the one controlling issue of race hatred. Without mincing his words, he declared bluntly what the South had done, and what it intended to do. People in the North, asserted Mr. Tillman, say that the South must "enforce the laws impartially; but we say we will not." The South Carolina Senator went on to explain that the negro had been deliberately disfranchised, the Fourteenth Amendment nullified, and that now the South proposed to "educate the North" to abandon all its worn-out notions about the abolition of slavery and human equality. It was in the same spirit that Toombs boasted he would crack a slave-driver's whip from Bunker Hill Monument. Such utterances as those of Tillman will, indeed, educate the North, if anything can. What shall it profit the Republican party to gain a few votes in the South and lose its own soul?

Last week's elections in Illinois and South Dakota are hailed as evidence that "the wave of fanaticism" has spent its force. Prohibition was, technically at least, an issue in most of the smaller towns and villages of the commonwealths mentioned. Only fifteen of the thirty-eight more important communities in Illinois expelled the saloon, and the rural districts were but slightly more inclined to no-license. The largest towns, like Joliet, went overwhelmingly "wet." South Dakota divided honors more evenly; but the no-license party only held its own there, the strong minority of the sixty-five balloting towns simply reaffirming earlier Prohibition victories. Contrasted with the Anti-Saloon League's Napoleonic marches everywhere else in the Middle West, all this looks like a sharp halt. Undeniably many voters are now pausing to weigh the promises of brewers and distillers, who in Ohio, for example, have joined with the reform clubs and Anti-Saloon League in securing the passage of a drastic excise law that is expected to drive the disreputable liquor dealer out of business. Wisconsin brewers and retailers are now asking that licenses be automatically annulled at the third violation of a very strict statute. And other States are being informed that the better element in the liquor trade wants a fair chance to prove that model saloons are possible. It is only natural that many voters in Illinois and South Dakota should listen to this request. They are not opposed to beer so much as to the way it is sold; and, if the traffic can be rid of its social and political infection, they may be inclined to make the trial before wrecking a great industry and depriving drinkers of the glass they think themselves entitled to enjoy.

If public schools ought to teach what the public wants, then Massachusetts has just put the finishing touch to the case for vocational training. During the past year the Commission on Industrial Education in that State tried to find out how many pupils in city grammar schools would, if the opportunity were at hand, at once seek instruction in trades and crafts. It was learned that, of the 49,201 pupils in the four highest grades in the thirty-six largest cities, more than 11,000 expect to leave school during the grammar course or at its end. The parents of such pupils in Lawrence, Lynn, Springfield, and Worcester were then asked personally whether they favored the establishment of a local industrial school. More than nine in every ten of 6,829 family heads, representing 9,982 children of industrial school age, answered affirmatively. The commission took special pains to consult with workingmen, who are exceptionally well organized in at least two of the four towns investigated. The answers seem to explode the theory that labor unions are opposed to vocational training. Probably whatever hostility is nowadays shown emanates chiefly from walking delegates and other leaders who see their power menaced by the multiplication of highly-trained laborers whose sympathies and sense of justice may be deeper than those of the union-made apprentice.

The specially interesting fact for Americans in the career of Sir Donald Currie, who has just died, is that abolition of the English coastwise navigation laws in 1849 gave the Cunard Company the idea of starting its Havre line, and so enabled him to demonstrate his rare organizing ability. Up to that time Great Britain had labored under precisely the same absurd, mediæval laws as disgrace this country to-day—prohibiting all foreign vessels from entering the British coastwise trade. So far from injuring British shipping, the abolition of this foolish restriction gave a great impetus to the entire business. Whereas the United States to-day is stolidly afraid to compete with foreigners for our harbor-to-harbor traffic, the English boldly said to their Dutch and French and Scandinavian neighbors: Come over and take our trade, if you can. Lower the rates, if you please; we shall meet your competition in one way or another, and our merchants will profit thereby. To-day, no one in England would dream of returning to the old laws, and Britannia rules the waves with her merchant ships. On the other hand, if American ship-owners are ever seen in the halls of Congress, it is because they are in search of subsidies which they imagine will take the place of energy, enterprise, and wise legislation.

The passing of Abdul Hamid is as unheroic as his life has been. In his own way, he fought to the last; but his weapons were guile, subornation, private and wholesale murder, and he ends his reign as a malefactor caught in the act. The new Turkey could not have become really new so long as the tie with an ugly past was preserved in the

person of the historic Sick Man of Europe, the Unspeakable, the Great Assassin, whose sinister figure not only dominated the Ottoman Empire, but, to the eye of the world, stood completely for it. The underlying motive of his reign of thirty-three years is said to have been one of fear, fear for his person and fear for his throne. When his elder brother Murad, after a few months of power, went insane, the reform party under Midhat Pasha, without waiting the year required by law, transferred the Khalifate to Abdul Hamid. Midhat looked upon the change as provisional. There is even said to be extant a letter in which Abdul Hamid pledged himself to abdicate in case of Murad's recovery. But to keep the throne he received conditionally, became the great object of the new Sultan's policy. To that end he built up the régime of personal absolutism, for a parallel to which we must go back to Tiberius and his government by delators. His native craft is said to have been displayed in the way he played off the Powers against each other. But how the empire profited thereby is hard to see. Bulgaria, Rumelia, Montenegro, Bosnia and Herzegovina, Cyprus, Egypt, part of Armenia—this is a sufficiently high rate of loss for the lapse of a single generation. Abdul Hamid's craft, then, was best displayed in keeping himself in power.

The very extreme to which the Sultan carried his personal rule turns out to the advantage of the Constitutional régime. In Russia, the Liberal elements had to contend not only against the Czar, but against a court party and a vast sluggish bureaucracy to which the Czar himself was very often a slave. But Abdul Hamid had tamed the Turkish bureaucracy. Of a court party there is, of course, no question. In a government by espionage, it is necessary only to crush the one man who holds all the threads, in order that the whole system shall fall to pieces. Abdul Hamid could plot, but he could not fight. That was shown by the mutiny of two weeks ago. He could bribe his guard to murder their officers. Had the troops run amuck and by a general massacre brought on European intervention, the Sultan's object would have been won. But Europe was not brought in, Abdul Hamid was left to fight the quarrel out with his subjects, and fighting in the open he did not understand. His fate was therefore sealed. The evil effects of his reign will long endure under his successor, Mohammed Reschad. In Asia Minor, for instance, the Sultan's order to slay and burn, once issued, cannot be easily stayed. That is why much turmoil is bound to come in the new Turkey, and why the world must be patient with the men who are to undertake one of the greatest housecleanings in history.

Foreign intervention in Persia appears imminent. Tabriz, which for many months has been held by the Constitutionalists against the Shah, is famine-stricken at last, and the capture of the city cannot be long delayed. Yet Europe knows too well what the seizure of Tabriz by the wild tribesmen making up the Shah's army will mean. There will be slaughter, and all the more pitiful because it will scarcely lead to the firm reëstablishment of the Shah's power. Wars in the unorganized Orient, in Persia as in Morocco, have a painful way of dragging out in an indecisive succession of ups and downs. The south would seem to be even in more complete revolt against the Shah than the north. Should the government's attention be directed away from Tabriz, the probability is that resistance would blaze out again. Such a condition of anarchy supplies Russia with the opportunity she has been waiting for. Her way has been made clear by the agreement with Great Britain which gives the Czar a free hand in northern Persia. Tabriz got its revolutionary alphabet from across the border in the Russian Caucasus, when that region was in active insurrection about three years ago. The revolution in the Caucasus is now dead, but Russia will be only too delighted to step into Persia to help quench the flames that are burning so close to her frontier.

The effect of such a step on internation politics might be important. German diplomacy would be pleased by the move. But not France. Frenchmen have been complaining bitterly of late that the much-vaunted and highly expensive Russian alliance has served them little in time of need. In 1905, when Germany dictated terms to the French government in the matter of Morocco, it was Russia's complete paralysis in Manchuria that furnished the occasion. Germany's recent *coup* in the matter of Bosnia-Herzegovina was made possible by the fact that Russia is still too weak to face an ultimatum. Frenchmen have been arguing that if Russia is to do her duty by the alliance, she must give up her policy of Asiatic adventure and turn her attention to her own internal condition and to her position as a European Power. To become mixed up in Persia—we know what a "temporary" occupation usually is—means that Russia will once more divert a great part of her military strength to Asia, and leave France more anxious than ever.

The British Premier now heads a Parliamentary committee to find out what basis there is for the naval scare. This step was probably decided upon before Lord Charles Beresford put forth the dark hint that there was dreadful trouble in the navy. British naval discipline seems to allow officers in high command to speak with a degree of freedom which in France, a few months ago, cost a vice-admiral his place in the active service. It is a subject which until recently has generally been regarded as outside the field of partisan politics. That emphatically is no longer the case. The Unionist party has attempted to make capital out of the fright. Bye-elections have been fought on it, and it seems almost to be replacing tariff reform as the issue on which the Liberals are to be turned out. It is still something of a mystery why Mr. Asquith and his First Lord of the Admiralty first raised the cry of "Fire." In any case, an authoritative pronouncement by an investigating committee will be of benefit to England's nerves and to the peace of the world.

Alarmist reports concerning the imminence of social war in France continue. The labor movement, we are told, is apparently merging into anarchism. The republic is declared to be in danger. We need not minimize the seriousness of the trades-union movement in France, in order to assert that much of this talk about onrushing anarchy is absurd. We must read such reports in the light of the fact that many Frenchmen find it almost impossible to think of the republic as not being in danger. Often the danger has been real, yet re-

publican institutions have managed to survive. At the very beginning, there was the danger of monarchist reaction. When Bonapartists, Legitimists, and Orleanists had reduced themselves to a state of deadlock, a new danger to the republic cropped up in clericalism; *voilà l'ennemi!* Then came Boulangism. Then came anti-Dreyfusism. Then came the Church once more, and its defeat in the Separation Law. Now come the labor unions, anti-militarism, and anarchy. It is no paradox to assert that in this latest danger, the French republic has much cause for satisfaction. For when the alarm turns to the fear of social revolution, it would mean that the old fear of reaction is pretty well gone. And that is quite true. Very few Frenchmen take the Monarchist parties seriously. In the elections, the Royalists and Nationalists have been rapidly approaching the vanishing point. If France is compelled to face serious social and economic problems, it is only what other nations are compelled to do. At least, the republic can take up the problem without fear of being stabbed in the back.

It is the practical aspect of the triumphs of Count Zeppelin, the Wright brothers, and other daring pilots of the sky, which has held the mind and fired the imagination of most people. But the matter has its interest also for the speculative intellect. The theoretical side is beginning to engage the attention of thoughtful men. The airship raises questions not only of commerce and of war, but of law, both private and international. As Europe is in advance of the United States in practical experiments in aeronautics, so she is in discussion of the changes which the conquest of the air is certain to bring about in local legislation and also in the law of nations. Last year the first book on this subject was published, "The Airship in Domestic Law and under the Law of Nations," by Prof. Friedrich Meili, professor of international private law in the University of Zürich. The author has a suggestive article in the *Frankfurter Zeitung* of April 9 on the new conceptions of law which the art and practice of aeronautics are bringing in their train. The automobile has affected private rights and the police power in many important ways, but it is obvious that the airship will cause many more and more profound modifications. Take, for example, the matter of trespass. Under established doctrines, a man's property in the soil extends to the stars overhead. But can he, then, cause the arrest for trespass of an aeronaut passing a half mile over his house or farm? Can he set celestial spring guns, or hire watchmen in captive balloons, for the effectual preservation of his especial section of the air from intruders? One sees that old ideas will have to be altered. Consider also the whole range of queries respecting actual damage caused by dragging anchors or ballast thrown overboard or by an unexpected and uncontrollable descent. The prospect of litigation over such things seems infinite, and settled legal principles appear inadequate to deal with these cases. Professor Meili's deliberate conclusion is: "As against the airship of the future, the protection afforded by existing laws safeguarding private rights is wholly insufficient."

Another long series of legal questions arises in connection with the liability of the owner or operator of an airship. When trade routes through the air are established, and goods and passengers are freely and regularly transported, is the law of common carrier to be applied? In case of accident to any of the airship's crew, is the doctrine of fellow-servant to prevail? It would seem that a whole new code of laws relating to the rights of passengers and of the personnel on airships will need to be enacted. Our Zürich professor therefore calls for a mixed commission, made up of jurists and aeronauts, to discuss the entire complex subject, and to recommend legislation. His own conviction is strong that, in the matter of damages for those wounded or killed on or by flying machines, the liability of the proprietor, or owning company, should be made absolute. It is, however, the status and treatment of airships under the law of nations which present the most urgent and puzzling questions. Something was done at the Hague Congress to regulate the use of military balloons, but that is a case aside. What we are concerned to know is not so much what the laws of war will have to say in the future about the employment and functions of airships, as what may be the international regulations for peaceful intercourse and commerce by means of aerial ships. We can already see how protectionist countries are shuddering at the thought that their tariffs may be made dead letters, and their custom-houses tenantless, by means of airy navies, stealing undetected into the interior. How can we compel an airship to come to anchor under a given cloud, or to discharge its freight at the top of a specified tower? Must all our custom-house agents become expert aeronauts, and cruise upon individual aeroplanes in swarms throughout our atmosphere, in order to prevent smuggling? Or will the very progress and triumphs of the science of aeronautics make the whole system of protection look more obsolete and senseless than ever, so that the nations may come the more readily to abandon it?

THE TARIFF MUDDLE.

The Senate persists in doing its worst with the tariff bill as it passed the House. Under cover of two or three improvements—as in the glove and hosiery schedules—Senator Aldrich has been quietly taking away one good feature of the Payne bill after another, introducing new classifications and changing ad valorem to specific duties—that way the tariff "joker" always lies—ripping the cotton schedules and silk schedules to pieces and re-writing them with all kinds of uncertainty and trickery. It is now announced that the Senate Finance Committee has completed the work of knocking out of the House bill all the remaining provisions that looked like keeping the Republican party's pledges. In the first draft of the Aldrich bill, iron ore was taken from the free list; now wood pulp is also to be taken from it, and hides, and coal, and oil. If this process goes on and is consummated, we shall soon be back to the Dingley bill, or worse. Such a measure as the Senate is slowly putting together will in no sense meet the expectations of the country, the promises of the party, or the demands of President Taft.

It is already plain that the leading Republican Senators have played the President false. They have pretended to favor and to further his plans for a revision of the tariff downwards, though all the time they were scheming to take care of their manufacturing friends by keeping the protective rates as high as ever, if not higher. It was trustingly said that, this time, Senator Aldrich

was going to take a "large view" of the tariff; that his main interest was in the finance bill which he plans to bring in next December, and to which he hopes to attach his name as to his monument of statesmanship. Tariff revision he was simply anxious to get done honestly and speedily, that it might be out of the way of the more important measure next his heart. But it is hard to teach an old dog new tricks, even if he wants to learn them. For so many years, and during the framing of so many tariffs, the watchword of schemers and plotters has been "see Aldrich," that the force of habit could not be broken. They have been "seeing" him for weeks past, and have been coming away saying with winks to their friends that they had "fixed" it.

Senator Hale appears to have been almost as potent as Aldrich in bedevilling the Payne bill. Apparently it is due to his insistence, and to the log-rolling combination which he got up, that the decision to take wood pulp off the free list, and to increase the duty on printing paper, was reached. The fact that the agreement involved taking hides from the free list, and so sacrificing one great interest of New England, appears not to matter to this New England Senator. Since Mr. Hale thinks that it will hurt Maine to have free wood pulp, he will fight to have it taxed; and he is perfectly willing to make an arrangement whereby everything else that is free shall also be taxed. And Senator Hale has in his hand not only tariff favors to exchange, but legislative favors with which to bargain. As Chairman of the Committee on Appropriations, he has vast power to make or break other Senators. Also at the head of the Steering Committee of the Senate, and prominent on the Committee on Naval Affairs, he has a great amount of special legislation at his disposal. All these resources he is understood to be ready to use in order to carry his point in tariff matters. With two such men as Hale and Aldrich lending themselves to the underground conspirators, and interposing their huge bulk athwart the path of reasonable tariff revision, it is not surprising that the Senate bill is rapidly going from bad to worse.

What is to be done? Who will put a hook in the nose of this Senate leviathan? There are signs that the stand-pat Senators are presuming too much upon their brute power. Mutterings of revolt have been heard from within the Senate Chamber itself. Outside, there can be no mistaking the sentiment of the country. Even thoroughgoing Republican newspapers are saying openly that the Senate bill will never do. The day has gone by when a wicked tariff could be enacted in a corner, and no one the wiser. Public feeling is now much more sensitive on that subject, and public information more extensive. The embattled ladies of Chicago showed what could be done by organized resentment at proposed tariff taxes of an outrageous sort. All over the land, the forgotten consumer is ready to rise in similar protest, if the right leader presents himself. But who is that leader to be?

In our opinion, the President will have to take the lead, at one time or another, in one way or another. He is peculiarly the people's representative, in this matter, their directly elect. His pledge was explicit to summon Congress in extraordinary session to lighten the burdens of tariff taxation; and he cannot stand by unconcerned and see Congress, or one branch of it, going to work to make those burdens heavier. It will be necessary for Mr. Taft to declare himself. He may choose to make his position clear when the bill goes to conference, and may urge the House to stand firm against the greedy demands of the Senate. It may be needful for him to let it be known that he will veto the bill if its more flagrant outrages upon decency and denials of justice are allowed to stand. That would give even Aldrich and Hale pause, and might compel them to surrender on pain of seeing leadership in the Senate pass to other hands. Some way out of the muddle must be found. By the Senate bill, the Republican party is threatened not only with failure, but disgrace. We look to the President to show the initiative and vigor needed to avert the catastrophe.

HOW WARS ARE MADE.

Émile Ollivier, the Minister under whom France went to war with Germany in 1870, has now brought his reminiscences, which he has been publishing in the *Revue des Deux Mondes*, down to "The Preliminaries of the War." The article is especially profitable reading, at a time when the tension between Germany and England is almost what it was between Germany and France, thirty-nine years ago. For in these pages of the man who was thought to have entered upon a bloody war with *cœur léger*, we see how a government that really dreads the sword may be driven into drawing it, and we are shown what is the nature of the force which exercises that fatal compulsion. The fair inference from M. Ollivier's narrative is that it is not statesmen who make wars, in modern times, not soldiers, not monarchs or Presidents, but hysterical public opinion, an inflamed and foolish national pride, a reckless press.

In several respects, the facts which M. Ollivier here sets forth, most of them with documentary evidence, will serve to rectify historical judgment. It has been said that the Emperor Napoleon wanted war. His Minister shows how numerous and unusual were the steps which he took in seeking to avoid it. Some of these negotiations had been kept a secret to the present day—some of Napoleon's approaches to foreigners were not known even to his Minister for Foreign Affairs. The common story is that the French went into the war despising the military power of Prussia. Ollivier shows us a Council of State listening to the reports of marshals and generals, and never for a moment indulging in the delusion that the war would be a military promenade to Berlin. It is true that Le Bœuf thought the French army stronger than the Prussian, but never concealed his conviction that the struggle would be desperate, unless the French could first mobilize and win early successes; and Chevandier, the officer best informed about the Prussian military organization, warned the Council that it was vain to count upon anticipating Moltke. Thus with expert opinion divided, the Ministry averse to war, the Corps Législatif well in hand, the Emperor anxiously looking for a solution short of an appeal to arms, conditions in those early July days of 1870 certainly looked as if peace were possible, even probable.

What, so far as the French were concerned, brought on the war? What was it that at last frightened Eugénie and made her use her influence over Napoleon in behalf of war, on the ground that the dynasty would not be safe without it? It was, as Ollivier clearly shows, an explosion of public rage. The people

were, he writes, much less masters of their passions than were the Ministers, and burst into extravagant demonstration and wild threats. Lord Lyons, writing to his government from Paris, put the case exactly when he said:

> It is impossible not to perceive that the feelings of the French nation would forbid the government, even if it wished, to acquiesce in the accession of a Hohenzollern Prince in Spain.

It was even then apparent that the responsible authorities were being swept away by the mob. The Parisian newspapers were more powerful than Ministers. Bismarck once declared that the press had never yet made a war by itself—he said that before our war with Spain!—but at that crisis he knew how to drive the French press to fury, for his own purposes. One of the ways in which he did it, as Busch has revealed, was by sending articles to certain German newspapers, not supposed to be officially inspired, the aim being expressly to inflame the French as well as feed the war-spirit at home. In view of this historic instance, the attitude to-day of portions of the English and German press is more ominous than all the Dreadnoughts built or building.

This melancholy experience of the French government in 1870 has a parallel in that of the American government in 1898. President Pritchett has recently published in the *North American Review* his recollections of repeated conversations with Mr. McKinley, after the war with Spain broke out. Brought into close and confidential relations with the President, Dr. Pritchett often heard him declare that the war was wholly unnecessary. One phrase of McKinley's was that he could have obtained all that we desired of Spain "if they had let me alone." The yelling of the press, the insensate clamors of the people and of Congress, the bloodthirsty sermons and prayers of clergymen—it was they that made the war.

This is not to excuse Ollivier or Napoleon, nor to exculpate McKinley. The latter, in admitting that he was driven from his conscientious convictions by a howling mob, passed upon himself the severest condemnation. It is a statesman's business to see to it that he is "let alone" in the path of duty and honor, when fateful issues are at stake. He should not allow crazy people to have their way, except as they advance over his dead body. If President McKinley had been cast in heroic mould, or had had the courage to face temporary unpopularity, he could have taken that suppressed Easter appeal and promise of the Queen-Regent of Spain in his hands, and gone to the country with it in a way to have stilled the shrieks and prevented the war. But we cannot count upon Providence always providing a popular government with leaders of the stuff to defy the mob; and so long as we are exposed to the danger of weak and timid rulers, we must recognize also the peril of the mob-spirit, fed by and feeding irresponsible and conscienceless newspapers.

REFORMING NEWSPAPER READERS.

The problem of reforming newspapers has been so long discussed, with such meagre results, that it is a relief to hear of the reform of the newspaper reader being undertaken. That is the real home for this kind of charity to begin at. First catch your newspaper reader, and fill him with so deep a disgust at what is trivial and vulgar and sensational and indecent that he will make a powerful demand felt for better newspapers, and better newspapers you may have some hope of getting. The trouble is that this demand is, in general, left so feeble and inarticulate. That it exists at all, it sometimes takes an unusually shrewd editor to discover. One such, in a large city of the West, who had been placed in charge of a paper of the shrieking order, looked about him and perceived that there was a large element of university-trained men in that town who might like to be addressed as reasonable human beings. He urged the proprietors of his newspaper to leave off bellowing, and the result was a very gratifying increase of both prosperity and influence. Per contra, we know of another newspaper, in a city filled with cultivated people, which recently changed owners and lapsed into the yellow variety, with the consequence of displeasing and losing a great many readers, to the consternation of the new régime. These instances imply what could be done by means of newspaper patrons, if they could only be reformed.

A beginning of the work has been made on a modest scale in England. The English press has not yet fallen to our lowest levels, but is rapidly hastening that way. The same effects of sensational and childish methods of journalism are observable there as here. Those interested in education and social reform see the need of fortifying people against the intellectual vacuity and the moral disintegration which come from steady and unwinking reading of silly or coarse and reckless sheets. Accordingly, a first step has been taken by the Clubs' Industrial Association. This organization, situated in the north of England, has recently formed a "newspaper class" for working girls. The object is to teach them what papers to read and what to avoid, and also what parts of any given newspaper to give chief attention to and what to skim or skip.

The idea seems excellent, as driving directly at the great lack in all this business, which is the lack of discrimination. To vast numbers of people, all newspapers look alike. Print is print, in whatever guise it presents itself, and is a thing sacredly to be received. You will see clergymen and benevolent silver-haired ladies turn from reading a religious paper to a perusal of the *Devil's Own*, with no sense of jar or shock. In the universal flux of judgment and jumble of opinions, the power of making distinctions seems to have been lost. Long habit inures even young girls to displays of newspaper vulgarity which, in any other form, they would think repulsive. "It is only those ridiculous newspapers," they say. Now, the first aim of education is to seek to give the ability to discriminate, to know what is good and what is evil; and the responsibility of educated readers, who go on patronizing venal or demoralizing newspapers, is much greater than that of the unthinking and ignorant. The latter can, perhaps, be taught to be a little more fastidious, but what of those who already know, and who profess to be select in their taste and associations, yet who act as if they cared not how soiled are the papers which they take in their hands?

The discrimination which it may be hoped the reformed newspaper reader will exercise, goes further. It will deal not alone with the choice of the journal to read, but with that of what matter in it to read. There is a great amount of newspaper reading which can only be called slavish. People bury them-

selves in the pages and devour them from the first headline to the last personal item. An appalling dissipation of energy and dulling of the mind cannot fail to befall many in consequence. They exhibit an abject reverence for the printed word that is fairly Arabic; and they pore over the intellect-destroying columns with an intentness that is truly marvellous. A man ought to be trained, or to train himself, to look for his own in reading any newspaper. He should chiefly consider, as Coleridge did in reading the Bible, that which "finds" him. The proportionate amount of time to be devoted to mere news, to discussion, to literary features, to financial reports, to criticism in art or music or drama—all this is something which intelligent readers ought to be able to work out for themselves. Many of them, we suppose, do so; the others, and the blankly ignorant, may well appeal to the compassionate aid of reformers.

President Hadley of Yale was quite right in his recent contention that we cannot make great progress in improving the intellectual and moral tone of newspapers, until newspaper readers and patrons are improved. Until they learn to discriminate, journalism will find it easiest to be undiscriminating; until they insist upon measure and reason, exaggeration and clamor will continue to rule the columns, and brawling ignorance to give judgment all day long. These English reformers of the newspaper, who take hold of the business by the right end, are to try to teach people what papers are worth reading, and how to attain a consistent and useful point of view in reading them. There is neither copyright nor tariff to prevent the use of the same idea in this country, where the need of something of the kind is great.

THE PRETENSIONS OF SOCIOLOGY.

Much is heard in these times of sociology. The proverbial "man in the street," who is supposed to notice nothing apart from his business and sporting interests, save what in some way jostles him and thus intrudes on his attention, has heard of sociology as a science that understands all about society and its make-up, and that is thus able to say what is the correct thing. Even the vaudeville hall has heard of it, as a sociological treatise supplied the phrase "trial marriage," used as a refrain in the topical song, "No Wedding Bells for Me," with which all the music-halls resounded until it wore itself out. Those who do not stand in a merely impressionist attitude to life, and who attribute to scholarship the duty of acting as a conservator of mental and moral values, have also heard of sociology, and are puzzled by it. They find it appearing as a sponsor for schemes of revolutionizing the family, the home, and the state, and they feel both perturbed at the prospect and perplexed by the difficulty they have in reconciling such projects with the respect they feel for science. Disturbance of this character is augmented by a belief that sociology is a new science which is derived from Darwinism, and which hence possesses the authority belonging to a doctrine generally accepted as applying to all forms of life and to all institutions arising from the modes of life. An impression has been made to the effect that scientific grounds have been established for the opinion that marriage, family life, society, and government are mere accidental cohesions which may now be superseded by more rational arrangements upon principles expounded by sociology. Pretensions of this character are certainly made in the name of sociology, and it therefore becomes a matter of public importance to inquire what this new science is and what basis it has for its claim of authority.

I.

Sociology has no connection with Darwinism except by an imputed affiliation, which on examination is found to possess no better warrant than the tendency toward syncretism that always appears when a great scientific or philosophical system dominates the country of thought. There is, then, a strong propensity on the part of system-builders to bring their own possessions within the shelter of its massive parapets and bastions. In this way sociology has been annexed to Darwinism, but it does not belong there. The term was invented by Auguste Comte to designate those branches of "organic physics" which deal with human society. The volume of his "Philosophie positive" that introduced the word "sociology" was published in 1839—twenty years before the publication of the "Origin of Species." J. S. Mill, who was much influenced by Comte's speculations, started the use of the term in England, employing it in his own writings as early as 1843. Harriet Martineau's translation of Comte's works was published in 1853. She had great expectations of Comte's system, believing that in it students would find "at least a resting-place for their thought—a rallying-point of their scattered speculations—and probably an immovable basis for their intellectual and moral convictions." Both resting-place and rallying-point are still to seek. Profs. Albion W. Small and George E. Vincent of the University of Chicago, in their manual for the study of sociology, expressly warn students not "to regard Comte as an authority in sociology." They remark that "all that is of permanent value in the six volumes of 'Positive Philosophy,' and in the four later volumes entitled 'System of Positive Polity,' might be reported in a few paragraphs."

Darwin made no use of Comte's terminology, but this of itself is not significant, since he wrote strictly as a naturalist and never made the slightest attempt to formulate a system of philosophy. It is significant, however, that the term sociology has never commended itself to Darwinists, even when considering implications of the master's views on the origin and nature of humanity. Haeckel, whose systematic exposition was followed by Darwin himself with lively interest, took a survey of the field claimed by sociology, but he proposed an entirely different terminology, which will be found in Table I of his "Evolution of Man," 1874. It may be doubted whether the use of the word sociology as a term designating social science would have survived the impact of Darwinism if Herbert Spencer had not adopted it, which he did as early as 1859. In his "Autobiography" he referred to his borrowings from Comte rather regretfully:

> Save in the adoption of the word "altruism," which I have defended, and in the adoption of his word "sociology" because there was no other available word (for both which adoptions I have been blamed), the only indebtedness I recognize is the indebtedness of antagonism.

Darwin's "Descent of Man" was published in 1871, but his views as to the particular causation of the human species do not appear to have had any effect whatever on Spencer's preconceived ideas of social science. Spencer's "Study of Sociology" was published serially in England and in the United States in 1872, and in book form in 1873. It makes only a passing allusion to Darwin, and then only with respect to his services in demonstrating the indefinite modifiability of species, elsewhere mentioned as "one of the cardinal truths which biology yields to sociology." Spencer's system was always expounded independently of Darwin's views. It was Spencer's labors that brought sociology into vogue, but he seems to have shared the fate of Comte in that his system is now regarded as defective and inadequate. Small and Vincent inform the student that "Spencer's sociology ends precisely where sociology proper should begin."

II.

What, then, is sociology? It is impossible to say, save that it deals with social phenomena; but this affords no definition, as the same may be said of history, politics, statistics, and other

sciences gathering their data from observation of mankind. In his "Pure Sociology" Prof. Lester F. Ward mentions twelve definitions of sociology already in existence, and then he proceeds to add another of his own. What claim has any body of knowledge to rank as a science whose students have yet to arrive at some agreement as to what it is or as to how it is to be defined? Sociology has not yet established any claim to be accepted as a science. Leslie Stephen, in his presidential address at the annual meeting of the Social and Political Education League, London, March, 1892, thus summarized the situation: "It may be stated that there is no science of sociology properly scientific—merely a heap of vague empirical observations, too flimsy to be useful in strict logical inference." The situation has not improved since then. Writing in 1902, Professor Ward said:

> I do not claim that sociology has as yet been established as a science. I only maintain that it is in process of establishment, and this by the same method by which all other sciences are established. Every independent thinker has his system.

The latest official bulletin is probably that issued by Professor Small. In an article contributed to the *American Journal of Sociology*, July, 1908, he says:

> Whether or not there is, or ever shall be, a science of sociology, there is and will hardly cease to be something which, for lack of a better name, we may call the sociological movement. This movement clearly vindicates the sociologists.

This, of course, suggests the query, What, then, is the sociological movement? What vision has it of fresh fields of knowledge that suggests the need of a new science to garner the results of research? We are told that the movement is fundamentally "a declaration of faith that the closest approach to ultimate organization of knowledge which finite intelligence can ever reach must be a formulation of the relations of all alleged knowledge to the central process of human experience." But has not that been the object of philosophy ever since it originated in ancient Greece? At any rate, it is clear that this movement, this faith, on its own showing, has no right to rank as a science or to set up any claim of authority.

III.

Accepting for the present the plea of confession and avoidance that is offered by the exponents of sociology when its scientific pretensions are challenged, let us consider it as a movement. In this respect, too, on its own showing, it is quite bewildered. It does not know whence it starts, or whither it is going. J. H. W. Stuckenberg, in his "Sociology, the Science of Human Society" (1903), has to admit that the very nature of the subject which sociology proposes to treat is yet to be settled. He remarks that "society is the new world which is still waiting for its Columbus"; and, again, that "the nature of society is the profound problem whose solution is the key to all other solutions." Darwin has offered a solution of this problem, namely, that human society was evolved from brute society by stresses resulting from the group incidence of natural selection, so that human society was shaped by the life of the community precisely as bee nature has been shaped by the life of the hive, certain distinctive organs and capacities being developed in the individual, not primarily for individual advantage, but for the advantage of the community. Thus Darwin's theory coincides with Aristotle's doctrine that man is born a political animal. In any period before the formation of society, the human species did not exist, but at the most only simian species with potential capacity for humanization under appropriate conditions. All theories postulating the existence of natural rights enjoyed by man before he was united with his fellows in social and political relations, collapse at once if Darwinism be valid. And yet, on this fundamental point of trenchant importance as regards system and terminology, sociology is distracted. On the one hand, Prof. Franklin H. Giddings declares:

> There is hardly a single fact in the whole range of sociological knowledge that does not support the conclusion that the race was social before it was human, and that its social qualities were the chief means of developing its human nature.

On the other hand, Professor Ward rejects the conclusions of Aristotle and Darwin, holding in express opposition to them both that man was not originally a social animal, but "that he was descended from an animal that was not even gregarious by instinct, and that human society . . . is purely a product of his reason, and arose by insensible degrees, *pari passu*, with the development of his brain." No disagreement could be more radical than this. The Darwinists hold that socialization developed the human brain; the anti-Darwinists hold that the human brain developed socialization. No wonder, then, that, lacking any base of operations, the movement is nothing more than desultory roving in all directions.

The unsystematic character of the movement accounts for its marked tendency to fall into errors, that might be avoided by recourse to established science. Sir Frederick Pollock, in his "History of the Science of Politics," remarks that "after Burke it was impossible for any one in England to set up the Social Contract again, either in Rousseau's or in Locke's form, for any effectual purpose." But sociologists in America do that very thing. Sociological discussion of the nature of government reads like an ardent revival of Rousseau's political philosophy. Professor Ward, in his "Dynamic Sociology" (Vol. II, p. 212 *et seq.*), argues that government was originally a system of imposture:

> It is evident that man in a supposed unrestrained state, in which none of his own race have the power to deprive him of any pleasure which he may seek, and be able to secure, would be far happier than in a condition where half of his desires which might otherwise be gratified are forbidden that gratification by the laws of government.

What is this but Rousseau's state of nature? If Darwin be right, in this "unrestrained state" we should not find men at all; perhaps not even animals so closely akin to men as the anthropoid apes. But Professor Ward makes this hypothetical state of nature the basis of his argument:

> Having arrived at a rational conception of what kind of a being man was before any society existed—that is, before the essential conditions of society, populousness, existed—we are better able to understand how society and government should have come about.

If man was in a state of happiness when there was no government to restrain his impulses, he was defrauded in some way when government was instituted. Hence Professor Ward concludes that government is essentially a usurpation:

> It must have been the emanation of a single brain or of a few concerting minds, the special exercise of a particular kind of cunning or sagacity, whereby certain individuals intent on securing the gratification of the special passion known as love of power, devised a plan or scheme of government.

If this be so, then government is a thing to be got rid of as soon as possible. That is just what Professor Ward holds to be the end of social effort and the blessed consummation of the labors of sociologists. What men and women are struggling to attain is "freedom to do as their desires prompt them, and to be their own judge of the rightfulness and justness of their actions." Hence robust sociologists contend that we should all be as free to find our affinities as cats or dogs. Suggestions of trial marriage are made simply as a temporary palliative of an enslaving institution. The trouble with divorce laws is not that they are loose, but that there should be any laws at all. Human beings should be free to mate as they please, and separate as they please, like other animals enjoying their natural freedom.

We have here an instance of what is a striking characteristic of sociology. It gives a hospitable reception to notions examined, discredited, and rejected by established science. After a hard struggle political science has got rid of the noxious fallacies generated by French

ideology in the eighteenth century. They now reappear as doctrines propounded by sociology. And so, likewise, in other branches of science, sociology appears as an interloper, proclaiming that the work must all be done over again, and so it starts to rake the refuse heap. It is a whimsical situation. Sociology admits that it has really no scientific credentials, and yet it claims sovereign authority in the field of science. Prof. Edward A. Ross of the University of Nebraska, in his "Foundations of Sociology," says: "It aspires to nothing less than the suzerainty of the special social sciences It expects them to surrender their autonomy and become dependencies, nay, even provinces of sociology."

These remarks are made in discussing the "problem of coming to terms with the special social sciences, such as economics, jurisprudence, and politics," and it is anticipated that "the workers in long-cultivated fields will resist such pretensions." That is very likely—the more so since sociology invites them to turn back to old errors. In America, although not to any extent in Europe, sociology, considered as a scheme of methodology, has made some impression on scholars in established sciences. There was a time in this country (chiefly owing to Spencer's influence) when there was, perhaps, a preponderance of scientific opinion to the effect that the scheme was theoretically feasible, and that sociology would eventually be established as a comprehensive system of science. I myself held that opinion at one time, and, impelled by it, I read extensively in sociological literature. But I finally concluded that if Darwin was on the right track, sociology was on the wrong track. Political and social phenomena can never be fully interpreted as results of individual activities. The attitude of sociology is precisely like that which a biologist would adopt if he should endeavor to discover the causes of the formation of tissues by scrutiny of the characteristics of individual cells instead of by consideration of the growth and development of the organism that includes the cells and conditions their activities. The true cause of the difficulties which the exponents of sociology have in formulating it, is that in reality there is no basis for it as a science. All its troubles come from its primal trouble that its fundamental concept is an illusion. Hence it is doomed to error by its nature. In endeavoring to substitute its elaborate ideology for existing scientific system, it is not going forward, but backward. All of the material with which it attempts to deal, according to the various definitions given of its purpose, is already allotted to better advantage. Take from it what belongs to psychology, history, anthropology, ethics, civics, jurisprudence, economics, statistics and charity administration, and there is nothing left of value. So far as sociology differs from established sciences, it is an asylum for their castaways.

V.

In considerations like these one should bear in mind Huxley's wise observation that "there is no greater mistake than the hasty conclusion that opinions are worthless because they are badly argued." Sociology may be worthless, but the streams of sentiment from which its fogs arise are by no means worthless. Professor Small points out the thing that counts when he says that even if there is no science of sociology, there is the sociological movement. There is, indeed, a world-wide movement for social reform involving extensive readjustments of public order and of governmental function. Civilization is apparently engaged in the dangerous but periodically unavoidable process of exuviation, when old forms are cast and new forms are shaped. But in Europe this is a political movement, and if in the United States it is regarded as a distinctly sociological movement, American scholarship is at fault. If sociology lacks scientific validity, it can not give safe guidance to any movement and its invasion of the political arena is an added peril. Hence it is impossible to follow Professor Small's logic when he holds that the movement "clearly vindicates the sociologists." It may account for the activity of the sociologists and for the attention their projects receive, just as the prevalence of disease accounts for the activity of quacks, but it certainly does not vindicate them. Apart from the general futility of sociology considered as a science, the American brand of the article is exposed to especial condemnation from the aid and comfort it gives to charlatanry. Instead of inspiring caution, it encourages haste, levity, and sensationalism in dealing with social problems. The official address delivered at Atlantic City, December 28, by the eminent sociologist, Prof. S. N. Patten of the University of Pennsylvania, is open to such charges. Among similar matter, he says: "No argument is good in a book or in a classroom unless it could convince the million readers of a daily paper and could find place in the campaign-book of a political party." Indeed! Thus sociology commends itself to people who mistake reverie for thought and feeling for judgment; who reach emotional conclusions from sentimental assumptions, and who impute to their projects the merit of their motives. We shall be lucky if we get through the present era of Jacobinism in ethics and politics without serious disaster.

In the ordinary course of scientific progress error is eliminated by discussion and concepts found to be invalid are discarded. If the invalid concept was of vital importance, then the terminology derived from it is also discarded and a new terminology is evolved. The process is illustrated by the way in which chemistry superseded alchemy. A similar fate seems to impend over sociology, but until the reconstruction of political science on Darwinian principles, now taking place, advances beyond the present stage of collection and verification of data, and has some generalizations to propound, sociology has its day. The matter might be left to right itself if sociology preserved the proper scientific habit of reserve as to provisional and tentative conclusions. But since it has gone into the forum to harangue the mob, it is the duty of whom it may concern to follow it there and to give notice that it possesses no authority whatever. If anything is urged in the name of sociology the fit rejoinder is that there is no such science.

Princeton, N. J.

NEWS FOR BIBLIOPHILES.

"New England's First Fruits," London, 1643, is usually accounted the first of the tracts on the conversion of the Indians. It was issued anonymously, and efforts to learn the author have met with no success. Worthington C. Ford records his attempt in the Proceedings of the Massachusetts Historical Society, and his conclusions have been accepted by capable bibliographers. The first president of Harvard College, Henry Dunster, was among the earliest to believe in teaching religion to the Indians in their native tongue, and in this preceded John Eliot by some years. As the second part of the tract relates to the college, it must have been prepared by Dunster, and his known interest in the Indians points to his authorship of the first part, which relates to their conversion. The third part was prepared in England, and by one who was closely connected with the trial of Mrs. Hutchinson and the antinomian troubles. From a comparison of title pages, and an examination of the names of the London printers of New England writings, Mr. Ford concludes that Hugh Peter and Thomas Welde, then agents from Massachusetts in England, were the writers, and that Welde was more immediately responsible for the issue. It is impossible to give the details brought forward in support of this view. The paper will repay study.

In a private library in Boston has been found a copy of the first edition of Milton's "Paradise Lost," with a hitherto unknown title-page. As is well known, there are a number of different "bindings of the first edition," the variations occurring in the title pages. This copy purports to have been "Printed by S. Simmons, and are to be sold by T. Helder, at the Angel in Little Brittain, 1667." While this title answers generally to that described in the Christ's College catalogue as the eighth binding of the first edition, it differs from it in the very important matter of date, being two years earlier, and thus falling

into the year the poem was first issued. The volume has been in the family for more than fifty years, and bears no evidence of being manufactured. As in so many instances, the wire marks of the paper of the title are different from those of the paper in the body of the volume. Simmons did print an edition in 1668, but Helder's name is not on that issue. Can another copy of his 1667 imprint be traced?

Correspondence.

WHEAT CORNERS AND THE PROTECTIVE TARIFF.

To the Editor of The Nation:

Sir: The recent attacks on Mr. Patten and his associates for bringing about the wheat corner, suggest the inquiry: Why is the wheat corner a bad thing? What harm does it do?

That it raises, for a short time, the price of wheat, is clear enough; but what harm is there in that? Exactly the same thing, only for a longer time, is done by the protective tariff. And we all know what a blessing that is! All duties that are protective—as distinguished from those that are for revenue only—depend, for their efficacy, upon their success in keeping commodities out of the country, so that United States citizens may thus be driven, as by a club, to buy in this country goods that are either dearer or of poorer quality than those made abroad. In this way the price of the commodity is raised by the tariff. That this raising of prices is a blessing to the community we all know; for such has been the teaching of Republican sages since the existence of their party. To go no farther back than twenty years or so—did not Benjamin Harrison explain to us then that "things can be too cheap," and that "a cheap coat means a cheap man inside of it?" And, if this be true, is it not equally clear that "a cheap loaf means a cheap man outside of it?" Undoubtedly it does. The second maxim follows irresistibly from the first. For, in these matters, there surely can be no distinction between food and clothing, or between outside and in. But, since this is so, what harm is there in Mr. Patten and his corner, and the consequent dearness of the loaf? What greater calamity can befall a community than to be made up of cheap men? (I may parenthetically remark, that, by logical inference from Mr. Harrison's maxim, we find that, as the air we breathe is, in dollars and cents, worth nothing whatever, it is clear that those who breathe this worthless atmosphere must, of necessity, be equally worthless themselves.)

From these dread calamities we have been rescued by those who, in order to provide revenue not for the Treasury but for themselves, have taxed food, clothing, and nearly every necessary of life, and who would undoubtedly tax the air we breathe, if there were any means of getting at it. Yet many Republicans in high office are foremost in denouncing Mr. Patten for doing, during the last few days, the very thing that their party has done since its foundation. Mr. Wilson, the Secretary of Agriculture, in speaking of the wheat corner, says: "Those who attempt to keep prices up at present rates expect to get their money out of the common people—the consumers." "Out of the common people—the consumers!" Out of whom, then, in the name of Heaven, have the iron men, the wool men, the sugar men, the plate-glass men—and all the other corrupt tariff beneficiaries expected to get—out of whom have they succeeded in getting—*their* money, for more than forty years?

I am no defender of Mr. Patten or his methods; but it is only just to say that, in bringing about the wheat corner, he has merely availed himself of his capital, and his superior skill and foresight. He has been guilty of no falsehood or hypocrisy. He has made no pretence of being actuated by any motive other than that of making money. And, lastly, he has not said that he wants the money merely in order to pay high wages to his employees. From this ancient and hoary lie—so frequently uttered by protectionist manufacturers, so necessary to allure the labor vote to the support of protection—Mr. Patten's record at least stands free.

And, so far as is known, he has resorted to no corrupt methods. He has not by making enormous campaign contributions, purchased from the government the power to levy a tax upon those "common people, the consumers," who are the objects of the tender solicitude of Secretary Wilson. It is true that there is a heavy tariff on imported wheat, but Mr. Patten is not the cause of that—it was in existence long before he was thought of—it was not imposed at his request. In fact, the wheat tariff was enacted merely to delude the farmer, so that, in the event of his complaining of protection on the commodities he is obliged to purchase, he can be told that his wares, too, are protected. The truth, of course, is that the farmer is not protected at all, as this country is still an exporter of grain.

In this fact lies, I think, the explanation of the support that has so far been given to the protective tariff—just as in the resentment occasioned by the wheat corner we may see the possible cause of that tariff's future downfall. The colossal and long-continued system of robbery known as protection is rendered possible only by the support it receives from the very victims who suffer the most from its oppression—"the common people—the consumers." They are plundered daily and hourly by taxes upon necessaries of life that are as important as wheat—yet there is, so far, but little evidence of discontent. But no tax has so powerful an effect upon the popular mind as the tax on grain. Other necessaries—other food, clothing, and even medicine—may be subjected to a tariff with possible impunity; but he who, in the hour of distress, levies a tax upon the staff of life, must reckon with a nation's fury. The mutterings of the last few days have shown what may be expected, if this country (no impossible event), should ever become an importer of grain, and the tax on bread, in some season of panic, thus come into active operation. It was under exactly such conditions that Great Britain, less than seventy years ago, was driven to the verge of civil war and revolution, when, as Hughes says, "In time, and only just in time, came the repeal of the corn laws." And, according to Herbert Paul ("Modern England," Vol. I, Introduction), "He [Sir Robert Peel] "thus [*i. e.*, by the repeal of the corn laws] saved England from the danger of revolution, then no vague or imaginary peril." The point to be borne in mind is that the whole protective system of England fell with its corn laws; for when the beneficiaries of those laws were deprived of the right to live at the expense of other people, they naturally refused to allow other people to live any longer at theirs. In this way, the whole protective tariff of England fell to pieces. Should our own wheat tariff ever become effective, and the people, in distress resembling the present, insist on its repeal, the history of the parent stem of the English speaking race may perhaps be repeated on this side of the Atlantic. In this way, the long expected relief may come at last.

Daniel Holsman.

Philadelphia, April 20.

THE "LOST LEAF" OF "PIERS THE PLOWMAN."

To the Editor of The Nation:

Sir: In the *Nation* of March 25 Prof. Carleton F. Brown of Bryn Mawr expresses his disbelief in my attempted solution of the textual difficulty in "Piers Plowman," A. V. 235 ff., and offers what he considers a simpler explanation. Having great respect for Professor Brown's opinion, and being anxious to keep clear of any undue bias in favor of my own suggestion, I have given careful consideration to his proposal; but I find myself wholly unable to accept it.

My hypothesis is that lines 236-259 originally followed line 145, so that the promise of restitution of fraudulent gains forms the conclusion of the confession of Covetousness. Professor Brown, on the other hand, believes that the emendation required is to make lines 236-241 follow line 253, which ends the confession of Robert the Robber.

Now, undoubtedly, it is for the text-corrector a simpler operation to transport a block of six lines to a place twelve lines distant than it is to transport a block of twenty-four lines to a place several pages distant. But this is not the sort of simplicity that matters. The really simplest hypothesis is that which assigns the simplest cause for the actual phenomena. No accident could be *more* simple than the misplacement of a whole leaf of MS.; and I doubt whether any equally simple cause could have produced a transposition of six lines to another place on the same page.

The important question, however, is not whether Professor Brown's explanation is simple, but whether it is adequate. I think it fails in three respects. In the first place, it leaves untouched the difficulty that the confession of Covetousness ends with a mere promise to deal honestly in future, without any mention of restitution. This is a very serious deficiency; the author of the B revision saw what was wanted, and proceeded to supply it. Secondly, Professor Brown's theory requires us to suppose that the poet, after having presented the confessions of the personifications of the deadly sins, ending with that of Sloth, suddenly introduces a new penitent, whose offences, according to the universal mediæval

classification, come under the head of Covetousness. My conjecture, if it be in other respects tenable, has the advantage of not imputing to him this grave fault of method. Thirdly, the whole point of the confession of Robert the Robber is that in his case restitution is impossible, and that unless God will accept his penitence without this condition, his situation is utterly desperate. In line 251 he says that as he knows no trade he cannot hope ever to earn the means of restoring what he has stolen. And yet, according to Professor Brown, only three lines further on he promises restitution!

On my view with regard to the original state of the text (and, I think, on no other) the motive for the introduction of Robert the Robber is perfectly obvious and natural. In the confession of Covetousness, one who has amassed riches by fraud expresses his repentance and his resolve to lead an honest life and to compensate those whom he has wronged. *He* clearly, if his repentance is genuine and if he adheres to his purpose, may reasonably hope for mercy. But then it occurs to the poet that a sinner in this kind may, by his neglect to learn any honest trade, have brought himself into such a condition that restitution is impossible. The case of this greater offender needs to be considered, and it is presented in the person of Robert the Robber. (He could not very well call him "Coveityse Number Two"!) The poet leaves his fate doubtful, though the mention of *Latro* suggests a ground of hope in the example of the penitent thief on the cross.

Professor Brown may perhaps reply that the poet brought in Robert the Robber after Sloth because the penitent thief was (as Professor Skeat remarks) "the stock example of an argument against wanhope, as resulting from sloth." But as nothing whatever has been said in the preceding lines about "wanhope" (*i. e.*, despair) as a consequence of sloth, the harshness of the transition is not greatly mitigated by this explanation. What does seem rather probable is that a recollection of the customary association of the story of the penitent thief with discourses on sloth may have been the cause of "Adam Scrivener's" mistake in arranging the poet's copy-slips.

I find myself unable to understand the objections that Professor Brown makes to my theory. The one which he specifies as the most formidable of all is that the promise in line 145 is inconsistent with that in line 241, if the two are assumed to be made by the same person. The inconsistency is not perceptible to me; but Professor Brown has failed to notice that I have suggested that lines 240-241 may be spurious, as they seem to be an echo of VII, 93-94.

Professor Brown's confidence in the correctness of his explanation has, he says, been confirmed by the discovery that it had been anticipated by Mr. T. D. Hall. I should not be surprised to learn that it had occurred to many other persons. Any one who had perceived the fact (which Professor Brown and I have learned from Professor Manly, but which Mr. Hall seems, much to his credit, to have observed independently) that lines 236ff. are not the sequel of line 235, might easily see that a *less* inappropriate place for them could be found on the very same page. It requires closer observation to see that the lines do not, after all, wholly suit the proposed context, and that a fitter place for them is to be found some pages back. Professor Brown differs from Professor Manly and myself in thinking that the omission of the confession of Wrath may be due, not to any accident in transmission, but to deliberate intention on the poet's own part. The question of the abstract probability of this need not, I think, be discussed. But I should like to call attention to one circumstance, that, in my opinion, absolutely forbids the supposition that William himself omitted the confession of Wrath, either intentionally or by oversight. The confession of Envy, as it stands in the existing form of the A text, is obviously incomplete. It does not include either a profession of penitence (for lines 105-106 are certainly nothing of the sort), or a promise of amendment. The confession can, I think, hardly have been left in this imperfect state by the poet, unless indeed he intended to imply that envy was a sin that was never repented of; and even if he did hold this curious doctrine, he would presumably have added some words expressly setting it forth. Now in the enumeration of the deadly sins, Envy is normally followed by Wrath, as we see in the B text of "Piers Plowman" and in Chaucer's "Parson's Tale." We are therefore met by the fact that the manuscripts of the A text omit the conclusion of one confession and the whole of that which might be expected to follow it. Professor Manly's assumption of a "lost leaf" (or leaves) completely accounts for this fact; and I do not see how it can be satisfactorily accounted for in any other way.

HENRY BRADLEY.

Oxford, April 13.

MOTH IN "LOVE'S LABOUR'S LOST."

TO THE EDITOR OF THE NATION:

SIR: In Moth's name in "Love's Labour's Lost" we have a pun that is a key at once to the diminutive size and to the unusual cleverness of the page. This pun has been obscured to us by the modern pronunciation of the page's name that identifies it with the insect moth. The pronunciation by Shakespeare was "Mote" (see Variorum "Love's Labour's Lost," p. 5, note). This pronunciation leads us by way of the word "Mot" to the solution of the pun. "Mot," now obsolete, from the Italian "motto," was in Shakespeare's day a synonym for "word, . . . jest, frump, scoffe, witty saying," as Florio informs us in his "Worlde of Wordes," 1598. Cotgrave, 1611, gives the allied French "mot" as "a motto, . . . also a quip, cut, nip, frumpe, scoffe, jeast."

We have contemporary evidence of this pun in a comedy, "Doctor Dodypoll" (Bullen, "Old Plays," Vol. III). This comedy, published in 1600, with its "Shakespeare echoes" (Schelling, "Elizabethan Drama," Vol. I, p. 137), has also a page in its *dramatis personæ*, a diminutive "wag" named Moth. It is in the spelling of this name that I find the strongest contemporary evidence of the pun. In the first pages of "Dr. Dodypoll" the name is consistently "Moth" (pp. 106, 107, 110, 111), but after twelve pages (after p. 112), "Moth" gives way, in the stage directions, to the full form, "Motto" (pp. 127, 133, 138, 139, 146, 152), and in the assignment of speeches to "Mot" (pp. 112, 138 [2], 140, 146), and to "Mott" (pp. 127, 133 [2]), and "Motto" (p. 138).

In the four passages in the text of "Love's Labour's Lost," where Moth's name is used (by Armado [Variorum], I, ii, 72; III, i, 135; and by Costard, I, ii, 152: III, i, 73), the knowledge of the pun adds significance to the words of the speakers. Two speeches that do not contain Moth's name, but that are directed to him, assume new significance in the light of the pun. One of these involves the single example of Shakespeare's use of "consonant" (V, i, 53). "*Quis, quis*, thou Consonant?" Holofernes inquires of Moth, with reference in his use of "consonant," to the play on words Moth has just made at his expense. It is in its radical sense of "sounding together" that the Pedant uses "consonant" here. "*Quis, quis*, thou punster?" Holofernes might have asked, if his taste in words had not led him to prefer the ink-horn term "con-sonant." The other passage, where indirect reference is made to the pun in Moth's name, is V, i, 39. Armado and Holofernes have just greeted each other with a pompous interchange of salutations. Moth and Costard express their opinion of these learned words as follows:

Moth—They have beene at a great feast of languages, and stolen the scraps.

Costard—O, they have lived long on the alms-basket of words. *I marvel thy master hath not eaten thee for a word;* for thou art not so long by the head as honorificabilitudinitatibus; thou art easier swallowed than a flap-dragon.

It is interesting to recall in this connection that Epiton, the page in Lyly's "Endimion" after whom it is thought Moth was modelled (Bond's Lyly, Vol. III, preface to "Endimion"), is referred to by the other characters of the play as Epi.

M. P. TILLEY.

University of Michigan, April 14.

THE PRONUNCIATION OF LATIN.

TO THE EDITOR OF THE NATION:

SIR: In contrast with the intense devotion to the Roman method of pronouncing Latin shown in four contributions in your issue of April 1, I beg to call attention to the views of Prof. Charles E. Bennett of Cornell, as stated on pp. 75-77 of "The Teaching of Latin and Greek in the Secondary School" (1901), written by him and a colleague, Prof. George E. Bristol, for the American Teachers' Series (Longmans, Green & Co.). Professor Bennett in referring to the "pronunciation of Latin under the Roman system" says: "As a matter of fact, few teachers and practically no pupils ever do acquire a pronunciation of any exactness." He mentions the "deplorable ignorance" of the method among 1,200 freshmen and 200 teachers, college professors, and graduate students, and finally declared the entire movement a "universal failure," a "miserable failure," without any promise of better results.

It is impossible for me to reconcile this positive condemnation by this high authority with the rosy endorsement of those four gentlemen, one of whom, at least, is emphatic in claiming mastery of the method by the average student. I cannot believe there has been such vast improvement in the short space of eight years. It seems plain to me that one side or the other is mistaken. Not being a teacher of

Latin myself I have no testimony to offer, but I hope other instructors in that branch will bring additional evidence. It is of great importance to tens of thousands of present and prospective students.

"THE BIBLE AS LITERARY MODEL."

TO THE EDITOR OF THE NATION:

SIR: In the book of Ecclesiastes it is written—and it has ofttimes been quoted with a commendation which does not leave its authority entirely dependent on its occurrence in Holy Writ—that "there is no new thing under the sun." But the editorial in your issue of April 8 makes one sit up and take notice that in literary criticism this does not hold true. It is a far cry from Shelley to "Mr." Watson in more senses than one, but both arrived at the same opinion in regard to the literary splendor of the Old Testament, Shelley making the specific, and in his case significant, acknowledgment that he owed a great debt to it as a source of inspiration and a model of style. It is perhaps an even further cry from John Calvin to Canon Driver, but they too seem to have arrived at the same viewpoint on this question if on no other. It may be doubted if the writer of the editorial in question ever read that book once popular in several languages, "The Institutes of the Christian Religion," for just the reason that if he had he could not have called in question the value of a style formed on the Bible for "the orderly exposition of complex matters" and "close and sound reasoning." Its Latinity, of course, was not that of the Augustan age, but the Bible in the brain of the man who thought it out and wrote it down gave a new efficiency to an old and blunted tool; and when the same pen wrote it out in French, a new language just coming to literary use, it gave to it a keenness of edge and adaptation to high utilities which sent it on its shining way as a language of the highest capacity for exact expression. Something the same thing happened to the speech of Englishmen, not only in what John Wyclif did for it, but in the clarification of a tongue overcharged with Latin words and Latin idioms in that great epoch when "England became the people of a book and that book was the Bible." The Parliamentary oratory of the Puritan period is marked by the influence of the Bible on thought and speech; lofty conceptions of man, the commonwealth, and God, and "fine ability to marshal facts." And is it not true that we have always declared that the great state papers of our Revolutionary epoch were dignified by "a style formed by Shakespeare and the Bible"?

But it is scarcely a point to be argued. Is it not clear, however, that the same reasoning applies to Shakespeare? Let us admit that the style of the New Testament and of Shakespeare "is a style" (I concede that they are one and the plural is not demanded) "perfectly fitting the simple men who first used it," and be glad that no higher criticism requires us to replace those "simple men" in the one case by clever forgers of the third century and in the other by the accomplished inventor of cryptograms. It is scarcely a point to be argued, but it does not seem impossible to illustrate it. First by examples: such we find in Genesis in the quest of a wife for Isaac, and the story of Joseph; and in the writings of Luke in the walk to Emmaus, and the arrest and defence of Paul. Secondly, by results: it was but yesterday we were listening to those who in eulogizing Lincoln told how his style was formed on the Bible, and he who cites Gov. Hughes needs to be sure that he did not form his style as well as his character on the model of Paul's writings. And then there is the Epistle to the Hebrews, not a bad piece of argumentation in itself, opening with a rather striking marshalling of facts, and rising in the eleventh chapter to a height not easily surpassed.

But still it is easy to concede that in none of these writings is there to be found "a style which any man seeking literary distinction would dream of *aping*." No, that is not the kind of effort the style or substance of the Bible harmonizes with.

ETHELBERT D. WARFIELD.

Lafayette College, Easton, Pa., April 10.

[In order that our own position may be wholly clear, we reprint a passage from the editorial in question.—Ed. *Nation*.]

For winged words, for verbal felicity, for phrases that have passed into the life-blood of English literature, we must, of course, go on sending our youth to the Bible. It is doubtless a great quickener of the imagination. As an introducer of young minds to majesty of thought and expression, to the sense of mystery, to grandeur of soul, all that is asserted for it by enthusiastic teachers may be readily granted. But when we talk of literary models, we do not mean only those for poets and prophets. We do not expect all our young men and women to learn to write in the grand style. It is the simpler qualities of good composition of which they are most in need, and for those it is a mistake to commend the Bible so highly and universally as some college authorities do. If, for example, we were asked in what kinds of writing it is most desirable that the generation now coming upon the stage should acquire skill, we should say in orderly exposition of complex matters, in close and sound reasoning, in accurate description. Yet in none of these things does the Bible excel.

It is to put no slight upon the genius of the Hebrews who wrote the Bible to say that their talents did not lie in the directions we have just mentioned. Their work was other and higher, but not that. . . . The man who took the Bible alone for his literary guide, would get little aid in meeting this most indispensable need of a modern writer. That kind of thing simply is not to be encountered in the Scriptures. To find examples of this ability to marshal facts and compel figures to yield up their meaning, we must go to one of the Indian orations of Burke, or a budget-speech by Gladstone, or the legal argument of a man like the new secretary of war, Mr. Dickinson, before the Alaska Arbitration Court.

THE SUBJECTS FOR ART.

TO THE EDITOR OF THE NATION:

SIR: The article, April 8, on "Great Art and Small Subjects" raises some significant questions that might well test the logic and the imagination of the greatest minds. Two thoughts came to me as I meditated on the article. The great catastrophes of life instead of stimulating the imagination rather deaden it. The effect upon the mind of such calamities as those of Lisbon and Messina is similar to great physical shock upon the nerves. Physical shock, if it is severe enough, deadens pain and renders feeling less acute. The very magnitude of these disasters and others which you mention outruns our powers of feeling and imagination. It is only when these elements of life are stirred that great art results. The flower has power to stir

Thoughts that do often lie too deep for tears,

while the catastrophe robs man of power to feel at all. The mind is astonished, appalled, overwhelmed, and the imagination cannot even grasp the reality of the situation, to say nothing of endeavoring to clothe it in goodly apparel and cause it to walk before us.

The other thought was that great art is made out of those events and experiences in history and life which have to do with what has been done *for* man rather than what has been done *to* man. The accidents and the tragedies which have befallen men by force of nature or by the will of man call forth feelings of pity and horror. It is only when something significant in man's progress meets our view that the imagination is stirred. The service of one man for another, like that of Hallam for Tennyson or King for Milton, becomes for us the universal picture of the power of friendship. The high inspiration of flower, or sea, or mountain is passed on by the artist to other men in the hope that it too may become a similar power in other lives. Christian art both in painting and in music reveals the sweep of this truth of the inspirational and stimulating power of a great service *for* man.

It may be that some day, far distant, we shall know what part the great catastrophes of the world have played in the service *for* men, what beneficent part in a kindly order and economy of the world Messina, for example, has had. When that time comes, the mind will have the right estimate and view of the facts, and the imagination will be able to use them in making some great works of art—great in proportion to their significance and present incomprehensibleness.

WILFRID ASA ROWELL.

Beloit, Wis., April 15.

"A HOLY AND HUMBLE MAN OF HEART."

GEORGE RICE CARPENTER.

He was a brother to his friends, a friend
To all in need. He gave himself, as kings
Strew gold, in little daily helpful things,
Ungrudging, while there yet was life to spend.
Humble of heart and holy to the end
He lived; for in his soul were Pisgah springs
Whereon God's shadow fell, and beckonings
Of hopes which our mortality transcend.
Hardly we reached to that shy soul of his,
So like the tall Alps which he loved, aloof
Like them in quietness, high over earth.
Yet without scorn he met life as it is,

In service putting his high soul to proof,
Womanly gentle, lit by cleanly mirth.

Jefferson B. Fletcher.
Columbia University.

Notes.

Beginning next autumn D. Appleton & Co. will be the agents for the publications of the University of Pennsylvania.

The following books, not previously announced, will be published by Houghton Mifflin Co. next month: "Military Hygiene," by Major Percy H. Ashburn, U. S. A.; "Economic Heresies," by Sir Nathaniel Nathan; "Moncure D. Conway, Addresses and Reprints, 1850-1907," and "Charles Edward Garman, a Memorial Volume." The new edition of "The Life and Letters of George Ticknor," announced by this house, has been postponed until the early autumn.

One of the best reprints of the excellent Tudor and Stuart Library (Henry Frowde) is Wilson's "Arte of Rhetorique," edited by G. H. Mair, from the editions of 1585, collated with the unique copy of the *editio princeps* of 1560. Mr. Mair, in his introduction, discusses various matters connected with the history of English style, and for the most part wisely. He shows how the attempt of Wilson, Cheke, and others "to write as men spoke" was balked by the Latinism of the Elizabethans, and was not made good until the days of Dryden. On another point Mr. Mair, we think, is led astray by his patriotism. He observes:

> The historians tell us that Euphuism is older than Euphues, but they have failed to notice that the English study of rhetoric provides a much better indication of its origin than do the imagined influences of Italy and Spain. It is very easy to exaggerate the cosmopolitanism of literary effort; and an English source for this affectation is in the nature of things more likely than a foreign. Now, the recipe, so to speak, of Euphuism is to be found in "The Arte of Rhetorique."

It should seem on the contrary that Wilson's vigorous protest against the use of "ynkehorn termes" (p. 162) and against the oncoming flood of "French English" and "English Italienated" rather substantiates the notion of foreign influence than makes itself for Euphuism. It would be an interesting experiment to use Wilson's work as a text-book in a college class to day. We can imagine such a course, in skilful hands, as extremely valuable and provocative of piquant historical comparisons. The type in this volume, as in all the series, is an exact reproduction of Tudor and Stuart printing. We have noted only one misprint (p. 71), "greese" (with long s) for "greefe."

The Macmillan Co. issues a new edition of J. H. Lupton's "Life of John Colet," the friend of Erasmus, who, four hundred years ago, founded St. Paul's School. Some of the details of Mr. Lupton's account of the founding have been called in question, since his book was first published in 1887, but as a whole the work presents a scholarly and interesting picture of the great Oxford reformer.

Still two more volumes, XIX and XX, of the New York Edition of Henry James's "Novels and Tales" (Charles Scribner's Sons) bring us "The Wings of the Dove." In the prolix introduction Mr. James explains the motive:

> The idea, reduced to its essence, is that of a young person conscious of a great capacity for life, but early stricken and doomed, condemned to die under short respite, while also enamoured of the world; aware, moreover, of the condemnation and passionately desiring to "put in" before extinction as many of the finer vibrations as possible, and so achieve, however briefly and brokenly, the sense of having lived.

Thus it came about that "the case prescribed for its central figure a sick young woman."

In 1889 Francis Thompson, author of "The Hound of Heaven," wrote an article on "Shelley," which he offered to the Dublin *Review*, without success. The essay, found among Thompson's papers at his death, was again offered to the *Review* by the poet's literary executor, and this time was accepted. It appeared in the issue of July, 1908, and created something of a sensation. George Wyndham, for instance, sent to the editor of the periodical a letter, in which he called it "the most important contribution to pure Letters written in English during the last twenty years," and this extravagant sentence was, for commercial reasons, not withheld from the public. Now the essay, together with Mr. Wyndham's letter and notes by Thompson's friend and patron, Wilfrid Meynell, has been put out in a neat volume by Scribners. It is, in fact, well worth reading and preserving—a piece of lyrical homage to Shelley, more itself in the nature of poetry than criticism. "Even in his descriptive passages," he remarks, commenting on Shelley as the mythological poet of nature, "the dream-character of his scenery is notorious; it is not the clear, recognizable scenery of Wordsworth, but a landscape that hovers athwart the heat and haze arising from his crackling fantasies." And again he says that "if Shelley, instead of culling Nature, crossed with its pollen the blossoms of his own soul, that Babylonian garden is his marvellous and best apology." Those who admire this kind of metaphorical prose may agree with Mr. Wyndham. Others, while not withholding admiration, will take a more sober view.

No less an authority than Theodore D. Woolsey, is credited with the statement that Francis Miles Finch, author of "The Blue and the Gray," was the only poet that Yale ever produced. However that may be, the poet was not eager to rush into print. For the first time, a year and a half after the author's death, the collection of his main poetic works is offered to the public, under the title "The Blue and the Gray, and Other Verses" (Henry Holt & Co.). The volume contains "Nathan Hale," which is familiar to all the school children of the country, and many pieces which Yale and Cornell have sung for years. It is interesting to know, as is told in the notes, that the famous "Smoking Song" is the oldest of the collection—a college boy performance, written in 1848. "The Blue and the Gray" was composed in 1867, after the author had read a newspaper item telling how the women of Columbus, Miss., had strewn flowers alike on the graves of the Confederate and the Northern soldiers. This sentiment of brotherhood stirred the soul of the Ithaca lawyer to write the poem which the *Atlantic Monthly* published in September of that same year. Strange to say, the noble feelings expressed in this piece were then challenged by many persons who refused to forgive and forget. Andrew D. White supplies by way of introduction a "Preliminary Word" giving a vivid account of Judge Finch's life and his services to Cornell University.

An unusually interesting collection of documents dealing with colonial affairs in the western Great Lakes region in the latter half of the eighteenth century is included in Vol. XVIII of the Collections of the State Historical Society of Wisconsin (Madison: Published by the Society), edited by Reuben Gold Thwaites. The volume concludes the series of documents connected with the French régime in Wisconsin, begun in Vol. XVI of the Collections, with a survey of the years 1743-1760, and covers also the documents of the British régime in the territory comprising the present State between 1760 and 1800. During the half-century and more from 1743 to 1800, Wisconsin was successively under the dominion of three great nations—France, Great Britain, and the United States—and was bordered by Spanish Louisiana, the domain of a fourth. The period embraced two extended wars waged to determine the question of sovereignty, and involved three distinct types of administration, the colonial paternalism of France, the military rule of England, and the beginnings of American control. These facts give the present volume a scope and interest that is unusual, and make available for students of Western colonial history a series of documents of great value. The Mackinac Register of Marriages, 1725 to 1821, is also included in this volume.

Bernard Mallet is his memoir of "Thomas George Earl of Northbrook" (Longmans, Green, & Co.) has filled a gap in the biography of Victorian statesmen. George Baring was assuredly not a man of the first rank, but both by his position and his character he was a noble specimen of the great Whig aristocrats of his time, and on at least three occasions he was so intimately connected with crises in the history of the British Empire that future historians cannot afford to overlook his biography. The recent English antipathy to things "made in Germany" must seem strange to the Barings, if they remember that their first English ancestor went from Bremen in 1717 to Exeter, as apprentice to a firm of clothworkers. But he and his son and grandson showed extraordinary ability at making money; money bought them into Parliament (the second John spent £40,000 on his elections); and in public life, not less than in commerce and banking, their successors have been men of mark. The German family of Baring is as thoroughly English as the Dutch family of Bentinck. Not the least interesting part of Mr. Mallet's book is that in which he sketches the Anglicizing process. Northbrook was Viceroy of India, 1872-76, making a reputation there as a business administrator, and as a friend of the natives. On his return he exerted a steadying influence during the Afghan flurries, was in Gladstone's Cabinet at the time of the Egyptian troubles, and of Gordon's expedition, and became one of the pioneer Liberal Unionists when Home Rule

split the great Liberal party in twain. As First Lord of the Admiralty he pushed forward the naval programmes which, imitated and expanded, now threaten to hankrupt every government with a navy. Mr. Mallet furnishes a sufficient description of Lord Northbrook's private life, showing him to have been stanch in integrity, sober in counsel, tenacious, and fair. In feature he was Yankee and not English, as the photograph on p. 150 indicates. Historians may regret that Mr. Mallet has not given an ampler account of Northbrook's relations with Gladstone, because it is evident that this might explain, even better than Mr. Morley did in his biography, the gradual elimination of several of his colleagues from the Prime Minister. Even before Home Rule cut them asunder, they were out of touch with their chief. Mr. Mallet writes a plain style, even a trifle stiff at times, but he spares eulogy and evidently purposes to tell the truth.

"The Book of the Divine Consolation of the Blessed Angela of Foligno" is a substantial addition to the New Mediæval Library published by Duffield & Co. Originally written in Latin at about the end of the thirteenth century, the work was rendered into Italian by Fra Arnaldo in 1510. It is now translated from the Italian into English by Mary G. Steegmann. Algar Thorold furnishes an introduction containing a few notes on the author and a rather Paterian appreciation of the saintly ideal. Readers may differ from Mr. Thorold in the degree of their admiration for the "pure and candid soul" of the Blessed Angela, but no student of mediæval culture can afford to neglect her religious testament, for it is a full and striking account of a typical penitence, conversion, and beatification undergone by a Tertiary Hermit of the family of St. Francis. When the holy woman first began to think of becoming a recluse, she was hampered by the bonds of this world; but in due time, as she says in her pious way, "by God's will there died my mother, who was a great hindrance unto me in following the way of God." Presently, also, her husband and children were providentially removed from her path in answer to her prayer, so that "I had great consolation of their deaths, *albeit I did also feel some grief.*" (The italics are ours, not Angela's.) After this, the Blessed Angela took eighteen distinct psychological steps to the embrace of God. Language is impotent to describe the mysterious bliss of the inner illumination which ensued. The high spiritual life was not, indeed, without its hours of gloom and apathy, but all the pleasures of the world were less than nought in comparison with the terrific ecstacies enjoyed by the celestial bride in the moments of divine favor. The insufferably realistic conceptions of the Crucifixion which turn our uninitiated eyes in horror from many a painting of the Middle Ages, have their counterpart and their explanation in the record of this fierce woman's meditations and visions.

Volume III. of Sir J. W. Redhouse's translation of El-Khazreji's "History of the Resuli Dynasty of Yemen," being volume III, 3, of the Publications of the E. J. W. Gibb Memorial (London: Luzac & Co.), contains the translator's annotations. These give a great mass of geographical, historical, biographical, and religious details, and, with an index, will be very useful. The editor, E. G. Browne, announces that the Arabic text, from a manuscript better than that used by Redhouse, will be issued shortly.

Among the best works which the centennial of Napoleon's conquest of Germany has produced, must be counted Paul Bailleu's "Königin Luise: Ein Lebensbild" (Leipzig: Giesecke & Devrient), which may possibly be the final and authentic life of this unhappy queen. It shows the same care as the author's other works; it is semi-popular, yet based on good sources, and finely illustrated.

Among those who have discussed the recent revolutionary movements in Turkey and the Balkans, probably no one is more deserving of a hearing than Dr. Vladan Georgevitch, the Minister-President of the last Ohrenovitch and the Servian representative in Constantinople. His book "Die türkische Revolution und ihre Aussichten" (Leipzig: S. Hirzel) brings an abundance of facts that would be known only to those behind the scenes; and notwithstanding his Bulgarian bias, he deserves credit for his objective presentation of the subject.

Some important volumes have been added to the series Beiträge zur deutschen Literaturwissenschaft, edited by Dr. Ernst Elster (Marburg: N. G. Elwert). Dr. Wilhelm Siebert's work "Heinrich Heines Beziehungen zu E. T. A. Hoffmann" is full of material not only for the literary student, but for any one who is interested in the two men as psychological types. Dr. Otto Draeger, in "Theodor Mundt und seine Beziehungen zum Jungen Deutschland," has chosen that group of German writers, who, during the revolutionary movements of the thirties, were officially labelled "Young Germany." Among them were Karl Gutzkow and Heinrich Laube. Dr. Draeger attempts to define the position of Mundt, whose wife Klara was the voluminous writer of pseudo-historical novels, "Luise Mühlbach." The eleventh book of the series is a study of Theodor Storm's art by Dr. Hans Eichentopf: "Theodor Storms Erzählungskunst in ihrer Entwicklung."

Keats has been made the subject of a little book of seventy pages entitled "Der Sensualismus bei John Keats" (Heidelberg: Carl Winter), by Sibylla Geest.

In the series "Aus Natur und Geisteswelt" (Leipzig: B. G. Teubner) is a history of German poetry which commends itself to the student for its brevity and conciseness, Heinrich Spiero's "Geschichte der deutschen Lyrik seit Claudius."

The collected essays of Betty Paoli, an Austrian writer known chiefly for her lyric verse, have been edited and furnished with a readable introduction by Frau Helene Bettelheim-Gabillon, and published by the Literarische Verein of Vienna.

Frau E. C. Dittmar's little volume, "Die Einwanderung gebildeter weiblicher Erwerbshedürftiger nach den Vereinigten Staaten" (Leipzig: Velhagen & Klassing), is prepared as a guide to Germans who think of emigrating to the United States. Frau Dittmar came to America thirty years ago, and for several years, as a journalist, she looked after the interests of feminine readers of the *New Yorker Staats-Zeitung* and answered some sixty to seventy letters a week from all classes seeking advice. Her total experience, therefore, has been peculiarly varied and extended.

The Speeches ("Reden") of Kaiser Wilhelm II, edited by Dr. H. Penzler (Leipzig: Reclam), have been brought out in three small volumes, covering the period down to 1905.

"Ferdinand Christian Baur, der Begründer der Tübingen Schule als Theologe, Schriftsteller und Charakter," by G. Fraedrich, is a "prize" work, published by F. A. Perthes of Gotha. It is an enthusiastic and yet critical account of one of the few theological leaders of the nineteenth century who have left a deep impression on thought. The volume also contains analyses of the character and work of the three recently deceased pupils of Baur, Adolf Hilgenfeld, Eduard Zeller, and Otto Pfleiderer. The index should have been more extensive.

The first volume (1651-1676) of the Correspondence of Bossuet, in the edition published under the patronage of the French Academy by Ch. Urhain and E. Levesque, contains hitherto unpublished letters with notes and appendices (Hachette).

"Le Mysticisme catholique et l'âme de Dante" is a small volume by Albert Leclère, doctor of letters of the University of Berne (Bloud). It is a useful supplement to treatises on the applications of scholastic theology in the "Divina Commedia," and has naturally more to do with the poet's own inner life.

"Bibliothèques," by Eugène Morel, treats in two considerable volumes, but from the point of view of the general reader, the development of public libraries and bookselling (Mercure de France). The first volume inquires what is read and bought in the two worlds, with special reference to France and Germany, without neglecting Australia and Japan. There is a separate treatment of the Bibliothèque Nationale of Paris, the British Museum, and the Congressional Library of Washington, and briefer mention of other libraries of Europe and elsewhere. The second volume takes up in detail the era of the free library in England and the United States, with views of buildings, etc. The alphabetical index forms a year-book of 1,000 libraries, showing money spent, number of books, and circulation under general heads of law, medicine, music, theatre, social sciences, commerce, and all the rest. The volumes are sold separately (7.50 francs each).

"La Poésie latine," by Frédéric Plessis, professor in the University of Paris, extends from Livius Andronicus to Rutilius Numatianus (12 francs, C. Klincksieck). The author is a writer of literary merit, as well as eruditon, and was recently within a vote or so of election to the French Academy.

Jean Duchesne-Fournet, aided by eight specialists, publishes the results of the "Mission en Éthiopie (1901-3)": First volume, journey, economic facts, Abyssinian manuscripts; second, geology, anthropology, and ethnography, insects, and Abyssinian bibliography. The accompanying atlas has sixty-four maps and sketches (60 francs for the entire work, Masson).

The fourteenth volume of Archives marocaines, published by the scientific mission

appointed by the French government for Morocco, is made up of two theses for the doctorate of letters, which break new and interesting ground—"Judéo-Hellènes et Judéo-Berbères," consisting of investigations into the origins of Jews and Judaism in Africa (272 pages); and "Les Hébraeo-Phéniciens," an introduction to the history of the origins of Hebrew colonization in Mediterranean countries (206 pages). This book is the work of Nahum Slouschz, who is an assistant at the Académie des Inscriptions et Belles-Lettres (E. Leroux).

In the Annales du Musée Guimet, Raymond Weill publishes "Les Origines de l'Égypte pharaonique," first part, second and third dynasties (8vo, figures and plates, 20 francs, E. Leroux).

The Unione Statistica delle città italiane has issued a second volume of the "Annuario Statistico" (Florence: Alfani e Venturi). It is edited by Prof. Ugo Giusti, head of the Florence bureau of statistics, and presents the most important administrative conditions in the chief communes of Italy for the year 1906-1907 in a series of well-arranged, comparative tables grouped under seventeen headings: meteorology; territory and population; building activity, including prices of land, rents, and workmen's houses; streets and parks; water and lighting; markets, public slaughter-houses, and prices of food; census of animals; education; libraries and museums; polls, military levies, charities, sanitation; expenditures; taxes; debts and loans; employees and pensions; strikes and labor bureaus; municipal ownership of public services; commerce and transportation; lotteries. The tables of migration and emigration, of pensions, and of the administration by the communes of unusual services are especially important. The municipal ownership of tramways has a logical development in the control of local steamboat service by the city of Venice. Other towns have assumed the distribution of electrical power, own pharmacies, workmen's houses, bakeries, grist mills, and even refrigerating plants. There are interesting details regarding the functions assumed by labor bureaus. The number of towns contributing to theatrical entertainments for the people and to orchestras and bands is noticeable. The almost universal lack of town statisticians and inexperience in gathering data have made the editor's work difficult, but the frank admission of the unavoidable deficiencies and limitations of these early volumes disarms criticism. The number of communes coöperating in this volume has increased from sixty-seven to eighty-three. Although the editor admits a large number of errors in the replies of some communes and inadequate explanations of marked differences in figures between successive years in others, the results are interesting and significant. The "Annuario" is a convenient, light quarto, which contains over three hundred pages, and an index of towns and one of subjects.

Charles Warren Stoddard, known as the "Poet of the South Seas," died at Monterey, Cal., April 24, at the age of sixty-five. He was born in Rochester in 1843 and early in life moved to California. For a time he was an actor, but he soon took up newspaper work and spent seven years as travelling correspondent of the San Francisco *Chronicle*. In 1885 he was appointed to the chair of English literature in the University of Notre Dame, Indiana, and remained there for two years. He went to the Catholic University of America in 1889, and there remained till his death. His skill in vivid description was shown at its best in "South Sea Idyls" (1873). William Dean Howells once said: "He produced the lightest, sweetest, wildest, freshest things that ever were written about the life of that summer ocean." Among his published works are: "Poems" (1867), "Mashallah: A Flight Into Egypt" (1881), "The Lepers of Molokai" (1885), "A Troubled Heart" (1885), "Lazy Letters from Low Latitudes" (1894), "The Wonder Workers of Padua" (1896), "A Cruise Under the Crescent from Suez to San Marco" (1898), "Over the Rocky Mountains to Alaska" (1899), "In the Footprints of the Padres" (1902), "Exits and Entrances" (1903), "For the Pleasure of His Company" (1903), "Father Damien—A Sketch" (1903), "The Island of Tranquil Delights" (1904), "The Confessions of a Reformed Poet" (1907), and "The Dream Lady" (1907).

Samuel June Barrows, well-known as a student of penology, and active in many forms of philanthropy, died in this city, April 21. He was born in New York in 1845, and after a primary school education began to earn his own living in a machine shop. Later he practised stenography and worked as a reporter. In 1867 he became stenographic secretary to William H. Seward, Secretary of State. After studying at the Harvard Divinity School and the University of Leipzig, he was called to the First Unitarian Church of Dorchester, Massachusetts, where he stayed five years. Then he held the editorship of the *Christian Register* for sixteen years. He was secretary of the American delegation at the International Prison Congress in Paris in 1895, and represented the United States on the International Prison Commission in 1896. In 1900 he was appointed to the office of corresponding secretary of the Prison Association of New York. He was one of the founders of the Massachusetts Prison Association, a member of the International Society of Comparative Criminal Law, and the author of various reports on penology, some of which are "The Prison Systems of the United States," "The Reformatory System of the United States," and "Crimes, Penalties, and Misdemeanors," all published by Congress. He was also the author of a volume entitled "The Isles and Shrines of Greece," and of various historical monographs.

Julia Louisa Matilda Woodruff, widow of the Rev. Curtiss T. Woodruff, died in New York, April 21, at the age of seventy-five. She wrote largely on devotional and other topics, including the following publications: "Shiloh" (1870), "My Winter in Cuba" (1871), "Holden with Cords" (1876), "The Daisy Seekers" (1885), "Life's Sunny Side" (1886), and "Bellevue" (1891).

Dr. Whitley Stokes, professor of physic in Dublin University, and a notable linguistic scholar, has died at the age of seventy-nine. He was for a number of years in India, where he was active in codifying the laws, and wrote largely on legal subjects. He was, however, best known as a Celtic scholar, being joint editor of the series of "Irische Texte," the "Thesaurus Palæohibernicus," and the "Archiv für keltische Lexicographie." From his long list of publications the following may be named: "Irish Glosses" (1860), "Three Irish Glossaries" (1862), "The Creation of the World, a Cornish Mystery" (1863), "Goidelicon" (1872), "Middle-Breton Hours" (1876), "The Calendar of Oengus" (1880), "The Tripartite Life of St. Patrick" (1887), "The Old-Irish Glosses at Würzburg and Carlsruhe" (1887), "Urkeltischer Sprachschatz" (1894), "The Gaelic Marco Polo, Maundevile and Fierabras" (1898), "The Eulogy of St. Columba" (1899), and "Martyrology of Oengus."

THE GROWTH OF NATIONALITIES.

The Cambridge Modern History. Planned by the late Lord Acton; edited by A. W. Ward, G. W. Prothero, and Stanley M. Leathes. Vol. XI: The Growth of Nationalities. New York: The Macmillan Co. $4.

In this great work, which has now reached its eleventh volume, leaving only one more to issue from the press, we note with interest that the number of contributors to each volume seems steadily to increase, and that among these the number of writers who are neither Englishmen nor Americans also increases. The present volume consists of twenty-eight chapters, some of them divided into sections done by different hands. There are twenty-nine contributors, and of these ten belong to one or other of the nations of Continental Europe. This may be taken as a testimony either to the sedulous eagerness of the editors to secure the most competent men to write, each about his own country, or to deficiency of perfectly competent English and American scholars; for *prima facie* and *cæteris paribus*, an historical scholar who can use English as his own language and does not need to be translated, would as a contributor be preferable to a foreign scholar.

The general quality and character of this volume vary little from the last three or four of its predecessors. All the work is carefully and intelligently done; all conforms to the modern conception of scientific history. There is no attempt at those rhetorical embellishments which were expected from the historians of a century ago. The style, though generally level, is clear and business-like; only rarely, as in such a chapter as Archibald Ross Colquhoun's on South Africa, does it tend to lapse occasionally into the slipshod. In such a book we have no right to look for literary brilliance, which in the case of all but the very best writers would be pretty sure to mean some sacrifice of accuracy and impartiality to literary effect. Nevertheless, the feeling comes into our mind that in these later volumes we have rather less of that sort of good writing which consists in clear, short, forcible characterization of events

and persons and tendencies than we had in the earlier volumes; and particularly in those upon the renaissance and the Reformation. It may also be remarked that there is in some of the chapters somewhat less than we could desire of an effort to bring out the broad features of the period, as apart from the details. Since the material is practically infinite, and the details might be expanded to any extent, the function of one who undertakes to condense the narrative must be to select such incidents as belong to the main stream, and tended either to accelerate or to retard the movement of that stream. Such a history as this ought to avoid becoming a mere chronicle: every part should be pervaded by the sense that there were governing tendencies, and there should be an effort to place these in a strong light. This criticism, however, is not intended to apply to the whole book, but only to some of the less skilful writers.

The geographical range of the narrative extends in this volume further than in its predecessors, a significant indication of the relations into which Europe began in the nineteenth century to come with countries previously uncivilized. There is a chapter on South Africa and Australia, another on China and Japan. Thus a new kind of utility in such a history as this is revealed. Even an exceptionally well-informed man might find some trouble in ascertaining where he should look for an account of the Afghan war of 1839-42, or of the two Chinese wars of 1841 and 1857, or of the Japanese revolution of 1868. But in this large and well ordered scheme a place is found for all events of any magnitude anywhere, except, perhaps, in Persia, which does not seem to be brought, except by incidental mention, within the rays of this historical lamp. A little space might have been gained by the omission of some of the disquisitions on literary history. The chapter on French literature ("Reaction against Romanticism") and that on the Italian literature of the Risorgimento, both of them excellently done by Prof. Émile Bourgeois and Prof. Carlo Segré, respectively, are doubtless needed, because they illustrate the contemporary movements of French and Italian political life. But for the chapter on English literature, the same reason cannot be advanced, nor does that chapter, although well executed, really add to the knowledge of those who are competent to use the book as a whole, while the section of Chapter xxiv on Scandinavian literature would have been better placed in a later volume, where it could have been brought down to include the two most remarkable of Norwegian writers, who belong to the generation which is now beginning to pass away. These, however, are minor points. The volume, as a whole, is quite worthy of the series. Nor need we single out special contributors. To praise the work of Dr. A. W. Ward or that of the late Sir Spencer Walpole would be superfluous. The editors have done well in enlisting for the chapters on India and the Far East such eminent specialists as Sir William Lee Warner and Sir Ernest Satow, and we note with pleasure the appearance in Chapter xv ("Austria, Prussia, and the Germanic Confederation") of Prof. Heinrich Friedjung, the brilliant author of the "Kampf um die Vorherrschaft in Deutschland, 1859-1866."

The general title of this volume, "Growth of Nationalities," fitly describes the period, roughly from 1840 to 1871, which is covered by these 1040 pages. Four stages, or sub-periods, may be distinguished in the movement. There was that of the preparations for and premonitory symptoms of revolution which had begun in Italy and Germany, almost immediately after, and which were the natural offspring of, the breakdown of the Napoleonic system. There was the short and highly exciting period of active revolution, exploding and spluttering all over Europe, which began with the Sicilian insurrections in January, 1848, and the Parisian street rising of February 22, in that year, and virtually closed with the surrender of Venice in August, 1849, though the old order was not fully reëstablished in Germany till 1850, and the republic did not fall before Louis Napoleon's *coup d'état* in France, December, 1851. The third period may be termed one of reaction, in which nevertheless the forces working afresh for or towards revolution soon showed themselves, and continued to gain strength from 1859 onwards. Last came the period of upturn, in which Italy shook off her foreign rulers (1859-60, 1866, 1870), while Germany obtained political unity by the extension of Austria (1866), and the establishment of the new Federal Empire (1870-71). This nationalistic movement was herewith by no means at its end. Moving eastward, it broke out in the Turkish Empire with violence in 1876, and led to the emancipation of Bulgaria in 1878, and, still later, to the emancipation of Crete, while, in the far North, the long dissensions of Norway and Sweden ended in 1905, with the separation of those two countries. How far Macedonia and Albania may, in like manner, secure autonomy, and what will be the end of the strife between the various nationalities in the Austro-Hungarian monarchy, it remains for the future to show

The principle of nationalities has been, in fact, intertwined, through the whole of the last ninety years since the Greek risings against the Sultan began, with the struggle against arbitrary power. Neither of these parallel movements could have achieved so rapid a triumph as those years have seen but for the help of the other. Each of the nationalities which sought to unite as one people, and get rid of the stranger, sought also to be free from despotic rule. The passion for liberty so stimulated nationalism that men did not always realize that the two aims are not necessarily the same, though the enemy to be vanquished was, in most cases, the same. This appeared in the case of Germany. The Liberal party in Germany was also the national party. In 1848-9, it strove at the same time for a free Germany and a united Germany. But, when a united Germany was at last created, the work was accomplished by a state and a minister whose policy fell far short of that ideal of liberty which the earlier German patriots had conceived; and the spirit of nationalism has been so strong since 1866 and 1870 that far less effort has been made to popularize the government than was expected forty years ago. Nationalism is, in fact, under certain conditions, the ally rather of despotism than of freedom. A people eager to overcome its foes and assert its predominance may, when the choice between freedom and military strength is set before it, prefer military strength. That is no new phenomenon in history. So, too, a people may, in the assertion of its own nationalistic aims, be found willing to forswear in practice its theoretic love of freedom, and either to deliver itself up to a dictator for the sake of securing national unity, or to exercise a tyranny over vassal states, or perhaps over portions of its own territory in which men of a different race and speech strive in vain to make good their claim to be considered a nationality and to have at least a measure of autonomy conceded to them.

Little reference is made in this volume to the effect on the European struggle for free government of the events that were passing in America. Yet that influence was at one time of great moment. The triumph of the Northern States in the civil war profoundly affected opinion in Western Europe. The aristocratic Tories in England and the supporters of Louis Napoleon's monarchy in France thought in 1862 that "the republican bubble had burst," and when slavery vanished, and the Northern democracy not merely showed its strength but showed also that it could be clement in victory, and that its republican institutions emerged unscathed from the furnace of civil war, a great stimulus was given both to the democratizing party in England and to the republican party in France. Incidentally, the failure of the French Emperor's expedition to Mexico, which was due to vigorous action taken by the North

after the defeat of the Confederates, gave a shock to the credit of the Empire from which it never recovered. But that was less significant than the moral influence of the triumph won by the Free States in a war on which the attention of the world had for four years been fixed.

The present volume brings us to the threshold of that new period in which we are now living, and in which neither freedom nor nationality is the most conspicuous force directing the march of events. As in the sixteenth and first half of the seventeenth centuries, international as well as civil wars were waged in the name of religion, as in the latter part of the seventeenth and all through the eighteenth century they sprang, chiefly out of the dynastic ambitions of monarchs, as in the nineteenth century their cause was to be found in the struggle for internal freedom or for national union, so now the sources of discord between states, and still more the springs of political party action within each state, are chiefly economic. Material interests rule the world; and they are now the material interests either of whole nations or of large classes and sections, not merely of individuals or privileged groups. Freedom and political power are now valued very largely as a means by which material benefits can be secured. Modern industry is the child of applied science and the parent of international commerce; and commerce, which ought to be the pledge of peace, has by no means fulfilled the hopes entertained of it by the optimistic economists of fifty years ago. To describe these new forces which in one direction embody themselves in labor unions and socialistic efforts to turn government into an agency for production and distribution and which, in another direction, intensify the jealousy and suspicion of great nations competing for markets, and to show how they have become factors in history more powerful than ever before, will be a chief task—and it is no easy one—of the concluding volume.

CURRENT FICTION.

Simeon Tetlow's Shadow. By Jennette Lee. New York: The Century Co.

If there is anything we do not know about the American financier, his methods, his morals, his domestic habits, it is surely our own fault. Whatever the reformer and the "muckraker" have left unsaid, the playwright and the novelist have undertaken to say. And yet we have not yet had any really arresting compelling interpretation of this "man of the hour," any more than of that other timely figure, the political boss. These dominating types have called forth innumerable studies, many of them minutely faithful to the fact, but no single great portraiture. Is the fault with our literary and dramatic artists, or with their theme? Is it possible that these famous magnates of ours, who so distress us and upon whom we so pride ourselves, simply fail to offer any new material for interpretation, or even any old material of the first order? The captain of industry, the political bully, are not new figures in the world's history: why should we feign surprise at them? Their machinery varies, the scale of their operations varies (at least as regards the number of dollars or human beings affected), but their method, their morale, are as old as the hills. Are we really conscious of a difference, except in bulk, between a Rockefeller and a corner grocer? Do these physical enlargements, these dropsies of great wealth and of the crushing power which great wealth brings, actually enlarge our experience? Perhaps so, as the experience of the myriad toads in a puddle might be enlarged (and abbreviated) by the development of Brobdingnagian proportions, with appetite corresponding, on the part of some score or two of their number. But the prodigies would remain toads.

Simeon Tetlow is a toad whose magnification seems to have been quite artificial, or rather perfectly unreal. He is supposed to be a railroad magnate of colossal bulk—financially:

> The tiny, shriveled figure gave no hint of the power that ticked carloads of live stock and human beings to their destination and laid its hand upon roads half dead, or dying, or alive and kicking, sweeping them gently into the system, with hardly a gulp.

At forty-two he is president of the "R. and Q." road, and a nervous wreck. It is a pity we have not been made acquainted with him earlier, so that we might have beheld him in his prime and carried over some actual sense of his power into the spectacle of his weakness. One is situated toward him somewhat as toward the familiar hero of fiction who is said to be uniformly brilliant and witty, and who lets us hear nothing but commonplace chatter. Simeon Tetlow, in so far as we are given to know him, is the protégé and puppet of a marvellous office-boy with a dull face and an intuitive knowledge of how to manage Tetlow's affairs, from his diet to his business. This is not, as the publisher's note too sanguinely suggests, "the story of a Man and a Railroad": it is the story of a boy-hero and two invalids. Simeon Tetlow is but half a man as we see him, and his railroad is left a vague generalization in the background. John Bennett is the chief actor, and his feats are as probable as those of the heroes of Messrs. Oliver Optic and Henty. It is well enough for us to believe that in Tetlow's condition an honest boy may have come, to supply him with "hands and feet—almost, it might seem, lungs and a few other useful vital organs"; but brains and will are a different matter. We must again take exception to the publisher's remark that "the interplay of his slow, sturdy nature with Simeon's vivid one is full of insight and humor and delightful surprise." There is very little humor in the book, though a great deal of pretty and wholesome sentiment. A little strained, perhaps, is the prolonged suffering of Tetlow under the curse of the old switch-tender, who has been displaced for carelessness; a little obvious the device of the innocent child who brings about the lifting of the curse; but accepted as a novel of sentiment and not of commercial life, the story may be enjoyed for its fluency and sweetness.

The Wild Geese. By Stanley J. Weyman. New York: Doubleday, Page & Co.

The announcement is made that this is the last novel to be put forth by Mr. Weyman; and it must be confessed that we are able to endure the thought with some composure. He has borne his part bravely in the heyday and through the decline of the historical romance; and with a score of popular successes to his credit, may now fairly leave what skirmishings remain in the hands of the younger generation. "The Wild Geese" is—the usual thing, only not quite so much so—a diminished echo of "Under the Red Robe" and "A Gentleman of France." It contains, that is, the same elements of love-making, political intrigue, and sword-play, but a notable falling off in spirit and swing. The action takes place in Kerry, in the reign of George the First. It is the darkest hour of Irish Jacobitism. The public observances of the Roman faith are forbidden, and Romanists are shorn of civil and political rights. In spite of conspiracies, duels, and dungeons, it is all a sufficiently amiable sort of thing to happen in a book: the only question is why it should be necessary for it to happen so many times in so many books. A hundred years ago historical romance was yet to be born, in the Waverley novels. The stream grows sadly dilute.

Whither Thou Goest. By J. J. Bell. New York: Fleming H. Revell Co.

A sweet, simple story, sweetly and simply told, consisting of the old theme with variations, smacking less of the kailyard than one might expect of the author of "Wee Macgreegor." Richard Balmain is drawn to Ruth Lennox, first by her fortune, and then by herself; but the latter emotion fails to convince her after she has been told of the former fact by her aunt, a personage as devoid of the milk of human kindness as Bill Sykes, and infinitely more pes-

tilent, as she gives the police no excuse for cutting short her misdemeanors. After this revelation, the book is occupied by Ruth's gradual realization that, mercenary or not, Dick's wooing has been only too successful, and by the struggle between his love and his pride before he can return to her. Needless to say, love wins the battle, even before Dick learns that Ruth has lost her fortune, the original cause of all the mischief. Some of the minor characters are drawn with vigor and distinction, especially Dick's gentle but strong-spirited mother, and Miss Fitzroy, the suffragist.

Much Ado about Peter. By Jean Webster. New York: Doubleday, Page & Co.

Ten light, deft, good-humored sketches of the life circulating about the stables and the kitchen of one of the American landed gentry are here made into a book which a person who has nothing else to do may read without effort, and even with mild amusement. Though the connection of the chapters with one another is by no means close, the rise of Peter from groom to coachman and his courtship of Annie, the maid, furnish a kind of unifving interest in the world of cooks, valets, gardeners, and stable-boys. Furthermore, the social and the serving worlds are linked together by an occasional implication that the young gentlemen and ladies who ride the fine horses and wear the fine gowns are not much wiser in the affairs of the heart than the men and maids who hold the bridles and do the ironing. The interest of the book lies mainly in the low-comedy characterization, and in the escapades of the high-spirited, unbridled children which family life of the character here suggested naturally produces. One cannot help feeling that if Miss Webster had kept Peter and his friends in their places, and had given the children the front of the stage, she might, with a little attention to plot, have written a fresh and continuously entertaining story of child-life. Certainly, if she does not wish her talent to run to seed she should not permit herself to make many more books in this fashion. Publishing volumes of sketches is a bad habit to form; it is extremely wasteful of material, and it betrays a lack of self-restraint and patient ambition.

France of the French. By Edward Harrison Barker. New York: Charles Scribner's Sons. $1.50 net.

France in the Twentieth Century. By W. L. George. New York: John Lane Co. $1.75 net.

France has recently fallen into the march of civilization and put forth a "Who's Who" of her own. Mr. Barker's volume may be best described as an attempt to clothe the skeleton structures of "Who's Who" with sufficient flesh for the uses of the average American newspaper office. This the author has done very successfully. Within some 260 pages he has brought together a surprisingly large amount of biographical information covering every field of contemporary French life. He has given to his sketches the added personal touch that bespeaks first-hand acquaintance with the material, and makes attractive reading. Names like Coppée, Richepin, Rostand, Deroulède, Bourget, Barrès, Anatole France, Jules Lemaître, Saint-Saëns, Massenet, Delibes, Roux, Berthelot, Clemenceau, Combes, Deschanel, Delcassé, receive their page or half-page of detailed fact and characterization. Mr. Barker is not absolutely contemporary. He includes the men who have so recently passed away that their names are still the names of the present day. Thus it would appear at first that the best French painters, like the best Indian, are the dead. But Jules Lefebvre, Bonnat, Carolus Duran, Flameng, and Rochegrosse, among the living, are accounted for. The chapters on art, and particularly the one on architecture, are done with more care and intimacy than the rest. As a rule, the record of personal opinion runs sober and just.

The chapters on French character, on family life, and on "Lights and Shadows" deal in the main with the perennial problem of French morality. On that difficult subject much can be written, and has been written, and, on the whole, to little purpose. In the end it always amounts to this: that the morals and conduct of the French people are not quite those of Great Britain and America, but that the French are a very likeable people nevertheless. We regret to see Mr. Barker advance the old argument that Paris is not France, and that Parisian standards are not the national standards. But that is, after all, quite opposite to what the French themselves maintain. Historically, Paris has dominated France. If the capital draws to herself a steady supply of fresh material from the provinces, it is still admitted that Paris shapes this rough matter to her own form with astonishing thoroughness and dispatch. If Hercules can be fairly enough built up from his foot, a nation cannot complain if the outside world reconstructs it from its head.

Mr. George's "France in the Twentieth Century" is an exasperating book. It combines a certain amount of expert knowledge and occasional flashes of real insight with an astounding mass of splendid misinformation. It is written from the point of view of an ardent Jacobin and admirer of the French people. But its tone is hyperemotional and its logic is, to say the least, dubious. Rarely has a cart been put so squarely before the horse as when the low state of French personal morals is shown to arise directly from the prevalence of an immoral literature and art. Mr. George's general reflections on politics and society are gigantic in sweep and childish in effect. As to his facts, he tells us that "all European states have written Constitutions, a copy of which can be purchased by any man for a few pence"; that in France "the Premier is selected by the President from among the men who can command a majority in both houses"; and that the word "bloc" was coined by Waldeck-Rousseau, whereas M. Clemenceau is its universally acknowledged father. The author's power of generalization is exemplified in the following pronouncement:

> The French are a nation of individualists; they do not take kindly to group action. It is for this reason that they do not succeed in team games such as cricket or football; every man in the team plays for himself, and disorder naturally follows.

The Springs of Helicon. By J. W. Mackail. New York: Longmans, Green, & Co. $1.25.

The three essays here brought together are a revision of lectures delivered at Oxford by the professor of poetry, and they display both the strength and the weakness common to the criticism of the English universities. For weakness, they lack a certain driving power, a certain dynamic use of ideas; they leave one with the feeling that most things here have already been said, although never before, perhaps, quite so well said. For strength, they introduce one into an atmosphere of golden serenity, into a society where all matters of taste are settled, beautifully and forever. In weighing the advantages and disadvantages of such a style, we are inclined to place the balance strongly on the positive side.

To be more particular, of the three essays, that on Chaucer is, to our taste, the least interesting; the judgments seem to us firmer and more decisive in those on Spenser and Milton. Many passages in the Spenser could be pointed out in which the criticism is flushed with a poetic warmth of imagination. Such, for example, is the description of the portrait of Count Martinengo-Cesaresco, in the National Gallery, with the application of its motto — ἰοὺ λίαν ποθῶ, "Oh, I desire too much"—to the outreaching spirit of the renaissance. Other passages dwell lovingly on subtleties of form and style, as in the long analysis of the Spenserian stanza and of its various capabilities and limitations—where the critic is at his best. Others introduce elaborate comparisons, such, for example, as the novel, and somewhat strained, parallel of Spenser and Livy, which reminds one almost too forcibly that the author has written his

history of Latin literature. Still others show the writer's sensitiveness to the shifting currents of literary inspiration, as when he touches on the change that takes place toward the end of the sixth book of "The Faerie Queene":

> It occurs subtly and silently, like dawn overspreading the sky. But it means that the spirit of the poet, and of his art, has changed. The renaissance is tiring of itself; poetry is returning to life: and with the same movement life is returning to poetry. . . . It suggests a return . . . to the pleasant villages and farms, to the opener air, from the enchanted atmosphere, heavy and luminous, of courtly romance.

On the whole, Professor Mackail rather underrates the value of Spenser's linked sweetness, apparently under the desire of throwing into higher relief the work of Milton in passing from renaissance to true classical influences, and so bringing English poetry to its own perfection and to its place in the literature of Europe. To the further glorification of his hero he somewhat exaggerates the aloofness of Milton; and nowhere does he better manifest his skill in dressing up old ideas with fresh poetical imagery than in his brief description of the period:

> The confusion of English politics in the seventeenth century seems reflected in the confusion of English poetry. We cannot bring its progress under any single formula. It is difficult to discriminate between the poetry which represents the continuance of an earlier impulse and that which is a new beginning, a separate movement. We seem to wander in a dimly lighted undergrowth, in a close dungeon of innumerous boughs. When we emerge into daylight, it is to find ourselves in another world. Darkness had slowly fallen on the Elizabethan afterglow; from out of a sky spangled with a confused multitude of stars which succeeded it, there comes breaking and flooding in, slowly and inevitably, the *Aufklärung*, the blanched clearness of a new and modern day.

We have no desire to detract from the enthusiastic admiration of Professor Mackail for the great and lonely star of that period between afterglow and dawn, but we think he might have pointed more clearly to the harm suffered by English literature from the isolation of its greatest and most classical poet. Milton "stands wholly apart; he founded no school; he exercised no effect upon contemporary poets"—to Professor Mackail as to Wordsworth that loneliness would seem to be an enhancement of virtue. But loss is reciprocal, and if the age and ages to come suffered from this neglect, Milton also was led by it into certain astringencies of taste that he would probably have escaped in a more sympathetic society. His extreme individualism is not altogether a strength.

We cannot take space to linger over the many felicitous paragraphs of this third essay—the merit of Waller, the comparison of Milton's periods with those of Virgil and Dante and Spenser, the delicate, unexpected dramatic sense evinced in the speeches of "Paradise Lost," etc. In one point Professor Mackail's hero-worship has, we think, led him astray. He quotes the well-known statement of Edward Phillips in regard to Milton's estimation of "Paradise Lost" and "Paradise Regained":

> It [the later poem] is generally censured to be much inferior to the other, though he could not hear with patience any such thing when related to him.

To take these words, says Professor Mackail, as meaning that Milton thought "Paradise Regained" the greater of the two epics, is a "strange and obstinate misapprehension." Milton heard them with impatience, he thinks, because they were true. We submit that the traditional interpretation is more plausible.

But, in the end, Professor Mackail's work is rather to be valued for its general suavity of tone than judged in accordance with the correctness or originality of its separate ideas.

Science.

THE AMERICAN PHILOSOPHICAL SOCIETY.

Philadelphia, April 26.

The annual General Meeting of the American Philosophical Society, the oldest scientific body in the country, was held here April 22-24. The president, Dr. W. W. Keen of Philadelphia, and vice-presidents, Prof. W. B. Scott of Princeton, and Prof. A. A. Michelson of Chicago, recent recipient of the Nobel prize, took turns in conducting the sessions. Notable among the foreign visitors were the Rt. Hon. James Bryce, the British ambassador at Washington, and Prof. Christian Hülsen, a member of the Imperial German Arcbæological Institute of Berlin, who has been in charge of the excavations of the Forum in Rome. The following new members were elected: Louis A. Bauer, William Howard Taft, Washington, D. C.; Marston Taylor Bogert, Hermon Carey Bumpus, Dr. Alexis Carrel, A. V. Williams Jackson, New York; Edwin Brant Frost, Williams Bay, Wis.; Robert Almer Harper, Charles Richard Van Hise, Madison, Wis.; William Herbert Hobbs, Victor Clarence Vaughan, Ann Arbor, Mich.; Abbott Lawrence Lowell, Boston; William Romaine Newbold, John Frederick Lewis, Charles Bingham Penrose, Philadelphia; Francis Darwin, Cambridge, England; Hermann Diels, Emil Fischer, Berlin; Friedrich Kohlrausch, Marburg; Wilhelm F. Ph. Pfeffer, Leipzig.

The evening of April 23 was devoted to a celebration of the centenary of Charles Darwin, who was a member of the society, as was also his grandfather Erasmus Darwin. The British ambassador spoke as one having authority since when a student in England he had a personal acquaintance with Darwin. He gave a number of personal reminiscences and described the reception of the "Origin of Species," which was universally discussed not only among the educated classes but by the common people as well. Prof. G. L. Goodale of Harvard considered "The Influence of Darwin on Natural Science"; and Prof. G. S. Fullerton of Columbia, "The Influence of Darwin on the Mental and Moral Sciences." At the suggestion of Ambassador Bryce, the society cabled congratulations to two close friends and collaborators of Darwin, Sir Joseph Dalton Hooker and Alfred Russel Wallace, both members of the society and still living in England.

Among the scientific papers of general interest was one by Dr. L. F. Kebler on the unsuspected presence of habit-forming agents in beverages and medicines. He called attention to the fact that a large number of soft drinks contain not only a considerable amount of caffein, but, in many instances, small quantities of cocain. Cocain has also been found in agents intended for the treatment of the tobacco habit. The same pernicious drug has been detected in medicine used in the treatment of hay fever, asthma, and in relieving pain resulting from dentition in infancy. Morphine, opium, chloral hydrate, heroin, and codein singly or combined have also been found in many other medicines, particularly those intended for the treatment of epilepsy, rheumatism, asthma, gastric troubles, and ailments of infancy and childhood.

Dr. L. A. Bauer of the Carnegie Institution of Washington read a suggestive paper dealing with the connection between the various manifestations of solar activity (*e. g.*, sun-spots) and the so-called magnetic storms which at times affect compass needles simultaneously all over the earth, which even interrupt telegraph and cable lines, and which are usually accompanied by fine auroral displays. One of the most severe of these magnetic storms was that of October 30-November 1, 1903, which was violent enough to derange the mariner's compass at certain places by as much as three degrees, and which was said to have caused a temporary suspension of the electric car line in Zürich. The effects of this particular storm lasted for fully two months after its apparent subsidence, the earth's magnetic condition being below normal, until towards the close of the year (1903). Prof. George E. Hale, director of the Carnegie Solar Observatory at Mt. Wilson, Cal., has discovered that sun-spots are centres of violent cyclones.

But however intensely magnetic these whirling cyclones may be, a simple calculation shows that they are far too distant to affect appreciably our most sensitive magnetic instruments. Yet the various curves exhibited indicate indisputably that some relation exists between solar activity, as evidenced, for example, by sun-spots, calcium flocculi, solar eruptions, prominences, etc., and the earth's magnetic fluctuations. The variations in the solar and the terrestrial magnetic phenomena follow each other closely. One of the most important of the inferences drawn is, that an increase in sun-spot activity is accompanied by a decrease in the earth's magnetization, or that the magnetization superposed on the earth's magnetic field during solar outbreaks is opposite to that of the earth's own field. It appears questionable whether the earth's magnetism ever settles down precisely to its former condition after the occurrence of a magnetic storm. The facts are not yet sufficient to draw a definite conclusion whether solar activity and magnetic storms stand to each other as cause and effect or whether they are both effects of the same cause.

Saturday afternoon was set aside for a "Symposium on Earthquakes," and the following papers were read: "Introduction, Classification, Discussion of Volcanic Earthquakes; Description, with illustrations, of the Charleston, S. C., and Kingston, Jamaica, Disasters," Prof. Edmund O. Hovey, New York; "The Present Status and the Outlook of Seismic Geology," Prof. William H. Hobbs, Ann Arbor; "Conditions Leading to Tectonic Earthquakes, Instruments Used in the Study of Earthquakes, Suggestions for a National Seismological Bureau," Prof. Harry F. Reid, Baltimore. Prof. Reid declared that the work of a national bureau would be very varied. It should collect data regarding all felt earthquakes, and make a geological examination, in special cases, of the regions where earthquakes occur. The instrumental records from the whole country should also be collected and studied to throw light on the nature of the earth's interior, and to discover the centres of earthquake disturbances in the surrounding oceans. This would require the general coöperation of many departments of the government.

Edwin Swift Balch explained why in his opinion America should reexplore Wilkes Land. Lieut. Charles Wilkes, U. S. N., first announced to the world in 1840 the existence of a great Antarctic continent, along whose shores he sailed for a distance of 1,500 miles, a coast known as Wilkes Land. It has not been visited again. Sir James Clark Ross, Sir Clements R. Markham, and Capt. Robert F. Scott, R. N., no one of whom has been there, declare emphatically that Wilkes Land does not exist and should be expurgated from the charts. It should, therefore, be looked on as a patriotic duty for America to verify Wilkes's discovery and get a more careful chart of these shores. Besides geographical discoveries, many other branches of science would be benefited by an expedition to the Antarctic. None of our museums has specimens of the fauna or petrography, etc., of Antarctica, and such collections should be obtained. An expedition to verify Wilkes's discoveries would cost perhaps $100,000; and the best way to start it might be to form an Antarctic committee, composed of representative scientists and explorers.

A paper on "J. J. Rousseau, a Precursor of Modern Pragmatism," was read by Prof. Albert Schinz of Bryn Mawr. He said that Rousseau, like modern pragmatists, starts from the assumption that an idea in order to be pronounced true must yield results, but meaning by results, useful results, or still more precisely moral results. Rousseau, like William James, develops a conception of truth by which he tries to displace the intellectual or rational conception of truth and replace it by a criterion varying according to circumstances. The "sentimentalism" or "rationalism" which Rousseau opposes to the "materialism" of his time, corresponds exactly to the "expedient" or the "humane arbitrariness" which William James opposes to "divine necessity" of modern intellectualism. There is a curious parallelism in the evolution of Rousseau's thought with that of James; and this circumstance will help us to account for their conception of truth and philosophy.

The meeting closed on Saturday evening with a dinner at which nearly one hundred members were present. President Keen presided as toastmaster and the following toasts were responded to: "The Memory of Franklin," President Francis L. Patton of Princeton; "Our Sister Societies," the British Ambassador and President Henry S. Pritchett of the Carnegie Foundation; "Our Universities," President-elect Lowell of Harvard; "The American Philosophical Society," President Keen.

ARTHUR WILLIS GOODSPEED.

A posthumous work of Dr. E. T. Hamy treats of "Les Débuts de Lamarck," with discussion of the work of Adanson, Jussieu, Pallas, Geoffroy-Saint-Hilaire, Cuvier, and other naturalists, most of whom were the author's predecessors at the Muséum of the classic Jardin des Plantes (3.50 francs, Guilmoto). "La Crise du transformisme," by Félix Le Dantec, continues this biologist's severe criticism of the hypothetical methods of Weismann, and, from the strictly mechanical point of view, forms a restatement of Lamarck's essential theory as distinct from Darwin's. Naturally the book runs counter to De Vries's theory of mutations and to other doctrines which seem to have escaped from further reasoning into the realm of accepted traditions among most English writers. The influence of Professor Le Dantec's teaching on the younger scientific men of France ought to result in a different state of things.

Drama.

Tragedy Queens of the Georgian Era. By George Fyvie. New York: E. P. Dutton & Co. $4 net.

From the great mass of contemporaneous record—diaries, letters, memoirs, criticism, etc.—Mr. Fyvie has carefully extracted the various references to the personal and artistic careers of the most prominent actresses of the eighteenth and the early part of the nineteenth century, and put them in consecutive and convenient order. Thus he furnishes in one attractive and, on the whole, instructive book, information hitherto obtainable only in a long course of miscellaneous reading.

It was inevitable, perhaps, that it should be somewhat in the nature of a scandalous chronicle. The author starts out with the assertion that his object was biographical rather than critical, and many of his heroines were far more distinguished for their dramatic abilities than for their private virtues. Nevertheless, it may be doubted whether it is necessary now to rehearse at length the gossip which has been public property for more than a century. Mr. Fyvie seems to have included Elizabeth Barry in his list—although she does not belong properly to the Georgian era at all—for the sake of dwelling upon her notorious connections with Rochester, Etheredge, and others. The publication of the rejected Otway's despairing appeal has more justification. That Barry was one of the chief ornaments of the British stage for a quarter of a century is unquestionable. Whether Otway really experienced all the agony he expressed is less certain. Anne Bracegirdle, who inspired passion in many hearts, counting Congreve, Lovelace, and Nicholas Rowe among her suitors, was much more circumspect in her conduct than most of her fair associates. She must have been a bewitching comedian, but her name will live, perhaps, in history chiefly on account of her attempted abduction by Hill and Lord Mohun and the trial of the latter by his peers for his share in the murder of the unlucky actor, Will Mountford. Of the official proceedings in this notorious case Mr. Fyvie gives some interesting details. Nance Oldfield, like Peg Woffington, has been made a heroine of modern comedy, and her name is therefore more familiar to the general public than those of many of her rivals. She shone both in tragedy and comedy,

and must have exerted a most uncommon personal charm, inasmuch as her notoriously irregular mode of life was no bar to her reception in respectable social circles, or at court, which possibly is less remarkable. Her popularity and her prudence were proved by the large estate which she left behind her and the valuable art collection which she owned.

The acknowledged preëminence of Susannah Arne (Mrs. Cibber), in such diverse parts as Juliet, Constance, and Lady Macbeth, justifies Mr. Fyvie's high estimate of her, but it was scarcely worth while to dwell for so long on the sordid story of her wedded life with the infamous Theophilus Cibber, or the endless squabbles between Covent Garden and Drury Lane. The quoted letters of Garrick and others are, however, illuminative of the period. The paper on Mrs. Pritchard, who stands second only to Mrs. Siddons, is an excellent one, and full justice is done to Mary Ann Yates and Mrs. Spranger Barry. The stress laid upon the "shrieks" of the latter suggests that her vigor was at least equal to her inspiration. Elizabeth Pope enjoys the distinction of being the last, and one of the best, of Garrick's Cordelias. One of the freshest chapters in the book is that devoted to Mrs. Inchbald, an actress of only ordinary capacity, but a woman whose varied ability, generous character, and high courage entitle her to remembrance. Mr. Fyvie's account of Sarah Siddons is full and adequate, but, of course, he has no new information, or estimate, to give concerning her. He would have followed a more dignified course, if he had imitated some of her other biographers in ignoring the wretched Galindo episode, which, at the worst, appears to have been only the result of mistaken confidence in a designing rascal. It certainly ought not to be treated as a significant incident, in a consistently worthy life. Julia Glover and Eliza O'Neill, who complete the list, are of lower artistic rank than most of their companions, but the latter is notable as the original of the Fotheringay in Thackeray's "Pendennis."

"The Writing on the Wall," by William J. Hurlbut, which was produced in the Savoy Theatre on Monday evening, has many of the characteristics of "The Fighting Hope," by the same author. In spite of its assumption of serious purpose, it is actually an inferior specimen of sensational and ultra-sentimental melodrama. Its violence and insincerity are emphasized by the artificial acting of Miss Olga Nethersole, whose indisputable natural ability is only discernible at rare intervals beneath the mass of her elaborate affectations. Briefly, the theme is the conscienceless greed of slum landlords, with an incidental attack upon the Trinity Church corporation; but the general treatment is so juvenile and inexpert in its unreasonableness and its platitudinous preachments—not to speak of its essentially undramatic quality—that the excellence of the object counts for little. Miss Nethersole plays the entirely theatrical part of a saintly and deeply wronged wife and devoted mother, whose only child is burned to death at a Christmas-tree festival which she has prepared for the tenants of one of the filthy warrens owned by her husband, whose avarice, in repainting old fire escapes instead of providing new ones, is responsible for the catastrophe. Manifestly there is here the material for an effective drama, and it affords Miss Nethersole—at the moment of her realization of the child's fate—an opportunity for one of those manifestations of agonized emotion in which she excels. At this crisis she approached the truth of nature more nearly than at any other time, and was correspondingly impressive. Throughout the rest of the play her mannerisms were fatal to all illusion. The only really notable acting in the representation was that of William Morris as the grasping landlord. His portrayal of a hard, strong man, suddenly shattered to his foundations by the fear of imminent ruin, disgrace, and punishment, and the loss of all that had made life dear to him, was exceedingly striking and able. Mr. Hurlbut has a sense of theatrical situation, but has everything to learn about the true principles of dramatic construction.

An experimental performance of a somewhat adroit translation of Brieux's "Les Hannetons," made by Laurence Irving, was given by Mr. Irving in the Hackett Theatre on Tuesday afternoon, to the evident pleasure of a special audience. The piece is an intimate and veracious study of the daily squabbles of an ill-mated pair, living in illegitimate union, of which the moral seems to be that such voluntary bonds, however lightly assumed, are apt to become intolerable, but unbreakable, fetters. This is, in its way, wholesome teaching, but the main object of the play is amusement, not instruction, and the cynical humor of it all, with the frequent flashes of characteristic Gallic wit, provoked much hearty laughter. But the tale is, in its essence, sordid, unsympathetic, and not well suited for general public entertainment. It was well played, on the whole, by Mr. Irving and his wife, Mabel Hackney, the latter furnishing a lively sketch of a vixenish and jealous temper.

Music.

OPERATIC MANAGEMENT.

The end of Heinrich Conried's troubled career suggests the reflection that few positions are so difficult to fill to the satisfaction of everybody as that of an operatic manager. He has to defer to the social element among his patrons as well as to the wishes of the music lovers. He has to deal with a large number of singers of various nationalities, each of whom clamors for special privileges. The unions to which the orchestral players, the chorus singers, and the stage-hands belong are all likely to harass him in turn, as they did Mr. Conried. He has to scour all Europe and America for new singers. He is likely to be stunned on finding that he has wasted a great deal of money on an artist who, while popular in Paris, London, or the cities of Germany, fails to please in New York. He has to arrange his repertory so as not to give the same operas too often on the same day in the week, or to deprive the subscribers of a certain week-day of the opportunity to hear this or that singer in a favorite rôle. He has to meet the assaults of all his artists, each demanding an advance in emoluments once a year; he is harassed hourly by the bugaboo of "sudden indisposition," which makes it necessary—though sometimes almost impossible—to change the opera at the last moment. In short, uneasy lies his head as if he wore a crown.

In addition to these general tasks and tribulations, Mr. Conried had troubles of his own. At one time he was almost paralyzed with fear lest his most profitable tenor should be ostracised. Another time a California earthquake upset his plans and changed a big surplus into a deficit. An upheaval of a different kind nearly frustrated his plans for "Parsifal," but luckily he won, and put $200,000 into his coffers. On the other hand, he lost the battle for "Salome," from which he had expected similar results; and this was one of the nails in his coffin. Overwork and other factors helped to undermine his health, and when he was asked to resign it was as much because of his impaired ability to discharge his manifold duties as because of the mistakes he was accused of having made. He had been chosen because of his success in managing theatrical and comic-opera companies, and in view of the fact that he knew very little about music or singing, it must be admitted he achieved some remarkable successes. His self-assurance was amazing. At a rehearsal of "Parsifal," when it was pointed out to him that his substitute for bells did not work well, he exclaimed: "Then Wagner composed that badly." He evidently believed with the German comic poet that—

> Bescheidenheit ist eine Zier,
> Doch weiter kommt man ohne ihr.

Operatic management used to be a much less difficult and complicated affair in the good old times. Then all a manager had to do was to find a popular prima donna and the problem was solved. When Catalani was remonstrated with for asking so large a sum that it became impossible to employ other artists of talent, her husband exclaimed: "Talent! Have you not Mme. Catalani? What would you have? If you want an opera company, my wife with four or five puppets is quite sufficient." Matters had already mended somewhat in the days of the doughty Col. Maple-

son; though Patti asked $5,000 a performance, he found it possible to engage a few other capable artists and a respectable orchestra; but he would have stood aghast at the demands now made on managers by operagoers. The subscribers of the Metropolitan to-day not only insist on having the names of the leading sopranos, contraltos, tenors, baritones, and bassos of the world in the prospectus, they want the scenery, the stage management, the chorus, and the orchestra to be as good as at Bayreuth or Munich. Admittedly, the success of the season just ended was due largely to the improvements of this kind made by Mr. Gatti-Casazza in the Italian operas, and in the German operas by Mr. Dippel who bought up the best players in town and searched all Germany for the best chorus singers.

Maurice Grau was the man who complicated the managerial functions in an unprecedented manner by abandoning the old plan of singing all operas in Italian. He engaged French singers for the French operas and German singers for the Wagner music dramas. It was a great step in advance, but it was a dangerous policy to pursue, for it made the public and the critics more and more exacting. If the Wagner operas were not done so well as at Bayreuth, Gounod so well as in Paris, Verdi so well as in Milan, the subscribers growled and wanted to know why—in fact, they expected all operas to be better presented here than abroad, and better they generally were, at least so far as the singing was concerned. When Mr. Conried entered on his duties he tried to degrade the prima donnas and tenors to a less commanding position, but soon found that this policy was suicidal. The best operas, with all-star casts, was what the public demanded, and if the cost was greater, who cared?

The growing fastidiousness of the public to which the manager has to cater, is illustrated in the case of Mr. Hammerstein at the Manhattan Opera House. He knew that such operas as "Pelléas et Mélisande," "Louise," "Thaïs," "Le Jongleur de Notre Dame" had been successful only in Paris. He concluded that their failure elsewhere had been due to their not having been interpreted in the genuine French spirit, so he imported a Parisian company, and found that, apparently, these were the very operas New Yorkers had been hungering for. So much has he been impressed by this circumstance that after a two years' trial he has decided to make French opera the mainstay of the next season, relegating Italian opera to a second place.

The latest problem has arisen from the growing competition in the operatic world. The leading singers refuse to sign, except for a given number of performances. But Mme. Tetrazzini, for example, draws full houses in only half a dozen operas and Mr. Hammerstein cannot ask his subscribers to hear her week after week in the same operas. Partly for this reason he built his opera house in Philadelphia, and is about to build one in Brooklyn; at these houses he can carry out his contracts with the singers without offending the subscribers. It is for the same reason that the Metropolitan Opera Company now performs not only here and in Philadelphia, but in Baltimore and Washington, beside promising aid to Boston. All this entails much additional work on the management—quite enough to keep two men busy.

"Les Chansons de Croisade," by Joseph Bédier, successor of Gaston Paris, with the collaboration of Pierre Auhry for the tunes, is a work of value in the history of crusaders as well as of music. Professor Bédier's name is enough to justify this unique excursion into a side field of erudition. Only 300 copies have been printed (10 francs, H. Champion).

Prof. Romain Rolland, who is becoming one of the most voluminous as well as competent writers on music, publishes "Beethoven," with twelve engravings, mainly portraits, in the Éditions d'Art, series of Thinkers (5 francs, E. Pelletan).

Marcella Sembrich will begin her farewell concert tour in the United States on October 18 next. She will also visit Mexico and Cuba in the first two months of next year.

For his farewell recital at Carnegie Hall Saturday afternoon, May 1, Ossip Gabrilowitch, the Russian pianist, has arranged a programme of compositions by Beethoven, Chopin, Schubert, Grieg, Josef Hofmann, Schioezer, and Gabrilowitch, the last-mentioned being the pianist's "Caprice Burlesque," opus 3. Gabrilowitch has been in this country the entire season, and his tour has taken him to the Pacific Coast and as far south as Texas. He will sail for Europe the middle of May.

Heinrich Conried, former director of the Metropolitan Opera House, died at Meran, Austria, April 27. He was born at Bielitz, Silesia, in 1855, and early made the stage his goal. After acting with some success in Germany, he came to America, and at first managed a small theatre on the Bowery. Later he took charge of the old Germania Theatre, then of the Thalia Theatre, and finally of the Irving Place Theatre. In all these places he maintained good stock companies, which were reinforced by the importation of distinguished German actors and actresses. He produced in an excellent way the best German plays, both classical and modern. His success in these theatres led to his appointment in 1903 as manager of the Metropolitan. His work as director of this opera house is the thing which has made his name most widely known. Perhaps his greatest achievement was the production of "Parsifal." Other novelties which he brought out were "Die Fledermaus," "Der Zigeunerbaron," "Fedora," "La Damnation de Faust," and "Adriana Lecouvreur."

Art.

A MUSEUM OF HORRORS.

The directors of the Museum of Industrial Art at Stuttgart have had the happy thought of exhibiting gross errors in taste (*Geschmacksverirrungen*). Instead of teaching by examples of what to imitate, the idea is to show the public and art students what to avoid. With German thoroughness, a catalogue of this display of artistic aberrations has been drawn up by Professor Pagaurek, under such various heads as wrong uses of material, fantastic treatment, freaks in decoration, and so forth. As the show is one of industrial art, it contains only monstrosities in that sphere: knock-kneed tables and all kinds of misapplied ingenuity in furniture, china, and ornaments, with wild extravagances in decoration. The whole is a kind of Dantean circle, about which the student and the apprentice are led in order to frighten them into the paths of artistic righteousness. What German youth most inclined to æsthetic debauchery would not be given pause by what is probably the *chef d'œuvre* of the exhibition—an iron stove in the guise of an antique suit of armor! The wicked—or the envious—might say that Teutonic taste leads the whole world of art in producing the thing that should not be. A kind of irresistible weakness for the bizarre, for over-ornamentation, for applying the methods of wood-carving to sculpture, seems, indeed, to trouble modern German art. The Empire suffers from a plague of inferior statues—though enriched also by some majestic ones—and if the Kaiser had wished to help out this Stuttgart exhibition, he could have drawn freely upon what is irreverently called his *Denkmalmarkt* in Berlin. But say what one will, we have in this holding up of a mirror to bad taste a brave attempt to do what other countries may as much need but lack the courage to undertake. If Germans make the artistic blunders, it is Germans also who have the critical detachment to assemble them where all may see and read the lesson.

Applause for this bold experiment comes from the land of impeccable artistic taste. Miguel Zamacois writes in the *Figaro* with enthusiastic praise of Professor Pagaurek's innovation, and expresses the ardent hope that Paris, and other large cities in France, may speedily have a "Musée National d'Art Répulsif et Anti-Exemplaire." He argues for this, not merely because of its benefit to art workers. He sees in the plan great possibilities of educating popular taste. It is not alone a question of teaching what not to admire, but of liberating the critical spirit and making discrimination necessary. The deadening thing about the ordinary museum

of art is that it lays a heavy hand upon the average visitor, making him a blind worshipper instead of an open-eyed observer and student. Most art collections have the air of official conservers of public admiration. They are to be viewed with humble thankfulness and devout awe, it being expected that the critical faculty will be left with the umbrella at the entrance. Somehow to waken the dormant judgment, so that it will not accept without question whatever works of art are held worthy to be put on exhibition—that, according to M. Zamacois, is the great need. To meet it, he would have the Stuttgart experiment widely imitated, and have professorships of the Ugly as well as the Beautiful. His final ideal is a splendid palace of art over the door of which might be inscribed: "Here one may discuss taste."

If such galleries could be made numerous, they would render museum-visiting a new thing. Instead of the solemn procession of overpowered tourists, sighing before every case or picture, "How lovely!" we should see alert people in eager debate, and should now and then catch the refreshing exclamation, "What a horror!" Of course, if the invitation were openly given to come and condemn, there might as easily be set up a conventional rejection as the conventional acceptance which we now have. Hence it might be well if the horrors were mixed with the triumphs, stimulating the public by leaving it to find out which is which. At all events, an occasional display of the misapplied and the distorted and the perverted in art would be wholesome.

"Van Dyck: Des Meisters Gemälde," edited by Emil Schaeffer (Stuttgart: Deutsche Veriags-Anstalt), constitutes the thirteenth volume of the excellent and deservedly popular series Klassiker der Kunst in Gesamtausgaben. The text of Schaeffer, though not inappreciative, regards Van Dyck as vastly overestimated by the general public. The reproduction of the pictures is excellent.

"La Cathédrale de Chartres," with thirty-eight engravings and two plans, by René Merlet, and "Le Château de Coucy," with thirty-six engravings and two plans, by Eugène Lefèvre-Pontalis, are two new volumes in the cheap series of Petites Monographies des grands edifices de la France (2.50 francs per volume, bound in supple cloth, H. Laurens). The previous issues dealt with the Abbey Church of Vézelay, the Château of Rambouiliet, and the Hôtel des Invalides. The editorship of M. Lefèvre-Pontalis, professor at the École des Chartes, is a warrant of competence in art and archæology; and no useless talk mars the clear explanations. Similar praise may be given to the rival series of Notices historiques et archéologiques sur les grands monuments (2.50 francs, D. A. Longuet), which publishes its second number, "La Cathédrale de Notre-Dame de Paris," with eighteen inset photo-reproductions and a plan, by Marcel Aubert, *archiviste-paléographe* at the Bibliothèque Nationale. The first number was devoted to the Basilica of Saint-Denis. In accuracy and completeness, these handbooks constitute a distinct advance beyond the guides of the past.

"Les Sforzas et les arts en Milanais (1450-1530)," an octavo book of more than five hundred pages, with engravings by Gustave Clausse, architect and member of the Royal Fine Art Academies of Italy, is a work of original investigation in art history of the renaissance (E. Leroux).

The British School of Archæology at Rome will begin in May a systematic study of the prehistoric remains in the island of Malta, whose Governor has granted special facilities. Here, as in Sardinia, several new examples of dolmens have been discovered recently, but the most important monuments are the large sanctuaries of Gigantia, Hagiar-Kim and Mnaidra, which seem first to have served as burial places, and then, according to Evans, to have become the seat of a form of hero worship. These investigations will be carried on by Dr. T. Ashby, the head of the school, assisted by T. E. Peet, while Dr. McKenzie continues the work in Sardinia.

At a meeting of the American School of Classical Studies held in Athens last month B. H. Hill spoke of the operations undertaken at Corinth which were devoted to the exploration of four chief centres—the ancient Agora, the fountain of Glauce, the theatre, and the fountain of Peirene. On the Agora site were discovered the foundations of a small sanctuary with remains of friezes, architraves, and cornices. At the extreme left was found a colonnade of fifteen Corinthian columns, the capitals of which bore a simplified form of acanthus ornament, with lions' heads, and claws and wings. Fragments of the pediments were also found in quantities, so that it is hoped that a complete restoration will be possible. Near the colonnade a stairway came to light which leads to a large temple situated sixty yards to the west. In the process of draining off the waters of the fountain of Peirene the excavators came upon walls of an aqueduct belonging to the early years of the Christian era. Four more chambers, or reservoirs, were laid bare, in addition to those unearthed in 1898. These are carved out of the rock and vaulted, and probably date from the period of Periander, who was tyrant of Corinth about 500 B. C. Four statues were unearthed among the early Christian débris. An important discovery is also the finding of the ancient way to Sicyon, which makes possible an accurate orientation of several remains on the site, since Pausanias mentions some buildings in their relation to the Sicyonian road. This evidence confirms the conjectural identification which had already been proposed by the excavators with regard to the Doric temple of Apollo, and the fountain of Glauce.

At a recent meeting of the German Archæological Institute in Athens, Dr. Dörpfeld gave an account of his discoveries at Leucadia, which he identifies with the Homeric Ithaca. Considerable quantities of earthenware, weapons, domestic implements, and smaller objects have been found in the course of the excavations. These show great similarity to the objects discovered at Zerelia by Mr. Ware, at Sesklos by M. Tsountas, and in the Second City of Troy. Dr. Dörpfeld thinks them the work of an Achæan civilization in northern and western Greece, contemporary with the Mycenæan age. The character of these remains is relatively primitive, both as regards their artistic value and their adaptation to practical needs; but this difficulty the excavator tries to explain by the theory that the realm of Odysseus was merely an outlying portion of the Achæan civilization.

At a meeting of the French Archæological School in Athens, M. Holleaux gave a summary of the explorations at Delos. Within the sacred enclosure, next to the temple of the Delians, which had already been identified, traces of two large edifices have been uncovered. To judge from the site of the remains and from their character, they seem to have belonged to two other temples. The building nearest the Temple of the Delians has been identified as the Temple of the Athenians. A large semi-circular marble base, with sockets for the reception of seven statues, has been discovered, indicating that this was the "Temple of the Seven Statues," as the Temple of the Athenians was commonly called. Moreover the architectural and sculptural fragments, of which a fairly large number have come to light, as well as some Attic inscriptions, leave no doubt that the edifice was the work of Athenians. The other building to the north of the Temple of the Athenians, M. Holleaux identifies as the "poros temple," mentioned in the inscriptions. Unfortunately, not a single stone of this building remains above ground. This fact is probably due to the nature of the porous stone, whose loose texture and friability make it easy to quarry for other buildings and less able to withstand the inclemencies of the weather.

The Groller Club will hold till May 8 an exhibition of the engraved work of the late Edwin Davis French. Among the exhibitors at the dealers' galleries in this city are etchings in colors at Brandus's.

From Bonn the death is reported of Ernst K. aus'm Weerth, for many years director of the Rhenish Provincial Museum. His archæological works include "Kunstdenkmäler des Mittelalters in den Rheinländern," "Bad der römischen Villa zu Alienz," "Mosaikboden von St. Gereon zu Köln," "Waldmalereien des christlichen Mittelalters zu Köln."

Mlle. Eugénie Hautier, a pupil of Robert-Fleury and Isabey, has died at the age of eighty-seven. She exhibited frequently at the Salon in the sixties, but since then had led a retired life

Another French artist whose death is announced is Jean-Henri Zuber at the age of sixty-four. He studied under Gleyre, and became a member of the Société des Artistes Français. Four of his pictures are in the Luxembourg.

BOOKS OF THE WEEK.

Adams, Joseph H. Harper's Machinery Book for Boys. Harper. $1.75.

A Gentleman from Mississippi: A Novel founded on the play. J. S. Ogilvie Publishing Co.

American Political Science Association Proceedings. December 28-31, 1908. Baltimore: Waverly Press.

Books for Travelers by Clara C. Perkins

The Builders of Spain

The author has a full knowledge of her subject; and the treatment is interesting. While appealing especially to those who have visited Spain, its elaborate illustrations, historical and architectural comment make this an admirable guide to intelligent sightseeing.

French Cathedrals and Chateaux

A sumptuous and popular work similar to "The Builders of Spain" in scope, appearance, and careful arrangement.

"Of genuine artistic value. Notable for its excellent arrangement."—Boston Herald.

Each, with Photogravure frontispieces and 62 half-tone plates. 2 vols, 8vo. $5.00 net, boxed, carriage extra.

HENRY HOLT & COMPANY, 34 W. 33D STREET, NEW YORK

The Most Notable Book of the Year

The M. P. for Russia

Reminiscences and Correspondence of Mme. OLGA NOVIKOFF

Hundreds of new letters from Gladstone, Froude, Kinglake, Freeman, Charles Villieres, Tyndall, and other famous men. 2 vols., 8vo. 60 Illustrations. $7.50 net.

In these intensely human and absorbingly interesting volumes is told the story of how one of the most remarkable women of our time, fired with a great patriotic idea, used her social position, her beauty, and her fascinating personality to its realization. Men of genius, statesmen, historians, litterateurs, the most brilliant and influential of their day, fell under her charm, and united in helping her to realize the great aim of her life—a rapprochement between Great Britain and Russia. The meeting of King Edward and the Tsar at Reval last year was the crown of a life work which will be placed among the great achievements in the political history of Europe.

NEW YORK, THURSDAY, MAY 6, 1909.

The Week.

Every time a Democratic Senator is caught with protectionist principles on his person, there is great hilarity in Republican ranks. But the country at large fails to catch the full force of the joke. Senator Aldrich and his lieutenants take delight in "smoking out" the Democrats, as if the sole duty of a legislator were to show that his opponent is no less a fool or a rascal than himself. It is not Democratic opposition that has forced tariff reform upon the Republican party, but a popular upheaval that was strong enough to make the Republicans write revision into their last national platform, and their Presidential candidate pledge himself solemnly. From the Democratic party the country has long ceased to expect either efficiency or common sense. If Senator Aldrich shows the Democrats to be protectionists at heart, he merely proves that the Republican party has infected its rival with a lust for tariff plunder equal to its own.

It needed only the speech of Senator Scott of West Virginia last week to illustrate to the full the intellectual darkness which envelops the mind of the "standpatter." Why alter the Dingley act at all? We had great industrial prosperity after 1907, did we not? The Dingley bill was enacted in 1897, was it not? Then the Dingley bill caused the prosperity after 1897. We had hard times between 1893 and 1897, did we not? There was no Dingley law in that period, was there? Then the hard times between 1893 and 1897 were caused by the absence of a Dingley law. This being so, why change the law at all? Why not go on to the end of time, with that heaven-inspired measure showering prosperity on the American people? We are aware that we do not do full justice to the *ad captandum* argument, the misstatement of fact, and the mental ineptitude displayed by the Senator from West Virginia; but our brief summary will fairly reproduce his logical processes, and we refer to it here as an illustration of a state of mind which, we have some hope, is passing away with other ancient superstitions.

The time, we may suppose, will come when American schoolboys who read of such arguments being employed in Senatorial debate will smile incredulously, as they do to-day when told of the similar arguments over the divine right of kings. Senator Scott is interesting chiefly as a relic, and as such he may be worth preserving. That his instructive speech should have reached its climax in the exposition of the way in which the Wilson bill of 1894 caused the panic of 1893, was to be expected. A rude and annoying Senator of the opposing party, who volunteered to accept Mr. Scott's demonstration that the Wilson law of 1894 was the cause of the panic of 1893, provided the West Virginia Senator would extend his argument and admit that the Payne tariff bill of 1909 caused the panic of 1907, elicited no response. Yet that invitation may hereafter be accepted, if the Scott type of mind continues to be represented in the Senate. One can at least conceive some oracle, say in 1923, explaining how everything went well until, in October, 1907, on the sudden suspicion that, a year and a half later, protective duties might be revised, the Knickerbocker Trust Company closed its doors, the Westinghouse Electric failed, the New York banks issued Clearing House loan certificates, and the mills began to cut down production and discharge their hands.

The beleaguered missionaries in Asia Minor could receive no more cheering message than the news of Oscar S. Straus's reappointment as Ambassador to Turkey. Missionaries in that land of terror and bloodshed always speak of the halcyon days of Straus. The lately-deposed Sultan has found it easy enough to pull the wool over the eyes of the average Minister to his court, and Mr. Leishman—the retiring Ambassador—did not satisfy Americans with interests in Turkey, any more than did that curious Minister from Texas whose chief boasts were that he was a rebel who had never surrendered or taken the oath of allegiance, and that he could snuff out a candle at thirty paces four out of five times. Mr. Straus, however, always stuck to his contentions and to the Sultan like a leech, and missionaries and teachers everywhere in Turkey looked to him with confidence. The country is to be congratulated that, in this time of upheaval and revolution, it will be represented at Constantinople by a man so admirably fitted for the post.

W. W. Rockhill's transfer from Peking to St. Petersburg is another piece of good news, in refreshing contrast to one or two other recent diplomatic appointments. For some time past there has been a feeling that Mr. Rockhill was less interested in our trade relations with China than a man of different training would be. That some one else would go to Peking has been known from the beginning of Mr. Taft's administration. It would, however, have been a genuine misfortune if a man of Mr. Rockhill's long diplomatic experience and rare knowledge of Oriental languages had been dropped out of the service. At St. Petersburg his linguistic attainments and his knowledge of the Far East will still be of great value to him and to the country. J. W. Riddle, the present Ambassador to Russia, is another man with a rare talent for languages, who worked his way up after thirteen years of service at Constantinople, Cairo, Belgrade, and St. Petersburg, to an ambassadorship, and his retirement would be a cause for earnest protest were it not that the delicate state of his health has made the tender of his resignation something more than the usual courtesy to the incoming President.

That all the cities along the Mississippi, from New Orleans to St. Paul, are liable to attack and demolition in case of war with a foreign Power is the startling information that is now being disseminated. Not only this but many of the cities on the tributaries of the Mississippi, such as Council Bluffs and Sioux City on the Missouri, Cincinnati and Louisville on the Ohio, and many others, are in like danger.

This is the alarming news being spread from New Orleans to Washington. The Red River thrills with it, the Yazoo Valley is filled with alarm. The Mississippi delta is shuddering daily at the thought of a battleship bombarding its levees. It is fear of the deep wa-

terway which Congress is constructing that is causing this panic in the Mississippi Valley, and is leading Milwaukee's brewers to tremble, lest the warships, after passing the New Orleans forts in the best manner of Farragut, should sail on up past Chicago into the Great Lakes, picking up coal and food on the way from unsuspecting river transports. Now, the foregoing is not the plot of a new play entitled "An American's Home on the Mississippi"; it is a genuine statement of a propaganda to-day carried on in New Orleans in order to induce Congress to appropriate money "on a great scale" "for a powerful fortified naval base at New Orleans." We have always felt that this big-navy mania, this fear of conquest to which the Anglo-Saxon nations suddenly fall prey, was a species of madness. After hearing of New Orleans's fears for St. Paul's safety from naval attack, we are certain that it is nothing else than insanity—but calculated insanity.

The story of the Sugar Trust's stealings from the government and the restitution it has been compelled to make, brings out more than the old truth that corporations have no soul. It is also evident that some of our largest corporations have no face to blush with. For ten years and more the stealing went on, with the indubitable connivance of officers of the company who were powerful enough to stop the practice if they had so chosen. But here again men who would be horrified at the idea of theft in their private character, found it clever and legitimate to resort to the meanest form of theft, in behalf of the corporation they served.

The Constitutionalists in Turkey are determined not to repeat their error of last July. Mistaken clemency or mistaken caution made them accept a compromise with the old order. The cost measured in human lives has been revealed during the past three weeks in Asia Minor and elsewhere. The initial error is now being repaired. Abdul Hamid is removed from the scene, and upon those who aided him to stir up mutiny and massacre, stern punishment is being visited. Kipling and his school have popularized an argument against liberty for the greater portion of the human race. It consists in one word: "Oriental." When the East was created, the inhabitants thereof were doomed to servitude in perpetuity. Reaction naturally seizes upon the hackneyed argument: "In spite of Constitutions and Parliaments, the East will always be the East." This is own cousin to the argument that the iniquities of the Czar's rule are justified by the fact that when you scratch a Russian you find a Tartar. The Young Turk leaders seem to have accepted the charge of being Orientals with a certain grim humor. When Abdul Hamid's chief eunuch was hanged high on Galata Bridge for the people to gaze at, even as Haman was hanged, the desire to impress the Oriental mind was evident. When the murderers of a member of the Turkish Parliament are put to death on the precise spot where their victim fell, we catch a distinct echo of the Cadi of the Arabian Nights, who had transgressors hanged from their own door-posts. But that the Liberal leaders at Constantinople know the nature of the people they deal with is not to their disadvantage.

British capital, frightened by Mr. Lloyd-George's white apron, cups, and blood basin, is said to be contemplating a flight abroad. The rumor need not be taken seriously. In the first place, capital may be fugitive under hostile circumstances, but it has also the habit of fixity. When the Stock Exchange transfer tax was enacted in this State, we all remember how Wall Street was going to move across to Jersey City. In the second place, British capital, even if it would run away, scarcely has a place to run to. On its way across the Channel it may run full tilt into French capital migrating from the Paris Bourse, the inevitable outcome, according to the prophets, of the proposed French income tax. Should they both seek refuge in Germany, the Minister of Finance will welcome them with a broad smile and a knife behind his back. Capital need not deceive itself. The merry game of battleship-building has become world-wide, and wherever it shall go—Spain, Austria, Brazil, Argentina—capital will find finance ministers, chancellors, grand-viziers, and maghzens waiting impatient. Capital cannot run away. It must make up its mind to stay at home and fight. Capital, like labor, must fight against Dreadnought manias, against official incompetence and extravagance, against corporation stealing from the government. All these things must be paid for; and capital pays for them in high taxes as labor pays in high-priced loaves of bread.

The birth of a daughter to the Queen of the Netherlands is, of course, an event of political importance. Yet it is a question whether the natural and long-deferred desire of the Dutch has not tended to exaggerate the possible consequences of failure of issue to Queen Wilhelmina. Vast German ambitions were supposed to be contingent upon the death of Wilhelmina without a successor of her body. Holland has been regarded as essential to the Pan-Germanic ideal which contemplates a Teutonic Empire straight across Europe from the North Sea to the Adriatic. For commerce and war the Dutch harbors would be of tremendous value to Germany. Such an ideal, Germans may cherish or not, but the birth of an heir to the Dutch crown need not interfere with the plan, any more than the absence of a direct heir would have greatly facilitated it. The succession in the Netherlands is definitely regulated. If Wilhelmina had died childless, there were in Germany a number of heirs, second-cousins of Wilhelmina, and their children, to whom the crown would have legally descended. That the accession of a German prince would have brought nearer the danger of absorption by Germany by no means follows. It is almost a natural law for foreign princes to forget their nativity for the interests of the people over whom they are called to rule. Great Britain is not particularly Germanophil because the father of Edward VII was a German prince. If the Kaiser or his successors want Holland, they will have to take it by persuasion or by force in very much the same fashion, whether Queen Wilhelmina's children or her cousins occupy the throne.

In the new Italian Chamber there is one Deputy who will gain prominence as a compact and independent Parliamentary party of one. He is Don Romolo Murri, a priest, whose Radical activities, chiefly in connection with the National Democratic League, of which he is the founder, have brought upon him the penalty of major excommunication. Don Romolo advocates a sharper

separation of Church and state than is now the rule in Italy. The state is to abstain from further interference in the administration of religious funds, and the ecclesiastical properties under its care are to be distributed among associations similar to those contemplated by the French Separation Law. On the other hand, the state is to guarantee freedom of instruction, with the right to pronounce on the scholastic programme. Feeling has been aroused in Rome by Murri's refusal to lay aside his priestly vestments. No ecclesiastical penalty can deprive an ordained priest of his sacerdotal character, and the Church admits the new Deputy's right to retain his priestly garments, while deploring that he should choose to exercise that right. With the strengthened Socialists and Radicals bent on a vigorous anti-clerical policy, the strengthened Catholics bound to resist bitterly, and Don Romolo Murri as an ecclesiastical free lance, Church questions are sure to form an important feature of Parliamentary discussion in the near future.

How rapidly nations forget is illustrated in the case of Portugal, which has experienced during the last half year a succession of ministerial crises. It would be imagined that such a bloodletting as Lisbon witnessed in February, 1908, would sober the country's judgment and turn its serious attention to the crying need of reform. The murder of King Carlos and the crown prince was brought about by the King's attempt to rule as a dictator. But this in turn had been made almost inevitable by the hopelessly corrupt state of parliamentary government. Two political parties, almost equally matched, worked steadily together for the looting of the state. The "rotative" system prescribed that as soon as one party had had its chance at the offices and the bribes, it should make way for the other. The dictator Franco tried to break up this system, the King was assassinated, Portugal for a time hovered on the verge of republicanism, and then it went back to the hallowed system of coöperative plunder. Once more the party of the Regenerators is engaged in regenerating the private fortunes of its leaders, and the party of the Progressists is making its regular recurrent progress through the pockets of the Portuguese people. No attempt is made to conceal the fact that the good old times are back again. People in Portugal must be very much like people in New York, where Senator Depew is again making after-dinner speeches.

TIGHTENING THE TARIFF GRIP.

Developments in the Senate have now gone far enough to show what the leaders of that body are prepared to do with tariff revision. In a word, they would make the tariff rates higher than before, with the only chance of change in an upward direction; and would so complicate and strengthen the administrative machinery designed to harry the importer and oppress the consumer, that the last estate of those unhappy citizens shall be worse than the first. This conclusion is the only one that can be drawn from the duties in the Aldrich bill, averaging slightly above those of the Dingley bill, and from the other proposals of Mr. Aldrich respecting a maximum and minimum tariff, and his sweeping amendments to the administrative sections of the tariff act. The whole performance must finally shatter the confidence, or the hope, which President Taft has cherished that he could "do business" with Senator Aldrich. It is now seen to be true, what an ex-Senator said when told of the inclination of the Administration to trust Aldrich to revise the tariff downwards: "Aldrich could give Taft all the trumps, and as many other good cards as you please, and still beat him!"

That the Rhode Island Senator has all along intended to give the lie to Republican campaign pledges of tariff revision, has now become abundantly evident. He has made himself the very prophet of the "stand-patters." And as if to destroy any last lingering doubt concerning his attitude come the amendments which he introduced last Friday. In his provisions for maximum and minimum tariff rates, he has completely reversed the position taken by both the McKinley bill and the Dingley bill. In them, we had high duties, to be sure, but the promise was held out of getting them reduced in practice, by means of reciprocity agreements. To-day, however, the only possibility of alteration is upwards. We may think Aldrich's level of duties high enough in all conscience, but he proposes to have them increased by 25 per cent. all around, in the case of any or all countries which discriminate against our foreign trade. True, this increase is left to the discretion of the President, and we may be sure that Mr. Taft would not abuse it: but the maximum tariff is made more of as a threat, than the minimum tariff is as an inducement; and in any event, we cannot hope to get a trade arrangement or reciprocity treaty which will lighten the burden of tariff taxes. Aldrich's figures will be the irreducible minimum, if he can make them so.

In the same way, his new Section 3, relating to the methods of collecting tariff taxes, reveals a purpose to make the administrative machinery a still more ready means of injustice. It contains, for example, the proviso that the appraisers may, in certain cases, completely disregard invoices and affidavits, and fix as the legal wholesale price abroad "not less than the wholesale price . . . in the United States, in the open market, due allowance by deduction being made for estimated duties thereon, cost of transportation, insurance, and other necessary expenses." Still more threatening than this, is the quiet proposal of Senator Aldrich to create a Court of Customs, consisting of a presiding judge and four associate judges, at a salary of $10,000 each. To this court shall be taken all appeals from any Board of General Appraisers, and its judgments or decrees "shall be final." That is, recourse to other Federal courts is cut off. Many famous customs suits have been taken to the Supreme Court, and great victories won in the interest of the consumer; but if Senator Aldrich's plan is adopted, a man may have his property taken away from him by this Court of Customs, while his right to appeal to the highest judicial tribunal will be cut off. The intent is obvious. Like all the other tariff schemes, which men such as Senator Aldrich favor, the aim is to tighten the grip of the tariff upon the consuming public remorselessly.

This week's debate and voting in the Senate may easily be critical. The game of the high-tariff intriguers is to secure enough votes to pass their bill very much as it is, on the plea that the measure will be altered for the better in conference between the two Houses. It

is even said that the President has been urged to say nothing at present about the bad features of the Senate bill, in the hope that the conference will insist upon a really honest revision. But we hope that neither he nor any tariff-reform Senator is credulous enough to be taken in by this. If Aldrich can get his measure through, on whatever pretences, without serious opposition, he will lead the Senate conferrees to an unyielding battle with those from the House. The time to attack and check him is before the bill gets out of the Senate. Hence we welcome the statement that a dozen or so of revisionist Republican Senators from the West are to take the floor to expose and denounce the kind of tricky revision which Aldrich has devised. Only by meeting him openly and resolutely, and by refusing to vote for those exorbitant duties which he would levy, in defiance of party pledges and of all decency, can the hands of the Ways and Means Committee of the House be held up, and the way made ready for the emerging from conference of a tariff bill such as the country was promised, and strongly desires.

THE "COMMODITIES DECISION."

When Senator Elkins, in June, 1906, proposed an amendment to the Hepburn Railway Rate bill, forbidding a railway to transport from State to State any commodity (with certain specified exceptions) manufactured, mined, produced, or owned by such railway, he thus described its purpose. It was:

> To divorce transportation from production on the part of the railroads engaged in transporting coal they mined and sold in competition with other shippers, which was a great abuse. This abuse grew into a grievous wrong to independent shippers. I sought to correct this abuse by an amendment confining railroads to their legitimate business of transporting freight and passengers, and prohibiting them from engaging in the transportation of any commodity which they might own except for their own use.

The West Virginia Senator was undoubtedly prompted to his action by the independent coal producers of his State. They complained that conditions were most unfair and destructive to their business when the railways, on whose services the independent miner must depend to get his product to market, were themselves engaged in competitive coal production, and were favoring themselves in the matter of transportation. Quite apart from discriminatory rates, the railways would, it was alleged, find it inconvenient to provide the cars which the independent miner needed. Coal produced by the railroads had the right of way. The "commodities clause" was wholly directed towards the mining industry. It would have applied to such iron mines as were then controlled by the Great Northern Railway; but that company has since divested itself of its ore lands through transfer to a separate corporation and a contract with the United States Steel Corporation. Railways are not engaged in or connected with manufacture on any such scale as to make the "commodities clause" a matter of importance in that direction; and they produce on a large scale nothing but the articles referred to, barring timber, which is expressly excepted from the operation of the law.

The scope and purpose of the "commodities clause," then, are clear, and naturally the law was tested in the case of the coal-mining railways. When the government brought suit in the Federal Circuit Court, almost exactly a year ago, the Attorney-General contended that the prohibition affected coal in which a railway company had any interest, including coal produced by a company any of whose stock the railway held. Counsel for the railways argued that the "commodities clause" not only forbids transportation under such circumstances, but "absolutely outlaws . . . coal in which the railroad company originally had any such interest, no matter how many times the title to it changes within the State of Pennsylvania." On this assumption the argument proceeded that, since the railways could not divest themselves of their heavily-mortgaged coal property without great pecuniary loss, the effect of the clause was "the taking of the defendant's property, corporate rights, and franchises, without due process of law."

With this view of the case the Circuit Court concurred, Judge Gray's opinion of last September being that the clause "invades the right of the State by striking down the liberty . . . to engage in interstate commerce to the fullest extent as to all harmless articles, whether owned or not owned by the carrier, and deprives of their property these defendants, contrary to the letter and the spirit of the fifth amendment to the Constitution." On Monday the Supreme Court reversed the lower court's decision as to the constitutionality of the "commodities clause." It did so, however, by giving a very different interpretation to its scope. In this respect, the Supreme Court does not follow the argument of the Circuit Court, or that of the government, or that of the defence. It declares that ownership of stock in a manufacturing or mining company does not constitute ownership of the commodities produced, and cites prior decisions of its own to that effect. Therefore, the argument that property owned through stock investment would be taken from the railways without due process of law was irrelevant. As to the question of direct ownership of coal or other commodities by a railway company, the act merely provides that they shall not be thus owned while in process of transportation. In other words, the railway must in good faith sell products thus owned by it before transporting them—which involves neither hardship nor confiscation.

Attorney-General Wickersham points out that "the decision does not sustain the full contention of either the government or the carriers"; also that "it sustains the principle contended for by the government, that Congress has power to prohibit a carrier from carrying, in competition with other shippers, commodities which the carrier owns or in which it is interested." Indeed, Mr. Wickersham believes that, under the decision, Congress itself has the power, if it sees fit to exercise it, to extend the prohibition to products of companies in which the railway has merely a stock interest.

The probability or improbability of such action depends largely, we should say, on how the railways hereafter use the opportunities opened by indirect ownership. It may be made, by unscrupulous use, a real abuse and a grievance to both competing producers and the consuming public; or it may be so exercised as to conform to the principles of equity and fair play. For ourselves, in view of the extent to which power over traffic and prices has been extended in this country, through purchase of stock in one corporation by use of the credit of another, we cannot regard it as unfortunate that this particular weapon is left in the hands of the national legislature. The "industrial amal-

gamation craze" of 1899 and 1901, the Northern Securities incident, and the more recent exploits in the field of railway corporations by Mr. Harriman, are landmarks which at least impress on the public mind the value of a power reserved in the hands of the people.

THE ENGLISH BUDGET.

The finance of English Liberalism was confessedly put to its trumps in the budget laid before the House of Commons by the Chancellor of the Exchequer last week. The financial record of the party had been better than of the Conservative Ministries immediately preceding. Until the demand for enormous sums for the navy, and the swelling expense of old-age pensions, disturbed the equilibrium of the budget, the Liberals had both remitted taxes and reduced the public debt. During the three years that Mr. Asquith was Chancellor of the Exchequer, the national debt was reduced at the rate of $75,000,000 a year. In 1903, the total was $3,800,000,000; it is now $3,480,000,000. This involves a diminution in the yearly interest charges to the amount of nearly $10,000,000. That was good financiering. But what the Conservative leaders had all along been hoping was, of course, that the Liberals would be driven into abandoning the policy of free trade. If only Mr. Balfour could see the Liberals make a beginning of tariff taxation, with incidental protection, his cup would run over. But that kind of net is spread in vain before any Liberal Chancellor of the Exchequer. More sagacious as well as more honorable than our own Democrats, he recognizes party suicide when he sees it, and knows that it is better to fail, temporarily, with a sound policy, than to attempt to get on for a time by compromise, trickery, and self-stultification.

The figures for the current year were not so black as they were expected to be. During the last few weeks of the fiscal year, the revenue picked up surprisingly. At the same time, expenditures were somewhat held down. The net result was a deficit of about $7,500,000, much smaller than had until recently been thought certain. But it is the budget for 1909-10 that causes the difficulty. How to cover the increased expenditures of nearly $80,000,000 was the problem of the Chancellor of the Exchequer. He could not dodge it, after the happy-go-lucky fashion of American public finance—letting the deficit go, and be hanged to it, or issuing bonds to pay current expenses, or putting up Senator Aldrich to guess that there will be money enough. Mr. Lloyd-George had to set it down in black and white, and show just what his new taxes will yield. In an unguarded moment, he once jested about robbing a hen-roost to get the financial eggs he might need. He might well have been reminded of what Montaigne says in his essay on "Glory":

> A man is not always at the top of a breach or at the head of an army. . . . He is often surprised between the hedge and the ditch; *he must run the hazard of his life against a henroost.*

Various small eggs, the Chancellor of the Exchequer can always put his hand upon through minor taxes. That he has done, here and there, in his budget. But it was all along evident that the main dependence must be placed upon the enlarged scope of old taxes. There are really, in England to-day, few "untapped" sources of funds for the Treasury. It is the land; it is inherited wealth; it is the tax on incomes, which alone furnish an elastic revenue. Accordingly, the expectation was strong that the Chancellor would be compelled to seek his eggs mainly in those nests; and he has done so. Added taxation of the land, in the shape of heavy levies upon freehold ground-rents in London and other great cities and a super-tax on large incomes are the resorts which the Chancellor has adopted. This plan has raised, in anticipation, the cry of "confiscation." It might, indeed, be the case that such taxes would bear very heavily, perhaps inequitably, upon the great landlords and the very rich. But there would be a kind of retributive justice in making them shoulder the new burdens, because they have been chiefly responsible for the increase of those burdens. By their insensate talk of war and artificial clamor for Dreadnoughts without end, they have pushed up the naval estimates abnormally, and it is only just that they should be made to foot a good share of the bills. If Lloyd-George could only find a way to make bellicose editors, too, put their hands in their pockets to pay for the folly which they have helped to blow so large, his justice would be fairly poetic.

Viewed purely as a measure of finance, the new English budget is capable and business-like. It goes straight to the point of raising the needed money by the necessary taxes. There is no artful attempt to conceal from the people the burdens which their representatives have voted that they shall bear. The Chancellor of the Exchequer simply comes forward remorseless as fate, to say to the House of Commons, and to the nation: "Since you have decided to spend such and such sums of money, I will show you how the uttermost farthing is to be got out of you." It is business applied to statesmanship. While the German government has struggled for months in vain to get through the Reichstag a tax-law to make income equal expenditures; while at Washington our system of taxation is left to guess-work and intrigue, with hugger-mugger the probable result, the English cling to their old successful way of making a responsible Ministry draw up a budget in which a tax is laid for every penny spent. Whatever else may be said of this, it is efficient finance.

Politically, the budget marks for the Liberals a decided lurch in the direction of the Radicals and the Labor party. The very taxes which make the City of London cry out in rage, fill the working classes and the Socialists with glee. To get at accumulated wealth by discriminating and depleting taxes, has long been their dream; and Mr. Lloyd-George has now made its realization seem much nearer. When we add that he has provided for labor exchanges, after the French model, and has outlined a scheme of state insurance of workingmen against lack of employment, we can see how strong a bid is made for the labor vote. With the Labor party split, as it now is, the Liberals may win some votes and retain some seats, as a consequence of their Radical budget. Yet their defeat is written in the stars, next year, or as soon as they step out or are turned out of office. They will have alarmed and alienated so many of their wealthy and middle-class followers that, as the drift of the bye-elections shows almost beyond a peradventure, the Conservatives will easily come back to power in the next general election. Thereupon, according to all precedent, all the Socialistic legislation of the Liberals will be, not repealed, but retained and extended by the Tories! It was so with the Irish land law, with the Harcourt graduated

inheritance tax, and there is no reason to doubt that it will be so as well with Lloyd-George's taxes on wealth and favors to labor. Mr. Balfour will be able to reconcile his opposition to them when out of office with his adoption of them when in power. "There were grave objections to these measures, but now that they are enacted, and the people are used to them, and even seem to like them, it is not expedient to expunge them."

RESEARCH AND RESULTS.

The trustees of the Carnegie Trust, at their annual meeting held in London recently, discussed at some length the results of the effort to encourage original research in the universities of Scotland. Mr. Balfour, for example, was amazed to find that the number of failures was so small. It was not an easy task, he declared, to catch the right man, and the number of men worth catching was not very large. He divided these eligible persons into two classes: those who had the gift and ambition, but not "the rare and overmastering" desire which forces one into this career. Such men must be taken early before they are absorbed in the necessary occupations of life. There was also a higher class, "those who seem born for research," to whom the penetration of the secrets of nature and history seems an overwhelming passion, from which they are scarcely to be diverted. To these men, said Mr. Balfour, it was all important, "not for the sake of the men but for the sake of the community, that they should have a chance of devoting their talents to that great work for which God undoubtedly intended them."

Mr. Balfour thus emphasized an idea to which Americans have hitherto paid but little attention. Before the Carnegie Institution of Washington was established, there was scarcely any organized effort to promote research. A few of our better equipped universities maintained chairs of research, and a few others tried to afford some leisure to those teachers who displayed special aptitude in this line; but with a growing population pressing hard on our educational resources, most colleges have been forced to lay on their faculties too heavy a burden of instruction. An occasional professor has deliberately slighted his classes in order to do work which has seemed more important, but such cases are exceptional. The average professor has stuck doggedly to his assigned tasks and relinquished one ambition after another, till failing strength has forced upon him the bitter truth that his *magnum opus*, his monument more enduring than bronze, has been a dream. Such failures contain a large element of the tragic; for, in proportion as the aim has been high, so must the consciousness of failure be galling. And this is one reason why every college faculty contains men who carry the scars of the balked and the disappointed. In many instances, doubtless, these men might have come far short of success even had they been offered an opportunity to become authors, to edit important historical documents, or to penetrate the secrets of nature; but most of them can justly complain that they have never had a fair chance.

The effect on our institutions of higher learning has also been depressing. The tendency has been to stiffen the traditions of intellectual mediocrity which are already too strong, to maintain a faculty which is content merely to go through the motions of teaching without actually inspiring our youth. We would not be thought to urge a faculty made up of investigators, for successful investigators may be poor teachers, especially of young undergraduates; but a faculty which contains few or no men of eager and inquiring mind inevitably stagnates. In far too many of our small colleges, East and West, teachers and students are doing nothing but whirl round in their squirrel-cages, with immense outward activity, but no actual progress. We complain that our undergraduates are absorbed in athletics, in social affairs, and in everything but study. Such diversions offer a peculiarly strong temptation to youth, and the only way to draw the undergraduate in the other direction is to make study itself attractive. This is not the same thing as making courses slipshod and easy; quite the contrary. The real method is to rouse ambition, to quicken, to energize; and for this task men of force and ambition are needed, men who, while they discharge their daily duties faithfully, still look forward and aspire to something beyond the routine of the classroom, and thus give their pupils an outlook into the world that lies outside the shaded streets of the college town.

We have been using the words "research" and "investigation," but they are too narrow in scope. In all fields, much interesting and stimulating work is always to be done that cannot, strictly speaking, extend the boundaries of our knowledge. In the natural sciences, there must be constant reorganization of data, and restatement of principles in the light of new experimentation—constant popularizing, not vulgarizing, of the results obtained in our laboratories. This, which was what Huxley undertook, is no dry mechanical process, but a challenge to the most ingenious of minds, a sure means of intellectual development. And in history and economics, in philosophy, and literature in all its branches, the same labor awaits the skilled hand. The classics of all tongues must be edited and criticised from the point of view of men and women of to-day, reinterpreted in the terms of modern speech. History must be rewritten for every generation. To these important undertakings, America could and would lend far more help, to the great advantage of the cause of education and our higher life generally, if we could entertain a larger conception of the function of a college.

THE NEW STAGE OF PRAGMATISM.

I.

It is one of the difficulties of coping with a philosophy of the flux, that no sooner have you come to grips with it than it flows into another form and eludes your grasp. To read the bold frontal attacks of Messrs. Schinz and Pratt* and then to find that the adversary in a simultaneous publication† has already slipped to one side, is to recall the Homeric wrestling match with the wily old man of the sea. No doubt he is Proteus still, and the contest is with the same foe, but the weapons must be changed and the grip altered. The chief concern of Professor Schinz is to lay bare the social *milieu* out of which Pragmatism has grown, and his conclusions touch the problem of democracy and aristocracy. His criticism of American life and literature from this point of view is extraordinarily keen. Professor Pratt is concerned more with the religious outcome of the movement

**Anti-Pragmatisme.* Par Albert Schinz, Professeur à l'Université de Bryn Mawr. Paris: Félix Alcan.

What is Pragmatism? By James Bissett Pratt, Assistant Professor of Philosophy in Williams College. New York: The Macmillan Co.

†*A Pluralistic Universe:* Hibbert Lectures at Manchester College on the Present Situation in Philosophy. By William James. New York: Longmans, Green, & Co.

than with its social meaning. The new philosophy is to him a part of the scientific tendency of thought which, in the words of a distinguished biologist, describes the Moral Imperative as a "psychic correlate of a reflective, cerebro-spinal, ideo-motor process, the efferent end of which is organized into motor tracts coördinated for a specific action." Whereto Mr. Pratt remarks gravely that this method "has pressed its splendidly useful and illuminating formulæ too far, it has attempted to simplify too much, and in doing so it has become somewhat narrow, somewhat blind, and somewhat unempirical." And he adds: "To my thinking, the pendulum has now swung too far in the anti-intellectualistic direction." Both writers make easy work with the equivocations of Mr. James's last book on "Pragmatism." And indeed it needs no profound study to see the weak joints in a logic which undertakes to determine the inmost nature of things by what we regard as pragmatically useful in our own lives, and to prove that truth is actually created by what we think it expedient to believe.

There is something like the hilarity of sport in dragging out the inconsistencies, if not insincerities, of a philosopher who has tried to defend rationally a system which is professedly an attack on rationalism. For just that, and nothing more, is Pragmatism. It is easy to show that such a philosopher ought, so far as the correspondence of logic and reality goes, to be a complete skeptic. Well and good. But what will you do if, before the ink is fairly dry on your book, this Proteus of the lecture hall is before the world with a recantation of his errors and a frank retreat to just such logical skepticism as you denounced him for not confessing. In one sense, Professor James's Hibbert Lectures are consistent with his past; they are in the right line of development from that temperamental impetus which by his own theory is the source of every philosophy, however he may have sloughed off various inconsistencies to attain this position. As a matter of fact, the word Pragmatism scarcely occurs in these lectures, and the attempt at their end to tack on a theory of creating, or even discovering, truth by the "practical reason" is purely perfunctory. Their central point, their crisis, so to speak, is the magnificent repudiation of the whole process of metaphysics:

> I saw (he says) that philosophy had been on a false scent ever since the days of Socrates and Plato, that an *intellectual* answer to the intellectualist's difficulties will never come, and that the real way out of them, far from consisting in the discovery of such an answer, consists in simply closing one's ears to the question. When conceptualism summons life to justify itself in conceptual terms, it is like a challenge addressed in a foreign language to some one who is absorbed in his own business; it is irrelevant to him altogether—he may let it lie unnoticed. I went thus through the "inner catastrophe"; . . . I had literally come to the end of my conceptual stock-in-trade, I was bankrupt intellectualistically, and had to change my base.

II.

To such an inner catastrophe, not unlike one of the conversions he has described so luminously in his "Varieties of Religious Experience," he was brought after long struggling with the problem of reason and covering hundreds of sheets of paper with memoranda of his self-questioning. As the worldling under the stroke of heaven forswears the world, so now he is "compelled to *give up logic*, fairly, squarely, and irrevocably." The apostle to him in this agony was the young sage of Paris, Henri Bergson, to whom many others, indeed, in these times of perplexity are turning inquisitive eyes, and to whom Mr. James devotes one of the most brilliant of his lectures. To that lecture itself, or to G.-H. Luquet's "Idées générales de psychologie," the questioner must be referred who hesitates to plunge into M. Bergson's own uncoördinated works. Mr. James centres his exposition about the hoary and awful paradox which sets Achilles forever approaching and never overtaking a tortoise, since by the time he reaches the tortoise's first starting-point, the tortoise has already got beyond that starting-point to another, and so on *ad infinitum*, the interval between the two being endlessly subdivided but never obliterated—just as ½ plus ¼ plus ⅛ may be prolonged into an infinite series without equalling unity. The solution is a statement of the absolute divorce between reason and sensuous experience; the one is discrete, the other is concrete and continuous. To analyze actual experience into the terms of the intellect is simply to use words without meaning:

> You cannot explain [by abstract concepts] what makes any single phenomenon be or go—you merely dot out the path of appearances which it traverses. For you cannot make continuous being out of discontinuities, and your concepts are discontinuous. The stages into which you analyze a change are *states*, the change itself goes on between them. It lies along their intervals, inhabits what your definition fails to gather up, and thus eludes conceptual explanation altogether.

With this sling of metaphysical negation he attacks Mr. Bradley, the champion of monism, or abstract idealism, or pantheism, or whatever you choose to call it; and, believe me, he makes good sport with the doughty Goliath of Oxford. I confess that to me monism has always been merely another word for monomania, and I have followed Mr. James's sallies into the madhouse with a kind of gay amusement. The attempt to catch and hold the universe in a syllogism, denying thereby all our concrete experience, all our sense of multiplicity and change, all our knowledge of evil, denying life itself for an abstract unity of the reason, has been one of the tyrannous obsessions of metaphysics. Common sense might protest against monism as a madness, but common sense is apt to shrivel away under the frown of a supercilious Reason, and Reason declares there shall be no contradiction in the sum of our experiences. The only escape is to deny the validity of reason itself as the sole criterion of reality. To this liberation Mr. James has been guided, or has at least been confirmed therein, by the new luminary of Paris, and now proclaims his gratitude. His protest against the whole school of German intellectualism will find an exultant echo in many laboring breasts. It is in a very literal sense the "psychological moment" for such an authoritative utterance as this:

> The English mind, thank heaven, and the French mind, are still kept, by their aversion to crude technique and barbarism, closer to truth's natural probabilities. Their literatures show fewer obvious falsities and monstrosities than that of Germany. Think of the German literature of æsthetics, with the preposterousness of such an unæsthetic personage as Immanuel Kant enthroned in its centre! Think of German books on *Religionsphilosophie*, with the heart's battles translated into conceptual jargon and made dialectic.

III.

Macte virtute! we cry, and toss hats into the air. There is no hope in Kant or any of his followers, for, as Mr. James rightly asserts, both wings of modern philosophy rest on intellectualist logic, "the absolutists smashing the world of sense by its means, the empiricists smashing the absolute—for the absolute, they say, is the quintessence of all logical contradictions. . . . Neither impugns in principle its general theoretic authority." I, for one, am ready to follow any leader out of the Egypt of Kantian metaphysics, and I would not belittle the honor due to M. Bergson and to Mr. James as the Moses and the Aaron of this exodus. Yet a word of demur must be entered against so extreme a statement as that "rationalism has never [before] been seriously questioned . . . and Bergson alone has been radical." Such an avowal rouses the suspicion that Mr. James himself has not really looked beyond the circle drawn by the wizard of Königsberg, that he too stands entranced in the illusion of the present. Sometimes as I consider with myself how this illusion daily more and more enthralls and impoverishes our mental life by cutting off from it all the rich experience of the past, it is as though we were at sea in a vessel, while a fog was settling upon the water, gradually, as it thickened, closing in upon our vision with ever narrower circle, blotting out the far-flashing lights of the horizon and

the depths of the sky, throwing a pall upon the very waves about us, until we move forward through a sullen obscurity, unaware of any other traveller upon that sea, save when through the fog the sound of a threatening alarm beats upon the ear. Mr. James, who has pondered so well Bergson's analysis of the individual consciousness as a summing up of all the past, should have seen the application of the same definition to the general consciousness of mankind. He should have seen that Bergson's rejection of reason as the arbiter of reality was no new thing, but the old insight re-defined in the terms of modern psychology. Had he been more completely freed from the vicious circle of the present, he would have known that in denouncing Platonism as the type and source of rationalistic metaphysics, he had in mind not the Greek Plato, but a Plato viewed through Teutonic spectacles. The doctrine of reminiscence, and indeed of ideas themselves if properly understood, should have taught him that Plato's instrument of truth was an intuition far closer to the facts of consciousness than is any canon of discrete logic, and at one with the faculty of religious insight wherever and whenever this is found. The Neo-Platonists developed this method—while denuding it of vitality, making it "thin," as Mr. James would say—in their distinction between intelligence (νοῦς) and the non-intelligible One or the First Good. Henry More, in his tantalizing obscure rhymes, sought to unite this higher skepticism with Christian theology, as, for instance, in his "Life of the Soul" (ii, 98):

How then, said Graco, is the spirit known
If not by reason? To this I replied,
Only the spirit can the spirit own.
But this, said he, is back again to slide
And in an idle Circle round to ride.
Why so, said I, is not light seen by light?
Straight Graculo did skilfully divide
All knowledge into sense and reason right.
Be 't so, said I, Don Graco, what's this reason's might?

If then, said he, the spirit may not be
Right reason, surely we must deem it sense.
Yes, sense it is, this was my short reply.

And Pascal meant the same thing when he declared that "there is nothing so conformable to reason as this disavowal of reason," and that "the heart has its reasons, which the reason does not know." To this extent the insight of faith is in agreement with the commonsense of the street, in so far as to both the meaning of the world is given by immediate experience rather than by any metaphysical system; and they are both in agreement with the complete skeptic in so far as they all hold their judgment in a state of suspension (ἐποχή) toward the pretensions of reason to act as the final arbiter of reality: "The truth is Pyrrhonism," said Pascal. In this contrast to rationalism, saint and man of the world and skeptic are at one; they diverge on other lines. It has seemed worth while to point, in passing, to this kinship of Bergson's psychological superrationalism with the constant attitude of faith, because the aspect of Mr. James's work which most deserves censure is the encouragement afforded therein to the particular vanity of our age—a smart contemporaneity. He should have pondered the scope of his own pregnant sentence: "If we do not feel both past and present in one field of feeling, we feel them not at all."

IV.

With this reserve, we may regard the call from metaphysics to a philosophy of immediate experience as altogether wholesome. Abstract reason is not in its own field a false thing, nor is it without indispensable usefulness in the application of experience to life; nevertheless, not through it shall we come into intimate touch with reality, but through life itself; the truth for us is not what we have defined logically, but what we actually feel and will. It does not follow, however, that in accepting heartily this method we must equally accept Mr. James's statement of the relative values of what he reports as obtained by the method; we may even suspect that in his evaluation he slips into the very error from which he is so eager to save us. Consciousness, he says, is not discrete, or divided into discontinuous moments, as it is presented to us by the reason, but is continuous; nor has it any conformity with the static void of monism. Time and change are of its essence, and if we wish to *know* reality we must "dive back into the flux itself." His cry is like the command of Faust to leave the musty cell and throw one's self into the stream of the world—*Hinaus ins Freie!* There is a splendid exhilaration in the call. There is grave irony as well as stirring exhortation in Mr. James's personal appeal to his audience:

If Oxford men could be ignorant of anything, it might almost seem that they had remained ignorant of the great empirical movement towards a pluralistic panpsychic view of the universe, into which our own generation has been drawn, and which threatens to short-circuit their methods [of monistic dogmatism] entirely and become their religious rival unless they are willing to make themselves its allies. Yet, wedded as they seem to be to the logical machinery and technical apparatus of absolutism, I cannot but believe that their fidelity to the religious ideal in general is deeper still. . . . Let empiricism once become associated with religion, as hitherto, through some strange misunderstanding, it has been associated with irreligion, and I believe that a new era of religion as well as of philosophy will be ready to begin. That great awakening of a new popular interest in philosophy, which is so striking a phenomenon at the present day in all countries, is undoubtedly due in part to religious demands.

A pluralistic panpsychic view of the universe. That is to say: as our only knowledge is experience and our experience is an inner consciousness flowing with ceaseless change about endlessly differing sensations presented to it from without, so the truth of the world for us is not monism, but pluralism. We are *du réel dans le réel*, but this reality is an infinite group of interacting, interpenetrating forces, over which no absolute law can be found to govern. And as these forces, like our states of consciousness, are in a constant mutation, so, like ourselves, they may very well be, in part at least, other streams of consciousness, meeting and embracing and repelling one another. How else, indeed, can they have any meaning or reality to us? The universe may thus be panpsychic, and one of the most interesting of Mr. James's lectures is a revival of Fechner's animism, with his vision of the world-soul enveloping and nourishing the souls of men. For the proof of such a theory Mr. James goes to what he deems the facts of experience:

In a word, the believer is continuous, to his own consciousness, at any rate, with a wider self from which saving experiences flow in. Those who have such experiences distinctly enough and often enough to live in the light of them remain quite unmoved by criticism, from whatever quarter it may come, be it academic or scientific, or be it merely the voice of logical common sense. They have had their vision and they *know*—that is enough—that we inhabit an invisible spiritual environment from which help comes, our soul being mysteriously one with a larger soul whose instruments we are.

By such steps the pragmatist, now rather choosing to be called the radical empiricist, arrives at the belief in a deity, who is by no means the static timeless absolute of the monist, with its foreignness from all things human, but a mighty God above other gods, "having an environment, being in time, and working out a history just like ourselves."

V.

It is a seductive theory and has at least that quality of "thickness" which Mr. James, with his genius for phrase-making, contrasts with the "thinness" of idealism. It is charming, but then the dog that trails always at the heels of the pragmatist will have his bark: Is it true? Somehow one cannot be quite at ease in this new Zion, and, reading M. Luquet's analysis of Bergsonism, I seem to divine where the trouble lies. When we enter upon the study of psychology, says that expositor, we must begin by discarding the logic which we used in the sciences. In this field contradictories no longer exclude each other. Every state of conscious-

ness is at once an existence and a knowledge, the thing known and the knower, a part and the whole. Here identity and change, past and present, are simultaneous attributes of the same subject. And he continues:

> Hence we explain at once the exlstence and the falseness, at least relative, of the two opposed psychological doctrines called phenomenalism and spiritism. The latter sees in the ego an immutable substance which looks on with indifference at the unrolling states of consciousness; the former sees in the ego only a succession, a collection of isolated states of consciousness, of whlch the first has ceased when the second ls produced.

This truth explains, I surmise, something more than the two present modes of psychology. Is not this irreconcilable dualism of consciousness the source of the two opposing schools of philosophy, which, ever since Parmenides and Heraclitus set forth the paradox of absolute rest and absolute motion, unity and multiplicity, identity and change, have been at each other's throats? Logic demands the rejection of a contradictory; and as the temperament of a man leads him to dwell on one or the other phase of his inner experience, so, if he is a metaphysician, he forthwith sets out to build a rational theory of the universe on that phase to the exclusion of the other. What, at bottom, is this Pluralism of Mr. James, but the same ancient presumption of the reason which he has himself so shrewdly denounced. His feeling for flux and change and multiplicity is a reality, a great and desirable reality, set over against the monist's exclusive sense of unity; but is it the whole of reality? How can one recall the innumerable witnesses of religion, or hearken to the self-revelation of the poets, how can one look into the mirror of one's own life, and not perceive that the sense of something immutable and undivided exists in some way side by side with the sense of everlasting flux, that there is within us some

> . . . central peace subsisting at the heart
> Of endless agitation?

Mr. James does, indeed, throw out hints that he has caught the meaning of this dualistic reality of experience, but, like other philosophers, he soon cowers at the imperious command of reason, and tries to hide the nature of his own submission to one horn of the dilemma by merriment over the writhing of Mr. Bradley on the other; meanwhile common sense stands like *das Weltkind in der Mitte.*

And if the Pluralism of Mr. James is no true substitute for dualism, but a rejection of the one for the many, so his Panpsychism commits the other error of metaphysics in translating a fact of inner experience into a theory of the universe at large. The comfortable belief in these world-souls and commingled spirits and finite Jehovahs is even a projection of our consciousness of personal change into the void, just as the monist's absolute abstraction is born of his consciousness of personal unity. No doubt we are not alone in the universe. Forces beat upon us from every side and are as really existent to us as ourselves: their influence upon ourselves we know, but their own secret name and nature we have not yet heard —not from Mr. James, or Mr. Bradley, or another. Until that prophet has appeared, I do not see what better thing we can do than to hold our judgment in a state of complete skepticism, or suspension, in regard to the correspondence of our inner experience with the world at large, neither affirming nor denying; while we accept honestly the dualism of consciousness as the illogical fact. Reason, I should suppose, may be our guide in determining the relative values to us of our opposed phases of consciousness. The will may be no Will to Believe—for we know—but a power to make of this choice of values the motive of contemplative and practical life. And, if I have read correctly the lesson of the past and of the present, faith, I dare avow, is something that strikes deeper than the mythologies of religion, or the imaginings of a fevered Pragmatism; it is the voice from our own centre of calm, asserting through all the noise of contradiction: "I am the better self and the higher value, the stronger life and the finer joy." To many who have looked steadfastly into the meaning of their inner life, that "wider self from which saving experiences flow in" will seem to be indeed a *wider self* rather than any environment of ghosts; and they will feel that in this belief they have a firmer assurance of reality than is offered to them by the new mythology of Pragmatism or Panpsychic Pluralism. They will think that John Woolman uttered the truth of dualism and of religion when he said: "The necessity of an inward stillness hath appeared clear to my mind; in true silence strength is renewed."

P. E. M.

NEWS FOR BIBLIOPHILES.

In 1906 the directors of the Virginia State Library made provision for the preparation of a Bibliography of Virginia. The period first taken up was Colonial Virginia and the report of the bibliographer, William Clayton-Torrence, covering the period 1607 to 1754, has just been printed. This is sent out as a pamphlet with the modest title "A Trial Bibliography," but an examination of the 154 pages, describing 219 books, pamphlets, and broadsides shows it to be a careful, accurate, and scholarly piece of work, hard to improve upon. The collations are moderately full; copies are located, so far as possible, in several public libraries, and references are given to earlier bibliographical works. Reprints are also referred to, and references are made to certain entries in the Stationers' Registers which, if ever printed, are not now known to exist. When we consider how many of the known pamphlets exist in one or two or three examples only it would be folly to say that those which have not been found were never printed. The historical, biographical, and bibliographical notes appended to many titles are especially interesting. The "Bibliography" as now printed ends with 1754. A note at the end says that descriptions of 230 additional titles, bringing the record down to 1776, had been prepared and that by a fire in the printing office the manuscript was destroyed. There is one early broadside, important because it is so early, which Mr. Clayton-Torrence seems to have overlooked and of which there is a copy in the British Museum, described as follows in the Fourth Series of William Carew Hazlitt's "Collections and Notes" (1903):

> Fort the Plantation in Virginia. Or Nova Britannia. London: Printed by John Windet. 1609. A broadside. B.M.
> An advertisement of an intended and approaching Voyage thither, and an invitation and encouragement to practical emigrants.

The late Dr. Alexander Brown discovered a transcript of this document in the Spanish archives, but was unable to locate a printed copy.

On May 12, 13, and 14 the Anderson Auction Co. of this city will sell the library of Mrs. Constance C. Poor of Tuxedo Park. The collection is chiefly notable for books on gardening and botany. Among the older works are Dodoen's "Newe Herball" (1578), Cook's "Manner of Raising, Ordering, and Improving Forest Trees" (1676), Cotton's "Planter's Manual" (1675), Gervase Markham's "Cheape and good Husbandry" (1631), Barnaby Googe's "Art and Trade of Husbandry" (1614). Important modern volumes are Sowerby's "English Botany," 13 vols.; Michaux's "North American Sylva," 3 vols.; Sargent's "Silva of North America," 3 vols.; Curtis's *Botanical Magazine,* 1787 to 1867, 93 vols.; and Paxton's *Magazine of Botany,* 1843 to 1849, 16 vols. A collection of fifteen autograph letters of Carlyle; Chaucer's Works, Kele's undated edition, also Islip's edition of 1602; and the Kelmscott Press Shakespeare, are other notable lots.

On May 11, 12, and 13 the Merwin-Clayton Sales Co. of this city will offer the libraries of Dr. E. C. Williams of Chicago and R. N. Oakman, jr., of Brooklyn. Among the items are the first edition of Pope's translation of the Iliad (1715-20), with autograph receipt for the first payment, signed by Pope, inserted; Burns's "Correspondence with Clarinda" (1843), first edition; the first portion of the Catalogue of Robert Hoe's library, Early English Books, 5 vols.; and books from the Kelmscott Press.

On May 12 and 13 C. F. Libbie & Co. of Boston sell the library and autograph collection of Franklin Webster Smith of Washington. Extra illustrated copies of Betterton's "History of the English Stage," and Charles James Fox's "History of the Early Part of the Reign of James the Second"; and a set of the Dunlap Society Publications are worthy of mention.

On May 10 and 11 Stan. V. Henkels will sell at Freeman's Auction Rooms in Philadelphia the library of the late John McAllister, jr., including a long series of Philadelphia directories, American almanacs and magazines, and a large collection of

pamphlets extending from colonial times to the civil war. As addenda, to be sold at twelve o'clock Tuesday, are eight New England pamphlets: Underhill's "Newes from America" (1638), lacking plan; Wood's "New England's Prospect" (1639), lacking map; and six of the very rare tracts by John Eliot telling of the conversion of the New England Indians, with the following titles: "New England's First Fruits" (1643), as usual without the errata leaf; "The Day-Breaking, if not the Sun-Rising of the Gospel with the Indians in New England" (1647); "The Clear Sunshine of the Gospel breaking forth up on the Indians in New England" (1648); "The Glorious Progress of the Gospel amongst the Indians in New England" (1649); "Strength out of Weakness or a Glorious Manifestation of the Further Progress of the Gospel among the Indians in New England" (1652); and "Tears of Repentance; or a Further Narrative of the Progress of the Gospel" (1653).

A most remarkable Caxton volume will be included in Sotheby, Wilkinson & Hodge's sale of May 20 and 21. It is made up of five productions of Caxton's press: (1) "The Mirrour of the Worlde" (1481), (2) "Dictes or Sayings of the Philosophers" (1478), (3-4) "Cicero's 'De Senectute' and 'De Amicitia' (probably published together, 1481), and (5) "The Boke named Cordyale" (1479). The volume is in old oak boards, probably Caxton's original binding, and the pieces are all perfect and in fine condition. The book was recently discovered in an old Manor House in the North of England. Among other books included in the same sale are "Robinson Crusoe" (1719), 2 vols., first editions; Hakluyt's "Principal Navigations, Voyages, and Discoveries" (1589); Quarles's "Emblemes" (1635), first edition; Smith's "Generall Historie of Virginia" (1632), with the "True Travels" (1630); and several first editions of Tennyson, presentation copies to Sarah Hayword.

IN MEMORY OF SWINBURNE.

(Vale, vale, in æternum, vale!)

I.

April whispers—"Canst thou, too, die,
Lover of life and lover of mine?"
April, queen over earth and sky,
Yearns, and her trembling lashes shine:
Master in song, good-bye, good-bye,
Down to the dim sea-line.

II.

"This is my singing season," he cried,
"April, what sweet new song do you bring?"
April came and knelt at his side
Breathing a song too great to sing—
Death!—and the dark cage-door swung wide:
Seaward the soul took wing.

III.

Sleep, on the breast of thine old-world lover,
Sleep, by thy "fair green-girdled" sea!
There shall thy soul with the sea-birds hover,
Free of the deep as their wings are free,
Free; for the grave-flowers only cover
This, the dark cage of thee.

IV.

Thee, the storm-bird, nightingale-souled,
Brother of Sappho, the seas reclaim!
Age upon age have the great waves rolled
Mad with her music, fierce and a-flame;
Thee, thee too, shall their glory enfold
Lit with thy snow-winged fame.

V.

Back thro' the years fleets the sea-bird's wing:
Sappho, of old time, once,—ah, hark!
So did he love her of old and sing!
Listen, he flies to her, back thro' the dark!
Sappho, of old time, once!—Yea, Spring
Calls him home to her, hark!

VI.

Sappho, long since, in the years far sped,
Sappho, I loved thee! Did I not seem
Fosterling only of earth? I have fled,
Fled to thee, sister. Time is a dream!
Shelley is here with us! Death lies dead!
Ah, how the bright waves gleam.

VII.

Wide was the cage-door, idly swinging,
April touched me and whispered "Come":
Out and away to the great deep winging,
Sister, I flashed to thee over the foam;
Out to the sea of Eternity, singing
"Mother, thy child comes home."

. . . . . .

VIII.

Ah, but how shall we welcome May
Here where the wing of song droops low,
Here by the last green swinging spray
Brushed by the sea-bird's wings of snow,
We that gazed on his glorious way
Out where the great winds blow?

IX.

April whispers—"Canst thou, too, die,
Lover of life and lover of mine?"
April, conquering earth and sky,
Yearns, and her trembling lashes shine:
Master in song, good-bye, good-bye,
Down to the dim sea-line.

ALFRED NOYES.

Correspondence.

TENNYSON'S REVISIONS OF HIS POEMS.

TO THE EDITOR OF THE NATION:

SIR: The publication of the new Eversley Edition of Tennyson has called attention to many variant readings of the poems and reminds me of one that I discovered in the first American (1859) edition of the first four "Idylls of the King" ("Enid," "Vivien," "Elaine," and "Guinevere," as they were then entitled), which was printed from advance sheets, sent from England. Of two of these ("Enid" and "Vivien") six "trial copies," as the reader may know, had been printed in 1857, with the title, "Enid and Nimuë; the True and the False," only one of which is said to have survived—now in the British Museum. There is also a volume of proof-sheets at South Kensington, with the title, "The True and the False; Four Idylls of the King," dated 1859. It contains the poems, which, after further revision, were published in July of that year. In the authorized American edition (1859) a passage in "Vivien" (lines 148-151) reads thus:

She loathed the knights, and ever seem'd to hear
Their laughing comment when her name was named.
For once, when Arthur, walking all alone,
Vexed at a rumor rife about the Queen,
Had met her, etc.

This reading is found nowhere else, and the poet must have changed it before the London edition of 1859 was printed. There it reads:

She hated all the knights, and heard in thought
Their lavish comment when her name was named.
For once, when Arthur walking all alone,
Vext at a rumour rife about the Queen,
Had met her, etc.

Later the last lines were changed to the present text:

Vext at a rumour issued from herself
Of some corruption crept among his knights,
Had met her, etc.

The 1857 reading was:

She hated all the knights because she deem'd
They wink'd and jested when her name was named.
For once when Arthur, walking all alone
And troubled in his heart about the Queen,
Had met her, etc.

There are a few other slight discrepancies between the English and American editions, not recorded by any of the commentators, but hardly worth mentioning here. For the most complete and accurate collation of the *English* editions (including the 1857 proofs), the reader may consult Prof. Richard Jones's "The Growth of the Idylls of the King" (Philadelphia, 1895), in which I have detected very few omissions or inaccuracies.

Apropos of the "Idylls," there is a strange omission in the text of all the English editions, not excepting the one just edited by the present Lord Tennyson. In the "Memoir" of his father (Vol. II., p. 129) we are told that in 1891 the poet, "thinking that perhaps he had not made the real humanity of the King sufficiently clear in his epilogue" ("To the Queen"), had inserted "as his last correction" the line, "Ideal manhood closed in real man," after line 37: "New-old, and shadowing sense at war with soul." The "Memoir" appeared in 1897, and I inserted the line in

the next issue of my edition of the "Idylls," and also in the Cambridge Edition of 1898. It is probably through mere oversight that it has not appeared in the English editions printed since 1891. I wonder if any reader has noticed that in *one* edition of the poems (I think only one, in 1897), Lord Tennyson included the poem entitled "Kate," first printed in 1833, but suppressed until after the poet's death. Apparently, on second thought, he decided to add nothing to the collected works as last arranged by his father.

Morton Luce ("Handbook of Tennyson's Works," 1895), and R. H. Shepherd ("Bibliography of Tennyson," 1896; printed for subscribers only), neither of whom is invariably accurate, mention six short poems omitted in the collected editions. I have found three of these, and have added them to the successive issues of the Cambridge Edition; but the others (not referred to in the "Memoir") I have not been able to trace. They are "a stanza in the volume of his poems presented to the Princess Louise of Schleswig-Holstein by the nurses of England; lines on the christening of the daughter of the Duchess of Fife; and lines to the memory of J. R. Lowell." Can any reader of the *Nation* help me in finding them? The lines on Lowell were probably reprinted here, but I have hunted for them in vain during the last ten years.

It is not generally known that Edward Lear made some two hundred drawings illustrating many of Tennyson's earlier poems. No English publisher was willing to incur the expense of reproducing them; but in 1889 a few of them were used in an edition of three poems—"Lines to E. L. on his Travels in Greece," "To a Daisy," and "The Palace of Art"—of which only one hundred numbered copies were published (London: Boussod, Valador & Co.), all signed by the poet, with a special introduction from his pen. Later the entire set was bought by Dana Estes of Boston, and as many of them as could well be used for the purpose were copied by photogravure for the *de luxe* edition of Tennyson (12 vols., limited to 1,000 copies), which I edited (1895-98). This edition had been planned several years earlier with the approval of the poet and his son, who assisted in the selection of the illustrations (of which a dozen or more were connected with single poems in some instances), and gave me other valuable help in the work. These drawings by Lear are not mentioned in the "Memoir" or any other book or article about the Tennysons that I have seen, and I was surprised to find no allusion to them in the recent "Letters of Edward Lear." Neither have I met with any mention of the large painting by Lear which hangs in the hall of Tennyson's summer residence at Aldworth. It illustrates one of the stanzas in "The Palace of Art" which describe tapestry pictures so graphically:

> One seem'd all dark and red—a tract of sand,
> And some one pacing there alone,
> Who paced forever in a glimmering land,
> Lit with a low large moon.

The picture *is* "all dark and red," with the full moon shining red through the twilight haze of the horizon; a solitary man striding across the foreground, and nothing else except a towering rock near the left side. The stanza is inscribed on the frame below. The painting was evidently hung in the broad, well-lighted hall, extending from the front to the rear of the mansion, because it was too large for the walls of any room. I am no connoisseur of painting, but the picture interested me greatly, and the more each time I saw it. The fifteen stanzas in the poem describing as many tapestries had always impressed me as remarkable examples of word-painting. Some of them have more of detail than this one—particularly that delineating a volcanic landscape:

> And one, a foreground black with stones and slags,
> Beyond, a line of heights, and higher
> All barr'd with long white cloud the scornful crags,
> And highest, snow and fire——

a four-fold view of plain, hill, and mountain, ending with the trisyllabic "snow and fire"—active volcanoes towering above the snow-line, painted no less vividly than concisely. This poem, as the reader knows, was first printed in the volume of 1832 (published in the winter of that year, but dated 1833), but some of these pictures were much altered in 1842, and some were omitted. The two quoted here were then as follows:

> Some were all dark and red, a glimmering land
> Lit with a low round moon,
> Among brown rocks a man upon the sand
> Went weeping all alone.

> One seemed a foreground black with stones and slags,
> Below sunsmitten icy spires
> Rose striped with long white cloud the scornful crags,
> Deep-trenched with thunderfires.

Throughout the book compound words generally omit the hyphen, as here. Two of the omitted stanzas may be added, as the book is in no American public or college library (Boston and Cambridge not excepted) that I know of:

> Or Venus in a snowy shell alone,
> Deepshadowed in the glassy brine,
> Moonlike glowed double on the blue, and shone
> A naked shape divine.

> Or blue-eyed Krimhilt from a craggy hold,
> Athwart the lightgreen rows of vine,
> Pour'd blazing hoards of Nibelungen gold,
> Down to the gulfy Rhine.

Cambridge, Mass., April 28.

A WORD ABOUT CARDELIUS.

To the Editor of The Nation:

Sir: Your correspondent's query in your issue of April 1 about the writings of Cardelius interests me, and I am glad to be able to inform him of the probable source of the quotation he has seen—though who could have taken the pains to translate even a slight portion of this little-known writer interests me—and I would in turn beg to know how the extract referred to may be obtained.

John or Joachim Cardelius was one of the most learned writers of the sixteenth century. He was a native of a small town in Franconia and son of a physician who is reputed never to have taken physic or to have been bled. At the age of ten our writer was graduated by his teacher as knowing more than he did; and thereafter the pupil succeeded to the master's perquisites. He had a peculiar affection for the classics, was a humanist in everything but his humanity, and wrote a vast quantity of Latin verses, dealing chiefly with the delights of learning, of which he was entitled to speak, and of marriage, of which he could have known nothing, since he is reputed never to have entered wedlock. One of his works best known in his day is on the virtues of garlic, another on the spread of polite literature among the peasant classes, and a third on the diseases that affect bookworms. Singly his works are very rare—*rarissima*—as is the collected edition also, printed by Mauretius and only mentioned, so far as I know, by Euges in his "Icon Illustrium Virorum," where our writer is spoken of as follows:

> Eo provectus est Eruditionis, ut communi Doctorum omnium consensu, peritiorem Linguæ Græcæ neminem, in Latina vero Lingua disertiores perpaucos, exactiorem autem nullum scriptorem habuerit Germania, sicut plurima ipsius monumenta testantur.

Robert Restieaux.

New York, April 15.

PLAGIARISM.

To the Editor of The Nation:

Sir: Prof. T. M. Parrott opens his interesting communication in the *Nation* of April 15 by the somewhat wide generalization that "the idea that the first, if not the sole, duty of an author is to be original at all costs is distinctly modern. The very word 'plagiarism' was unknown to the Elizabethans." One of Professor Parrott's examples is Jonson. In Jonson's works (ed. of 1640) is an "Epigram to Proule the Plagiary":

> Forbeare to tempt me Proule, I will not show
> A line unto thee, till the world it know;
> Or that I have by two good sufficient men,
> To be the wealthy witnesse of my pen, etc.

This seems to show that Jonson knew the thing—when he saw it in another. Quite a little anthology might be adduced, in fact, from Jonson, and other Elizabethans, to show that—under such conditions—plagiarism was one of those airy nothings included in poetical nomenclature.

Antedating the Elizabethans, middle age literature is full of the literary scandals of authors

> Whom the lore of centuries, plus a hundred fights,
> Taught no great respect for one another's rights.

The lore of centuries indeed. Horace discusses the practice; Plutarch reprobates an instance of it in Epicurus (?), and Professor Parrott well shows that the Elizabethans knew their classics.

The Elizabethans, under the mellowing action of time, seem very fine people in their way, but "Victoria has thieves as good." Why Professor Parrott's undeserved slur on the "over-scrupulousness" of modern writers? Were it not invidious to select from such abundance of material, one might well adduce modern authors who could give spades and trumps to Alcyonius himself, who was accused of having burned the only known copy of Cicero on Glory that his own might not suffer by the discovery of his borrowings therefrom.

Bunford Samuel.

Philadelphia, April 27.

GREAT BRITAIN AND GERMANY.

To the Editor of The Nation:

Sir: To your explanation (April 15) of the deplorable condition of the Anglo-German relations, I should like to add a word. It is undoubtedly true that between the

common people of Germany and Great Britain there is little if any widespread hostility, but undoubtedly there is considerable acerbity between the commercial and official classes of those nations. And the reason is not far to seek.

Judging from the tone of British newspaper and magazine articles as well as speeches in Parliament, the British have viewed with complacency, or at least without alarm, the growth of the German army and the military supremacy of Germany in Europe. No very serious objections have been urged against German colonial expansion outside of Europe. Birmingham and Manchester have felt the pinch of German competition pretty keenly, but if the people of Central and South America prefer cheaper German goods, *que voulez vous?* World commerce is free, and that is part of the game.

"But how about the German navy?" the British public is asking. "What will it be used for?" What is the need of such a tremendous navy? Why such a startling disproportion between the size of the German navy and the amount of German ocean-borne commerce? So long as the British navy has been supreme, no restrictions have been laid on foreign commerce except tariffs by the foreign countries themselves; but, supposing the German navy were supreme, would these free-trade conditions continue to be open to all competitors? Great Britain lives by foreign commerce—it is the breath in her nostrils, the blood in her veins, the food in her mouth. She lives by manufacturing for and trading with foreign countries; and it is an absolute prerequisite of her existence that there should be complete security on the ocean for her traffic and commerce. Present conditions of world-commerce demonstrate that with the British navy supreme all nations, great and small, may traverse the ocean in absolute security and unhampered in search of markets and trade; but, judging from Germany's commercial methods and her past economic history, is it certain that such conditions would last if the Germans were supreme at sea? And with changed conditions, what will become of Great Britain's foreign commerce, and, with her foreign commerce restricted or imperilled, what becomes of Great Britain? We in the United States could manage to worry along pretty comfortably even if all of our ocean-borne commerce were shut off; but under similar conditions Great Britain would die of inanition in six weeks. These are some of the problems agitating the British public at present.

Of course, it may be that the Kaiser is laying down new Dreadnoughts merely in a spirit of facetiousness, and the feverish activity of German naval ship yards is all a huge joke. If so, the most excruciating part of the joke lies in the fact that it seems as if Germany in 1912 would have more Dreadnoughts in her navy than Great Britain. Add to this that Austria, Germany's ally, has taken to building Dreadnoughts, that the Russian navy is a minus quantity, that the French navy according to recent revelations is unfit—and the joke becomes positively killing. Meanwhile, Germany placidly assures Great Britain of her earnest desire for peace. According to our humorists Englishmen are slow to see a joke of any sort, and clearly Anglo-German diplomacy has a large task ahead of itself to convince the British public that there is nothing serious in the present German naval programme.

E. L. C. Morse.

Chicago, April 19.

A CORRECTION.

To the Editor of The Nation:

Sir: In the interests of accuracy kindly allow me to correct an error into which Prof. Arthur W. Goodspeed fell, in his account, in your issue of April 29, of the recent meeting of the American Philosophical Society at Philadelphia. Prof. Christian Hülsen, secretary of the German Archæological Institute in Rome, is credited by many of us as being the greatest among Roman topographers of the present day; but he is a German, and *l'Italia farà da se.* The gentleman who "has been in charge of the excavations of the Forum in Rome," as well as of other things, is Commendatore Giacomo Boni, who should not be deprived of any of his well-deserved credit, even in the popular mind. E. T. M.

University of Chicago, May 1.

Notes.

Longmans, Green, & Co. have ready for early publication, "Five Months in the Himalaya," by A. L. Mumm, formerly secretary of the Alpine Club; and "The Basis of Ascendancy," by Edgar Gardner Murphy.

The Yale Publishing Association has in press "The Journal of an Expedition Across Venezuela and Colombia, 1906-1907," by Dr. Hiram Bingham. The author gives the results of explorations made by him over the route traversed by Bolivar in the celebrated march of 1819 and on the battlefields of Boyaca and Carabobo.

Next autumn A. C. McClurg & Co. will give us two books of political memoirs, one "The Diary of James K. Polk," the other Adlai E. Stevenson's "Something of Men I Have Known." Polk's Diary was used by Professor Garrison in writing the seventeenth volume of "The American Nation," and James Schouler also made use of it, but it has never been so well known as its historical value is said to warrant.

The April issue of *The American Journal of International Law* opens with an elaborate eighty-five page study by Alejandro Alvarez, Councillor of the Chilian Foreign Office, "Latin America and International Law." He finds during the entire period since allegiance to the European home governments was severed a determination to foster and perpetuate the idea of Latin-American solidarity, however the realization of that determination may have been interrupted by contests between certain of the so-called republics. The editorial comment sets forth the exact status of our controversy with Venezuela. Due emphasis is laid on the first decision of the Central American Court of Justice, the interposition of that court in the dispute between Honduras on one side and Guatemala and San Salvador on the other, without either of the litigants having made a request for such action, resulting, as the editorial declares, in preventing the outbreak of war. The judgment of the court is given, in a literal translation. The editor also comments on a real diplomatic triumph—that of M. Isvolsky, Minister of Foreign Affairs for Russia, in proposing a mode of solving the Balkan question, which has met the approbation of Bulgaria, and of the signatories of the Treaty of Berlin. The details of our remission of a part of China's indemnity for damages growing out of the Boxer troubles of 1900, are also given, and the preliminaries to what is likely to be a final settlement of the Newfoundland fisheries controversy. The Supplement presents the treaties that affect the Panama Canal. The number is noteworthy as exhibiting triumphs of diplomacy in averting the peril of war.

Sturgis & Walton of this city have been brave enough to bring out a new edition, neatly printed and bound, of "The Lost Tales of Miletus," by Sir Edward Bulwer Lytton. We should be interested to know how many readers can be found to-day for these rhythmical experiments in rhymeless stanzas. The poems sound pretty thin when compared with the richer work of William Morris in "The Earthly Paradise."

A timely reissue for this season, when the flood of travel to Europe is beginning, is "The Playground of Europe," by the late Sir Leslie Stephen (G. P. Putnam's Sons). The handsome typography and binding are uniform with those of other volumes by Stephen published by the same firm. This book, as many of our readers will remember, is made up of papers on Switzerland and the Alps, most of them written when this enthusiastic Alpinist was a young man. The illustrations are excellent half-tones.

A fourth edition of Baedeker's "United States, with Excursions to Mexico, Cuba, Porto Rico, and Alaska" has just been issued (imported by Charles Scribner's Sons). The excursions to Cuba and Porto Rico appear for the first time in this volume. There are thirty-three maps, as compared with twenty-five in the third edition, and forty-eight plans, as compared with thirty-five. The handbook on the United States is perhaps not so well known as those volumes of the series which treat European countries, but, like all the rest, it is crammed with useful and interesting information.

Largely through the instrumentality of the graduate schools in our greater universities, the history of the United States, especially during the eighteenth century, is being rewritten in monographs on particular periods, districts, or movements. Of such works one of the most important which has recently appeared is Dr. E. P. Tanner's "Province of New Jersey, 1664-1738," which forms Volume XXX of the Columbia University Studies in History, Economics, and Public Law. It is a monument of painstaking research. Its 700 pages give us the most minute and scholarly account yet produced of any colony during a similar period. Dr. Tanner seems to have exhausted all printed and accessible manuscript material on the subject, which is primarily "an account of the political institutions of New Jersey during the period of her executive union with New York." One wonders, however, whether some light might not have been thrown on certain

features of the work by consulting the Journals of the Lords of Trade and Plantations, preserved in Philadelphia. The field covered is one of much interest, and no little difficulty, and his careful discussion of the proprietorships and the land systems of East and West Jersey will be welcomed by all who have had to do with those troublesome questions. By far the larger part of the study is, of course, devoted to the administrative aspects of the province. He has chapters on the Governors and their powers; the Council, its personnel, its legal position, in administration and in legislation; the General Assembly and the conflict between Executive and Legislature; the judicial, financial, and militia systems; the Church of England; and concluding chapters on the proprietorship under royal rule. The critical apparatus, and the elaborate index, are good. Such work has much to commend it. And not the least of its uses is that some day, on the basis of these studies, we may come to a better understanding of those political and administrative situations which underlay and led up to the American Revolution. Then we may hope to have adequate histories of that most important event.

A formula book of English official historical documents is in process of publication by the Cambridge University Press under the editorship of Hubert Hall of the Public Record Office. Mr. Hall originally planned this collection as an appendix to his "Studies in English Official Historical Documents," but as the work increased in bulk, he finally decided to issue it as a separate publication. The first volume, which has now appeared, contains diplomatic documents, 225 in number, dating from the eighth to the nineteenth centuries. They are classified in groups and in some instances, for example the nine instruments illustrating the passage of the Connecticut charter through the seals, form a continuous series. The documents were transcribed by the seven members of Mr. Hall's seminar in the London School of Economics, Mr. Hall selecting the specimens and assuming all the responsibilities of editorship. The work is admirably done and its usefulness is beyond dispute. The only previous "Formulare Anglicanum" is that of Thomas Madox issued in 1702, a collection almost entirely legal in character and much more limited in scope. Mr. Hall proposes to issue a second volume to contain formulas of surveys, inquisitions, accounts, and a few selected judicial records. When completed, the work will be a helpful introduction to the still youthful science of diplomatics.

"When Railroads Were New," by Charles Frederick Carter (Henry Holt & Co.), is the outcome of the conviction that no satisfactory account of railway beginnings is available to the general reader. To admit this contention is to overlook the classic writings of Charles Francis Adams and the standard histories of individual systems such as Smalley's "History of the Northern Pacific." Upon all of these the author has evidently drawn in his attempt "to gather the floating fragments of railroad history having a human interest into a coherent narrative." Yet there is not a word of acknowledgment or a bibliographical reference. That he has cultivated his field assiduously is clear from the abundant harvest of new and fugitive material which he has garnered. Amid such an array of matter one expects to find occasional errors in dates and points of fact, but these could be more readily forgiven if the finality of statement, so prevalent throughout the book, were supported by the evidence. Such evidence seems called for, when we are told, for example, that Peter Cooper antedated Stephenson in the invention of the multitubular boiler and the artificial draught. Yet the author with his keen sense of the humorous and the dramatic, traces in a most entertaining way the struggles of the idealists to overcome the conservatism of capital, the opposition of vested interests, and the prejudices of the blind and the ignorant, and, barring his all too frequent descent into flippancy and slang, presents his material effectively. We follow the pioneer days of the most important seaboard railways, of the "incubator" roads of the Middle West, and the romantic construction of the Pacific lines whose completion was celebrated by processions, feasting, and the driving of golden spikes. Finally we reach the prosaic birth of the Canadian Pacific, brought to life in an undemonstrative business-like fashion—at the completion of which its general manager only remarked, "The last spike will be just as good an iron one as there is between Montreal and Vancouver. Any one who wants to see it driven will have to pay full fare."

F. Frankfort Moore comes to the study of the eighteenth century—"A Georgian Pageant" he calls his book (E. P. Dutton & Co.)—as a child of Erin and as novelist. The combination is rather piquant when you consider that his subjects are Fanny Burney, the Thrales, Dr. Johnson, The Gunnings, Goldsmith, Sheridan, the Rev. James Hackman, and others who flutter about that lively company of British and Irish folk. You feel the touch of the novelist and dramatist in the very opening scene, which discloses Fanny Burney in Kew Gardens pursued by mad King George. The account of that famous adventure is vivid enough in Miss Burney's Diary, but Mr. Moore can tell you just what gestures she made, and precisely what lines of verse "flashed through her active brain," with the divination which has always been the prerogative of his school. As for the child of Erin, his huge indignation against any one who has smiled at the two Gunning girls or their masterful mother, or hinted that they had a brogue, his outcry over poor Boswell's contempt of Goldsmith, his rage with Johnson and Mr. Thrale—a hundred little touches throughout the book tell where his heart lies. "Where is there an element of romance in the story of the Gunnings?" he exclaims; "they were by birth entitled to the best, and by beauty to the best of the best. As it was, the one only became the wife of a contemptible duke [two dukes in succession], the other of a ridiculous earl. It may really be said that they threw themselves away." It is not their romance Mr. Frankfort really means to deny, for, as a trained novelist, he is careful to wring the full measure of that element of interest out of their story; his quarrel is with those who, like Walpole, saw anything odd in this capture of England from Castle Coote, County Roscommon. For Goldsmith the converser, Mr. Frankfort makes out a strong case; undoubtedly the sneers of Boswell & Co. were due in part to their priggish inability to understand a right Irish humor, but it is hard to believe also that Goldsmith did not at times talk like poor Poll. The evidence is too strong. The curious thing is that Mr. Frankfort stumbles into the very same pitfall when he denounces Johnson's conversation, failing to catch the note of British humor in the doctor's exaggerations. Of all Mr. Frankfort's chapters the truest seems to us to be that on the tragic story of Mr. Hackman and Miss Reay. Here his training enables him to analyze as interesting a psychological problem as ever confronted a novelist. He should, however, have given his reasons for accepting the whole of that correspondence as authentic. Altogether his book is more entertaining than the average writing of the kind on the comedy of the eighteenth century.

The motley multitude of wonders ascribed to the Virgin during the age of faith and fancy is represented in the New Mediæval Library by a selection mainly from the thirteenth century collection of Gautier de Coinci, translated into English by Alice Kemp-Welch, under the title, "Of the Tumbler of Our Lady and Other Miracles" (Duffield & Co.). Though these stories are told quite simply and briefly for religious edification only, several of them contain matter which should be attractive to mediævalizing poets. The first, by the way, was elaborated by Edwin Markham no longer ago than 1907, into an unusually meritorious Christmas poem, called the "Juggler of Touraine." There is considerable diversity in the marvels here recorded—a knight whose place in a tournament is taken by Our Lady, a violin player to whom the image of the Virgin bows, a monk who dies in an actual odor of sanctity, with five celestial roses in his mouth—but these are all, so to speak, conventional and orthodox miracles, such as might have happened to any well-regulated devotee. There is nothing here to illustrate the curious vulgar extension of the Virgin's benefactions to an interposition, sometimes grotesque and profane, in the affairs of bakers and tapsters, the desperate crises of pious thieves, and the predicaments of religious but very worldly sinners. That play of a primitive and untutored credulousness which, as in the apocryphal New Testament, credits a divine being with a purposeless and even immoral display of power, is to the general student not the least instructive aspect of popular mediæval literature. For it was but one step from the credulity of the ignorantly devout to the skepticism of the free-thinker who, in derision, fabricated burlesque miracles easily mistakable for originals. A future volume in this series might well be devoted to the highly interesting group of ambiguous legends clustering about the Virgin.

The Proceedings of the Bostonian Society, just published, contain the annual address of the president, J. F. Hunnewell, on the historical museums of Europe, the most noted of which is that in Zurich, where in some sixty rooms "over sixteen hundred years of national history are illustrated." The one in Munich is the largest, its nearly one hundred halls showing the great

length and variety of Bavarian history from the rudest to the most civilized ages. S. A. Bent proves satisfactorily and with many interesting facts the mythical character of the commonly accepted story that Mary Chilton was the first passenger of the Mayflower to step upon Plymouth Rock. The portraits of two colonial patriots, James Otis and Samuel Adams, with sketches of their careers, add value and attractiveness to the publication.

Alfred P. Schultz's "Race or Mongrel" (L. C. Page & Co.) is one of those curious but well-meant productions which cannot be commended without serious qualification, yet whose reading is not devoid of stimulus and profit. Upon the foundation of a brief and fragmentary outline of the history of ancient nations is reared the theory that the fall of nations is attributable to promiscuous intermarriage with alien stocks, and that the one sure source of national strength and perdurance is racial purity. What tells in the struggle for survival is not government, or institutions, or education, or religion, but blood. The inevitable result of indiscriminate racial mixture, as Mr. Schultz constantly asseverates and tries everywhere to show, is the production of a mongrel type containing in itself no power of development or perpetuation, and doomed to extinction. In proof, we are pointed to the history of the Hindus, the Greeks, and the Romans, and of the present South American whites, "bastards of incompatible races, the descendants of two, three, and more cultures that have nothing in common, of races that belong to different periods of development" (p. 163). On the other hand, the Jews, whom Mr. Schultz apparently thinks of as likely to possess the earth, and the Anglo-Saxons in Europe and America, owe their ascendency and permanence to abstention from intermarriage, save under rigid conditions of selection, with alien races. The particular lesson of all this for us is that the United States should rigorously restrict immigration, shun with horror the absorption of alien neighbors like the Mexicans, and see to it that the foreigners who come to us be allowed for a generation the free use of their native language as a safeguard against too rapid assimilation. To show the incompleteness of Mr. Schultz's survey of human progress would be to elaborate a treatise on anthropology and sociology; and we cannot but fear that his book, notwithstanding the crude vigor of its language and the undoubted suggestiveness of its observations, will be classed by students as an extreme and one-sided presentation of an interesting and vital subject.

Three volumes of Richard Dehmel's works are issued by S. Fischer of Berlin: "Lebensblätter," "Betrachtungen über Kunst, Gott, und die Welt," and "Der Kindergarten." Hitherto Herr Dehmel has contented himself with printing his thoughts at random; and it is only in his collected works that one sees how prolific and vigorous a writer he is. In his "Lebensblätter," for example—a rather unfortunate title, since Dehmel himself once issued a volume of poems under the same name—there are a dozen good short stories, modern German in spirit, and yet having much of the old-time mystery and magic about them. The best are "Die drei Schwestern," "Der Werwolf," and "Der lächelnde Erbe," all infused with poetic fancy. Dehmel's "Betrachtungen" disclose the thinker, but not the man of such sober, dry thought that no one but an abstract philosopher will read him. He wishes to reorganize men's ideas about beauty, nature, the purity and preservation of language, the moral training of children, public discourse, the relation of personality to art, and the value of art to the masses. He sees the humor in even the most serious of situations, and knows that if he can make others see it also, he will the more easily convince and convert. In remarkable contrast, as coming from the same author, is the volume of stories, poems, and plays designed for the kindergarten world. Here are quaint jingles and rhymes, suggesting sometimes Mother Goose, but more often Stevenson or Eugene Field, A particularly charming poem is that which pictures the revolving, starry heavens as "The Great Merry-go-Round." Here also are simple plays, such as little children may easily produce, designed to awaken in the expanding mind, perhaps, some of that same curiosity for the stage which Goethe early experienced. How the author of the more serious essays could put and keep himself so effectually in touch with the young would be, perhaps, a mystery if one did not perceive that he finds in child life and children, the beginning of human development, a theme of absorbing interest not always vouchsafed to those who have become sobered and burdened with prosy affairs.

The recent action of the Prussian government in admitting women to the universities on an equality with the men and the thorough reorganization of the secondary schools for girls in the kingdom are producing fruit in the shape of books treating the historical and the theoretical phases of the problem. One of the best of its kind is that of Dr. B. May, "Die Mädchenerziehung in der Geschichte der Pädagogik von Plato bis zum 18 Jahrhundert" (Strassburg and Leipzig: Josef Singer). The author confines himself to a discussion of the theories that have been urged in reference to the education of women, but does not take up the practical attempts to realize these ideals. In the Grecian age he deals chiefly with Plato and Aristotle; in the middle ages largely with Jerome and Vincentius of Beauvais; in the period of the renaissance, with the Hispano-Dutch humanist John Louis Vives; in modern times with such men as Erasmus, Luther, and Fénelon. Unfortunately the book closes with the end of the seventeenth century, and hence ignores the even more interesting period that begins with the eighteenth. The book has the merit of being a systematic summary of what has so far been found scattered through many works.

Under the title, "Religionsgeschichtliche Erklärung des Neuen Testaments," Prof. Carl Clemen of Bonn has published an exhaustive and thorough study of the dependence of early Christianity upon the non-Jewish religions and philosophical systems (Giessen: Alfred Töpelmann). He has collected with utmost pains the assertions of such dependence from Philo and Celsus to the latest phase of the "Babel und Eibel" controversy, which was brought so prominently to general notice by the lectures of Professor Delitzsch and the theological fulminations of the German Kaiser. With the greatest care he has examined the large number of suggested parallels between early Christian views and expressions and other Oriental religions, cults, and philosophies, determining by careful criticism whether dependence existed, and in which direction and to what extent. Every phase of Christian doctrine and each item in Christian history is compared with similar topics in non-Christian literature. His conclusion is that in the preaching of Jesus and the Synoptic Gospels direct or indirect influence is to be found only in particular expressions, metaphors, and parables. In some of the speeches of the Acts, on the contrary, he asserts direct dependence upon the current Greek philosophy, especially Stoicism. Yet all in all the Christian system is declared to be independent and original, foreign sources having affected only the periphery of Christian literature, not the essence of the faith itself. The result of the most careful comparative study of Christian origins Professor Clemen believes will be an apologetic gain, revealing the non-Christian source of some of the conceptions which have been an incubus on the Christian faith and leaving its essential message in clearer light. The method of the investigation is fair, cautious, and impartial. The student will find an abundance of salient material gathered from widely scattered sources. In this field, where vague and general assertions have been abundant and hasty conclusions rife, such thorough criticism was much needed, and the interests of sober and unprejudiced truth will be served by wide use of Professor Clemen's study.

Of the French works which have been called out by the approaching Calvin centenary in July one of the most important and most able is Prof. C. Doumergue's "Jean Calvin: Les hommes et les choses de son temps (Lausanne; Bridel). The author draws from many sources, from the letters of Calvin especially, but also from other documents. As the subtitle indicates, the work is really a history of the thought and the civilization of the age of Calvin. Nowhere else is the historical setting of the Geneva reformer more fully described. Indeed, it may be an open question whether Doumergue has not, by the very abundance of materials, crowded the person and the work of Calvin into the background. Of the five volumes that are to constitute this set, the fourth, entitled "Le Programme," and the fifth, "La Lutte et le triomphe," are yet to appear. Those that have been issued are called "La Jeunesse de Calvin," "Les Premiers Essais," "La Ville, la maison et la rue de Calvin." Each is handsomely illustrated. Thus far there has been a little too much special pleading for the hero.

It is proposed to establish at Columbia College a library of English literature in memory of Prof. George Rice Carpenter. A nucleus for the memorial already exists in the form of several volumes gathered together by Professor Carpenter for the use of students in English and comparative literature. It is expected that a separate room will be set aside for the collection when it has attained sufficient size. A committee has been formed to take charge of the matter, composed of Profs. William T. Brewster, Wilson Farrand, Jef-

ferson B. Fletcher, G. C. D. Odell, and Ashley H. Thorndike, together with James G. Croswell, Frederick P. Keppel, secretary, and John B. Pine, clerk of the board of trustees.

The following appointments have been made for next year at the American School of Classical Studies in Rome: Guy Blandin Colburn, A.B. (Brown University), Ph.D. (University of Wisconsin), acting professor of Latin in Iowa College, to the fellowship of the Archæological Institute in Classical Archæology; and Henry H. Armstrong, professor of Latin in Yankton College, to be a research associate of the Carnegie Institution in Classical Archæology.

Dr. Sheldon Jackson, United States general agent of education in Alaska since 1885, died at Asheville, N. C., May 1. He was born in Minaville, N. Y., in 1834, and after graduation from Union College and Princeton Theological Seminary, he was ordained as a Presbyterian minister. For some time he engaged in teaching and in mission work among the Indians, and for more than thirty years he had given special attention to Alaska. He introduced the public school system into that Territory, and he was indefatigable in his efforts to improve social and intellectual conditions there. He was author of "Education in Alaska" (1872), "Hand-book on Alaska," "Alaska and Missions on the North Pacific Coast," and since 1886 of annual reports on education in Alaska.

Caleb Benjamin Tillinghast, since 1883 State Librarian of Massachusetts, died at Boston April 28. He was born at West Greenwich, R. I., in 1823, and before taking up library work he had tried both school-teaching and journalism. He had been chairman of the Massachusetts Free Public Library Commission and the Committee on Publication of the New England Historic Genealogical Society, and treasurer of the Massachusetts Board of Education.

The Very Rev. John Marshall Lang, principal of Aberdeen University since 1900, died at Aberdeen May 2, in his seventy-fifth year. He had been moderator of the Church of Scotland. His books are "Heaven and Home," "Life: Is It Worth Living?" "The Last Supper of Our Lord," "Homiletics on St. Luke's Gospel," "Central American Faiths," "The Anglican Church," "The Expansion of the Christian Life," and "The Church and Its Social Mission."

The death is reported from Edinburgh, in his eighty-seventh year, of David Lewis, a well-known temperance reformer. He wrote a "History of the Temperance Movement in Scotland," "The Drink Problem," "The Drink Traffic in the Nineteenth Century," and "The Drink Trade."

Karl G. F. von Reinhardstoettner, professor in the Technical High School of Munich, has died at the age of sixty-two. He was an authority on Portuguese, writing a grammar of the language and a history of the literature.

Stephen von Kotze, a Berlin writer of marked and humorous individuality, has died at the age of thirty-nine. His works include "Australische Skizzen," "Ein afrikanischer Küstenbummel," and "Im europäischen Hinterhaus."

The death is reported of Paschal Grousset, a journalist of note and a member of the French Chamber. He was born sixty-four years ago in Corsica. In 1869 he was appointed by Henri Rochefort editor of *La Marseillaise*, and during the Commune acted as delegate for foreign affairs. After the establishment of the republic he escaped to England, where he lived until 1881. Under the name of Philippe Daryl he wrote for *Le Temps* on English topics and translated English novels into French. Under another name, André Laurie, he published a number of romances and books of travel.

Anthony Jannaris, who was for many years prominent in the political affairs of Crete, died suddenly April 26, on the steamship Majestic, bound to New York. Dr. Jannaris was born in Crete in 1852; from 1883 to 1885 he was headmaster of the Public Gymnasium of Canea; in 1889 was appointed lecturer in Greek literature at the University of Athens, but he gave up this position in the same year and returned home to take part in the insurrection. For his share in this movement he was proscribed by the Sultan and fled to London. The next six years he spent in an investigation of the history of the Greek language, working in the British Museum. Returning to Crete, he was elected a member of the Cretan Assembly, and in the troubles of 1897 he acted as correspondent of the London *Times*. After various other vicissitudes he became in 1907 inspector-general of public education in Crete. He wrote numerous books and articles in various reviews. Among his more noteworthy works are grammars and dictionaries of the Greek language, studies of Cretan folklore, critical notes on Longinus, and a translation into English of St. John's Gospel as read by the early Christians.

THE EMPIRE OF THE MONGOLS.

The Mongols: A History. By Jeremiah Curtin; with a Foreword by Theodore Roosevelt. Pp. xxvi+426. Boston: Little, Brown & Co. $3 net.

The Mongols in Russia. By Jeremiah Curtin. Pp. xx+448. Boston: Little, Brown & Co. $3 net.

When two years ago the pen dropped from the tired hand of Jeremiah Curtin, the distinguished linguist, ethnologist, and traveller, he left nearly ready for the printer a series of three volumes dealing with that great nomad race of Central Asia that seven centuries ago burst its desert bounds and made the yellow peril such terrible reality to Western civilization. These writings have since been prepared for the press by Mrs. Curtin, his companion and partner in all his journeyings and undertakings. The first volume came out about a year ago; the second has just appeared. The final volume, embodying a personal study of a typical Mongol tribe, the Buriats, is promised for an early date. We learn from Mrs. Curtin that it was the author's intention to include still another volume, on the history of Tamerlane and the Mogul emperors. With this in view, preparations had been made for an additional two years' sojourn in Persia and India, when the illness which proved fatal intervened to prevent the completion of the plan. Before taking up these books in detail, we may note that the term Mongol appears to be of Chinese origin, and is properly applied to a group of closely cognate pastoral tribes centring in Mongolia between Lake Baikal and the Gobi desert. They are a part of the great Turanian, or Tatar, stock, which includes also the Manchus, Turks, and, with considerable Aryan mixture, the Finns and Magyars.

"The Mongols" is really a history of Jinghis Khan, the founder of the short-lived Mongol Empire, and of his immediate successors; all that belongs to the earlier period is summarized in a few short paragraphs, while the long period of decadence after 1412 is dismissed in some twenty lines. The conquest of Russia is barely mentioned, and Timurleng (Tamerlane) and the Mogul Empire of Delhi have been reserved for another volume. Temudjin, known in history as Jinghis Khan, the son of a petty tribal chief, was born in 1161 on one of the head-streams of the Amur River, in what is now Russian territory. Through cold-blooded murders and skilful alliances he managed to secure recognition as Khan, or, lord, of his native tribe, by the time he was forty years old, and four years later, after a series of rapid victories in Mongolia and China, he assumed the title of Jinghis, "The Mighty." From that time until his death his one object was the subjection of the known world to his own rule, and this object he systematically prosecuted for over twenty years with almost unvarying success, every conquest being a ruin and desolation, every pledge a treachery, and every victory a stupendous massacre of almost unimaginable atrocity. With these nomads every man was a warrior, and the army was simply a group of marching tribes. A single illustration of Mongol warfare will suffice. At Nishapur (1221) they began by laying waste the whole province of which the city was the capital. The siege was then pressed, with the help of three thousand balistas, three hundred catapults, four thousand ladders, and seven hundred machines for throwing burning naphtha. The city was finally taken by assault, the daughter of Jinghis leading one of the storming parties. In the ensuing four days of slaughter every living thing—excepting a few hundred skilled artisans reserved for future service—was destroyed, even to the cats and dogs. Every prostrate body was beheaded, and three pyramids were built, of men's, women's, and children's heads. Fifteen days were occupied in utterly razing the city, after which barley was sown upon the ruins.

At his death in 1227, Jinghis left to his son and successor a greater extent

of empire than had ever before been ruled by one man. Under Kubilai (Kubla Khan, 1259-1294) the Mongol Empire reached its highest magnificence. After him came swift decay. In 1368, the now degenerate Mongols were driven out of China by the founder of the Ming dynasty and later on were made tributary. All of their tribes are now subject either to China or to Russia.

Nearly one-half of the second book is taken up with the history of Russia, previous to the first Mongol invasion. This portion is chiefly a wearisome record of the conflicts of rival cities, the history of the Russian state beginning in 862, when the citizens of Novgorod, weary of anarchy and invasion, invited Rurik, the Norseman, to come and rule over them. As a member of the Hanseatic League, "mighty Novgorod" rose to greatness, but in the end (1478) all the Russian cities were brought under the central authority of Moscow. In 1224 the news came from the south that the terrible warriors of Jinghis had swept across the Ural and were ravaging the territories of the Polovtsi Tartars, a remotely kindred people, who had occupied the Black Sea country nearly two centuries before. In response to the cry of the Polovtsi, "To-morrow they will strike you," the neighboring Russian princes marshalled their forces against the enemy, but were totally defeated on the banks of the Kalka by the Mongol host under Subotai and Chepé. The Prince of Kief and two others were crushed to death under a platform of heavy planks upon which their barbarous captors sat and feasted while their victims were in their death tortures. Then the Mongols retired, as suddenly as they had appeared, to the mystery of their own deserts. In 1237, the full Mongol flood came upon Russia. The invasion was led by Batu, grandson of Jinghis Khan. To his demand for tribute, the Russian princes gave brave, but injudicious, refusal. One city after another was taken by storm —Riazan, Kolomna, Moscow, Vladimir, Tver—their treasures seized, their buildings burned and levelled, their people slaughtered by tens of thousands, and their principal men crucified and flayed alive. Nothing could withstand the fury of the yellow barbarian. The next year Batu built his capital at Sarai, near the mouth of the Volga, and established the famous khanate of the Kiptchak, or Golden Horde—a name chosen from Mongol symbolism—which stretched from Turkestan to the Dnieper and for nearly two centuries dominated the whole of eastern Europe.

Batu's reign marks both the summit and the ebb of Mongol power in Europe. With his death about 1255 begins the decay that follows inaction among races bred only to fighting. Within the next century the Mongols exchanged their heathenism for the religion of Mohammed. In the meantime intestine feuds were wasting their strength, while Russian power was steadily consolidating under the leadership of Moscow. In 1380 Dmitri of Moscow, at Kulikovo on the Don, routed a great army led by the Khan Mamai himself. From that time on the Mongols, in spite of temporary successes, lost ground, and the last remaining Mongol khanate in Russia was extinguished with the annexation of the Crimea in 1783.

Besides the main story, the second volume affords interesting light upon the origin of the conflict between Russia and Poland, the struggle between Rome and Constantinople for ecclesiastical supremacy in Eastern Europe, and the Germanizing of the Baltic provinces in the name of Christianity by the Knights of the Cross. Paganism lingered in Lithuania down to the close of the fourteenth century.

While the story of the Mongols is new to most readers, and is here vividly told, the style of the narrative, for want of the author's final revision, is somewhat too terse and abrupt for easy reading, suggestive rather of annals than of a rounded history. The lack of notes, bibliography, or reference to specific authorities, in both volumes, and the omission of an index to the second, are serious deficiencies, due also to the fact of the author's untimely death, and not in accord with his usual careful custom. It is to be hoped that all these defects will be remedied in the proposed third volume. Each volume is accompanied by a map and portrait of the author.

CURRENT FICTION.

Fraternity. By John Galsworthy. New York: G. P. Putnam's Sons.

This latest book of Mr. Galsworthy's, like several of its predecessors, seems wilfully to leave the artistic sense of the reader unsatisfied. It has, strictly speaking, no hero or heroine, no climax, and no conclusion. Like "The Island Pharisees," it is seething with the leaven of humanitarianism and is full of unanswered questions. The general interrogation of the work is summarized in three lines from the "Electra" of Euripides printed on the title-page:

Brother, brother, on some far shore
Hast thou a city, is there a door
That knows thy footfall, Wandering One?

A sensitive skeptic, outraged by social injustices, haunted by the persistent dream of universal brotherhood, Mr. Galsworthy appears ready with Carlyle and Ruskin in his later period to let the "devil fly away with the fine arts" till that question is answered. Till a new light breaks for suffering humanity, there is no joy for the artist in painting pictures or writing novels. Indeed, till some solution is found for our social problems, no deep and true book can possibly have a hero, a climax, or a conclusion. Meanwhile, the artist has a great preparatory work to perform to shatter the complacent egotism of the contented, and to send to them in visions of the night a dream of the New Eden. To this extent, then, "Fraternity" is a purpose novel allied in spirit and general intention with many of the novels put forth in the Revolutionary Era of fair hope. But it is distinguished from them by a great difference which makes it faithfully representative of the sober wisdom gained by a century of disillusionment: though it yearns with the old ardor toward the divine idea of Social Justice, it betrays the new and almost tragical uncertainty as to her whereabouts.

We have perhaps emphasized rather too much Mr. Galsworthy's sacrifice of art to life. In spite of his desire to make fiction serve a higher master, he has produced a book which, even judged purely on its artistic merits, must rank as one of the most notable of the day. When one compares it with his earlier novels, such as "The Villa Rubein" and "The Island Pharisees," one is astonished at his development in breadth, variety, subtlety, charm, and sympathy. In his recently published "Commentary," a volume of brilliantly suggestive character sketches, we noted his unusual power of symbolizing an entire class or social stratum by one keenly observed, significantly delineated individual. The same power is exerted on a larger scale in "Fraternity," and with much more dramatic effect. Here is a whole social world—the fine-grained, unpractical literary man, his brother the man of facts and action, the gross man of wealth and business, the strenuous young physician, the decrepit butler, the model, the street-sweeper, wives, children, and infants—each member intimately, unmistakably himself or herself, and yet somehow clearly standing for every man and every woman of that stamp. What brotherhood exists in this world, what strivings toward it, what indifference to it, what repulsion from it—such is this study of the novelist. He has not simplified the problem; it is life in its complexity that he envisages—life with its immortal prejudices and its immortal egotism. Some of the characters, too, are touched with the fever of fraternal love. But at the end of the book the literary man wears the wan smile of Hamlet. "It is a disease to smile like that!" comments the young physician. "Your prescription," is the retort, "in this case has not been too successful, has it?" And the Laertes of the story can only reply, "I can't help it if people will be d——d fools." There

is one old man, however, feeble-minded, lost to his own time, a Maeterlinckian figure, whose prophetic eyes have seen the glory of the New Jerusalem on earth. Stepping into the night, he utters one cry, "Brothers!" A policeman passing on his beat lifts his lantern and peers into the darkness: no one is there. That is one of many touches of grim yet tender irony which lend a peculiar fascination to this picture of a segment of modern life.

The Actress. By Louise Closser Hale. New York: Harper & Bros.

Mrs. Hale has given us in this book that refreshing and unusual thing, a wholesome glimpse of stage-life seen from the inside. The picture she presents is neither framed by the proscenium arch nor caught by a surreptitious eye at the crack of the stage-door; standing among the hard-working, warm-hearted servants of the public whose labors we applaud so lightly, we realize the drudgery of what seems so spontaneous. Glamor enough, however, mingles with the grind, to make Rhoda Miller, the heroine, scorn the humdrum round of domesticity pressed upon her notice by her suitor, Aaron Adams, one of those characters whose strength, tenderness, and general desirability are so obvious in fiction and so easily overlooked in real life. Rhoda goes to England and scores a tremendous success, which falls far short of filling Aaron's place in her heart; thinking that her deserted swain has found consolation, she endeavors in vain to do likewise—here Mrs. Hale indulges in a deliciously funny stab at the Artistic Temperament in the composer Meurice—and finally collapses in the severe illness that is the last resort of heroines hard pressed by the burdens of their own folly. Of course, Aaron appears to gather her wasted form in his strong arms, and she gladly exchanges the world of make-believe for that of reality. The book abounds in clever character-drawing, the descriptions of English society being particularly well done.

The Girl and the Bill. By Bannister Merwin. New York: Dodd, Mead & Co.

This story almost exceeds the speed limit. A girl and a five-dollar bill are the leading racers and are never lost to view, but their attendant train of persons and things grows to bewildering length. There are stolen papers, cryptograms, refrigerator prisons, and hollow Chicago tree trunks. There are sleuth-houndings in Japanese, Portuguese, and American styles. There are international sluggings, ranging from yellow jiu-jitsu to the good old-fashioned universal monkey-wrench, and the futile but patriotically cow-boyish attempt to throw from a launch a lariat over a gentleman in a neighboring motor-boat. There are an intrepid girl and an engaging man, accomplished detectives both. And there are world-important diplomacies. All this and these, with much and many more, are whizzed before the reader as the recorded contents of a day and a quarter—almost less time than it takes to tell it. Out of the whole emerges a very good, readable story, violating probabilities, as it should, but dealing mercifully with sensibilities.

Uncle Gregory. By George Sandeman. New York: G. P. Putnam's Sons.

This story possesses the peculiar interest and fascination that always accrue to a book, as to a person, that can suggest depths of significance below what meets the casual glance. If these depths are a baffling puzzle even when their presence is recognized, the interest is so much the greater. It may be that Mr. Sandeman is guiltless of symbolic intent, and has sought merely to give us the round unvarnished tale of a wealthy Peer Gynt who wished to have only the memory of his shiploads of Bibles preserved for posterity. Whatever the intention of the book, its impression is of a strength disproportionate to the expressed subject matter, and we feel that there is real weight in the question so often asked by those laboring at the elusive biography: "What is the real Uncle Gregory?" They severally apprehend him as a grown-up child trying to embody his sister's ideal for him—a saint—a demon—an epitome of the spirit of his time. One can but wish that the author had brought to his climax some such sledgehammer force as we feel in Chesterton's "Man Who Was Thursday," a book of somewhat similar effect; but he evades the questions he has raised, and closes the book, as it were, with an interrogation point.

The M.P. for Russia: Reminiscences and Correspondence of Madame Olga Novikoff. Edited by W. T. Stead. 2 vols. New York: G. P. Putnam's Sons. $7.50 net.

It is perhaps unjust to say that these volumes disappoint expectations. One knew of Madame Novikoff's reputation, and of the conviction of many of her English and Continental contemporaries that she was a woman of great ability and of extraordinary charm; yet to say that these are not conveyed by this record may amount to no more than to confess that personality eludes the printed page. But the editing is at least in fault in that it leaves many things obscure that should have been cleared up—for example, the precise nature of Madame Novikoff's relations with the Russian government—and in general tends to give the reader an intolerable deal of Stead to a pennyworth of Novikoff. The main facts in her career, however, are put in relief: her ardent and life-long Pan-Slavism; her whole-souled championing of Russia abroad, particularly in England, where she lived for a part of each year for many years; her remarkable mastery of English, and her conquest of many warm friends and admirers among the best of her day in England—Carlyle, Froude, Kinglake, Tyndall, Gladstone. But when we come to the proof in cold type of her uncommon graces and brilliant wit, it largely vanishes. After all, we have to take it on credit. What so many capable observers experienced in their own persons, cannot have been so mythical or so exaggerated as these pages would make it seem.

Madame Novikoff's greatest successes in England were won in those years when Beaconsfield called her by the title now given this book. During the preliminaries of the Russo-Turkish war, while it was raging, and throughout its fateful sequels, she was "M.P. for Russia" in the sense that she wrote books and articles and kept up a voluminous correspondence and maintained a salon in London, all for the purpose of correcting English prejudices and leading to that better political understanding which seemed to be established after Gladstone's return to power in 1880. Later, she was not so happy. The war with Japan and the following political developments in Russia were terrible blows to her. "Heaven save us from a Constitution," was her cry, and she dreaded a Parliament as devoutly as Froude. Thus the break-up of autocratic Russia seems to leave this autocrat sad and puzzled, at the end of her days. And her proud cry, "The Future is ours," rings pathetically now.

From the old public issues treated with such prolixity and vanity by Mr. Stead, the reader turns to the human intercourse here outlined. Kinglake appears at his best in the letters of his that are printed. Froude in his was coldly kind and politically askew. Gladstone writes as a tremendous man of business. With Disraeli, Madame Novikoff, naturally, never got into close touch. She has some good stories of his habitual resort to flattery, from the Queen down, in order to gain his ends. She was talking with Gortschakoff after the Congress of Berlin. He said: "I cannot complain of Beaconsfield. He called on me no end of times and was most complimentary. He told me, among other things, that whenever he hears a *bon mot*, he always says, 'Oh, it is not so good as what was said by Prince Gortschakoff'." Madame Novikoff frankly rejoined: "Prince, I must tell you that Lord Salisbury said not long ago that Beaconsfield's power lay in his shameless habit of flattering everybody." Gortschakoff protested, but *un peu tard*, one fears, that he was not

easily taken in by flattery. Charles Villiers is quoted as authority for another story in the same vein. When the Queen published what Villiers is strangely made to call her "Reminiscences of Life in Scotland," she sent a copy to members of Parliament:

> We were evidently expected to offer madrigals and burn incense. . . . We were all in a fix. Dizzy alone never lost courage. "This production," he wrote, "can only be compared to Shakespeare, or to the Gospels." I remained silent, while he went on, as if speaking to himself. "Yes, it wants a lot of courage for serving such a dish, and an exceptionally robust health to assimilate it!"

The Moral System of Dante's Inferno. By W. H. V. Reade. New York: Henry Frowde. $4.15.

This is the most exhaustive analysis that has ever been made of Dante's morals. For five hundred years critics have discussed why the poet condemns sinners to an upper or a lower circle of hell, contrary to the popularly accepted enormity of their wickedness. To link Brutus and Cassius, who regarded themselves as martyrs to patriotism, with Judas Iscariot, the supreme embodiment of treachery among Christians, has seemed a paradox to many a student of Dante. But nobody has been able to maintain that the verdicts in the Divine Comedy were haphazard or arbitrary: for there is no other masterpiece in the world in which every part has been so carefully adjusted to the whole, and where literally every word has been so charged with significance. Mr. Reade's task is to discover the rules which guided Dante's verdicts.

He begins, very properly, with an examination of two modern theories which may be regarded as both representative and weighty—those of Witte and of Dr. Edward Moore. Having disposed of these, he goes back to the two great bodies of moral teaching—Aristotle's and Thomas Aquinas's—from which Dante drew directly. With patient elaboration, he compares their systems piecemeal, virtue by virtue and vice by vice, and so is able to show not only which of his masters Dante followed in each particular case, but also the general attitude towards life of the Greeks and of the supreme Catholic dogmatist. He traces, further, the origin of such of Dante's verdicts as correspond with neither the Aristotelian nor the Thoman model. His fundamental division of sins into those of Force and those of Fraud, for instance, Dante borrowed from Cicero. The Christian theology naturally led to a whole tribe of sins which Paganism took no notice of.

Mr Reade's treatise, therefore, may interest also students of comparative morals who are not primarily concerned with Dante. It could scarcely be more careful, thorough, or open-minded. We think it would be well, however, if he had translated his many extracts from St. Thomas, putting the original text in the footnotes. And he might assist the readers of his intricate arguments by summing up briefly and very clearly the points that he has demonstrated, chapter by chapter. Like many learned controversialists, he sometimes seems to forget that most of us read not for the sake of the controversy, but to learn its results. Howbeit, he has produced a work which every exhaustive student of Dante will turn to and which will not need to be undertaken again on so elaborate a scale.

Madrid: An Historical Description and Handbook of the Spanish Capital. By Albert F. Calvert. With 453 illustrations. New York: John Lane Co. $1.50 net.

Madrid is not a typically Spanish city. The traveller visits it to see the Prado and the Royal Armory, but not to see Spain. In no other great Continental capital, to be sure, may one see ox-carts in fashionable thoroughfares, mule teams in the service of royalty, men wrapped in capas, and women whose street costume includes a fan in the hand and a rose in the hair. These touches, however, are by way of suggestion only. One must wait for some day when the city is *en fête*, when the promise of a great *corrida* has roused the national passion for the favorite sport and filled the Alcalá with a stream of eager humanity, to realize that at heart Madrid is Spain. In this volume of the Spanish Series, Mr. Calvert proves that, while Madrid cannot compete with her older sisters, Segovia, Burgos, Seville, Cordova, Granada, Toledo, and Avila, in antiquities or local color, the spirit of modern progress which has made her a prosperous capital has not destroyed her charm for even the traveller of the romantic school. One could not ask for a better supplement to the more practical details of the guide-book. The work is accurate, sympathetically just, complete without being tiresome, and profusely illustrated. It contains a chapter of general impressions, a brief history of the city, descriptions of the court, society, art, literature, and the drama, churches and public buildings, including the Escorial, La Granja, and Alcalá; an excellent guide to that marvellous collection of arms and armor, so little of which, curiously enough, is of Spanish workmanship, and last but not least two chapters on the bull-fight.

For those who wish more detail, special volumes of the series are devoted to Goya, Velasquez, the Prado, Spanish arms and armor, the Escorial, and the tapestries of the Royal Palace. No other country lends itself to a series of descriptive volumes as does Spain, for Spain is not one, but many, countries; and its people, from the Basque to the Andalusian, many peoples. Travellers will do well to economize space in other directions, if necessary, and include Mr. Calvert's volumes in their outfit.

Science.

The Home Garden. By Eben E. Rexford. Philadelphia: J. B. Lippincott Co. $1.25 net.

The Summer Garden of Pleasure. By Mrs. Stephen Batson. Chicago: A. C. McClurg & Co. $3.50.

Works on gardening written by optimists are pleasanter to read and much more profitable to use than those which are prepared by the unsuccessful and pessimistic. Some of the smaller treatises on the art of managing plants appear to have been the outcome of disappointment: the writers having failed to make their gardens pay either in money or pleasure, vent their vexation in the construction of delusive books. "The Home Garden" is the sober production of a successful gardener who has reaped fair crops of wholesome and kindly fruits of the earth. How far one can trust the author in estimating the attractiveness of gardening for boys is a doubtful matter. Our experience does not wholly confirm the confidence which is here expressed in the alluring nature of weeding with the aid of the latest improved tools. After giving a good account of certain labor-saving appliances, the author proceeds:

> Nine boys, I venture to say, can be made to take an interest in the garden where the implements I have mentioned are used, where one could be induced to work in it with simply a hoe and spade. Boys, like men, have a horror of pulling weeds, and the writer of this cannot say that he blames them for it, for he can easily remember the time when he would rather take a whipping than weed the garden for an hour. He very much doubts if he would have a garden now if all the work in it had to be done in the slow, hard, old-fashioned way.

This book does not deal at all with the decorative floral features of gardens, but solely with the modest plots of vegetables and small-fruits which can be managed without too much trouble by a person with scanty leisure and good courage. The directions for the management of the soil and most of the plants are plain and sensible, and cannot carry any beginner far out of the way. Moreover, the author wisely calls attention to the disheartening features of gardening which confront the beginner after the rosy dawn of the seed-bed has begun to grow gray with the coming of blights and insect pests. The actual danger from these enemies is lessened by the modern methods of spraying and by the judicious selection of va-

rieties of resistant character. The advice to choose from the too enticing catalogues only the old-established and approved sorts, instead of the newer and untried, is sound and always safe. The author might also have called attention to the desirability of selecting only varieties which are suited to the particular latitude and exposure of the garden. Plants which are adapted to Maine may not be so good for southern Pennsylvania. The little book is complete, as far as it goes, and does not refer the reader for necessary information to another book in the same series. In short, this treatise is a convenient, untechnical, but not encyclopædic, aid to beginners. Although it is very small, it ought to have an index.

"The Summer Garden of Pleasure" is an English work which endeavors to justify its existence by an apologetic preface. The author tenders counsel to the "amateur who gardens on the level," whatever that may mean, and "who longs after color schemes as ardently as do his brethren with larger powers." To illustrate her views of color distribution, the author makes intelligent use of some exceedingly impressionistic paintings by Osmund Pittman. Much of the advice is presented in an uninteresting manner, but it is all made easily accessible by the device—costly in printing, but very useful—of marginal headings for the paragraphs. The best part of the book is that which is devoted to the management of the flower garden in the midsummer season, in order to prevent complete banishment of attractive flowers when the shadow of autumn is about to fall. The suggestions are, of course, better adapted to the exigencies of the English gardens than to ours, but with a few amendments many of the ideas may be carried out here. There will be considerable difference of opinion as to the artistic effect of some of the combinations depicted in this book, since a few of them appear to have been introduced as examples of what to avoid, but many are quiet and restful enough, even for a Japanese.

Longmans, Green, & Co. announce as soon to be published "The Fundamental Principles of Chemistry," by Wilhelm Ostwald, authorized translation by Harry W. Morse.

"Les Phénomènes psychiques et supernormaux," by Dr. Paul Joire, treats observation and experimentation in such matter from the point of view of a professor at the Institut Psycho-physiologique of Paris (8vo, 22 figures, Vigot Frères). "Le Cœur humain et les lois de la psychologie positive," by Antoine Baumann, is, like the other books of this author, an excursion where science and philosophy meet (Perrin).

"Le Rationalisme comme hypothèse méthodologique," by F. Maugé, is a philosophic treatment of theory which underlies science, in two parts: first, the rationalist hypothesis and experimental method; second, the conditions and principles of systematizing in the sciences (617 pages, Alcan).

The recent publication of the official documents in the case of Galileo has led to the preparation by a Catholic scholar, Dr. A. Müller, S.J., director of the astronomical observatory on the Janiculum in Rome, of a work of some two hundred pages treating the new phases of this old controversy, "Galileo Galilei und das kopernikanische Weltsystem" (Freiburg-im-B.; Herder). A further work on this matter, by the same author, is in course of publication, "Der Galilei Prozess (1631-1632) nach Ursprung, Verlauf und Folgen." Naturally this monograph presents the matter from the point of view of the Catholic Church.

"Unsere Kultur" is the title of a readable scientific volume by Prof. Albert Geyer (Giessen: E. Roth), designed to give a popular view of the development of modern life. The author cannot forget that he is more German than *Weltmensch;* he credits Bell with a part in the development of the telephone, but only after the Germans had previously made some progress; and in the history of steam navigation he passes by unknown Fulton altogether, beginning with the steamboats on the Rhine, 1816, the Oder, 1825, and the Danube, 1833.

Simeon Snell, president of the British Medical Association and one of the leading ophthalmic surgeons of England, died at Sheffield last month. He had been professor of ophthalmology at the University of Sheffield, and had edited the *Quarterly Medical Journal.* Among his publications are: "The Electro-Magnet and Its Employment in Ophthalmic Surgery," "Miners' Nystagmus," "School Life and Eyesight," "Prevention of Eye Accidents in Certain Trades," and "Eyestrain as a Cause of Headaches."

Charles Bell Taylor, an eminent ophthalmic surgeon, died at Nottingham, England, last month, at the age of eighty. He obtained his medical education at the University of Edinburgh and Paris. He was the author of "On Diseases of the Eye," which has run through several editions.

Drama.

The Playhouse and the Play. By Percy MacKaye. New York: The Macmillan Co. $1.25 net.

In "The Playhouse and the Play" Percy MacKaye has collected the various essays on the theatre which he has written during the last two or three years. Most of them have been read before different universities, clubs, or associations, and all have been published in full or in part. It is well that they should be offered in this convenient form, for—and this will be admitted even by those who do not agree with all his conclusions—they are full of interesting and pregnant matter. The following passage in one of them may be quoted as the common text of all:

In theatrical amusement we are concerned with public happiness. Real happiness means education; real education means happiness. And in regard to our drama there can be no sounder, no more enlightening conviction than this truth: that by whatever name we choose to call it, the influence of our theatres is a colossal, a national influence in forming the taste, the moral will, the mental capacity of our people.

In common with all other thoughtful students of the theatre and its possibilities he laments that so potent an engine of civilization should be delivered into the hands of commercial speculators, barred from the performance of its highest functions, and often degraded to the basest uses.

Comparatively few persons ever stop to think of the actual influence of the theatre, for good or ill, upon public tastes and morals. Mr. MacKaye quotes some facts and figures which throw much illumination on this subject. Beyond doubt, the influence is enormous, and, as matters now stand, more often mischievous than beneficial, or even innocuous. The question is how existing evils are to be remedied and the potential benefits of the theatre to be brought into operation. Mr. MacKaye's one solution is endowment. He even makes the rash statement that without endowment no effectual art can live, a dogma that would scarcely bear the test of examination. In his enthusiasm he imagines a civic theatre—apparently some ideal development of the ancient classical prototype—in every considerable city, capable of doing a large part of the work that churches, schools, and universities do now; an institution representative of all that is intellectually and morally best in the community, an unfailing source of incentive and example. It is a pretty dream, but, like most enthusiasts, Mr. Mackaye, with his soaring vision, overlooks the sordid financial, political, and other practical difficulties in the way.

There is the gravest reason for mistrusting the possibilty of a sound and enlightened administration of a theatre by public officials. What might be accomplished by private generosity and altruistic effort is another question, which need not be considered now. Mr. Mackaye is right in his assertion that the theatre will never reveal its highest powers, until it is run in the public interest and not wholly as a commercial speculation. But it may be pointed out that public interests and private gain are not necessarily or invariably incompatible. Plenty of money has been made before now in the higher walks of literature, art, and the drama. Mr. Mackaye's dictum that "the rational aim of theatrical business is to ignore the rational aim of dramatic art" is by no means universally true. Even in this country, over and over again, the best plays have proved the most profitable. A great part of Edwin Booth's fortune was made out of Shakespeare. Mr. Man-

tell, a far inferior actor, is doing well by following—*longo sed intervallo*—in his footsteps. In the dramatic business, as in others, it often pays to supply the finest stock, and some dim perception of this fact is beginning to dawn, apparently, upon one or two of our managers. Being simply commercial men, they cannot, as Mr. Mackaye points out, be expected to risk their money in what they believe to be a losing venture, but for the same reason, they would readily abandon a policy threatening to be ruinous. The present talk among them of repertory theatres is not without significance. It is the lack of competition, not the want of endowment, that is stifling the theatre. Half a dozen really independent theatres in the hands of duly qualified managers, with artistic impulses and some capital behind them, might do as much towards a theatrical revival as any endowment.

The strong interest in everything pertaining to the drama which is noticeable in German letters to-day is responsible for the attention which is now drawn to Ludwig Tieck's writings on the subject. For it was Tieck, as artistic manager of the theatre of Dresden, and as one of the translators of Shakespeare, to whom is due much of Shakespeare's popularity among the Germans. It was Tieck, too, who, when he settled in Berlin in the forties, succeeded in having Sophocles's "Antigone" and other classical tragedies performed. The little book which calls attention to his work in behalf of the theatre is Dr. Erich Drach's "Ludwig Tieck's Bühnenreformen" (Berlin: R. Trenkel).

Dr. Alfred Schaer is the author of a book of 127 pages containing an interesting historical investigation: "Die dramatische Bearbeitung der Pyramus-Thisbe Sage in Deutschland im 16. und 17. Jahrhundert" (Leipzig: W. Schäfer).

"The Great John Ganton," an adaptation of Arthur J. Eddy's story of the Chicago stock yards (see the *Nation* of December 10, 1908, p. 580), by the young English dramatist, J. Hartley Manners, was produced in the Lyric Theatre on Monday evening. The play may or may not please the general public—it undoubtedly possesses certain elements of popularity—but is a crude, loquacious, melodramatic, insignificant piece, which may be dismissed with brief notice. Pretending to have a serious object in the exposure and denunciation of corrupt, tyrannical, and unscrupulous business methods, and the evils of gambling in Wall Street and elsewhere, it deals mainly in sonorous platitudes and extravagant incident, without reaching any definite conclusion. From first to last it is intensely but not skilfully or effectively theatrical To the solution of current problems it contributes nothing, and it has no value as a picture of life or manners. In the central figure of John Ganton himself, inconsistent as it is in more respects than one, there is a certain amount of vitality, and the character suits the personality of George Fawcett, an experienced actor, who plays it with humor and some emotional force. On him the future of the piece depends.

The London Play Actors seem to have made a somewhat remarkable find in "Chains," a realistic drama of the English lower middle class, by Elizabeth Baker, who is said to have had no experience of the theatre. Her topic is the awful monotony and drudgery of the treadmill existence led by tens and hundreds of thousands of men dependent solely upon clerical employment, without hope of progress, rest, or change.

Olive Logan, lecturer, actress, and author, died at Banstead, England, April 27, at the age of seventy. She was born in Elmira, N. Y., and after some experience as a lecturer, went on the stage. She was author of several books, including "Women and Theatres" (1869), and "The Mimic World" (1871); she wrote a comedy, "Surf," a dramatization of Wilkie Collins's "Armadale," and a metrical translation of François Coppée's "Le Passant," produced in London in 1887.

Music.

Beethoven's Letters. By Dr. A. A. Kalischer; translated with Preface by J. S. Shedlock. 2 vols. New York: E. P. Dutton & Co. $7.50.

When the question of bringing out an edition of Haydn's complete works was being discussed, some years ago, Brahms expressed the opinion that only those things that were really of interest should be printed. Of the others it would be sufficient, he thought, if a dozen copies were made by hand for distribution in the largest libraries where students might have access to them. One cannot but think that such a plan should be adopted with regard to the printing of letters by famous men. Here we have a collection of Beethoven's in two volumes, 925 pages altogether, yet all that was really worth reading could have been easily held in one volume of 400 pages. What earthly use is there in printing notes like this?—"Do tell me if I can speak to you this evening about five o'clock. The matter is pressing." Or this—"His high-born von Smeskall is requested kindly to say where one can speak with him to-morrow." There is a great deal of that sort of thing, and the result is that few even of those who purchase such books have the courage or time to read them through.

Beethoven speaks of himself as being "fearfully lazy" as a correspondent. His output of letters certainly was a mere bagatelle as compared with the numerous and voluminous epistles of Schumann, Wagner, or Liszt. There are altogether 1,220 in these volumes, and most of them are very short, containing, like the two specimens quoted, things that we now usually confide to the telephone. That they make up so many pages is explained by the fact that most of them are followed by comments (often longer than the letters) by the German editor and the English translator. Dr. Kalischer declares that he was engaged for a good twenty years on his task; during that time he examined over six hundred autograph letters to correct the printed versions, and he found many new ones, some of exceptional length, to add to those which had previously appeared. His notes are accurate, illuminating, helpful, and Mr. Shedlock, who has translated both the comments and the letters admirably, contributes more useful matter.

It is with Beethoven's letters as with his compositions: the longer they are, the more they interest us. Being, as he says, lazy as a correspondent, he never sat down to pen a long letter unless he had something on his heart. It is when he talks to or about his publishers, his spendthrift nephew, his incorrigible servants, his critics, his growing deafness, that he grows confiding and entertaining—unwittingly, for he never dreamed that any of these letters would be seen in print. Regarding the trouble with his ears, he wrote in 1800: "Please keep as a great secret what I have told you about my hearing; trust no one, whoever it may be, with it." This remained his attitude for years; the malady was slow in developing, but by 1817 it had reached a stage which induced him to write to Nanette Streicher:

> Now a great request to Streicher; ask him in my name to be kind enough to prepare a pianoforte especially adapted to my weak hearing. I want the tone to be as strong as possible.

A surprisingly large number of these letters, and not the shortest by any means, are jeremiads about servants. These are always amusing; they show the great composer from his most human side. "I came here with an impaired indigestion, and a terrible cold—the former through that archpig the housekeeper, the other from a beast of a kitchenmaid." "Such people," he declares in another letter, "cannot be governed by love, but only by fear; I see that now quite clearly"; and in harmony with this suggestion is his statement regarding one servant: "I threw at her my heavy chair which stands by the bed; for that I was at peace the whole day." He finally seeks consolation in this philosophical reflection: "We shall not fare better with other servants." His feelings were easily ruffled, and he often wrote as if he had been badly treated even by his best friends. With his publishers he had many a tiff. He complains of the engravers "who pick us poor composers to death"; of the many errors in the printed pages because his frequent requests for proofs had been neglected. He tells the head of the great firm of Breitkopf & Härtel that if he had his wish, said publisher "would have to wander about

in penitential garments made of hair for all the wicked things that he has done to my works." In another mood he writes to the same man:

> You as a more humane being and a more cultured head than all the other publishers of music ought not to pay poor terms to the artist, but rather help him on the road to accomplish undisturbed what is in him, and what one expects from him.

"As you are neither Jews nor Italians," he writes to another firm, "and I neither of the two, we shall no doubt come to an agreement."

The critics fare much worse than the publishers; in fact, they are castigated almost as severely as the servants. In the early period the critics were inclined to make sport of Beethoven's artwork. "Advise your critics," he wrote to a publisher in 1801, "to exercise more care and good sense with regard to the productions of young authors, for many a one may thereby become disspirited who otherwise might have risen to higher things." But the culprits continued to ply their nefarious trade. "In what a mean way are critics allowed to pounce upon us," he writes in 1803; "I am treated infamously." Eight years later he again complained of being "reviewed in a shameful manner," but looked at the matter more calmly: "It may give one a little prick like the sting of a gnat, and then it becomes quite a little joke. *Not forever; that you cannot do.*" What the critic had said was:

> In quartet writing the aim should surely not be to commemorate the dead, or to express the feelings of one in despair, but by soft, pleasing play of the imagination to refresh and gladden one's heart.

Dr. Kalischer tries hard to prove that the famous letters to the "Immortal Beloved" were addressed to the Countess Guicciardi; he declares that Thayer's attempt to "palm off the Countess Brunswick as the Immortal Beloved must now be regarded as having totally failed"; but since this was written, La Mara has proved in "Beethovens unsterbliche Geliebte" (*Nation*, February 18, p. 177) that Thayer was right. On the other hand, one gains the distinct impression from reading Dr. Kalischer's two volumes that the equally famous letters to Bettina Brentano are not genuine. He himself thinks there were "interpolations"; but when read in connection with the other Beethoven letters they seem so different in style and thought from all the others that one cannot but suspect that they were altogether the products of that woman's imagination.

These beautifully printed volumes are adorned with many interesting facsimiles and portraits.

Henry W. Savage asserts that "The Merry Widow" has been an unprecedented popular success. First produced in Vienna, on December 30, 1905, it had had up to the first of April, 1909, 1,503 performances in America, 1,365 in England; total number of performances everywhere, about 18,000. It has been sung in 422 German cities, 135 English, and 154 American cities. It has been translated into thirteen languages and produced in thirty different countries, including Turkey, Persia, Japan, China, Hindustan, and Siberia. New York paid a million dollars to hear it last year; Chicago paid $364,000 in twenty-six weeks; Boston, $250,000 in eighteen weeks this season. More than 3,000,000 copies of the "Merry Widow" waltz have been sold in Europe; and in America the music publishers sold $400,000 worth of "Merry Widow" scores and selections in twenty-three months. Up to April 1, 1909, three American companies played to gross receipts of $2,694,000.

Art.

A Century of Archæological Discoveries. By A. Michaelis; translated by Bettina Kahnweiler. New York: E. P. Dutton & Co. $4 net.

In viewing the collections of Greek and Roman antiquities which almost every important city in Europe now possesses, or in visiting the ancient sites of classic lands, it is sometimes difficult to realize that the work which produced these museum collections and unearthed the remains of these cities has been almost entirely accomplished in the last century. A few exceptions, such as the discovery of Herculaneum and of Pompeii and occasional finds by private individuals, still belong to the preceding period, but most of the material now at our disposal and the gradual building up of a science of archæology are entirely due to the labors of the last ten decades. "A Century of Archæological Discoveries," therefore, gives us practically the whole history of archæological excavations, from the tentative and fortuitous efforts of earlier explorers to the carefully planned, systematic excavations of to-day. The picture is necessarily sketchy; yet, considering the size of the volume, it is very comprehensive, because not only have the actual finds been recorded, but the more important discoveries in the examination of the material have been noted, so that the achievements of the scholar as well as those of the explorer have been embodied.

Of the record as it stands archæologists may well be proud. At first the remnants of past civilizations were treasured purely for their artistic value. But gradually their vast importance in shedding light on the history and life of the people by whose hands they were produced was recognized, and a systematic study of the material began. The result is that we have now not only a fairly complete and coördinate picture of the artistic development of these people, but in some cases past history has been actually reconstructed. Thus, thanks to the spade and the critical acumen of the Cretan explorers, we are in possession of more knowledge of the civilization of prehistoric Greece than the Greeks of the classical period had themselves. Moreover, the importance of illustrating and verifying written history by the material remains now at our disposal is being more and more recognized.

A book describing in concise form this evolution of the science of archæology had been much in request, and Professor Michaelis's work, which appeared in 1906, entitled "Die archäologischen Entdeckungen des neunzehnten Jahrhunderts," was welcomed on all sides. The translation into English is a matter for sincere congratulation, because the book is addressed, as the author expressly says, not so much to the professional archæologist (who would be more likely to understand German), as to all those "who have preserved an interest in and love for ancient art." The subject, indeed, is presented not in a dry and technical manner, such as a great specialist with expert knowledge often uses, but in a fresh, narrative style which combines accuracy and scholarship with the personal element of enthusiasm. We are indebted to Miss Kahnweiler not only for a good translation—as any one who has tried rendering a German scientific work into English will admit—but for the addition of illustrations, such as plans of Olympia, Delphi, the Athenian Acropolis, as well as of the most important sites and monuments, which add much to the usefulness of the volume. There are also several interpolations; for instance, a brief mention of the recent discoveries of the British School at Sparta, which bring the discussion up to date.

The chief criticism is that the work is a little one-sided. Professor Michaelis himself admits that he has devoted most space to the German excavations, mainly because his facilities have been greater in that direction. In fact, German investigations—even the more recent ones—have been faithfully recorded here; Dr. Dörpfeld's theories regarding the theatre, the old Athena temple, and the Enneakrounos are all clearly stated. The excavations of the Englishmen Cockrell, Layard, and Newton have also been fully treated; but those of later date, carried on by the British and American Schools, are too cursorily mentioned. Crete, too, comes in for a very small share, considering the far-reaching importance of the discoveries there. A few additions would remedy this defect, and it is to be hoped that in a future edition this amendment will be made.

From the *Fine Art Trade Journal* of London we have received the "Art Prices Current" for 1907-8. The record is limited to

the sales at Christie's, but, as the editor of the volume observes, any other system of inclusion and exclusion would introduce a confusing personal element, while the volume of business at Christie's is so predominantly large as to indicate fully the tendency of prices.

In the series of monographs Die Kunst, edited by Dr. Richard Muther (Berlin: Marquardt & Co.), the fiftieth volume, just published, "Das Fest der Elemente," attempts to show not only the use of the so-called elements, fire, water, earth, and air, in landscape gardening and pyrotechnics, but the relations which they bear to man's reading of nature. The comparisons between the specimens of this art from the renaissance period and from modern times are interesting and suggestive. The author is Dr. Oscar Bie, the editor of the *Neue Rundschau*. The book is profusely illustrated.

"L'Esthétique des villes," by Émile Magne, treats successively of street decoration and movement, of processions, markets, bazaars, fairs, cemeteries, of outer manifestations of water and fire (lights), and of all that goes to the artistic constitution of the Cité Future (352 pages, Mercure de France).

"Die deutsche Landschaft: Deutsche Charakterlandschaften in farbigen Bildern," by Prof. Ernst Liebermann (Hamburg: Gutenberg-Verlag), is a work to be completed in eight series of five sheets each, at five marks a series. The first two series have already appeared. This enterprise, which endeavors to offer artistic quality at a low price, deserves to be commended to all lovers of German landscape, and particularly to those school and college teachers of German who believe in pictorial aid for quickening the imagination of their students. If they prefer an artist's individual impressions to the unemotional accuracy of the camera, they will derive pleasure from these successful reproductions, in the rich but subdued original colors, of the paintings of the well-known Munich master. Of the different pictures, each of which can be bought singly, the following are perhaps the most typical and attractive: Thüringer Landschaft, Buchenwald, Rudelsburg, In den Vorbergen der bayrischen Alpen, and Felder. Least successful is Eifellandschaft. The pictures are uniform in size (six by eight inches), and loosely mounted on black cardboard two inches wider on all sides. They may thus, even without further framing, be effectively displayed on the walls of the study or classroom.

It will be no new observation to those who have followed the recent tendency of this *genre* of painting to say that in the forty-second annual exhibition of the American Water Color Society, now holding at the Fine Arts Galleries, the old-fashioned thin washes are scarcely to be seen. Ben Foster's Glimpse of the Sea, and H. Bolton Jones's Early Snow, hanging together in the Vanderbilt room, stand out conspicuously in this respect, and make one regret that the clean transparency and the light decorative value of the old style have been so generally discarded for methods that imitate without equalling the heavier and richer effects of oils. There are a few other pictures in this manner, but they are for the most part insignificant. Perhaps, the most striking of these—although it is by no means a pure example—is George Wharton Edwards's Springtime in the Village, a large field in clear colors, crossed by two diagonal paths. In the contest with oils, the new, carefully-worked method is most successful in the winter scenes. In a number of these—*e. g.*, Charles Mente's Mill Stream, and H. Bolton Jones's Winter, the latter a pastel—the fuzzy texture of snow is represented better than can be done with the hard surface of oils, and the reflected shadows have a softer, less repulsive gleam. Another group, chiefly pastels, imitates well the glowing greens and deep blues of stained glass. Notable among these are Charles Warren Eaton's Cypresses, Reynolds Beal's Middlehope Valley, Gustave Cimiotti's Trooping Clouds, and Frederick Crane's Afterglow. From these, it is an easy transition to such pictures as the Warwick Castle of Gifford Beal, with its large masses of solid, almost unshaded green, and the Lake Como of Charles Warren Eaton, with its heavy mass of ultramarine. For the rest, we can mention only The Village Green of Florence Francis Snell, showing a small group of children in a green common, closed in by two converging lines of red houses; a group of pleasant out-of-door sketches, by Frederick Freer; a charming little view In a Swiss Town by Emma Lampert Cooper; The Buzzards' Roost of J. C. Nicoll, showing a mound of ruins in a yellowish green field; an excellent lifelike portrait of Enid Yandell, the sculptress, by Albert Sterner; and the little Puerto del Sol of Edward Penfield. Not the least interesting part of the exhibition is the collection of etchings, prints, and drawings in the Central Gallery. In technique, the work in this department is even more satisfactory than the brush work; the only drawback to full enjoyment is the monotony of the subjects chosen. Here the romantic etchings of Joseph Pennell and Ernest D. Roth stand out with some distinction. The same may be said, for other qualities, of the refined prints of Charles F. W. Mielatz, showing glimpses of New York streets and parks. For pure decorative charm the colored plates of George Senseney have a unique character; they would hang well in boudoir or hall. Altogether the exhibition compares well with its recent predecessors, and, if not so impressive as the more pretentious displays of the Academy, is at least free from the loud monstrosities that hurt the eye in the usual collection of oils.

The chief interest of the summer exhibition, just opened at the New Gallery, is in the new departure made by the management. The objection to the methods of the artists who have taken possession of the New Gallery is the same that was made a year ago (*Nation* of April 9, 1908, p. 340), when the Allied Artists' Association was founded: anybody who subscribes has a right to exhibit—a plan which is bound to be fatal to the quality of an exhibition as a whole. The important difference between the two groups is that the subscription to the Allied Artists is very small, and gives a chance to the young and struggling, while the subscription to the New Gallery is very large, and gives a chance only to those who have arrived either popularly or financially. This year's exhibition is an excellent proof of the point. At a glance, it may look better than in previous years, simply because fewer pictures are shown and the walls are less crowded. But in the merit of the pictures there is no improvement whatever, and, after the first glance, the absence of any reason for the collection to have been brought together beyond the need of the artist to sell, is but too apparent. Work comes from the Academy, from the International, from the various other groups and societies, which have their own exhibitions at other seasons or in other places. There are a few survivors of the old Burne-Jones period, but they seem only sad witnesses of the day and a movement that have passed. There are several members of the Glasgow School that first dawned upon London at the last exhibition of the Grosvenor, and that now, as a school, has ceased to exist almost as completely as the "neo-primitives" of the previous generation. There is no possibility of coherence in the meeting of all these different elements, nor is there enough distinction in individual work to make up for the lack. J. J. Shannon and George Henry are probably reserving their best portraits for the Academy; C. H. Shannon had more important work in the last International; the principal landscapes are by Frank Walton, Mark Fisher, and Mr. Peppercorn, who show in half a dozen other galleries. Water color is almost entirely absent, black-and-white holds but a small place. The sculpture is not remarkable. Altogether, the exhibition does not promise great things in the future from the new method and management.

At the Carnegie Institute, Pittsburgh, the international jury in the annual art competition has announced the following awards: Medal of the first class (gold), with $1,500, to Edmund C. Tarbell, Boston, for his painting Girl Crocheting; medal of the second class (silver), with $1,000, to George Sauter, London, for his painting The Bridal Morning; medal of the third class (bronze), with $500, to Bruce Crane, New York city, for his painting November Hills; honorable mention to Elizabeth Sparhawk-Jones, Philadelphia, for her painting, In Rittenhouse Square; to Arnesby Brown, Cornwall, England, for his painting, The Gate; to E. A. Hornel, Scotland, for his painting Amusement; and to Stanhope A. Forbes, Penzance, England, for his painting, The Village Industry.

Among the exhibitions at the dealers' galleries in this city are paintings and drawings by Max Weber at Haas's, till May 8; and paintings by Chase, Melchers, Hassam, etc., at Montross's, May 8.

Theodore Minot Clark, who from 1881 to 1888 was in charge of the department of architecture at the Massachusetts Institute of Technology, died in Boston April 29 at the age of sixty-four. He was born in Boston, and was a graduate of Harvard in the class of 1886. Among his writings are "Rural School Architecture" (1880), "Building Superintendence" (1884), "Architect, Owner, and Builder before the Law" (1894), and "The Care of a House" (1903).

We have to report the death of two French artists, Lionel Le Couteux, an etcher of high repute, at the age of sixty-one, and Alfred Robaut, a lithographer and

writer on art subjects at the age of seventy-nine.

From Venice comes the news of the death of Prof. Franz Wickhoff, the art-writer, at the age of fifty-five. He wrote largely on the literary influences in art, publishing the "Wiener Genesis," "Sachis Restauration der sterhenden Mutter des Aristides," and "Dürer Studien."

Finance.

THE PROBLEM OF THE RAILWAYS.

It has been pointed out, as one cause for the stubborn maintenance of the higher price of railway stocks, that the dividends paid by the companies, even during the worst months of last year, were large enough to provide a handsome margin to the buyer on borrowed money, over and above what he had to pay for interest. Such a stock as Chicago, Milwaukee and St. Paul, for instance, pays 7 per cent. per annum. Its price has lately been about 150, at which the holder would net about 4¾ per cent. Baltimore and Ohio, paying 6 per cent., and selling around 114, would yield 5¼ per cent. With call loans obtainable and renewable at 1 or 2 per cent., the margin on such holdings will be 2 to 4 per cent. Even with Reading, whose price of 145 makes its 4 per cent. dividend yield barely 2¾ per cent., there is a surplus over the recent cost of call money in Wall Street.

This sort of calculation is not final. The price of money might go up to 6 per cent., which would more than wipe out the margin over dividends. The market value of the stock might go down when the holder wished to sell; it would certainly do so if the money rate should rise. Or the dividend rate itself might be reduced. All such considerations suggest the larger question, What is to happen to these railways and their stocks in the more distant future? Waiving the possibility of fluctuations in the money market, the main issue, after all, relates to railway finance, the maintenance or increase of the dividends. And this in the last analysis must depend on the future movement of traffic.

In reply to an inquiry regarding present conditions, the chief of an important Western railway system has lately had this to say:

> Our business is not what it should be. The backwardness of the season is largely to blame. No disposition is being shown to anticipate good crops. The usual mainstay of the railroads at this time of year, freight made up of manufactured products, reflects only hand-to-mouth buying.

This statement will probably sound odd in view of the recent statements as to monthly earnings. A number of important companies published last week their gross receipts for March and the nine months of the current fiscal year. These are the principal changes from a year ago:

	March Gross.	9 months Gross.
Erie	+$619,885	—$249,280
Union Pacific	+ 812,231	+1,031,027
Southern Pacific	+ 629,845	—5,217,919
Atlantic Coast Line	+ 322,647	— 235,000
Northwestern	+ 472,443	+ 545,379
Rock Island	+ 210,125	+ 432,308
Southern Ry.	+ 507,423	— 578,948
Atchison	+ 871,202	— 103,442
Balt. & Ohio	+ 543,801	—4,916,803
Kansas City So.	+ 36,219	— 443,707

Here is decided improvement, the gain for March alone, in a number of the companies, equalling or exceeding the whole of the nine months' decrease. But the gain of March was made in comparison with one of the leanest months of the immediate after-panic depression. If the March comparisons are made, not with 1908, but with 1907, the result will be somewhat different. These are the changes from the corresponding month of the pre-panic period, two years ago:

	March Gross.	9 months Gross.
Erie	—$172,915	—$1,532,707
Union Pacific	— 42,556	+ 2,853,046
Southern Pacific	— 178,751	— 3,081,417
Atl. Coast Line	+ 147,917	— 309,479
Northwestern	— 298,042	— 2,880,083
Rock Island	— 156,273	+ 1,738,344
Southern Ry.	— 345,373	— 2,582,240
Atchison	— 160,983	+ 713,969
Balt. & Ohio	— 683,827	— 7,430,870
Kansas City So.	— 51,297	— 135,541

We are not, then, so far on the upgrade yet as the comparison with 1908, taken by itself, suggested. How soon the rest of the lost ground is to be recovered will naturally depend, in the first instance, on the increase in traffic moving over the railways, a matter which, in its turn, hangs on the question of general trade revival. This second consideration, again, rests first on the recuperation from the effects of the break-down of credit; but, second, on the outturn of the crops. Wall Street often amuses itself with arguing that a deficient grain crop, sold at unusually high prices, is as much of an industrial blessing as a moderate crop sold at average prices, or a "bumper crop" with prices below the lately prevailing level. However this may be with other interests, it is not so with the railways. A hundred million bushels less produced upon the farms is a hundred million bushels less of freight. For the crop results, we shall have to wait. Another factor in the recent improving earnings, which may or may not be permanent, is the higher freight rates. Since July 1, last year, local and through rates, in the South and West especially, have been increased all the way from 3 to 60 per cent. on coal, iron, steel, lumber, grain and grain products, packing-house products, and scores of other commodities. The fixing of these higher rates was justly objected to, last year, as uneconomic and unfair to the consumer; but they were made. There are only two obstacles in the way of their remaining—compulsory revision under the auspices of the Interstate Commission, and competitive rate-cutting by the companies themselves. The increase will also test the force of the prediction, made by shippers' associations when the rates were raised, that the contemplated advance "would retard the return of normal conditions."

"Railroad Promotion and Capitalization in the United States," by Frederick A. Cleveland, will be issued soon by Longmans, Green, & Co.

Harper & Bros. have brought out in book form Victor Morawetz's plan for solving the currency problem, "The Banking and Currency Problem in the United States." The views of Mr. Morawetz received so much, and well-deserved, attention when they were first published, that it is unnecessary to review them at length now. His proposal is, in substance, that the national banks be authorized "to issue notes upon their joint credit, and to control the uncovered amount of these notes by the joint action of the Secretary of the Treasury and of a managing board, or committee, elected by the banks." That by this, or some similar plan, our currency system could be improved at points where it is most defective, we cannot doubt; our only doubt is as to the desire or ability of Congress to enact a rational currency law. Two features of Mr. Morawetz's presentation of his case are worthy of special commendation. He appreciates, and clearly explains, the fact that banknotes are in certain essential particulars unlike bank deposits; principally because by means of notes banks can indirectly increase the proportion which their reserves bear to their demand liabilities. The second noteworthy point is that, unlike many denizens of Manhattan Island, he maintains that the establishment of a central bank is not desirable or practicable in the United States. No one, in fact, has ever stated the reasons more forcibly and succinctly than Mr. Morawetz.

"Compilation of Laws Relating to Trust Companies of the United States," published by the Trust Company Section of the Amer-

Financial.

Letters of Credit

Buy and sell bills of exchange and make cable transfers of money on all foreign points; also make collections, and issue Commercial and Travellers' Credits available in all parts of the world.

International Cheques. Certificates of Deposit.

BROWN BROTHERS & CO.

No. 59 Wall Street, New York

ican Bankers' Association, is one of the most useful works yet published under the auspices of the American Bankers' Association. It covers a variety of subjects on which there has been insufficient light, and cites the important statutes of each State bearing upon trust company operation. An index at the end of each State section is a good feature. The compilation was made by Benjamin J. Downer of the New York bar, assisted by Philip S. Babcock, secretary of the Trust Company Section of the American Bankers' Association.

Important New Railroad Books

McPherson's Railroad Freight Rates: In Relation to the Industry and Commerce of the United States

By LOGAN G. McPHERSON, Lecturer on Transportation in Johns Hopkins University. With Maps, Tables, and full index. $2.25 *net*, by mail, $2.42. *(Just issued.)*

The result of a first hand survey covering the entire country. So comprehensive and thorough as to be exceedingly valuable to railroad traffic men and large shippers. The general public and younger railroad men will find it lucid, interesting, and of specific application, their only means of learning what the present freight rate system is and how it has been evolved.

The information as to the interrelation of the freight rates was obtained directly from the traffic vice-presidents and freight traffic managers of the railroads, the traffic experts of great industrial and commercial corporations, of the shippers' organizations of the various cities, and in many communities from individual shippers.

Carter's When Railroads Were New

By CHARLES F. CARTER. 16 full-page illustrations, $2.00 *net*, by mail $2.16.

"This invaluable account is unique. It gathers the fragments of railroad history, weaving a human interest into a coherent record. A human and personal document, not a dry historical treatise, batch of statistics, or collections of anecdotes."—*Baltimore Sun.*

"Full of interest. Besides the general chapters on the beginnings the author gives the early history of the Erie, the Pennsylvania and the Baltimore and Ohio Railroads, of the Vanderbilt lines, the first Pacific Railroad, and of the Canadian Pacific . . . Very readable."—*New York Sun.*

McPherson's The Working of the Railroads is in its 4th printing. ($1.50 *net*, by mail $1.63.) *The Dial* says it is "the most important contribution to its branch of the subject that has yet been made."

HENRY HOLT AND COMPANY, 34 W. 33D ST. NEW YORK

Forty Years of American Finance

A Short Financial History of the Government and People of the United States since the Civil War, 1865-1907.

By ALEXANDER DANA NOYES
Financial Editor of the N. Y. Eve. Post.

Being the Second and Extended Edition of "Thirty Years of American Finance."
Cr. 8vo. $1.50 net.

The new book carries the story of the American financial markets down to 1908, describing and examining such episodes as the industrial revival after 1898, the great boom of 1901, the history of the Steel Trust, the promoters' mania, the "rich men's panic" of 1903, the "millionaire speculation" of 1905 and 1906, and the panic of 1907. This is the first complete and thorough history that has been published of this extraordinary, dramatic and interesting chapter in finance.

G. P. PUTNAM'S SONS, 27 W. 23d St. NEW YORK

UNEMPLOYMENT:

A Problem of Industry

By W. H. BEVERIDGE, formerly Sub-Warden of Toynbee Hall. 8vo, $2.40 *net.*

"It is a book which every one ought to have read who presumes to write or speak on the question of unemployment."—*Westminster Gazette.*

LONGMANS, GREEN, & CO., NEW YORK

JUST ISSUED. Cloth. $1.50 net.

SAINTE-BEUVE

By Prof. George M. Harper, Princeton University.
J. B. LIPPINCOTT CO., Philadelphia.

The Nation.

NEW YORK, THURSDAY, MAY 13, 1909.

The Week.

Senator Dolliver has been most usefully applying a little Western bluntness and honesty to the tariff debate. His exposure of the way in which the cotton and wool schedules have been dictated by the very men who hope to make money out of them, and of the tricks and devices and robberies with which they are stuffed, has been most effective. And the ridicule which he poured upon Senator Aldrich was refreshing. The nettled Rhode Island Senator retorted, of course, that Senator Dolliver was only a Democrat in disguise, had private grievances to avenge, and had got his information from wicked importers; but that is only the usual abuse visited upon a Republican who dares to tell the truth about the tariff. What the country wants to know is, not what Mr. Dolliver's motives may be, but whether the facts are as he states them. Is it true, as he says, that the manufacturers who disgusted the Ways and Means Committee with their hoggish demands, went to Aldrich and got permission from him to write their own clauses in the tariff? Is it the fact that the effect of the Aldrich bill would be to condemn the masses of the people to pay more for poorer clothing? If tariff rapacity is proposing to palm off shoddy and cotton as all wool, it is well that the nation should know it. For Aldrich to insinuate personal grudges and party disloyalty is of no use either to him or his cause or his clients. What has to be done is squarely to meet Senator Dolliver's charges.

It is, we think, mainly in this same line of exposure of tariff facts that the most is to be expected from a Tariff Commission, if we ever get one. The New York Chamber of Commerce has gone on record in favor of the commission plan, and business opinion everywhere seems to be veering to it. There is a certain promise of usefulness in the project, but let no man delude himself into thinking that we are going to have the tariff taken out of politics immediately, or get anything like a non-partisan or scientific framing of customs duties. Until Republicans learn new methods of electing a President and carrying Congress, and until a number of their influential leaders pass from the scene, we shall have the tariff kept in politics because the politicians believe it pays to keep it there. Yet an able and honest Tariff Commission could serve as a kind of perpetual blister upon high-tariff backs. It could collect information and exhibit correct inferences, showing just how tariff stupidities work and how tariff robberies find their victims. As a means of rousing popular indignation, as well as instructing public opinion, and possibly even of shaming Congress into doing something to cure demonstrated evils, a Tariff Commission might have a valuable function.

Already the Sugar Trust stood before the country as about the most despicable thief that ever sneaked and pilfered and lied, but its action in sanctimoniously discharging its seven employees who have been indicted for complicity in its frauds upon the government, sounds an even lower depth of meanness. These subordinates must have acted under orders. It was not into their pockets that the stealings from the public revenues went, but into the pockets of the rich officers and owners of the Sugar Trust. This was the irrefragable conclusion arrived at by both judge and jury, when the test case was tried. Hence for the Trust now virtuously to dismiss from its service mere tools, with the protest that it is "anxious to punish the guilty," while not a word is said or a step taken by the chief beneficiaries of the larceny, is to stamp it as not only without a soul, but without ordinary perceptive faculties or common decency.

Fashions in battleships change as certainly as the style of women's hats. When Ericsson brought out the Monitor a revolution was at hand not only in the change of materials and the use of armor, but in the effort to show nothing above water, except a "cheese-box on a raft." This style lasted for some years and remains to-day the best. But the English navy reverted to its high sides, iron walls succeeding the wooden that made Britannia mistress of the seas—and our own Navy Department imitated the British when it began to rebuild the navy in 1882, and has been imitating it ever since. But now after the world cruise of our fleet, the fashion is changing again. Bow ornaments, some of the boats, and deck-houses are to go. "Much of the material," it is reported to-day, "which has hitherto made the main deck of a battleship an overcrowded platform has been placed below deck out of sight and range." Thus does the whirligig of time bring its revenges. We may yet live to see the new and monstrous masts that disfigure our craft disappear, and genuine honor paid to Ericsson by returning to his plans. In these days of artificial ventilation hundreds of feet underground, there can no longer be the excuse that the monitors cannot be made habitable for their crews. Naval engineering has solved far more difficult problems. And Ericsson's truth, that a fighting ship should show as small an above-water mark as possible, remains irrefutable.

"Recall" elections threaten to become epidemic on the Pacific Coast. Not to be outdone by Los Angeles, Estacada, Ore., is about to recall, on petition of 50 per cent. of the voters, both the Mayor and Council. Meanwhile, Los Angeles herself, having got the habit, cannot leave it off. The new Mayor is at loggerheads with the Civil Service Commission, and has called upon its members to resign. As they have shown less alacrity than Falstaff in sinking, Mayor Alexander has asked the Council to remove them. In case the Council does not agree, it is proposed to force it to action by "recall" proceedings against recalcitrant members. To this it is retorted that, if such a course is attempted, the Council will compel a "recall" election on Mayor Alexander himself. At this rate, Los Angeles promises to involve herself in a "recall" carnival which will eclipse the Seattle Exposition in magnitude and variety before the summer is over.

We bespeak for Gen. Sherman's family letters in the May *Scribner's* a wide

reading in the South, where the strong feeling against that General shows few signs of diminishing. Sheridan has been forgiven; Grant is mildly sneered at. But mention of Sherman still opens floodgates of bitterness. He was a purloiner of silver; his soldiers spared neither women nor children; he burned towns that had not offended and cities that had surrendered, and he spared not even the convents occupied by women of his own religious faith. Well, Gen. Sherman always admitted that his was a ruthless military hand. What Sheridan undertook to do in the Shenandoah valley, to impoverish it so that a crow flying across it must take his rations on his back, Sherman did wherever he went. He was bound that the South should know war in its worst forms, and thus bring irresistible pressure to bear on the Confederacy. When he cut loose on his March to the Sea, both policy and necessity dictated his sweeping clean the country that he passed over:

> They no longer call my army "Cowardly Yanks," but have tried to arouse the sympathy of the civilized world by stories of the cruel barbarities of my army. The next step in the progress will be, "for God's sake spare us; we must surrender." When that end is reached we begin to see daylight. . . .

Now, the man who wrote this was at heart no barbarian, no hater of the South. He had lived there for years—a fact which gave him not only unusual knowledge of localities, but also of Southern character. He yielded to no one in admiration for the pertinacity and bravery with which the South fought, and he records that sentiment in these letters. He opposed the introduction of negro troops into the army because he knew how such action would humiliate the South. He took the best care of the families of three rebel generals, Hardee, McLaws, and G. W. Smith, when they were directly entrusted to him, and he complains in Savannah that "the women here, as in Memphis, are disposed to usurp my time more from curiosity than from business. They had been told of my burning and killing until they expected the veriest monster. . . ." But most striking of all is this passage from a letter of June 26, written in the field near Marietta, Georgia:

> To realize what war is, one should follow our track. . . . Though not conscious of danger at this moment, I know the country swarms with thousands who would shoot me, and thank their God they had slain a monster; and yet I have been more kindly disposed to the people of the South *than any general officer of the whole army.*

Whatever else may be said about these letters, their frankness and their clear evidence that Sherman entertained no illusions about himself, was to be caught by no political net, and knew exactly what were his greatest military achievements, make them exceptionally valuable as historical material.

It is certainly a vexing state of affairs in Porto Rico which led to President Taft's message to Congress Monday. The Porto Rican Assembly has refused, both in the regular and in an extraordinary session, to vote the money necessary to carry on the government of the island. It is not a question of withholding certain appropriations, or of directing how given supplies shall be expended, but of denying the funds absolutely necessary to keep the courts and the schools open. This is too much like that childish spirit which has now and again been manifested in Cuba, and which leads a political party, or a public body, to say that if it can't have its own way, it "won't play with you any more." The Porto Rican Assembly, of course, desired to bring the Council to terms in certain matters in dispute between them. But it must find some means of doing this other than paralyzing the entire government. To attempt that, is not to exercise the power of the purse; it is to act out of spite and recklessness. The readiest way of meeting this foolish obstinacy is by some such amendment to the Porto Rican Act as President Taft proposes—namely, to legalize appropriations on the basis of the preceding year, whenever the Assembly declines to vote them for a coming twelvemonth. That would both meet the case and would be better than Bismarck's method of making his own military budget, after the Prussian Parliament had refused to vote it.

No more fitting memorial to Dr. William T. Bull could be found than the great research fund which is to be raised in his name. But this skilled surgeon's death under the very disease which he had fought in so many a clinic should be looked upon only as an occasion for doing what ought to have been done, had he lived. Less for honor to the departed than out of mercy to sufferers living and yet unborn, the campaign against hidden and remorseless scourges should be pushed to the last outpost that money, science, and heroism can reach. Every day a new cure for cancer or some other malignant disease is heralded, and on the next surgeons shake their heads, while trusting patients grasp at the empty promise in a last desperation. Every day the keenest, wisest expert guesses—and gives up. To end the tragedy, the half-million dollars which the memorial committee seeks would be a trifling sum. Even though it does not bring us to the full solution of all the mysteries, it will help to carry us farther on the way. Its income will not have to be spent for hospitals, instruments, or other accessories, but wholly for investigations under the eyes of our first specialists, many of whom will serve as unpaid advisers.

Despite the recent split in the English Labor party, a Labor candidate was elected to Parliament last week in the Attercliffe division of Sheffield. This constituency in 1906 returned a Liberal, who had 6,523 votes to 5,736 for his Conservative rival. In the bye-election just held, there were four candidates, and a great breaking up of the electorate. The Labor party led the poll with 3,531, next came the Conservatives with 3,380, the Liberals followed with 3,175, while an Independent Conservative had 2,803. If the Conservatives had stood together, it is clear that they would have won the seat; but the really significant thing is the inability of the Liberals and the Laborites to combine, as they did in 1906. Should this divisive force persist in the next general election, the triumph of the Conservatives will be all the more certain. Keir Hardie and three other prominent Labor members of Parliament resigned a few days ago from the National Administrative Council of their party, on the ground that its control was falling into the hands of avowed and extreme Socialists. But so far as Sheffield goes, this breach in the party has not affected its voting power.

Mr. Asquith has added Welsh disestablishment to the list of his burdens. The bill to that purpose which he introduced into the House of Commons a few

days ago, has strong backing, of course; so strong, in fact, that the Ministry has been accused of taking up the measure largely for the purpose of stirring up Nonconformist zeal in general support of the government. But opposition is making itself felt. A Royal Commission has been taking testimony on the subject. From the commission's figures, the government argues that an established Church which counts less than 180,000 adherents, as against nearly 600,000 members of other churches, presents a situation analogous to that which compelled disestablishment in Ireland. The accuracy of the government's figures has been questioned. However, the principal argument against the bill is that it calls for disendowment as well as disestablishment. That is, the Church in Wales is not only to lose its future income from the state, but is to be deprived of its ancient holdings, which are to be used by the state for secular purposes. Such a measure would place the Anglican clergy at a decided disadvantage, as compared with the free churches which have built up endowments for the support of their ministry. The former would have to be provided for afresh. Yet it should not be hard to arrange a compromise. Nonconformists may argue that a disestablished church cannot hold on to property acquired as a state church in the past. But on the sins of the past England has never been hard.

Rumors of the approaching fall of the Stolypin Ministry, the dissolution of the third Duma, and the return of the extreme reactionaries to power, flow in steadily from St. Petersburg. There have been writers who tried to show that the Czar is not the weak creature he is popularly believed to be. But given the opportunity, Nicholas II, ruler by the grace of God over one hundred and fifty million Russians, seldom fails to show that he does not know his own mind and his own interests. Otherwise it is impossible to understand how there can be talk of dismissing the man who in less than three years may be said almost to have saved the Czar's Empire for him by quelling a revolution and inducting the nation into the difficult forms of constitutional practice. The kind of order that M. Stolypin has restored is, naturally, the old Russian brand, the "order" of the scaffold and the knout. But that he has succeeded is attested by the very fact that his enemies, the reactionaries, should consider themselves sufficiently out of the woods to start plotting against him. Everything is possible in Russia, where political intrigue, to attain its own ends, stops short of nothing. The Azeff affair has shown the police of St. Petersburg working at the assassination of governors-general and grand dukes, when it suited the interests of the police.

The Shah took nearly half a dozen oaths of fealty to the first Persian Constitution before he revoked it. There are more substantial guarantees behind the new Constitution which he proclaimed last week. Foreign intervention is now a fact. Russia is in occupation of Tabriz, and if England has not been active, it is because the situation in southern Persia, which falls within her sphere of influence, has not become sufficiently serious. Unchecked optimism as to the future of Liberalism in Persia is not yet in place. A Constitution upheld by Russian bayonets is reasonably certain to turn out a pretty tame Constitution. But, on the other hand, it shows how firmly the principle of political liberty has taken root even in the benighted Orient, that Russia should find it politic and necessary to urge any kind of Constitution upon the Shah. The heroic stand made by the Nationalists at Tabriz proves that the fatalistic, stubborn temper of the East may be turned to the uses of a good cause as of a bad one, of liberty and progress as of reaction. It is easy for Western Europe, from the safe anchorage of Parliamentary habit, to sneer or feel discouraged at the pitiful flounderings of the Orient's infant Parliaments. We are apt to forget that such pangs invariably accompany the birth of institutions.

The reëstablishment of the Constitution in Persia should help the Liberal cause in Turkey. Partisans of the old régime may argue, of course, that the Constitutionalists have brought foreign intervention upon Persia, and will do the same for the Ottoman Empire. But against this is the argument of established fact. A Constitution there is in Persia; the Shah tried to do away with it on the ground that it was irreconcilable with the Moslem faith, and his Moslem subjects rose up against him. This supposed incompatibility of Islam with free institutions is worked pretty hard these days. The Koran stands for absolutism; the Mohammedan believer will die for the Koran; therefore, etc. But the "therefore" does not follow by any means. We must take it for granted that the Moslem, like the Christian and the Jew, is primarily a human being. As such his religion shapes itself to his human needs and aspirations. There is no Sacred Book which has not been "interpreted" in accordance with certain elementary requirements of the practical reason. Give the Liberals in Turkey a free hand for a score of years, and they will bring up a generation that will find in the Koran every sanction for Parliamentary government. It is fair to argue that the Turkish nation may be too ignorant, or too poor, or too much torn up by racial feuds to be fit for Parliamentary government. But to cite the Koran as an insuperable barrier to liberty is absurd.

Alfred H. Harrison, the Arctic explorer, reaffirms in the *Nineteenth Century* his belief in the success of any Arctic expedition which is willing to sit down on the ice and drift with the leisurely Polar current. He proposes to place on the ice, off Pulen Island, in October of this year, or in 1910, three years' supplies, after careful transport down the Mackenzie River, and then to await results. According to calculations based on the voyage of casks placed within the circular drift current, Mr. Harrison feels sure that he will float right across the centre of the Arctic Ocean within easy striking distance of the Pole, and will finally emerge in the neighborhood of Spitzbergen, where additional supplies will be awaiting him. The history of Arctic travel convinces him that the ice in itself has never presented any insurmountable difficulty. Of all those who have made regular ice-journeys, but one party has perished. The real cause of the many disasters has been, not the endeavor to make well-equipped ice-journeys, but the attempt to reach land in the summer, when compelled by lack of food. He insists that his party can, when drifting, be made perfectly comfortable in Eskimo houses, and that if he gets his provisions safely cached on the ice, the attainment of the Pole and the exploration of the unknown region "are merely a matter of slow and steady advance."

A NEW POLITICAL ALIGNMENT.

It was no mere chance that ten Republican Senators from the West were found voting with all the Democratic Senators from the South, in a division in the Senate last week. That junction was a temporary sign of permanent and deep-seated political sympathies. It has had many manifestations before, and, unless all signs fail, will have even more striking ones in the future. Several other Western Republican Senators are restless. Six or seven in addition are reported as ready to unite with Southern Democrats when certain test votes on the tariff are taken. It is a kind of tacit political alliance which cuts across party lines, because the things which these groups of men in different parties have in common draw them together more powerfully than mere traditional partisan names and policies are any longer able to keep them asunder. We may have before our eyes the forming of a new alignment which will be critical in our future political history.

Any one can see that the West and the South have many interests and ideas in common. Certain divisive questions, like slavery and its sequels, may serve to keep them apart, but when the force of such issues is spent, the natural tendency to union asserts itself. Physically, the two sections are close to each other, and the natural lines of communication and trade unite them. The Mississippi still flows from the Northwest to the South. And in recent years, railway development has been pushed as notably in lines roughly parallel to the river, as at right angles to it. Moreover, the improvement of Southern harbors, like Galveston and Newport News, has tended to make the great commerce flow as do the rivers. And in addition to this natural and acquired linking of trade, there has been a marked drawing together of West and South in political conceptions, in that instinctive attitude of the masses of the population, which makes up the true driving force in politics. The two regions are alike in being radical politically, and in being more like each other than either is like New England or the East in general.

In 1896, this inherent identity of feeling between the South and the West had a formidable manifestation, and was nearer to proving its political mastery than at the time we liked to think. Mr. Bryan staked his all, in the Presidential campaign of that year, on winning enough Western States from the Republicans to make up, with the Southern, an electoral majority. The plan was shrewdly conceived, and was not so far from proving successful. Bryan carried a list of Western States that included Colorado, Idaho, Kansas, Montana, Nebraska, Nevada, South Dakota, Utah, Washington, and Wyoming. It is foolish to dismiss that array as merely "mining camps." The silver question was, of course, the great issue, and was what defeated Bryan; but behind silver, even in that campaign, stood the mightier political force of class antagonism, a spirit of sectional revolt which was at the same time a spirit of sectional unity. And it is no insignificant circumstance that, to-day, Republican Senators from some of those Bryan States—Nebraska and Kansas, for example—are standing shoulder to shoulder with Southern Democrats. With free silver shelved, the old *idem sentire de republica* is declaring itself again.

This time, too, the ostensible issue is not the deep and effectual reason for the union. Westerners are snapping party ties on the question of the tariff, partly because they resent its burdens and injustices, but more because they are jealous of New England wealth, and of the capital of New York and the Middle States, which appear to them to be using Senator Aldrich as an amanuensis to write out tariff dictation. The revolt is really that of the radical West and South against the conservative East. It was no casual thing that Western Senators pointed out and denounced the dominance of New England Senators in the Finance Committee of the Senate, and in other powerful committees of that body. There spoke a sectional distrust and dislike which may be prophetic of a sweeping readjustment of parties, before many years have passed.

That it will surely come, we should not think of being so rash as to predict. But its possibility lies open to the gaze of everybody. The breach may not occur over the tariff. Senator Aldrich has such glittering bribes in his hand that he may be able to buy the needed votes. But with the tariff either out of the way or in the way, the tendency we have indicated remains, and will have to be reckoned with. That it has entered into the remote calculations of President Taft, is not at all impossible. His openly conciliatory policy towards the South, his announced intention of travelling extensively in the West, his advocacy of the income tax, by which both South and West have long sworn, may be without special meaning, yet they are the kind of thing a far-sighted President, looking to his own succession, would be apt to do if he saw, or thought he saw, the forming of a political alliance that would shatter and destroy old party combinations.

FINANCE AND RESPONSIBLE MINISTRIES.

After months of discussion in the Reichstag, in the press, and by the public, the German financial muddle is apparently worse than ever. A sane and comprehensive plan of rescuing the Empire from its embarrassments seems as far off as in December, though the impatience of the country grows daily. A group of prominent men has petitioned the Reichstag to do something quickly, for the deficit does not stand still while the politicians wrangle. The Chancellor and his Finance Minister are wholly unable to find the way out. They are paying the penalty for having conceded so much hitherto to certain favored interests, primarily the landowners and the manufacturers. These pampered classes have become so accustomed to believing they own the government that they angrily resent any effort to compel them to bear a larger burden of taxation, the proposed heavy inheritance taxes in particular.

In this respect, the situation at Berlin is analogous to that at Washington. The protected manufacturers and "standpat" politicians are infuriated at the idea of any reduction of the profits made by the beneficiaries of our tariff, and are endeavoring by hook or by crook, by this cleverly concealed joker or that innocent-looking specific duty, to trick both the public and those leaders, like Mr. Taft, who desire a little mercy for the ultimate consumer. Have they not bought and paid for the Republican party's success, with the understanding that their purses shall be well filled in return? It is precisely the same in Berlin. The Prussian *Junker*, the capitalists who own thousands of acres of land, the nobles who have reserved for themselves a great majority of the choicest

positions in the army, the navy, and the civil service, are outraged that they should be asked to pay the heaviest taxes. It matters not to them that the enormous deficit is the result of policies they have so long dictated, or that true patriotism would prompt their coming now to the rescue. They have planted their feet like so many stubborn mules, and balked—thus far so successfully that the imperial German nation presents to the outside world the extraordinary spectacle of being unable to regulate its own budget and make its income meet its outgo.

It is not only Von Bülow's having in the past bound and delivered himself into the hands of the favored classes that has made it possible for them to block the way; it is the absence of a responsible party Ministry. When the crisis between the Chancellor, the Kaiser, and the Reichstag arose last autumn, the Radicals pointed out that this was the opportunity for the Reichstag to refuse to vote supplies, unless it obtained the right to decide what Ministers should supervise expenditures. But the Reichstag committee to which this Constitutional question was referred produced nothing. Now, however, Von Bülow himself must see that on his side there would be advantages were he the chosen Prime Minister of a really strong party. His ill-assorted "block" fails him when he most needs it, so that the belief is growing in Berlin that he must again dissolve the Reichstag and take the chance of further Socialist successes—or ask the Socialists, whom the Kaiser has branded as traitors, to help him pass the inheritance-tax proposals. So far is he from being master of the "block" that it seems to have mastered him. And it can only add to his and the country's intense mortification to see how Mr. Lloyd-George is grappling with his problem, across the Channel. Indubitably, the new English budget is in some aspects Socialistic and revolutionary; but it has been presented by a virile leader, strong in the consciousness of a great party behind him—and, most important of all, unhampered by protected industries. He can lay the burden of taxation squarely upon those best able to afford it. The rich landowners may wriggle if they please; they hold no mortgage upon Mr. Asquith's Ministry.

This lack of direct Parliamentary responsibility in Germany again affords a parallel with our own plight. We have no system of budget-making, no scientific effort to present annually estimates of expenditure and of income. In the current tariff debate, Senator Aldrich has met all questions as to how he can pay the increased expenses of government with a possibly decreased revenue, by the cheerful promise to cut appropriations. This is one of the good intentions with which the road to the financial Inferno of nations is paved. Just twelve years ago, Speaker Reed wrote that Senator Allison agreed with him that "never in our experience has there been such a rush on their part [the public's] for appropriations as now, when income is too small by fifty or sixty millions." Billion-dollar Congresses create an appetite that grows with feeding at the government trough, and that is not readily checked even in bad times or by a startling deficit. Reckless extravagance makes the nation reckless of its credit, and absurdly overconfident that the way out of any difficulty can easily be found.

"I welcome any discussion," wrote Mr. Reed in the same private letter, "which would create responsible government somewhere." Certainly, there is no responsible government anywhere in Germany. The Chancellor is chosen by the Emperor; his sympathies may be with any political party, with several, or with none. If the Reichstag rebukes him, and the Kaiser is willing, he tries to bribe a new coalition to give him what he wants. But the day of reckoning has come in Von Bülow's present helplessness. The only question is whether he shall dissolve Parliament, or whether he can buy, beg, or compromise his way to some half-hearted, half-way scheme of financial reform.

THE FRENCH STATE EMPLOYEES.

The Parisian postal and telegraph workers, by organizing themselves as a trade-union which claims, under the law of 1884, the right to strike, bring squarely before the French Cabinet and Parliament a problem which the government has hitherto been content to attack through diplomacy and political manipulation, but upon which it now must definitely legislate. The situation in France is serious but as yet there is no cause for the cry of revolution. In the first place, it remains to be shown just how strong the sentiment is behind the labor leaders who have issued this defiance of the government. Dispatches from Paris agree that the state employees are not a unit in seeking a clash. Many oppose the idea of a general strike. Some are even opposed to the formation of a syndicate or trade-union. "Others believe that a congress representing all classes of employees alone would be qualified to decide the question." From the haste with which the new union was organized and publicly announced, it would be almost as correct to say that the French postal clerks and telegraph operators have had a union formed for them, as that they have formed themselves into a union. The project seems to have been launched by a number of leaders who have been deliberately baiting the government and who have been suspended from the public service.

Nevertheless, the question whether the servants of the state shall have the right to hamper or completely block the service of the state has been put and must be answered. The French Chamber has been dallying with bills on the subject. It must now get to work in earnest. The question as usually treated has two aspects: the trade-union phase and the revolutionary phase. Shall the state employees be allowed to strike? And shall the state employees be allowed to revolt? The second phase is the more prominent in the public mind. In the campaign which the noted General Confederation of Labor is conducting against the government and against the entire social system of the present, the state functionaries have been counted upon to play an important part. But from the practical point of view, this revolutionary aspect may, for the time at least, be put aside. When it comes to revolution, there is no longer any question of right or wrong. If the state employees in France have come to look forward to a general strike as a means of subverting the existing social order, they may prepare for that great event just as well through their present organization into mutual benefit associations as through unions formally endowed with the right to strike. We must take it for granted, therefore, that the impelling cause in the present agitation is still predominantly a peaceful

one. If the men in the post-offices and telegraph bureaus desire to strike, it is probably for the good old reason of securing higher wages, easier hours, and improved conditions of labor.

The problem is one that confronts every government that has gone extensively into the employment of labor. It confronts the governments of Germany, Austria, Italy, and Russia, as well as of France. All but the first have had the question on their hands in more or less acute form. In Russia, the great railway strike of 1905 forced a Constitution from the Czar. In Austria, a few years ago, the imminence of a general strike wrested from the government a grant of universal suffrage. The Italian railways have had years of chronic disorder, in the course of which the theory of the "pacific" strike—the strike which consists in doing one's work as dilatorily and as badly as possible—was carried to a high state of perfection. Prussia alone has been untroubled, because in Prussia alone the iron military discipline keeps the government service—schools and municipal bureaus, as well as railways and post-offices—free from every kind of revolutionary taint. But neither the historical tradition of France nor the spirit of the French people admits of rigid Prussian discipline. Democratic principles must be allowed free play at the cost of an explosion.

How far is the present French government willing to go? M. Clemenceau has left no doubt of his position on the specific question of state employees and the right to strike. In Parliament and out he has rejected the claim as absurd. It would make the servants of the state its masters, and put tremendous power into the hands of individuals responsible to no recognized organ of the state. A little more than a week ago, at the unveiling of the Gambetta monument at Nice, M. Clemenceau summed up the case of order and common-sense against the advocates of revolution, philosophical and other:

> A nation cannot live on philosophy. Society cannot halt in its path at the command of an individual to make way for the fallible prophets of the future. The present has its rights, and the present means the ordered life of every citizen within the framework of the law. Undoubtedly, there are in democracies, as in every other form of government, crises of varying duration and intensity. Too many men have been spoiled by a régime of violence for the rational enjoyment of freedom. Their difficulty is to see that one who would impose respect for his personal liberty on his neighbor must begin by imposing on himself respect for his neighbor's personal liberty. How much worse, then, does the evil grow if the servants of the state, representative of the power of the state, prove false to their primary duty, abandon their posts, and turn against the nation the power which was confided to them for its service! A society that would tolerate such a condition of things would go down to its destruction in the midst of universal contempt.

Issue, therefore, has been clearly joined between the Clemenceau Ministry and the extremists among the labor leaders.

The way out seems to lie, as we have said, through legislation which shall specifically prohibit the right to strike, while conceding to public servants an increased share in the shaping of administrative policy in so far as it concerns their own condition. That the unions shall dominate their superiors is out of the question. M. Clemenceau has declared that Ministers must continue responsible to Parliament, and not to their employees. But, after all, in every democracy, a minister, a mayor, or a commissioner is responsible in measure to every subordinate of his who has a vote. In this country, we sometimes hear of bills being passed because the letter-carriers or school-teachers insist. In lieu of this indirect system of self-government among government employees, France might well hit upon some direct form of coöperation between government employees and their superiors.

HAMMOND LAMONT.

With the deepest sorrow and an overwhelming sense of personal loss, we record the death of Hammond Lamont. Such qualities as he possessed make his friends feel that silence and bowed heads are the best form of tribute. Especially under the first shock of his unexpected and untimely end, cut off, as he was, cruelly in the meridian of his powers and usefulness, are his associates inclined simply to say:

> What else in life seems piteous any more,
> After such pity?

Mr. Lamont had an intellect that ranged free and wide. His mental vigor was what first impressed men making his acquaintance. Penetrating, incisive, clear, and sane, his reason was a fine organ of truth. His favorite studies and largest attainments were in English literature, of which he possessed extensive knowledge, kept in order by a judgment of extraordinary balance and clarity. In educational matters, he was thoroughly versed. His writings upon the problems of school and college and university compelled attention; and his advice and assistance were often sought by college authorities. Known by a multitude of university men, he was prized by them all. But Mr. Lamont had also read eagerly and thought deeply about all the great questions that press upon a modern man with a soul above the clods. In politics, in morals, in that mystery and awe of existence which we call religion, his active mind had sought out fact and built up conviction. And his intellectual honesty was so complete, his detection of fallacy and delusion so instant, his hatred of sham and lies so absolute, that for him the discovery of the truth was the same thing as embracing it, his translation of thought into motive and action being instinctive and instantaneous. It would never have been necessary for a Socrates to bid Mr. Lamont "follow the argument." He was always following it to the end, sweet or bitter. It was this intellectual stanchness of the man, combined with his firm-fibred character and loyalty to friendship, that bound like-minded men to him with hooks of steel.

Mr. Lamont was the son of the Rev. Thomas and Caroline D. Lamont. He was born in Monticello, N. Y., in 1864, and prepared for college in Albany. Entering Harvard with the class of 1886 he was graduated as one of its first scholars, a member of the Phi Beta Kappa, and Ivy Orator of his class, besides having made a reputation as a remarkable undergraduate journalist. To newspaper work he naturally turned on graduation, spending two years in Albany journalism and two years as a member of the staff of the Seattle *Post-Intelligencer*. When, in 1892, President Eliot visited Seattle, his attention was attracted by Mr. Lamont's able reporting of his address in that city and by other evidences of unusual ability. Mr. Eliot at once offered him an instructorship in the English department at Harvard, which position he held until called to the department of English at Brown University as associate professor, and, from 1898 on, full professor of rhetoric. He then accepted in 1900 the position of managing editor of the *Evening Post*, which he held for six years with marked success. His regular contributions

to the editorial page were distinguished by their lucid style, their information, their original humor, and keen irony.

Despite his unsparing journalistic labors, he never lost his interest in the subjects in which he had taught. He edited several well-known college text-books, and published, in 1906, a book entitled "English Composition," which is largely used in the high schools of the country. Shortly before his death he had received most flattering offers from Williams College and from one of the best-known Middle Western State universities to return to the professorial career, and he had, during his connection with the *Evening Post*, declined similar offers from Brown University and Cornell.

On July 1, 1906, with the retirement from the editorship of the *Nation* of the late Wendell Phillips Garrison, Mr. Lamont succeeded him, and applied himself to the new duties with his customary vigor and enthusiasm. Readers of the *Nation* need not be told what admirable qualities he imported into this work.

Death came on the evening of May 6, as the result of an operation to which in advance no great importance was attached. It proved, however, to be so serious that he was unable to rally from the shock. Such consolation as those who mourn him may derive from the thought that his life was filled with militant and honorable striving, they may lay to heart without a single mental reserve. But we know not to-day what healing there is for those who are struck down by his remediless loss, and the tragedy of his end.

FRENCH FICTION.

PARIS, May 1.

"Les Unis," by Édouard Rod, is well written, like all the many novels of this distinguished author (Fasquelle). He no longer shows us a world of inherited Calvinism. The "united ones" of his story are the daughters (and their consorts) of a fanatical reformer who rejects for them the subjection of conventional marriage and puts in practice the free unions of the good time coming. He is not conscious that his own rigid moral ideas have their efficiency from that traditional society which he wishes to revolutionize. So, when his sons-in-love and not in-law follow their unrestrained selfishness, profiting by the freedom, which he thought was to regenerate the world, only to ruin and destroy his children's happiness, the stroke is appalling. It is impossible not to see in the defeated patriarch the image of the late Élisée Reclus (though, of course, not of his family). He joined with undisputed eminence in science a social fanaticism which made him the chief prophet of the Anarchist movement. No failure of his disciples to come up to his own moral principles (inherited, by the way, from Calvinist generations) could trouble the fatuity which made him willing to smash the existing world for some non-existent future dreamed of in his philosophy. M. Rod, in likely examples, shows the outcome of such efforts. The story is of intense interest—and it starts up questions than which none can be timelier.

"Le Talion," by Victor Margueritte, like others of the novels of this author and his brother, tells of unhappiness resulting from marriage and from love not legalized and of the revenge which comes from the child (Fasquelle). In the old ideas, marriage was sacred precisely because it protected the lawful child of lawful parents. If the count could be made, how many marriages are there nowadays which do not make for happiness precisely for the same old reason? Why, then, barrow up our feelings by imagined exceptions? And, even if the revolution in laws which the Margueritte brothers seem to desire could be brought about, might not what they regard as freedom come to be worse slavery, particularly for mother and child? Paul Margueritte, who is no longer writing in collaboration with his brother, publishes a volume of stories—"La Lanterne magique" (Plon)—which raise no such moral questions, although they deal with love in a way not usually open to the young person.

"Le Mariage de Mademoiselle Gimel, dactylographe," by René Bazin, accompanied by two short stories, makes up another volume of this writer who so amiably discredits the exclusive meaning long attached to French fiction. It will be all the more sympathetic to Americans, inasmuch as it introduces the girl typewriter into French literature (Annales politiques et littéraires). Another view of marriage—more modern, not so Christian, as old-fashioned folk might say—is that exemplified in "Les Anxiétés de Thérèse Lesieure" (Plon), by Étienne Bricon. The banker's daughter has never had to face the realities of life; and her mixed ideals are not fulfilled in the dull garrison town where she comes to live as a lieutenant's bride. A desperate flirtation—*liaison*, we used to say—with an aristocratic captain does not mend matters. So she begins a correspondence with the sentimental novelist most in fashion. He certainly gives very commonsense spiritual direction; but his penitent finds out that he needs guidance himself because of some uncomfortable actress who has crossed his vision. Naturally, in another's case she sees clearly; and the book, after a first moral alarm, reasons out virtue's excellence in such letters as only French men and women can write.

"Le Reste est silence" (Stock), by a new writer, Edmond Jaloux, is noteworthy from its perfect style and its treatment of a new idea in these love stories. It is the child's impressions of unhappy things which go on before him, beyond all his comprehension. He knows only that his mother is beautiful, that his father is *brave*, but that there are doings of his mother which he must not tell his father. Then the storm breaks before his wondering eyes; and at last the beautiful mother, who has disappeared, comes back broken and humbled, crying out as she kisses frantically her child what she might have known all along from David's psalm in her prayer-book—"All men are liars!"—but mentally reserving, the child must think, the lawful husband whose bravery she has taxed so heavily.

In violent contrast with this delicate shading of a child's impressions of love and life which he cannot understand, we have two roughly brushed pictures of American love as seen by Frenchmen quite as uncomprehending as the child, and with added prejudices and who-knows-what humiliating memories. "Incivilisés" (Juven), by Harry R. Tremont, strikes its keynote in its title. "The author lived long in the United States, where the savory and exact notes which he took enable him to show American women and girls as they are—bold, flirtatious, perverse, and wild." *Merci du peu!* Xavier Torau-Bayle publishes a more neutral novel, "Une Française aux États-Unis" (Mathot), which from the nature of things ought to have pathos.

"Autour de l'amour," by Gaston Rageot, who is a professor and philosopher as well as story-writer, tries in touching examples to prove a startling thesis: Love, which so preoccupies French talk in literature, drama, and life itself, scarcely exists in the modern heart. "We live under the easy rule of adventure and pleasure, which have killed sentiment and even gallantry."

Hate, which is a passion quite as much as love, enters into a number of the new novels. "La Fourmilière" (Flammarion) is by Lucien Alphonse-Daudet, a younger son of the great novelist, who is fain to write, like all the rest of the family. The "ant-hill" is the native provincial town of a painter, who thinks to find refuge there after great sorrow; but he is wounded and stung by village spite until he does away with himself, leaving by will his château and lands to the King of Prussia to revenge himself on his country-

men. "Sœur Marie-Odile" (Lemerre) is an idyll only shadowed by local hates, with its further dark gloom from disappointed love suddenly illumined by final peace in the convent. The author, Charles d'Ollone, must have known from childhood the scenes he portrays; and his poetic feeling will reach those tourists who have wandered from the lake of Gerardmer to the forests of Alsace and the mountain shrine of St. Odile. "Les Deux Routes" (Perrin), by Paul Tany, shows how the modest and working artist reaches glory and love at last after many meritorious days, while the other—the *arriviste* who would trample every one down in his efforts to find a short cut—ends up properly in Bedlam. In "Les Demoiselles de la poste" (Plon), by Paul Bonhomme, we leave the provinces and Bohemia for the every-day life of towns. That the joys and sorrows of post-office and telephone girls should be made the subject of a French novel, without any of Zola's un-Naturalism, is a sign of many good things, not the least of which is the advance of French society toward sane democracy.

"Le Soldat Bernard" (Fayard), by Paul Acker, is a novel which is not a romance. It is full of urgent timeliness—the thrilling conversion to patriotism of an anti-Militarist during compulsory military service, with what he feels during the attacks of striking workmen on soldiers protecting society as it is. S. D.

Correspondence.

THE "LOST LEAF" OF "PIERS THE PLOWMAN."

To the Editor of The Nation:

Sir: Two recent letters in the *Nation* (March 25 and April 29) on the text of Passus v of "Piers the Plowman" have reopened a question to the solution of which I should like to contribute some new material. As the whole matter now stands the original hypothesis of Prof. J. M. Manly of the University of Chicago was criticised by Dr. Henry Bradley of Oxford, who presented an alternative theory. This, in turn, was criticised in the *Nation* by Prof. Carleton F. Brown of Bryn Mawr, who offered still another explanation for the condition of the text. In his final letter, to the *Nation* of April 29, Dr. Bradley disposes of Professor Brown's theory, and reverts to his own radical modification of Professor Manly's. I shall try to show that Dr. Bradley's theory is nevertheless unsound, and that Professor Manly's is the most acceptable.

Very briefly, the Manly theory, as stated in *Modern Philology*, January, 1906, is an attempt to account for two gaps or breaks in the text of Passus v of Version A of "Piers the Plowman," one gap after line 106, the other between lines 235 and 236, according to Skeat's numbering. Seven of the 129 lines between the two breaks are spurious, thus reducing the number to 122. According to the theory, these lines occupied the inside two folios (four pages) of a quire, and the breaks before and after were occasioned by the loss of both halves of the leaf next to the innermost.

Dr. Bradley, in the London *Athenæum*, April 21, 1906, argued that the author wrote his first draft on loose sheets or scraps of paper or parchment. One of these, holding lines 236-259, was shifted from the end of Covetousness (line 145) to its present position, where it was copied in by the scribe of an archetypal manuscript. Another sheet, containing the end of the account of Envy and all of Wrath, was lost from between lines 106 and 107. At first sight, indeed, this seems a most tempting suggestion, but there are a number of considerations which render its acceptance impossible.

For one thing, we have little evidence concerning mediæval methods of original composition. Did authors then compose on scraps or in books? The manuscript of the Ormulum, which is the only one I know of that is the (probably) first draft in the author's hand, is made up in such a way that the first quire must have been sewed together before being written on. The other quires were folded together and then filled with writing, in accordance with the regular custom of mediæval copyists in making up manuscripts. Some of the author's changes and additions, however, are on small scraps, which were inserted and sewed in later. It therefore seems that the one author whose practice we know composed in a book, and added his afterthoughts on scraps. If Dr. Bradley's "shifted-leaf" argument tries to avail itself of these inserted scraps, Dr. Bradley must account for the loss of the end of Envy and all of Wrath, as well as for the shift of what seems to him to be the continuation of Covetousness and the sequent Robert the Robber, on the ground that these passages were not in the first draft, but were afterthoughts of the author.

Furthermore, as the account of Covetousness stands in lines 107-145, it forms a complete discourse, rendering unnecessary any further development or addition. In Passus V every complete account of a sin includes a confession, a repentance, and a vow. Covetousness in his turn confesses several varieties of cheating in trade; swears to cease from "that sin" of "regratery"—*i. e.*, "never wickedly to weigh or to use wicked bargaining"; and promises to go with his wife to Walsingham, and to pray the Rood of Bromholm to bring him out of debt. The account thus agrees in structure with all the other complete presentations, and it is therefore unnecessary to assume that it is incomplete. But Dr. Bradley believes that Covetousness is rich, and therefore ought to make restitution. I find nowhere in the description of this sin in this poem any indication that he is rich. In fact, in his last line he says he will pray the Rood of Bromholm to bring him out of debt, implying that no other expiation is needed, or perhaps possible.

Still further, as Professor Brown points out, there is an obvious inconsistency between the vow just paraphrased and the one in line 241, in which whoever is speaking says, "I schal seche Seynt Treuthe er I seo Rome." This inconsistency does not appear to be rightly dismissed with the statement that "it is not perceptible," as Dr. Bradley says it is not to him. It has seemed considerable to several unprejudiced persons of recognized judgment with whom I have discussed it. A vow to undertake a conventional mediæval pilgrimage followed six lines later by a vow to undertake the highly spiritual pilgrimage to the shrine of Truth before seeing Rome—*i. e.*, before undertaking a conventional mediæval pilgrimage—both indulged in by the same person, would appear to involve almost a contradiction. Dr. Bradley himself seems to wish that the second vow were not there, for he suggests that the two lines containing it "may be spurious, as they seem to be an echo of vii, 93-94." This attempt to remove the inconsistency rests upon pure assumption. Lines 241-242 are attested in the critical text by all the evidence.

In order to support his own theory as opposed to Brown's, Dr. Bradley suggests and replies to a possible argument of Brown's. It might be contended, he says, that Robert belongs after Sloth, because the penitent thief is "the stock example of an argument against wanhope, as resulting from sloth." But, replies Dr. Bradley to the hypothetical objection, "In the preceding lines nothing has been said about 'wanhope' (*i. e.*, despair) as a consequence of sloth." He has failed to notice that in line 225, in advising Sloth, Vigilate says, "Beware of wanhope, who wishes to betray thee." The hypothetical objection to the Bradley shift is therefore in full force.

Dr. Bradley points out the direct inconsistency involved in Professor Brown's proposed transposition of lines 236-241. There is additional, and even stronger, evidence in lines 242-243, where the poet says that Robert looked on Reddite, and, because there was not wherewith, he wept full sore.

There is no doubt that lines 236-241 belong before the confession of Robert the Robber, and not after it. But it does not seem to me that they are therefore to be understood as being joined more closely in sense with the end of Covetousness, rather than with the beginning of Robert. Professor Manly, in his first article, has already suggested that they are the last part of the introduction of Robert. In what setting then do they probably occur?

Only four of the six sins in the A version are developed *in extenso*. Three of these receive a direct suggestion to repentance, or even as to the form of the vow. Repentance urges Envy, Gluttony's wife warns him, and Vigilate, the veil, tells Sloth to say, "I am sorry for my sins," etc. It looks extremely probable therefore that some one may be doing the same thing for Robert, and may be telling him in what words to make his vow. We may tentatively go even further, and attribute lines 236-241 to a speaker named "Reddite," upon whom Robert then looks in line 242. Compare the fact that "Vigilate" and "Reddite" are both Latin imperatives.

Therefore, in view of (1) our ignorance of mediæval methods of composition, (2) the lack of necessity for supposing the account of Covetousness to be incomplete, (3) the inconsistency involved in the shift, (4) the stock appropriateness of the thief's following Sloth, and (5) the appositeness of lines 236-241 as the last part of the introduction of Robert the Robber, Dr. Bradley's proposal is almost certainly to be regarded as impossible.

None of the later discussions have attached true significance to the combination of *two* gaps in Passus v, one before line 236, and the other after line 106, with which the uncompleted confession of Envy comes to an abrupt close. In his last letter Dr. Bradley uses the break after Envy to controvert Brown's contention that the poet may have intentionally omitted Wrath. In a discussion with me, Prof. W. A. Neilson has pointed to clear evidence that the poet did not intend to leave Envy impenitent, in lines v, 59-60, which begin the account of Envy: "Envy with heavy heart asked for shrift, and, full of care, began to show his guilt." Professor Manly's theory has the advantage of accounting for both breaks on the same hypothesis, without involving any contradictory shifts of parts of the text. Furthermore, it has the added confirmation of some calculations which he and I originally worked out independently, and to which I later furnished some additional material during an examination of the manuscripts of the A version.

These calculations involve the number of lines in the poem preceding the first break. Between the two breaks are 122 lines, or an average of 30½ per page for four pages. If we divide the number of lines in the poem preceding the first break by 30½, will the answer bring us to the end of the second folio of a quire? For this is necessary in order to support our theory of the lost third and sixth folios. In the critical text of version A there are 1,026 lines before the first break. Adding five titles to passus, and six Latin lines, we get a total of 1,037 lines. In mediæval manuscripts the writing invariably begins at the top of page 1. If we suppose two full quires of sixteen pages each plus four pages of a third quire before our first break, the 1,037 lines will fill the thirty-six pages at 28 and 29-36ths lines per page, or 29 lines per page for 29 pages, and 28 lines per page for 7 pages. That is to say, we must accept an average of a little less than 29 lines per page for 36 pages, and then jump to an average of 30½ lines for four pages. If we examine almost any middle English manuscript of the fourteenth or fifteenth century, we shall find that such a fluctuation is a common thing. For example, of manuscripts Trinity College, Cambridge, R. 3. 14, Harleian 6041, Trinity College, Dublin D. 4. 1, and University College, Oxford (all A-text), each exhibits occasional fluctuations of from three to five lines per page, with a steady average. Consequently, we may adduce this striking piece of confirmatory evidence in favor of Professor Manly's theory: The number of lines in the poem preceding our first break fill two quires of eight folios each and the first two folios of the third quire. Then comes the first break, involving the loss of one folio, containing the end of Envy and all of Wrath. Then come the inside two folios containing the 122 lines between the breaks. Then we have a loss of another folio, containing, perhaps, more of Sloth, and the introduction and development of Robert the Robber. After this break we resume the continuous poem.

ENGLISH EXAMINATIONS FOR COLLEGE.

TO THE EDITOR OF THE NATION:

SIR: Our academic halls must soon be overwhelmed by the annual inundation of English examinations—character sketches of Antonio and Bassanio, dissertations on the moral taught by the "Vision of Sir Launfal," and comparisons of "Sweet Auburn" and Camelot, of Will Wimble and Benjamin Franklin, of Brutus and the Ancient Mariner. A few dozen candidates out of thousands will discuss such topics as these intelligently, because they are prodigies; many will misquote or misinterpret opinions of text-book editors and instructors, which impressed them particularly (and we all know how often it is the unessential that the pupil remembers); a vast majority will flounder around in a sea of facts and fancies, beginning nowhere, ending nowhere; and all this because they can not write on the kind of subject about which they have something to say.

At the age when a candidate goes up for college examinations he is far more concerned with the living world about him than with the world of books. He can tell you all about what he has heard, or seen, or done, and often tell it very well. He can write vividly and enthusiastically of a school contest, a cruise, a hunting trip, a quaint foreign city he has visited, perhaps of State or national politics. To him the old fisherman he met on the Maine coast last summer is infinitely more vital than Dr. Primrose; and the chances are he can write about the former much more skilfully than about the latter. Yet seldom in a college examination does he have opportunity to tell of what he has himself observed. He is required to write a character sketch, or a criticism of style, or an abstract of a plot, or to describe a scene in a novel. His facts are all second-hand; and a story about a story, or a description of a description, is rather distantly removed from real life.

It is because a candidate is so seldom allowed to write on the sort of subject which he can treat best that to some the entrance examinations may appear to do *the greatest injustice to the greatest number*. We drill our pupils in narration, description, exposition, and argument; we assist them to do original work, to think and observe for themselves, as they will always have to do. We teach them that the principles of composition have a direct, practical bearing on every line they write throughout their lives, in business letters, or essays, or what not; that the real purpose of all their practice is to acquire the power of stating effectively whatever they may wish to say of their daily observations and experiences. And we try to train them accordingly. But the examination says: "Don't tell a story which you really know something about from experience; don't even tell a story of your own age and generation; but narrate briefly a long narrative of Tennyson's about some people who lived, or very likely did not live, about fourteen centuries ago. Don't describe anything you ever saw; but, instead, describe Scott's description of the storming of a castle in a country which you perhaps never visited, and in a period seven hundred years before you were born. To show what you can do in exposition, in an hour's time sift your thoughts, analyze the situation, group your facts, and write a treatise on the differences between life in Camelot at the time of King Arthur and in London at the time of Queen Anne. (Oh, for the inspiration of a Mark Twain and a John Richard Green!) Write a careful analysis of the character of Lady Macbeth, or Shylock, or Brutus. To be sure, great thinkers have given to the world their opinions of these characters, slowly evolved from long and painstaking study. We allow you one-half hour. What do you think of Poe's style? It is assumed, of course, that you are a competent literary critic."
